LITERATURE

Reminiscences of my Irish Journey in 1849. By Thomas Carlyle. With a Preface by J. A. Froude. (Sampson Low & Co.)

MR. FROUDE is only in part responsible for the appearance of this diary. It is the property of Messrs. Sampson Low & Co., who consulted Mr. Froude as to the propriety of giving it to the world, and he saw no objection as the "remarks, rough and hasty as they are, cannot be injurious, and may possibly be useful." As the book would very likely have been printed in any case, and as Mr. Froude alters nothing and suppresses nothing, and confines himself to correcting the press, it is rather an *imprimatur* than an editorship which he contributes.

But it is not so certain that the book cannot be injurious, at least to Carlyle's own reputation. Of all accounts of Ireland we have ever seen, this is the hardest and least genial. The attitude throughout is unsympathetic and contemptuous, and occasionally there are outbursts of the coarsest insolence. It must always have been dangerous to have been thrown in Carlyle's way, except at moments when his digestion was especially in order, and during this Irish tour he appears to have been out of health and out of temper. He was in Ireland for little more than a month—the July of 1849; and when on his return he threw these reminiscences together, he summed all up with "ugly spectacle; sad health, sad humour; a thing unjoyful to look upon. The whole country figures in my mind like a ragged coat, one huge beggar's gaberdine, not patched or patchable any longer; far from a joyful or beautiful spectacle." Never apparently was the distressful country so distressful, never the melancholy ocean so melancholy, as during this tour. People were kind and hospitable to him, as Irish people always are; but he has few good words for them. He mentions them all, and grumbles sometimes at his dinner, sometimes at his bed, sometimes at his hosts themselves. For Lord George Hill alone he appears to have had a real liking, but hardly a single other person entirely escapes. Occasionally his entertainer may be damned with faint praise, but oftener with expressions of a stronger character. He speaks of his hostess at one house by name as "foolish" and "a dim Glasgow lady" (whatever that may mean), and of his host (a very distinguished man) as growing "more gloomy, emphatic, contradictory." At another house he stays with "Socinian really well-conditioned people:—much should not be said of it." At one of the next houses he stays at he notes: "My *tay* was very cold and bad. Talking difficult; no good of the O'Shaughnessys, no good of anything till I got away to bed." One of his most useful friends in the west of Ireland he mentions by name as "a really good, but also really stupid man." In short, there can be few among those whose hospitality he enjoyed who will feel elated at the way in which their illustrious guest appraised their value. Now and then, it is true, Carlyle mentions no name, but the anonymous person is always some inferior creature:—

"To Mr. Something, a retired merchant of full purse, our intended host's father-in-law. Showy, newish house and grounds, overhanging the sea near by; retired merchant not at home; his wife (poor Mrs. Sterling's dialect and manner were recalled to me), greatly flattered by Lord G.'s call, will give lunch, &c., will do all things but *speak* a little less."

One instance of this sort of insolent sneering is probably enough, but there are others equally bad. The only excuse is that Carlyle may have written down his notes for mere reference and never intended to publish them, but even this cannot justify the supercilious tone with which he speaks of those who had been kind to him.

And now let us see what he says of Ireland itself. As the book is without any shadow of index or table of contents, it is somewhat difficult to refer to any particular part of the tour. However, Carlyle seems to have seen the most characteristic parts of the country—Dublin, Cork, Killarney, Galway, Sligo, and part of Donegal—and found all barren. Scarcely anything interested and scarcely anything pleased him. The streets in Dublin are "*vapid-inane*-looking"; the Vice-Regal Lodge is "decidedly dull"; Glendalough is the "grimmest spot in my memory"; Killarney is "well enough; but don't bother me with *audibly* admiring it: Oh! if you but wouldn't!" and so throughout this unhappy journey goes on a constant growl of sullen discontent.

For the Irish themselves he has the most characteristic contempt. Here is one passage:—

"Kildare Railway; big blockhead, sitting with his dirty feet on seat opposite, not stirring them for me, who wanted to sit there. 'One thing we're all agreed on,' said he, 'we're very *ill governed*; Whig, Tory, Radical, Repealer, all admit we're very ill governed!' I thought to myself, 'Yes, indeed: you govern yourself. He that would govern you well, would probably surprise you much, my friend,—laying a heavy horsewhip over that back of yours.'"

Here is a description of the workhouse at Westport:—

"Human swinery has here reached its *acme*, happily: 30,000 paupers in this union, population supposed to be about 60,000. Workhouse proper (I suppose) cannot hold above 3 or 4,000 of them, subsidiary workhouses and outdoor relief the others. Abomination of desolation; what *can* you make of it! Outdoor quasi-*work*: 3 or 400 big hulks of fellows tumbling about with shares, picks, and barrows, 'levelling' the end of their workhouse hill; at first glance you would think them all working; look nearer, in each shovel there is some ounce or two of mould, and it is all make-believe; 5 or 600 boys or lads, pretending to break stones. Can it be a *charity* to keep men alive on these terms? In face of all the twaddle of the earth, shoot a man rather than train him (with heavy expense to his neighbours) to be a deceptive human *swine*. Fifty-four wretched mothers sat rocking young offspring in one room: *vogue la galère*."

As for any hint or suggestion of a hint which might be of value as regards Ireland, there is absolutely none. On the contrary, some of Carlyle's hasty generalizations are quite misleading. For instance, he says:—

"Here too [at Lismore] I found what was before visible, that the English absentee generally far surpasses the native resident as an owner of land; and that all *admit* the fact indeed."

Now the fact was that Carlyle had just been taken round the Duke of Devonshire's magnificent property by his agent, and he might well be impressed by much he saw. The moral, however, is obvious. It is not that the duke or any one else is a better landlord because he is an absentee, but that a man of prodigious wealth, even though an absentee, is more capable of doing justice to an estate than an impoverished resident.

Several passages might well have been omitted that have no literary value. There is too much of this sort of thing:—

"Tuesday, 24th July.—Towards post-office; *damp*-sunny morning: letters had come last night; other to-day from 'Inspector of Kilrush'; come, oh, come! Glove shop; Limerick gloves, scarcely *any* made now; buy a pair of cloth gloves; n.b. have my gutta-percha shoes out soleing with leather, gutta having gone like toasted cheese on the paving in the late hot weather; right glad to have leather shoes again! Breakfast bad; confused inanity of morning, settling, &c.; about noon Duffy goes away for Galway; and I am to follow after a day."

The two things on which this tourist lays the greatest stress are his bed and his tea:—

"Sleep sound till six, bemoaned by the everlasting main"; "Bed at last, but no great shakes of a sleep"; "I slept and again slept, a heavy sleep; still remembered with thankfulness"; "Inn and a cup of hot tea, that is the grand outlook"; "Bread bad, tea luke-warm," &c.,

and so on to the end. He is very particular. At one place he has an "elaborate dinner, *no* dish of which dare I eat; salmon, veal, lamb, and that is *all!*" What would he have wished? however, he gets some cold beef. Elsewhere his host tries to please him by ordering for supper "Irish stirabout (a frightful parody of 'Scotch porridge,' like hot dough), which I would not eat, and even durst not, except in *semblance*." The idea of Carlyle, the great destroyer of shams, being reduced, like another Jack the Giant-Killer, to swallow stirabout "in semblance" is delightful.

Still there are some redeeming bits. The account of Lady Becher (the famous Miss O'Neill), with "her own strict, methodic, vigorous character and perfect Church of Englandism," is interesting; and at Castlebar we get a rather amusing glimpse of the late Chief Secretary for Ireland: "Tuam coach (ours of yesterday) comes in; there rushes from it, *shot* as if by cannon from Yorkshire or Morpeth without stopping, W. E. Forster! very blue-nosed, but with news from my wife and with inextinguishable good humour." Then there are picturesque touches scattered here and there through the descriptions of scenery; as how

could it be otherwise when Carlyle was the writer? Here is the road from Killarney towards Limerick:—

"Road ('made by Queen Elizabeth') runs straight as an arrow, over hill, over hollow; steep and rough and unspeakably dreary; bare, *blue*, bog without limit, ragged people in small force working languidly at their scantlings or peat, no other work at all; look hungry in their rags; hopeless air as of creatures sunk beyond hope."

Eighteenth Century Essays. Selected and Annotated by Austin Dobson. (Kegan Paul, Trench & Co.)

THE present volume, to which Mr. Caldecott contributes an engaging little frontispiece, is perhaps the pleasantest number of the series—"The Parchment Library," as it is called—to which it belongs. It is fortunate in its material and its editor alike. The poet of 'Beau Brocade' and the exquisite 'Dead Letter' may be said to know his eighteenth century by heart. He is much more in sympathy with Gay and Prior than with the authors of 'Chastelard,' and the 'Earthly Paradise,' and the 'Ring and the Book'; he has the eighteenth century feeling for Horace, and not a little of the sense of clean-cut form, the subdued elegance of manner, the tact, the measure, the distinction of colour and line, the vigorous lightness of touch, which are distinguishing features in the work of his favourite master and his favourite models. Upon him, therefore, it was natural that the task of selecting and annotating a series of representative examples of the work of the older essayists should devolve. It was natural, too, that the result should be satisfactory. He has done his work with taste and judgment. His text is an example of accuracy and neatness. His notes are apt and pertinent. His introductory essay is clearly and gracefully written, and of information and reflection it contains just as much as it should and no more. Indeed, his little book is a model of its kind. More competent work, as far as it goes, is not often put before the public.

That such a volume was necessary seems evident enough. Now that it has come, it will certainly be read with pleasure. It contains a lesson, and a good one, but that it will be read with profit is dubious. The British essayists are more talked about than known. It is to be suspected that from the first their reputation has greatly exceeded their popularity; and of late years, in spite of the declamation of Macaulay and the very literary enthusiasm of the author of 'Esmond' and the 'Virginians,' they have fallen further into the background, and are less than ever studied and appreciated. In theory the age of Anne is still the Augustan age to us; but it is so in theory only, and only to a certain extent. What attracts about it is its outside. We are in love with its houses and its china and its costumes. We are fond of it, not as it was, but as it seems to Mr. Caldecott and Mr. Leslie and Miss Kate Greenaway. We care little for its comedy and nothing at all for its tragedy. Its verse is all that our own is not, and the same may be said of its prose and ours—of the prose of Mr. Swinburne and Mr. George Meredith and the prose of Addison and Swift. Mr. Gladstone is not a bit like Bolingbroke, and between the *Times* and the *Tatler*, between the *Spectator* and the *Fortnightly Review*, there is a difference of close upon two centuries and of a dozen revolutions—political, social, scientific, and æsthetic. We may babble as we please about the "sweetness" of Steele and the "humour" of Sir Roger de Coverley, but in our hearts we care for them a great deal less than we ought, and, in fact, Mr. Mudie's subscribers do not hesitate to prefer the "sweetness" of Mr. Black and the "humour" of Mr. James Payn. Their love is not for the essentials of the time, but only for its accidents and oddities; and they express it in pictures and poems and achievements in architecture, and by the purchase of cabinets with "a good deal of the Chippendale feeling." That this is, after all, but natural is tolerably obvious. It is questionable, however, whether we might not with advantage increase our interest, and carry our imitation a little deeper and further. The Essayists, for instance, are often dull, but they write like scholars and gentlemen. They refrain from personalities; they let scandal alone, and do not dabble in eavesdropping; they never go out of their way in search of affectation or prurience or melancholy, but are content to be merely wise and cheerful and humane. Above all, they do their work as well as they can. They seem to write, not for bread nor for a place in society, but for the pleasure of writing and of writing well. In these hysterical times the reverse is the case. Life is so full, so much is asked and so much has to be given, that tranquil writing and carefu workmanship are impossible. Mr. Dobson has bewailed the change in a charming rondeau, perhaps the best he has ever produced. He is melancholy when he reflects upon the fact that of old the world was wont to write "with slower pen" than now:—

> More swiftly now the hours take flight!
> What 's read at morn is dead at night;
> Scant space have we for art's delays,
> Whose breathless thought so briefly stays,
> We may not work—ah! would we might,
> With slower pen!

It must be owned that his melancholy is anything but groundless. The trick of amenity and good breeding has been lost; the charms of an excellence that is unobtrusive are charms no more. We write as men paint for the exhibitions: with the consciousness that we must pass without notice if we do not give way to excesses in the matter of colour and subject and tone. The need exists, and the world bows to it. This little volume of 'Eighteenth Century Essays' might easily be described as a protest against the necessity and the submission. It contains ample proof that it is possible to be eloquent without adjectives, and elegant without affectation; that to be brilliant you need not necessarily be extravagant and conceited; that without being maudlin and sentimental it is possible to be pathetic; and that once upon a time a writer, to prove himself a humourist, had no occasion to be a jackpudding likewise.

Mr. Dobson has wisely avoided the severer parts of his material, and his selection "is mainly confined to sketches of character and manners and those chiefly of the humorous kind." Steele is represented by the two immortal papers which tell how 'Mr. Bickerstaff visits a Friend,' by his sketches of Dick Estcourt and the Trumpet Club, by his 'Recollections of Childhood,' by his note on 'Sir Roger de Coverley's Ancestors,' and by his pleasant account of a ramble in town. The selection from Addison includes the portraits of Tom Folio, Will Wimble, Ned Softly, the Tory Foxhunter, and the Political Upholsterer; with the 'Meditations in Westminster Abbey,' the "Citizen's" and the "Fine Lady's" journals, the 'Adventures of a Shilling,' the 'Exercise of the Fan,' and the fancy of the 'Frozen Voices.' Johnson has been drawn upon for his sketch of Dick Minim; Reynolds, for his gentle squib upon the art critic of the period; Chesterfield, for his account of a club of scholars and drunkards; Mackenzie, for his portrait of a country dowager; Cowper, for his pleasant little etching of a country congregation; and Goldsmith, for his 'Man in Black' and his delicious account of Beau Tibbs and family. Mr. Dobson's "Dedication to an Illustrious Personage"—Mrs. Richmond Thackeray Ritchie to wit—would be a perfect little *pasticcio* (as he might say) of eighteenth century English but for an unhappy burst of adjectives at the end of it. To drop metaphor, he is so ill-starred as to speak of the "pure and unaffected pathos" of the writer responsible for Amelia and Helen Pendennis, and the "keen yet kindly satire" of the author of Barnes Newcome and Mrs. Mackenzie, of 'Barry Lyndon' and the 'Book of Snobs.' That no eighteenth century writer could have employed these epithets we do not need to point out; nor do we need to note that the expressions, remarkable as a mistake in style, are even more remarkable as a mistake in criticism. It must be admitted, too, that Mr. Dobson is not always so impartial as he might be. Thus in his note upon Addison's 'Meditations in Westminster Abbey' he quotes Raleigh's magnificent apostrophe to "eloquent, just, and mighty Death," and is ingenious enough, after acknowledging its superiority to the subject of his note, to remark that "unfortunately the 'History of the World' is not entirely of a piece" with it. To be fair he should have added that there are many pages of Addison "not entirely of a piece" with the 'Meditations.'

Unexplored Balûchistan. By Ernest Ayscoghe Floyer. With Map and 12 Illustrations. (Griffith & Farran.)

MR. FLOYER'S successful journey takes away to some extent the reproach to geographers (if not, as Sir F. Goldsmid in his introduction hints, to the British Government) implied in the title of this book, and his able and amusing narrative sufficiently explains the causes of his success. A service of some years in the Telegraph Department had made him familiar with the Persian and Baluch languages; and his acquaintance with the character of both peoples, and strong sympathy at all events with the latter, were hardly less valuable in many an emergency.

From the various characteristic scenes and conversations described, the reader can hardly fail to form a high opinion of this race. The Makrani is, and considers himself, the Baluch *par excellence*, comparing favourably, the author says, even with our allies of Eastern Baluchistan:—

"Balūchis are the best fellow-travellers in the world. In times of difficulty they get excited, shout, and work like demons. In camp they were always merry, and their conversation cleaner than any similar set of men I ever heard. They have a strong appreciation of the ridiculous, and inexhaustible good nature."

Their sense of fun and humour is always showing itself, every little adventure or difficulty becoming the cause for endless "chaff" and satire, while every new experience seems to strike them from the ludicrous side. The author gives many amusing instances of this, and of pointed satire and repartee, especially directed against the Persians, whom, though the ruling race, they do not hold in much respect.

On descending into the vast sandy desert of Persia, "I overheard Brahim ironically thanking God that we had at last arrived at the land of rose bowers and nightingales." Later on, meeting some Persians,

"the leader, riding up to the first man he saw (by chance Tajoo), called out to him in a bullying authoritative manner to bring him a light, and quite unnecessarily swearing at him to make haste. Tajoo had never been spoken to in that tone before, and seemed to feel only contempt for the man who could use it. He looked him quietly up and down, and then turned round to us with his most whimsical face and said, 'Now this, indeed, is an excellent Persian man. If they're all like this, we shall have some extraordinary enjoyment.'...Brahim offered him the wished-for light, and I heard him say, sneeringly, 'I suppose the Sahib has enormous quantities of money: all these boxes are full of it, eh?' 'No,' said Brahim gravely, 'these are all full of sand, which the Sahib has brought as a present for the Governor of Kirman, whose country hasn't got any.'"

There is no pleasanter feature in the book than the daily life and doings of the party. At first a wild and untrained set, his followers became, when once disciplined by the author's tact and firmness, a most trustworthy band, and well deserving the regard he felt for them. The point of honour is strong with them. Though none of them had ever seen snow or ice, and they felt the cold of the mountains severely, they preferred camping in the open to sleeping "like jackals" in a cave. On another occasion,

"the cold weather was intense. The thermometer marked 21° in the morning, and Brahim, disgusted at the complaints of one or two of the men, gave them every rag he had and slept in a thin cotton shirt sooner than the Balūch reputation for hardihood should suffer at their hands."

In fulfilling a trust, absolute honesty seems with these benighted savages to be a matter of course.

Many of the author's other portraits are also well and characteristically sketched—among them the jovial, honest muleteer Hāji, a model travelling companion and guide, and Mahmud Bey, a chivalrous Turcoman, to whose devotion at a critical moment the author probably owed his life. Hussein, one of his Persian guides, was

"apparently about seventeen years old; he was nearly six feet high, immensely broad, with huge fleshy limbs, and a round pink and white face, as of a somewhat dishonest cherub.....His speech was absurdly flowery. I was never less than a 'majesty of exalted place,' and even the men were all 'exalted places,' a thing they chuckled grimly over. When, however, they tried to assume this lofty position with regard to him, in such matters as fetching wood and water for the camp, our clever friend left them very far to leeward. They always chose their times badly, just when he was on the point of saying his prayers."

But one day

"our guide the cherub, whom we had not seen since arrival at Raiūn, was not to the fore. He lay dying, we were told, the result of his imbecility in fasting during a hard day's march, and then gorging quarts of water, raw turnips, dates, and any stuff he could lay hands upon. These *soi-disant* Muslimeen of Persia have no business to fast on the day's march, and the Kurān is sufficiently explicit on the subject, if they would only take the trouble to read it, instead of so much Hāfiz, Sheikh Saadi, and other obscene authors. Seeing that, after having been paid to guide us, he had invariably been at the rear of the caravan, I sternly refused all appeal for bakshish, even to defray his funeral expenses."

But the book must be read to appreciate the pleasant and natural way in which the author combines a description of the appearance of the country and its resources, the difficulties and adventures of the route, and the characteristic interviews with people of various classes, great and small, the whole being enlivened by the shrewd and humorous remarks of his men, to whom much that they saw was entirely novel. Mr. Floyer is, by his own account, an adept at the art—more necessary in Persia than elsewhere—of self-assertion. The circumstances under which he practised it certainly appear to justify him, though the necessity was, as he admits, sometimes due to the impolitic habit of being very shabbily dressed. However, the result seems to have been always successful. He was, moreover, very plain-spoken when moved by a display of meanness or wickedness. At Kahnu there was a poor slave who, having been maltreated and then abandoned by his master, seemed to be dying of starvation.

"No one would employ him, for he was still Ahmed Khan's slave, and no one would give him food without work.....I said, 'Do you mean to say that this boy is dying quietly before every one, and not one will give him a piece of bread? Verily, and by God, you are Muslims every one of you, and if you don't get to heaven and enjoy its fullest delights, then there is neither faith in God nor His prophet.' I shouted to my men, who by this time had loaded the camels and stood around, each one at his camel's head waiting for the route. 'Oh Balūchis,' I said, 'now we have indeed left behind us our own country, and entered that of the noble and powerful Gajars. Last night you saw the chief of this country as drunk as a female pig, and now you see a son of man starving in the midst of strong fat men because he is too ill to work.' 'Ah, miskīn bīchāra [*Ah, poor, helpless creature*], I've got some bread,' said two or three immediately, producing their food for the route. But the poor fellow couldn't eat bread, so Ghulamshah fed him with alternate sips of tea from my road bottle and bites of a hard-boiled egg. In five minutes Brahim was holding him on in front of him on his camel, and we marched out of Kahnu."

The Baluch prides himself specially on his politeness, and, as with the Arabs, a long string of salutations must be exchanged between passing travellers, at a serious sacrifice of time. Mr. Floyer being one day surrounded, at a distance from his party, by armed men, who began pressing on him unpleasantly with questions, adroitly turned the tables by waiting until there was a pause, and then said, in a slow and dignified manner:—

"'Salaam aleikum.' It took at once. Their self-respect and politeness were both touched. Their intense curiosity had led them into a serious breach of good manners, for even the commonest Balūchis will exchange salutations in a most punctilious manner. The one false step was irretrievable, and with the loftiest politeness I could assume, I pursued my advantage and went through the entire salutation. 'Peace be with you.' 'And on you be peace.' 'You are welcome.' 'May you be in safety.' 'Are you well?' 'Is all your house well?' 'By God's kindness all is well.' 'Give news.' 'I have none; and am interested only in your good health.' We were just beginning all over again, for it is impolite to be the first to stop, when the caravan hove in sight. As camel after camel came round the corner, each led by one of our jaunty devil-may-care fellows fully armed, the faces of my two heroes went through a series of dissolving views, and I heard one say to the other in a resigned and awe-struck tone, 'Well, I've lived nearly 3,000 years, and I've travelled over the whole of Balūchistan, but I never saw a man with so much property as that in all my life!'"

Mr. Floyer has a theory about the shrines, which consist of heaps of stones by the roadside, to which every passer-by contributes something:—

"They suggest the idea that they are crude attempts at road-clearing, and the natives all say that the Mullas have given out that it behoves all true believers passing along the road to cast at least one stone on each heap, to make the road easier to the holy pilgrims, thereby becoming part sharers in the latter's sanctity. The custom has been introduced into Balūchistan, where it is certainly particularly wanted, while the reason for it is not realized by such splendid hill walkers as the Balūchis, who always aver that each heap marks the burial place of some saint. Often, when ahead of the caravan in Balūchistan, I have made a heap of stones by the side of the tract, and, when the men got near, have ostentatiously thrown a stone on to it, and my example was always unhesitatingly followed."

But this will hardly explain the Highland cairn. We have left unnoticed many points of interest in the book, including the long journey through Persia by the northern route from Ispahan, through Daulatabad, to Bagdad; but we should mention that, while still leaving certain points unsettled, the author has carefully recorded the natural features of the country, and determined various positions, in parts hitherto unvisited. It only remains, then, to congratulate him on the use to which he put a well-earned holiday, and on this very satisfactory record of it.

Outlines of Primitive Belief among the Indo-European Races. By Charles Francis Keary. (Longmans & Co.)

MR. KEARY has written an interesting book on an attractive subject. The first chapter may, it is to be feared, prove deterrent to some readers, for it deals with questions which can scarcely be rendered generally entertaining. Indeed, the author advises "those who have no relish for psychological problems" to pass it by. Something of the same kind may be said of the second chapter, which deals with fetichism, nature worship, and anthropomorphism. But the rest of the volume, devoted mainly to poetic myths, legends, and tales, can be recommended to

all who care for the fair divinities of old religions and the forms in which popular fancy has embodied nature forces or moral ideas. Mr. Keary has evidently bestowed upon his subject much conscientious labour, and he has, as a general rule, treated it in a style deserving of high praise. Fortunately he is not run away with by any particular hobby. He has no wish, he says in his preface, "to establish any new theory of the origin of belief among mankind," and he does not use his artistic implements as weapons to be hurled against any theological adversaries. Towards the "solar" method of explanation he sometimes displays marked leanings, but he does not render it ridiculous by indiscreet employment. Here and there, it is true, he speaks of mere hypotheses as if they were established truths. Such a passage as the following is irritatingly dogmatic:—

"The Cyclops is a personification of the stormy sky; his one eye is the sun looking red and angry through the clouds, as we so often see it at the end of a tempestuous day. The Chimæra is herself the cloud which drops rain as the goat drops milk. The Furies (Erinyes) are descended from the Vedic Saranyū, the dawn. Beings like these are the first fruits of man's poetic faculty in its commerce with nature."

Now and then also Mr. Keary puts forward an explanation which it would have been better to keep modestly in reserve, such as this:—

"The sober truth about Marsyas' skin was, I suspect, that it was a sheepskin placed in a certain river in Asia Minor in such a way that the water running through it gave it a tuneful sound; not less, however, is Marsyas the typical river god, who sets up his earthly music in despite of the airs of heaven."

The following passage also seems to be of doubtful accuracy, so far as "the Aryan Indian" is concerned:—

"All through the history of belief we shall find one or both of these two gods—the god of love or the god of wine—possessing a mighty power. For one class of people and for one climate the one indulgence, for other sorts the other. Aphroditê for the southern Greek and the Greeks of the islands, and for the Asiatic people of warm Semitic blood. Dionysus for Thrace and the shepherds of the north, and chiefly, too, for the Aryan Indian and Persian. Wine for the German, love for the Celt. 'For beauty and amorousness, the sons of Gaedhil.'"

The statement about "the Aryan Indian" is supported by a foot-note to the effect that "the place which is occupied in the Vedic ritual by the intoxicating plant Soma is a sufficient proof of this."

The best part of Mr. Keary's book, we are inclined to think, is that which is devoted to the heathen beliefs of the north of Europe. He is thoroughly well read in German and Scandinavian literature, and he has turned his studies to good account. The four chapters on "The Gods of the Mark," "The Gods of the Homestead," "The Shadow of Death," and "Ragnarök" are full of sound knowledge and poetic description. No one can fail to read them with pleasure as well as with advantage. The following passage, extracted from the chapter on "The Beliefs of Heathen Germany," may be taken as a fair specimen of Mr. Keary's style:—

"The greater part of the forests of Northern Europe are *black forests*—that is to say, composed of pine trees—and in such the coming of the storm is made the more wonderful from the silence which has reigned there just before. Who that has known it does not remember this strange stillness of the pine forest? Anon the quiet is broken by a distant sound, so like the sound of the sea that we can fancy we distinctly hear the waves drawing backwards over a pebbly beach. As it comes nearer the sound increases to a roar; it is the rush of the wind among the boughs. Such was the coming of Odhinn. And now see! far overhead with the wind are riding the clouds. These are the misty beings, born of the river or the sea, whom we have already encountered in so many different mythologies. In India they were Apsaras (formless ones) or Gandharvas; in Greece they were nymphs, nereids, Muses, Aphroditês, Tritogeneias. In the Teutonic creeds they are the warlike, fierce Valkyriur."

The three chapters devoted to Greek mythology may also be highly commended. One of them traces the history of the Hellenic deities through a series of changes corresponding to various phases of religious growth. Another discusses the Mysteries, the wanderings of Dêmêtêr, and the abduction of Persephonê. The third deals with the Odyssey and "the Sea of Death." They are very pleasant to read, and they testify, like the rest of the work, to careful and earnest study on the part of their author. Some idea of their nature may be conveyed by the following extract from the chapter on "Zeus, Apollo, Athênê":—

"The belief of Christianity is a belief in the beauty of holiness; the creed of Hellas was a belief in the beauty of the world and of mankind. Nature was no longer terrible to those who had grown to understand her better. They were not only in a new nature, but they looked upon nature with new eyes. Once Zeus had embodied all that seemed most impressive in the world around—the dark rugged land, the storm heard in the forests, and the sea raging against the shore. And he was in himself the soul of such scenes. To him might have been addressed the words of Patroclus to Achilles—

Grey ocean bore thee, and the lofty rocks: for cruel are thy thoughts.

But when Apollo and Athênê had taken their place beside Zeus men saw the sun rise in a milder majesty, and the airs grew calmer, and the hills were clothed with purple brightness. From the bare mountains of Thrace, from windy heights and perilous seas, the Greeks had passed to the Ægean, to its safe harbours and its thousand laughing islands; they had exchanged the lonely life of shepherds for the security of streets, for commerce, and for luxury. Apollo was a lover of nature, but not in her most terrible aspects; 'the high watches pleased him and the far-reaching mountain-tops, and the rivers that run into the deep, and the shores stretching down to the sea, and the sea's harbours.' Wherever on the Asiatic coast some promontory extended commanding a wide horizon there was sure to have stood from old times a temple to the sun-god. From such places, from those high watches, men saw him as he rose, and prayed to him when he sank into the waters. He went, they deemed, to an unseen divine land whither the dead heroes had gone before. And before he quite descended he seemed to stand as a messenger between men and that future world. It was not so much the far-off heaven of the gods to which he was going, as to the happy land of the blessed set apart for mortals; and the two worlds between which he stood were both human habitations, though one was the world of the living and the other of the dead. Therefore Apollo was always the friend of man and accessible to human prayer."

The last two chapters of Mr. Keary's book deal with "The Earthly Paradise" and with "Heathenism in the Middle Ages." In one of these he discusses the survival of pagan influences in mediæval pictures of a terrestrial place of future happiness—a home of sensuous ease, free from carking care and the cold shadow of death, a region in which, apart from mortal turmoil, Arthur might continue to rule among his knights and Charlemagne among his paladins. In the other he attempts to discover "what strain of heathenism still lingered in the Christianity of the Middle Ages, and how far the life and thought of the men of those days was a legacy from the past life and thought of the heathen days which had been before them." The subject, as he says, is too large to be duly dealt with in a single chapter; but what he has written about it is so eloquently expressed that it may be perused with pleasure even by readers who do not entirely agree with the arguments of which he makes use.

Altavona: Fact and Fiction from my Life in the Highlands. By John Stuart Blackie. (Edinburgh, Douglas.)

WHATEVER view may be taken of his political remedies, Prof. Blackie certainly has a good knowledge of the evils he seeks to cure. The interest of his book to some readers will be not a little enhanced by the disquisitions on the language and history of the country which incidentally occur. It is couched in the form of a dialogue, in which the interlocutors are a Highland gentleman, who may be fairly taken to expound the sentiments of the author, consisting of Toryism, Radicalism, and Presbyterianism in equal proportions, mingled with the anti-commercial and military spirit of the genuine Celt; his cousin or niece, who represents the point of view of old Highland Catholicism, and is the principal authority for the poetry and traditional lore; Bücherblume, a German professor, who brings to the study of a new subject an amount of minute information on collateral topics which contrasts with the complete ignorance of an English "Episcopo-Oxonian." This gentleman, except in affability and good will, contributes nothing to the discussion, until he becomes interested in the ecclesiastical antiquities of Iona and Oronsay and the modern ecclesiasticism of the Free Kirk in the North. Mr. Church is certainly an unflattering, though hardly an exaggerated specimen of the average Englishman of culture when placed amid foreign surroundings. His good-humoured acknowledgment of utter ignorance of the history and feelings of his Highland friends is amusingly characteristic. One would think, however, that there must be few Englishmen who literally do not know who their grandmothers were, and surely most even of Oxford dons must have read of the "brim battle of the Harlaw." A fifth interlocutor is provided in Hilarius, the school inspector, a thinly veiled personality, whose special subject is the geological conformation of the country.

The party, with the occasional assistance of native boatmen and others, spend a summer holiday in picnics and discussion, in the course of which the sports, antiquities, and agricultural condition of the Highlands are diffusely treated, while the scenery is celebrated in the strains of

bards who deserve to be known more widely than they are. Here is Duncan Ban M'Intyre's description of a mountain stream:—

From the rim it trickles down
Of the mountain's granite crown
Clear and cool;
Keen and eager though it go
Through your veins with lively flow,
Yet it knoweth not to reign
Through the chambers of the brain
With misrule;
Where dark water-cresses grow
You will trace its quiet flow,
With mossy border yellow,
So mild, and soft, and mellow,
In its pouring.
With no slimy dregs to trouble
The brightness of its bubble
As it threads its silver way
From the granite shoulders grey
Of Ben Dorain.
Then down the sloping side
It will slip with glassy slide
Gently welling,
Till it gather strength to leap
With a light and foamy sweep
To the corrie broad and deep
Proudly swelling;
Then bends beneath the boulders
'Neath the shadow of the shoulders
Of the Ben,
Through a country rough and shaggy,
So jaggy and so knaggy,
Full of hummocks and of hunches,
Full of stumps and tufts and bunches,
Full of bushes and of rushes,
In the glen,
Through rich green solitudes,
And wildly hanging woods,
With blossom and with bell,
In rich redundant swell,
And the pride
Of the mountain daisy there,
And the forest everywhere
With the dress and with the air
Of a bride.

Mr. Blackie certainly in this volume gives plenty of proof that the stores of Gaelic poetry are not to be despised. He laments, with all lovers of the Highlands, that an ancient and musical tongue should be doomed to extinction through the apathy of the upper class of Celts and the ignorance of cultivated Saxons. "There is one key to the hearts of all Highlanders," says Macdonald, "and I possess it."

"*Ch.* What is that? *Mac.* I speak Gaelic. *Ch.* Is that a rare accomplishment? *Mac.* I am sorry to say it is—amongst the Highland gentry. *B. The more fools they, if such a natural accomplishment can command so much love.*"

If Highland lairds had been as much alive to the treasures of their ancestral tongue as many Teutonic scholars are, it would hardly have been worth the while of Irish land agitators to send Celtic-speaking missionaries to the Hebrides. Mr. Blackie's eloquent pen is under no difficulty in making the worst of what is certainly an unwholesome state of things—a factitious wilderness in which, for the most part, the remnant of the native inhabitants are reduced to the most subordinate positions, while the land, in the hands of alien or absentee proprietors, is used merely for the sports of the rich, or for sheep-breeding, which itself is carried on by farmers from the distant Lowlands. No doubt in the early days of the century much was urged, and still may be, on grounds of political economy, in favour of "the clearances"; but while the economical conditions have changed, the higher patriotism which prefers men to money was then, as now, outraged by the purely commercial spirit which prompted the desolation of the glens.

Woe to them who choose for a clan
Four-footed people!

is the feeling not only of the Celt, but of any one who combines sympathy with his economic doctrines; and woe, we may further say, to the shortsighted ignorance which imagines that politics can be divorced from feeling. As to the possibility and justice at this time of day of the remedies Mr. Blackie suggests there will be very various opinions: he has, at any rate, stated the case of the crofters very forcibly, and not without recognition of the excellence of many landlords who look upon Highland estates as something more than shootings. Besides the exhaustive discussion of the "land question," there are some interesting conversations on ecclesiastical politics in the North, where, be it noted, the Free Kirk is averse from disestablishment for various reasons, among others that with large parishes "they perceive that a little State subsidy and division of labour is not to be regarded readily as an abominable thing."

An earnest plea for Gaelic in schools as the best method of education, "educing what lies in germ," and providing the complement of the merely scholastic inscription of formulas on the mind, is the last aim of the book, which closes appropriately, as it commenced, with song. The verses interspersed in the dialogue are of various merit; most of the translations are somewhat free, and where the Gaelic method of rhyming has been imitated, as in 'Agus O Mhórag,' we cannot think the attempt particularly successful.

NOVELS OF THE WEEK.

The Shackles of an Old Love. By Mrs. Wilkin. (Allen & Co.)

The Dawn of the Twentieth Century. 3 vols. (Remington & Co.)

Cobwebs. By Mabel Collins. 3 vols. (Tinsley Brothers.)

"Queen like, she stood before her mirror, and what did that mirror reflect? A delicious dream, half sensuous, half divine. Her tall *svelte* figure gowned in the traditional white satin of bridehood, her firm well-set forehead wreathed with inevitable but mystic orange blooms," &c. When the heroine is sensuous and *svelte*, the novel-reader knows that a certain amount of moral acrobatism will be practised on the line which divides the proper from the improper in the case of heroines. The "inevitable but mystic orange blooms" signalize Regina's marriage to a grand but elderly colonel; there is, however, at the moment of the Indian wedding a captain in England who is also grand and far from elderly. The ceremony which unites his love to Sir Henry Radcliffe is not more effectual than the devotion to himself of a fair cousin to whom he is in some sort engaged to wean Eustace de Mowbray from his passion for "Regina, Lady Radcliffe." Yet much credit is due to both inasmuch as in spite of opportunity they exercise patience till the deaths of the colonel and the cousin fairly give them their freedom and happiness. Regarding the distress of the faithful Lady Vixen, Mrs. Wilkin thus moralizes:—

"Poor foolish Vixie! Broken hearts are as common nowadays as broken limbs, broken reputations, and broken fortunes! Broken limbs can be patched up again or exorcised by Hutton into becoming once more sweet and serviceable to their wearer. Broken reputations! what say the wise French? 'Ce n'est que le premier pas qui coûte.' Broken fortunes!—hey presto! Is it not as easy to blow bubbles as it is for them to burst? Broken hearts! Oh, is there any balm in Gilead—any angel footfalls on the tufted floor? Whose voices whisper,—

Quaff, oh quaff the kind Nepenthe!"

Indeed, Lady Vixen has much wrong, and her death involves more real pathos than most of the incidents in this somewhat diffuse history. The military and sporting episodes interspersed with the doleful current of love have a more real ring about them than the romance they adorn; and on the whole we prefer Warren's mode of diction, hopelessly slangy as is that warrior's language, to the extraordinary pigeon-English, consisting of French, Spanish, Hindoostanee, and tall talk, in which a great part of the narrative is couched. However strange the medium of conveyance, it must be admitted that the story is not dull, and by the time the various couples have been finally and judiciously paired, the reader feels that he has had good measure for a considerable expenditure of patience.

The writer of 'The Dawn of the Twentieth Century' has not produced a lively picture of the period. He anticipates a sort of bourgeois millennium when Radicalism has become tempered with old-fashioned Toryism, and when the Roman Catholics, the Established Church, and the Dissenters have all become united, after the abandonment of the Papal infallibility and the discovery of documents proving that England had never been definitively separated from Rome. By using as actors in his scenes political persons now living, and changing only their surnames, the author hopes that those who are moderately acquainted with politics will be able to read between the lines, and indeed the task is very easy. The political changes seem to be mostly due to the influence and to the remarkable change in the opinions of Mr. Joseph Workington, who was Mr. John Freeman's colleague as member for Polinghurst. A book of this sort is sure to be heavy if the author has not more than common imagination and invention, and these the author of 'The Dawn of the Twentieth Century' certainly does not possess.

There is a good deal of fancy and spirit about Miss Collins's tales. 'Cobwebs' is the experience of a young married woman who, to assist her husband, tries her fortune on the stage and undergoes much misconstruction and mortification. There is evidence in the story that the author knows to some extent what she is writing about when she deals with the "external stimulant" of an actor's life. "A woman of fashion" is a repulsive creature, who endeavours to buy a man's caresses by presenting jewels to his wife. The lady's "ardent Southern nature," however (she is not altogether an Englishwoman, though an English peeress), fails to triumph over the virtuous American artist whom she has inveigled to her house. 'Lady Janet the Medium,' 'Behind the Screen,' and other stories, are more or less well imagined scenes from social life; though that Lady Jane, who is fascinated by the charms of a ruffianly swindler of low origin and manners, "was the victim of one of those

XUM

infatuations which seem most often to affect delicate and refined women," we do not believe. 'The Idol of an Hour' is an amusing case of mistaken identity, the desertion of "Otto Wodehead" and the rest when Lilla is proved merely to be a successful *débutante* in painting being prompt for persons of such languid movements generally. 'Ariel' and 'In Cold Blood' are not without indications that the author might be successful in the field of mystery. There is a circumstantiality in the latter story which is highly promising. 'Two Beauties' is a trifle vulgar, as is sometimes the case when the manners of great-great-grandmothers are taken in hand by their descendants. With this exception, and that of some tricks of manner, such as the copious use of the enclitic "to" at the end of sentences, there is nothing disagreeable, and much that is happily conceived, in these slight volumes.

HISTORICAL AND ANTIQUARIAN PUBLICATIONS.

THE *History of the Edinburgh or Queen's Regiment, Light Infantry Militia, (now) Third Battalion the Royal Scots*, by Major R. C. Dudgeon, has been sent to us by Messrs. W. Blackwood & Sons. It is about time that the historians of militia regiments should cease to devote the first chapter to a sketch of the origin and progress of the oldest branch of the land forces. It must be admitted, however, that Major Dudgeon's sketch is succinct and clear, and that he supplies some useful information on the subject of the recent fusion of the militia with the regular army, if indeed there can be any real fusion when the conditions of service of the two branches of the army are so different. Though the English militia in its present form may be said to date only from 1756, it was not till forty-one years later that a similar force was established in Scotland, although in Scotland, as in England, a militia force, in some form or other, is of old date. In 1778 a regiment called the "Southern Fencibles" was raised from the counties of Edinburgh, Berwick, Haddington, Linlithgow, Peebles, Selkirk, Roxburgh, and Dumfries. This corps remained embodied till the peace of 1783, when it was disbanded. In February, 1797, the 2nd Royal Edinburgh Volunteers was founded, the colonel being the Duke of Buccleuch, who had commanded the Southern Fencibles. In 1797 an Act was passed by which the raising by ballot of a militia force in Scotland of 6,000 men was authorized. Among the regiments raised under this Act was the 10th North British or Edinburgh Regiment, the Duke of Buccleuch being appointed colonel. The regiment remained embodied till the peace of Amiens, and the peace having proved but a lull in the storm of war, the 51st or Edinburgh Militia was shortly afterwards raised. The appointment of colonel being in the gift of the lord lieutenant of the county, the Duke of Buccleuch nominated himself, and several of the officers who had served under him in the 10th North British Regiment received commissions. On the 11th of April, 1802, the regiment was embodied, and remained so till the 3rd of April, 1815. During those twelve years it furnished 833 men to the regular army. Nothing worthy of record occurred till the beginning of 1855, when the regiment was again embodied and remained so till May in the following year. On the 1st of July, 1881, the regiment became the 3rd Battalion the Royal Scots (Lothian Regiment). A final chapter is devoted by Major Dudgeon to a brief sketch of the origin and history of the Royal Scots.

NONE of the chapters in *America: a History*, by the late Mr. R. Mackenzie (Nelson & Sons), shows signs of the author having engaged in original research, yet it is evident that he had often consulted the best authorities. Sometimes he follows them implicitly, failing to weigh their respective value and to estimate for himself the probability of one or the other being trustworthy. In the case of Capt. John Smith, who is lauded by Mr. Bancroft as the Father of Virginia, Mr. Mackenzie repeats the old fables about Smith and Pocahontas. He accepts Smith's own account of himself, an account which is as worthy of credence as Capt. Lemuel Gulliver's narrative of his adventures. The following paragraph, which is a fair sample of Mr. Mackenzie's style, shows how he deals with the Pocahontas legend :—"When the welfare of the colony was in some measure secured, Smith set forth with a few companions to explore the interior of the country. He and his followers were captured by the Indians, and the followers were summarily butchered. Smith's composure did not fail him in the worst extremity. He produced his pocket compass, and interested the savages by explaining its properties. He wrote a letter in their sight—to their infinite surprise. They spared him, and made a show of him in all the settlements round about. He was to them an unfathomable mystery. He was plainly superhuman. Whether his power would bring them good or evil they were not able to determine. After much hesitation they chose the course which prudence seem [*sic*] to counsel. They resolved to extinguish powers so formidable, regarding whose use they could obtain no guarantee. Smith was bound and stretched upon the earth, his head resting on a great stone. The mighty club was uplifted to dash out his brains. But Smith was a man who won golden opinions of all. The Indian chief had a daughter, Pocahontas, a child of ten or twelve years. She could not bear to see the pleasing Englishman destroyed. As Smith lay waiting the fatal stroke, she caught him in her arms and interposed herself between him and the club. Her intercession prevailed, and Smith was set free." This story of Pocahontas is quite as authentic as that of Glumdalclitch, a little Brobdingnagian girl, nine years old and forty feet high, saving Gulliver from being drowned in a cream jug. Nor is the subsequent reference to the Indian maiden as complete as it should be. Mr. Mackenzie writes how, five years later, John Rolfe, "an honest and discreet Englishman," fell in love with her, and after a mental struggle about uniting himself with "one of barbarous breeding and of a cursed race," he first converted her to Christianity, next caused her to be baptized, and then he married her. This is the oft-repeated tale. The important fact is omitted that the philanthropic John Rolfe had a wife living at the time he is said to have married Pocahontas. Sir Thomas Dale, the Governor of Virginia, tried to marry a sister of Pocahontas, for the same reasons assigned by John Rolfe and despite the fact that his wife was living also. The number of lesser slips is considerable. At p. 19 Mr. Mackenzie writes: "Occasionally toy ships of 20 or 25 tons were used. The brother of Sir Walter Raleigh crossed the Atlantic in such a ship, and perished in it as he attempted to return to England." Now, Sir Humphrey Gilbert was the brother-in-law, and not the brother, of Raleigh. He crossed the Atlantic in the Delight, a vessel of 120 tons burden; it was on the return voyage from Newfoundland that he perished in the Squirrel, a vessel of ten tons. At p. 85, "the hungry eye of Lord Grenville" is looking where a new tax might be laid. The "hungry eye" belonged to George Grenville; not till many years afterwards was there a Lord Grenville in the person of his brother. At p. 87 Mr. Mackenzie writes: "It was during the agitation arising out of the Stamp Act that the idea of a General Congress of the States was suggested." He must have penned this in forgetfulness of the General Congress which met at Albany twelve years before the Stamp Act passed. He repeats at p. 105 the common statement about the Declaration of Independence having had "the unanimous concurrence of all the States." He ought to have explained that the declaration was carried by one vote only, and that the minority agreed to allow the decision to go forth as if there had been no difference of opinion. We thought that the facts about Napoleon and the Berlin decrees were so well known that no mistake could be made about them. Yet Mr. Mackenzie, writing at p. 141 under date 1806, states: "England gave out a decree announcing that all the coasts of France and her allies were in a state of blockade, and that any vessels attempting to trade with the blockaded countries were liable to seizure. At that time nearly all the Continent was in alliance with France. Napoleon replied by declaring the British Isles in a state of blockade." The truth is that Napoleon launched a decree from Berlin on the 20th of November, 1806, declaring the British Islands in a state of blockade, and it was not till the 7th of January, 1807, that the British Government retaliated by prohibiting trade with French ports. With regard to Newfoundland, it is written at p. 406 that the Government of Charles II. ordered the settlers to leave the island, and that "the barbarous edict was enforced by burning down all houses and wasting the fields of the inhabitants." The edict was truly barbarous; but at the solicitation of a settler it was rescinded, and the houses were not burnt down neither were the fields laid waste. If it were true, as is written at p. 422, that the Nelson river can be rendered navigable for large vessels, many persons would rejoice. It is because the river has so many serious obstacles to navigation that a railway is about to be constructed along the valley of that river from the northern end of Lake Winnipeg to Port Nelson. Mr. Mackenzie is not singular in failing to apprehend the difference between the Pilgrim Fathers and the Puritans who settled in Massachusetts. In a foot-note to p. 506 he writes: "Thirty years after the Pilgrim Fathers had settled in Massachusetts, Cromwell invited them to remove to Jamaica." The Pilgrim Fathers founded New Plymouth; the Puritan Fathers founded Massachusetts, and it was with the latter that Cromwell entered into correspondence.

A History of England from the Revolution of 1688. By Martin Simpson. Vol. I. (Stokesley, Tweddell & Sons.)—The author of this volume is Lecturer in Natural Science, author of 'A Guide to the Geology of the Yorkshire Coast,' 'Lias Fossils,' 'Guide to Whitby,' &c., and curator of the Whitby Museum. At first sight it would appear that an acquaintance, however intimate, with the Yorkshire coast in general and with Whitby in particular is not, taken alone, a valid reason for regarding oneself as qualified to write a history of England; and as there is no preface we are free to draw our own conclusion that Mr. Simpson undertook this work as a pleasing relaxation from the strain of his geological investigations. Regarded as such it will no doubt be viewed with interest by Mr. Simpson's friends, though the general public will be inclined to question its utility. The book can scarcely be called a work of research, for it contains no new information or theory; nor a school-book, for it is entirely deficient in that sort of arrangement which would render it useful for schools. Sentences occur at times which make one think that Mr. Simpson must have been reading Macaulay; but the style of that author has not been slavishly imitated. With [illegible] slight qualification, the volume before us, containing the reign of William III., is sufficiently accurate, and the printing is creditable to the little Yorkshire market town which has produced it.

Furness Past and Present: its History and Antiquities, in two large quarto volumes (Barrow-in-Furness, Richardson), has the unusual merit of being edited by its projector and publisher, Mr. Joseph Richardson, of Barrow-in-Furness,

who in the introduction states that he first entertained the idea of bringing out this work in 1870 and finally completed it in 1880. He also points out, with some pardonable degree of pride, that the book is "profusely illustrated," and that "although altogether produced on the publisher's premises (the wood engravings excepted), it has cost upwards of 4,000*l*." The preface, which is dated from "Stokesby, Yorkshire, May, 1870," is a remarkable production. Starting with the statement that 'The Antiquities of Furness,' by the Rev. Thomas West, was published in 1774, "when George III., Æ. 36, was only in the fourteenth year of his long and eventful reign," the ingenious author takes up no less than twenty-five quarto pages in describing not only those who were Mr. West's contemporaries in that year all over the civilized world, but also in giving the names of those who were then recently dead as well as those who had not then been born! The way in which the most incongruous persons are brought together is amusing, but no quotation can give any idea of the extraordinary character of this preface as a whole. No wonder the author freely confesses, "I have laid every source of information I have had access to under tribute for my readers." In spite, however, of this unsatisfactory beginning, these two volumes show much industry and a striving after truth which is very commendable. The antiquary need not expect to find any additions to the early history of this portion of North Lancashire, but he will as a rule find that history fairly summarized; and the more modern history, which it may be presumed is more interesting to Mr. Richardson's readers and subscribers, is given in great detail. Few districts have altered more than Furness has during the past hundred years. The development of the hematite mines and the iron trade generally has completely changed the face of the country. So lately as thirty-seven years ago, in 1845, the name of Barrow was not found in any map of the district: it had then seventeen houses, with a population of about seventy people. In 1875 its population was 41,000, it had become a municipal borough, and was striving to obtain parliamentary representation. Of those who have contributed to this wonderful growth the reader will find full and presumably accurate accounts in this book, the narrative of the rise of the town and the district generally being given in great detail. The illustrations are varied in character. Most of them are lithographic plates of scenery and of the modern houses of the large employers of labour in this district, but there are also facsimiles, maps, plans, &c., together with portraits of those to whose genius, skill, and good luck Furness generally and Barrow-in-Furness in particular owe so much. Those who like to gaze upon the features of these distinguished local men, from the Dukes of Devonshire and Buccleuch downwards, can do so here to their hearts' content. Not only this, but the "arms" of the Furness families, both old and new, are given, illuminated in gold and colours, thereby not only adding to the appearance of the book, but also, no doubt, increasing the number of Mr. Richardson's subscribers and patrons. This book does not appear to be much known outside of the district to which it specially relates, but it is one which will commend itself to those who wish to know more of the present state of North Lancashire and who care to trace out the rapid growth of that now very important district. Mr. Richardson appears to have spared no pains to obtain the most modern information, and has now placed it upon permanent record in these two volumes.

Nooks and Corners of Lancashire and Cheshire, by Mr. James Croston, F.S.A. (Manchester, J. Heywood), is a handsome volume containing descriptive accounts of some of the most interesting places in Lancashire and Cheshire. Mr. Croston's plan has been first to describe the localities themselves and then to relate the history of the persons or families who have become identified with them. Thus under Marple Hall in Cheshire is an account of the Bradshaw family and of John Bradshaw, the President of the High Court of Justice which condemned King Charles. The College at Manchester brings into prominence the Wizard Warden, Dr. John Dee, whilst the Fittons of Gawsworth, the Leghs of Adlington, the Byroms of Kersall Cell, and Samuel Crompton, the inventor of the spinning mule, all claim attention and are treated of in separate chapters. Whalley Abbey and Stonyhurst College, Ribchester, the Cartmel Shore and Wraysholme Tower, all in Lancashire, together with Beeston Castle in Cheshire, are the headings of the remainder of the ten chapters of which this volume consists. Mr. Croston does not profess to give much new or original matter, but, as he himself states, his aim has been rather "to seize upon and group, from such accredited sources of information as were available, the leading facts and incidents relating to special localities.....and by combining with the graver and more substantial matters of history an animated description of the physical features and scenic attractions of the localities .....to render them more interesting to the general reader." In doing what he has thus undertaken Mr. Croston has undoubtedly succeeded, for he possesses a fluent and pleasant style which is likely to carry most of his readers on with him. Many of the chapters are perhaps somewhat unduly spun out; but this, which was excusable when these articles appeared in a newspaper, should have been corrected when they came to be reprinted in book form. The same also holds good of his acknowledgments to previous writers. In the columns of a newspaper it is not always easy to do this, but in the pages of a book the least that can be expected is that foot-notes should be used, stating whence the information given in the text has been derived. In this respect Mr. Croston sins flagrantly. Whilst his indebtedness to previous writers is very great, his acknowledgments are almost *nil*. As a second series is to follow, it is much to be hoped that he will there be more mindful of his obligations to others. It only remains to say that the book is well printed, with good margins, and is tastefully got up. Some of the woodcuts are, however, extremely poor.

M. PAUL MEYER has sent us an interesting paper published by him in *Romania* on an Anglo-Norman poem containing a contemporary history of William Marshal, the great Earl of Pembroke, who won Magna Charta from King John, and was Protector in the first three years of Henry III. It seems extraordinary that such a remarkable production should have attracted so little attention hitherto. M. Meyer first met with the original MS. at the sale of the Savile collection in 1861, when, after the British Museum authorities had offered 200*l*., and Sir Frederic Madden 250*l*., it was knocked down to the late Sir Thomas Phillipps for 380*l*. It reposed for some years in his library, utterly unknown to the world, but was identified two years ago by Miss Toulmin Smith, and extracts from it are given by M. Meyer at considerable length. From these it appears to have been composed by some professional troubadour, partly from oral and partly from written information, a few years after the hero's death, and it is expressly said to have been done at the expense of the earl's son William, who succeeded him in the title. It is certainly a very polished work, and seems to be of no small historical value, even in the passages relating to the hero's early years. For example, we are told, near the beginning, how John the Marshal, father of the future earl, who took the part of the Empress Maud in the war against Stephen, on one occasion gave his little son William to the usurper as a hostage, and recklessly endangered the poor lad's life by refusing to surrender Newbury at the appointed term. King Stephen, as if to make sure, himself conducted the little fellow to the place of execution, but was so charmed, it seems, with his behaviour on the way that he forbore to carry out his intention. We may add, in justice to the "worthy peer," that this is not the only passage in the poem which attributes to Stephen a delight in childish gaiety. Surely a little usurpation may be pardoned to a king who, as we read elsewhere, was capable of playing at *chevaliers* with a little boy. These *chevaliers*, from the description of the game, would almost appear to be the species of plantain so used to this day, and called by children "Jack Straws" or "fighting men," except that they are said to have had broad and pointed leaves:—

Qui ont la folille agüe et lée.

But whatever they were, little William decapitated the *chevalier* in the king's hand to his great satisfaction, and we are very glad that the record of the fact remains for the credit of King Stephen.

OUR LIBRARY TABLE.

MESSRS. KEGAN PAUL & Co. send us the first volume of an edition of *Shakspere's Works*, which forms part of the "Parchment Library." It is prettily printed, and it is a pity that the editor should adopt the spelling of Shakspeare's name which has least authority. As he has not prefixed any account of his method of forming his text, we must defer further notice.

MR. HENRY VIZETELLY has written a quarto volume on the *History of Champagne* (Sotheran & Co.), in which he has collected a large number of facts, many of them very curious and interesting. Mr. Vizetelly has traced the gradual growth in popularity of sparkling champagne since the days of Dom Perignon, and he has not neglected the earlier history of the Champagne vineyards. In the second part of the book Mr. Vizetelly has added particulars regarding the cultivation of the vines, and the chief firms at Rheims, Épernay, &c. A large number of woodcuts are given, some excellent, but some might as well have been omitted.

WE have received from Messrs. Rivington *The Annual Register* for 1881. "Literature" is not well represented by the short, "scrappy" reviews of English books, arbitrarily selected, given at the end of the volume. More editorial control over all the articles is needed, with the view of producing uniformity in the spelling of names, and the avoidance of repetition such as has occurred with regard to the Central Asian, the Tunisian, and other questions. The index also might be greatly improved, but the articles themselves are almost without exception good. At p. 269 the writer of the article on Russia seems to suppose that the railway has been made to Askabad, which is not the case.

WE have some other books of reference on our table. Among them is the *Army and Navy Calendar* (Allen & Co.), a most useful and well-compiled compendium of information respecting both services. It is amply provided with plans, and the price is most moderate.—Mr. Murby sends us the *Insurance Blue Book*, an excellent handbook which has reached its tenth year of issue.—Messrs. Dulau send us a convenient *Catalogue of French Books*.

THE first volume of the *Sunbeam Library*, sent us by Messrs. Longman, contains a great deal of reading for half-a-crown.—One of the best of the sixpenny publications is Messrs. Routledge's reissue of Staunton's *Shakspeare*.

WE have received from Messrs. Juta, Heelis & Co. the first three numbers of the *Cape Quarterly Review*. This review is the successor of the defunct *Cape Monthly Magazine*, and a series of papers entitled 'Chronicles of the Cape Commanders,' which began in the *Cape Monthly*, are continued in the *Quarterly*. They are founded on official documents to which the writer, Mr. George M'Call Theal, the author of a volume of Kaffir folk-tales, has had access. The 'Journal of the Trek Boers' is a narrative

of the sufferings of a number of Dutch farmers and their families who in 1874 "trekked" from their farms in the Transvaal. In the same number is an article on Thomas Pringle, the Scottish poet. In No. 2 begins an account of the political and commercial relations subsisting between England and Russia in the second half of the sixteenth century, written by Count George Tolstoy, who settled at the Cape and married an English lady there. This contribution is continued in the third number, which also contains 'Notes on Books relating to South Africa.'

THE Committee of the Free Libraries of the Manor of Aston mention in their *Fourth Annual Report* that the new library buildings were completed in December last, and that the collection of works of reference, which had been in course of formation during the last two years, has been thrown open to the public.

WE have also received the *Report* of the Committee of the Free Library at West Bromwich for the year ending March 25th.

MONSIGNOR SETON has gathered into a volume a dozen *Essays on various Subjects, chiefly Roman*, and they are printed by the Catholic Publication Society of New York. The book aims chiefly at giving information, and it gives it intelligibly and, on the whole, pleasantly. Readers who want to know the story and the working of Roman Catholic institutions will find in it much to their purpose; but they will look in vain for any new light on the doctrine or the influence of the Church.

WE have on our table *Golden Threads from an Ancient Loom*, by L. Hands (Griffith & Farran), —*Dick the Newsboy*, by Rev. T. Keyworth (Glasgow, Marr),—*Crowns of all Nations*, by A. Göhre (Fischer),—*Good Times*, by D. Wheeler (New York, White & Stokes),—*H.R.H. Prince Leopold*, by Rev. C. Bullock ('Home Words'),—*The Braes o' Mar*, by A. H. Wylie (Nisbet),—*The Council of Canterbury*, by H. W. P. (Simpkin), —*The Anniversary Text-Book* (Griffith & Farran), —*Mountain Psalms*, by J. V. von Scheffel (Trübner),—*Poems of English Heroism*, by A. C. Auchmuty (Kegan Paul),—*Sir Hervey's Bride, Poems*, by J. O'Reilly Hoey (Marcus Ward),—*Rip van Winkle, Poems*, by A. R. Grote (Kegan Paul),—*Gerontius*, by Sylvius (Provost),—*Three Vows*, by W. B. Greene (Low),—*The Perfect Way; or, the Finding of Christ* (Field & Tuer),—*The Reign of Christ on Earth*, by D. T. Taylor (Bagster),—*The Divine Patriot*, by R. F. L. Blunt, D.D. (Kegan Paul),—*Pleasant Talks about Jesus*, by J. Colwell (Bemrose),—*Stories from the Life of Moses*, by R. Bartram (S.S.A.),—*What is the Truth as to Everlasting Punishment?* Part II., by the Rev. F. N. Oxenham (Kegan Paul),—*Fragments from the Early History of the Christian Church*, Parts I. and II. (Nisbet),—*Onesimus, Memoirs of a Disciple of St. Paul* (Macmillan),—*Vorlesungen über Aesthetik*, by K. C. F. Krause (Leipzig, Schulze),—*Philosophie Elliptique du Latent Opérant*, Part II., by Marquis de Seoane (Paris, Klincksieck),—*Il Mar Morto e la Pentapoli del Giordano*, by E. Falcucci (Leghorn, Giusti),—*La Mujer Marroqui*, by D. F. O. Y. Canales (Madrid, Hernandez),—*Poésies Fantaisistes*, by Comte de la Houssaye (Paris, Noblet),—*Der Bravo*, 2 vols., by F. Cooper (Stuttgart, Spemann),—and *Der Brautmarsch*, by B. Björnson (Stuttgart, Spemann). Among New Editions we have *Greek Accentuation*, by H. W. Chandler (Frowde),—*Deschanel's Treatise on Natural Philosophy*, by J. D. Everett (Blackie), —*Empirical Psychology*, by L. P. Hickok (Boston, U.S., Ginn & Heath),—*A Complete Guide to Matriculation at the University of London*, by W. Dodds (Heywood),—*Every-day Life in our Public Schools*, by C. E. Pascoe (Griffith & Farran),—Routledge's "Sixpenny Series": *Andersen's Fairy Tales, Æsop's Fables, The Boy's Own Natural History*, by Rev. J. G. Wood, *The Bab Ballads*, by W. S. Gilbert, and *Longfellow's Poems*,—*The Sinless Sufferer*, by S. W. Skeffington (Skeffington),—*A Book of Lyrics*, by J. Skipsey (Bogue),—*The Medical Adviser in Life Assurance*, by E. H. Sieveking (Churchill),—and *The Companies Acts*, 1862-80, by A. Pulbrook (Wilson).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Blunt's (Rev. J. H.) Reformation of the Church of England, Vol. 2, A.D. 1547-1662, 8vo. 18/ cl.
Osborne's (E.) The Children's Saviour, 18mo. 3/6 cl.
Smyth's (Rev. N.) The Religious Feeling a Study for Faith, cr. 8vo. 2/ cl.

Fine Art and Archæology.

Cesnola's (A. P. di) Salaminia (Cyprus): The History, Treasures, and Antiquities of Salamis, roy. 8vo. 31/6 cl.
Davidson's (T.) Parthenon Frieze, and other Essays, 6/ cl.

Poetry.

Lear's (H. L. S.) Five Minutes' Daily Readings of Poetry, 3/6
Longfellow's (H. W.) In the Harbour, Ultima Thule, Part 2, 12mo. 3/6 cl.

History and Biography.

Cory's (W.) Guide to Modern English History, Part 2, 1830-1835, 8vo. 15/ cl.
Erskine (Hon. H.), Lord Advocate for Scotland, with Notices of certain of his Kinsfolk and of his Time, by Lieut.-Col. A. Fergusson, 8vo. 31/6 cl.
Garibaldi (Giuseppe), Life of, Italian Hero and Patriot, by H. Blackett, cr. 8vo. 3/6 cl.
Peter's (C.) Chronological Tables of Greek History, trans. by G. Chawner, 4to. 10/ cl.
Ramsay's (Lieut.-Col. B. D. W.) Rough Recollections of Military Service, 2 vols. cr. 8vo. 21/ cl.

Geography and Travel.

Howard's (C.) Roads of England and Wales, cr. 8vo. 3/6 cl.
Oswald's (E. J.) By Fell and Fjord, or Scenes and Studies in Iceland, cr. 8vo. 7/6 cl.
Otter's (R. H.) Winters Abroad, cr. 8vo. 7/6 cl.
Stanford's Compendium of Geography: Vol. 4, Asia, with Ethnological Appendix by A. H. Keane, ed. by Sir R. Temple, 8vo. 21/ cl.
Tayler's (W.) Thirty-eight Years in India, Vol. 2, 8vo. 25/ cl.

Science.

Buzzard's (T.) Clinical Lectures on Diseases of the Nervous System, 8vo. 15/ cl.
Owen's (R.) Experimental Physiology, its Benefits to Mankind, cr. 8vo. 5/ cl.
Physiological Fallacies, First Series, 8vo. 5/ cl.
Strickland's (H. E.) Collection of Birds, Catalogue of, by O. Salvin, 8vo. 21/ cl.

General Literature.

Anstey's (F.) Vice Versâ, or a Lesson to Fathers, cr. 8vo. 6/ cl.
Caulfield (S. F. A.) and Saward's (B. C.) Dictionary of Needlework, 4to. 21/ cl.
Cazenove's (A.) Madge Allerton, cr. 8vo. 5/ cl.
Collins's (Mabel) Cobwebs, 3 vols. cr. 8vo. 31/6 cl.
Craik's (G. M.) Fortune's Marriage, 3 vols. cr. 8vo. 31/6 cl.
His Little Mother, and other Tales and Sketches, by Author of 'John Halifax,' cr. 8vo. 6/ cl.
Lethbridge's (R.) High Education in India, cr. 8vo. 5/ cl.
Mac Donald's (G.) Adela Cathcart, cr. 8vo. 6/ cl.
Ruthieston, some Notes by a Brother and Sister, by Author of 'The Chorister Brothers,' cr. 8vo. 5/ cl.
Spyri's (J.) Heidis's Early Experiences, 12mo. 3/6 cl.
Whitehurst's (F. F.) On the Grampian Hills, Grouse and Ptarmigan Shooting, cr. 8vo. 7/6 cl.
Winter's (J. S.) Cavalry Life, or Sketches and Stories in Barracks and Out, cr. 8vo. 3/6 cl.

NOTES FROM CAMBRIDGE.

June 27, 1882.

THE term which is now drawing to a close marks an epoch in the history of Cambridge. For thirty-two years, which may be conveniently divided into three periods of ten or eleven years each, the University has been abnormally occupied with the cares of legislation. The first of the three periods in question, beginning with the appointment of the Royal Commission of 1850 and ending with the ratification of the statutes of 1858–1861, relieved both the University and the colleges of several glaring anachronisms and of some serious abuses, but left the work of reconstruction incomplete. The next brought to a happy conclusion in the Universities Tests Act of 1871 the struggle which had begun with the Feathers Tavern petition of 1771. The third and last, which ends with the present term, has revised and supplemented the reforms of 1850-1861 by the light of experience derived in the interval, and has given to the University and the colleges complete, and it may be hoped harmonious, systems of statutes, which either are in force already or will come into force as soon as they have been formally approved by the Queen in Council.

In October, then, the University and the colleges will enter upon a new era. Let us hope that the University may make a good use of the funds which are placed at its disposal by the taxation of the colleges; that the governing bodies of the colleges may exercise conscientiously and judiciously the increased powers which have been reposed in them; and that the individuals who now for the first time find permanent careers open to them at Cambridge may appreciate their obligation to do what they can for the promotion, not only of education, but also of science and learning. If these conditions are fulfilled, the time and trouble which during the last two-and-thirty years have been liberally expended upon legislative reform will not have been wasted, and a university which, if less "ancient and splendid" than that of Oxford, has not been unimportant in the past, may look forward with confidence to a brilliant future.

Of course no one will for a moment suppose that the reforms authorized by the Commission of 1877 are final. Anachronisms and abuses are still to be found in our statute books, while it is reasonable to suppose that, with the increased activity of the future, the need of changes as yet unforeseen will speedily make itself urgently felt. But it would be nothing less than affectation to ignore the substantial reforms which Cambridge owes to the Commissioners. They might, perhaps, have given us more; and it is certainly to be deplored that the Act of 1877 left the constitution of the University untouched; but the legislation of the present year is, I venture to think, sound as far as it goes.

Nor have the last eleven years been barren in other respects. Our examinations, which at one time threatened to suppress all individuality and to extinguish the love of science and learning, have been modified in such a way that, though they will probably be less interesting as competitions in the eyes of the general public, they will not harm, and may even promote, education and research. These very important reforms, effected by the Senate without the intervention of the Commissioners, have naturally failed to commend themselves to some *laudatores temporis acti*, who have not realized, for example, that the mathematical tripos of their youth bore a greater resemblance to the reformed mathematical tripos of 1882 than to the unreformed mathematical tripos of 1881, swollen as it was by the successive accretions of years of exaggerated competition. Such persons will find evidence of the unsatisfactory condition of the unreformed mathematical tripos in a report recently issued by Mr. G. H. Darwin, F.R.S., additional examiner in the last examination under the old system, who sums up a very formidable indictment in the following pregnant sentences:—"It appears to me that the mediocre men—and perhaps even the highest—attempt to read far too much, and that the training afforded them both as mathematicians and in the way of general education was bad. I think the University is to be congratulated on the approaching change of system, and if it shall be found possible for examiners by a stringent treatment of half-intelligence to induce men to

read less and master better what they read, I think the gain will be great in both these respects..... I should like to see a great curtailment or even the total suppression of what may be called classical pieces of 'bookwork.' Let the questions be easy, but let them demand an application of what has been read, instead of a faithful reproduction thereof, and it would then be almost useless to acquire an algebraic comprehension of isolated pieces of argument in a physical subject without the basis of the physical principles."

Apropos of triposes, it is amusing to find your Liberal contemporaries the *Daily News* and the *Pall Mall Gazette* regretting changes which have been made in our mathematical and classical lists respectively. Conservatism seems to be so deeply ingrained in human nature that, when it finds no vent in politics, it expresses itself in minor matters, such as the affairs of our little academic world.

To the last eleven years belongs also the movement known as "university extension." I am aware that there are some who hold that the university deserts its province when it attempts to make its influence felt among the masses. At Cambridge, however, we are for the most part disposed to think that the spread of education in the country will not hinder, but rather promote, research; and we are proud to know that this great popular movement is in many of the manufacturing towns associated with the name of our Professor of Mechanism and Applied Mechanics.

Nor can I omit all mention of the support which the University, indirectly and directly, has given to another popular movement of the last fifteen years, that which has for its aim the promotion of the higher education of women. The two colleges which represent the Cambridge branch of this national movement continue to grow and flourish, and have begun to contribute a fair number of candidates to the triposes, of whom a fair proportion obtain first classes. Too much credit can hardly be given to the principals and the managing committees of Girton and Newnham, whose judgment has conducted to a successful issue an experiment thought by most people ten years ago hazardous in the extreme.

The foregoing protest against the desponding view which academic reformers are apt to take of what has been, and what may yet be, achieved has run to such a length that I must confine myself within narrow limits in speaking of Mr. Matthew Arnold's Rede Lecture on 'Science and Literature.' If the Vice-Chancellor is to be congratulated on his choice of a lecturer, and the audience on their good fortune in hearing so admirable a specimen of the lecturer's peculiar eloquence, Mr. Matthew Arnold is also, I think, to be congratulated on obtaining so excellent an opportunity of delivering himself upon a congenial subject. The presence of men of science in the audience gave point to his sarcasms, whilst men of letters were not wanting who might sympathize in his onslaught. The lecture contained many brilliant sentences, and was emphasized by some of those recurrent burdens with which Mr. Arnold loves to produce now a solemn and now a ludicrous effect. It may be questioned, however, whether either scientists or humanists will allow that literature *includes* science, as Mr. Arnold appeared to maintain; and it may be wondered why, if "humane letters are in no danger of being thrust out from their leading place in education," he should think it necessary "to *plead* with the friends of physical science on their behalf." X.

HORNE TOOKE'S COPY OF JUNIUS.

THE subject of Mr. Bent's letter is full of interest and seems to invite criticism. I do not wish to enter into the larger question, Was Horne Tooke Junius? but only into the minor one, What evidence does Mr. Bent's letter afford? As regards the larger question there is at present nothing more to be said than that it is possible, though certainly very improbable, that Horne Tooke wrote the letters of Junius, though it is pretty certain that he knew something about the writer of them. We have now an account of Horne Tooke's copy of Junius and certain conclusions based upon its examination. I rather doubt whether it is quite correct to call the book in question "Horne Tooke's copy," and would suggest that it would be better to describe it as a copy of Junius which formerly belonged to Horne Tooke. It is said to be a copy of the well-known "Piccadilly edition" of 1771, to contain MS. notes by Horne Tooke, and to have been given by him during his lifetime to his friend Mr. Browne at Genoa. It is certain that Horne Tooke had more than one copy of Junius; no doubt he saw and had the letters as they first came out, and certainly he had a copy of the first genuine edition of Junius printed by Woodfall in 1772, for it was sold at the sale of his books, after his death, for 1*l.* 18s., having his MS. notes. It is most improbable that Horne Tooke would give away during his lifetime a copy of Junius containing notes of any importance which could throw light on its authorship, which it was clearly his wish to keep concealed. The fact that he thus gave it away seems to destroy all its value as evidence, except the possible evidence that he designed it to mislead. I fail to see much weight in the remark that Horne Tooke had not studied Woodfall's edition when he wrote these notes. Of course he had not, as Woodfall's edition was not then (1771) published, and these MS. notes, it is to be presumed, were made in that year. It is very true, as Mr. Bent says, that it is difficult to know for what purpose these notes were made, but I think it is clear that they were not the genuine private notes of Horne Tooke; they are memoranda written for some unknown purpose, and cannot be treated as evidence. The MS. notes in the copy of Junius sold at Horne Tooke's death may be of more value, but I should rather suspect them, for, taking into consideration the whole character of the man, it is most unlikely that he would have left a copy of Junius with any MS. notes calculated to throw light upon the name of the writer. If for the mere sake of argument we assume that Horne Tooke was Junius, and concealed the fact from 1769 to 1812, it is surely improbable that he would knowingly leave evidence in writing at his death, but certain that he would not have given any such evidence away, even to a friend, during his lifetime. I am not aware that the notes in Horne Tooke's Woodfall's 'Junius' have been published, but a comparison of them with those in Mr. Browne's copy would be interesting.

EDWARD SOLLY.

THE PALÆOGRAPHICAL SOCIETY.

THE twelfth part issued by the Palæographical Society is remarkable for the wide range of subjects and for the increased number of plates. The first plate is derived from a trilingual inscription in Latin, Greek, and Punic Phœnician, about 160–150 B.C., incised on the base of a bronze pillar or altar, now in the possession of the Royal Academy of Turin. The Phœnician is the principal text of the three; all the letters of the inscription appear from their irregularity to have been made by the aid of a chisel rather than a graver, the imperfections being very numerous, especially in the curved letters. Of the six Greek codices which contribute specimens to this part, the first is from a copy of the Gospels in the British Museum, dated A.D. 1033, written on vellum in small set minuscules by the priest Synesius, who has perpetuated his name in the volume. The second, also in the Museum, is from the commentary on the 'Octoechus' (a kind of service book in eight tones), written in A.D. 1252, also in short, thick, set minuscules, on leaves of thick cotton paper. Twenty years later in date is an elegantly written Evangelistarium, in the national collection, on vellum, in larger minuscules somewhat widely spaced. A copy of the Gospels on vellum, written in the island of Cyprus in A.D. 1305, shows the gradual progress of this minuscule handwriting, some of the letters being here widely spread, but still carefully formed. Still later, an Evangelistarium on paper, dated A.D. 1335, also in the Museum, indicates square minuscules, heavily formed and written with a thick stylus; and the Greek series finishes with a page from the Burney MS. 50, in the Museum, written in A.D. 1362, on paper apparently of Italian fabric, by a certain John Philagrius, in set minuscules spaced out, and by no means so elegant as those of the earlier manuscripts in the set.

The Latin series commences with a plate from the renowned Virgil in the Stiftsbibliothek of St. Gall. This venerable codex is attributed to the fourth or fifth century of our era. It consists of eleven delicately thin vellum leaves of the 'Georgics' and 'Æneid,' written in large square capital letters, slightly sloping to the right, of the style obtaining in epigraphic inscriptions at an earlier period, and without division of words. The only abbreviation in this aged MS. is the use of *q·* for *que*. The letters are considered by the editors to be rather heavy, and wanting in elegance and compactness. They are nevertheless, we may add, strictly Roman in their characteristics of proportion and general *ensemble*. The same famous library has been drawn upon for a plate from the Capitularia, or Constitutions of Charlemagne, a vellum MS. of the date A.D. 825, written in well-formed minuscules of the Caroline style, with the open *a* as well as the closed or Italian *a*, the spreading *r*, and the occasional use of monogrammatic combinations or ligatures for *nt*, *ri*, *et*, *mus*, and so forth. Two plates from the 'Book of Deer,' so called from its having belonged to the Columban house at Deer, in Aberdeenshire, show Latin writing and native ornamentation of the tenth century, the script being in set minuscules of the late Hiberno-Saxon, but not yet quite distinctly Irish, type. This precious MS. is preserved in the University Library, Cambridge. It is succeeded by a plate of the carefully written set Irish minuscules of A.D. 1138, as exhibited in the Harley MS. known as the 'Gospels of Maelbrigte' of Armagh. Here, however, the ornamentation acquires that interlacing knotwork style, combined with animal and geometric designs, which is characteristic of the Celtic school of palæography. This MS., we are told, was stolen by Jean Aymon from the Bibliothèque Nationale early in the eighteenth century, and was purchased by the Earl of Oxford in 1718. A Latin Bible from the Abbey of Floreffe, near Namur, lavishly ornamented, written about A.D. 1160; an ornamental charter of King John, dated A.D. 1204; the original articles of Magna Charta, in the British Museum, A.D. 1215; the autograph MS. of Matthew Paris, A.D. 1250–1253; and other Latin and French charters of the thirteenth century, follow in due order of chronology; and after specimens of three fine fourteenth century codices and others from the gorgeously brilliant illuminations of the fifteenth century schools, aptly illustrated by the Breviary of John, Duke of Burgundy, the Psalter of Alfonso of Aragon, and the Breviary of S. Croce, Florence, the present part issued by the Society concludes with two plates from the Runic casket of the eighth or ninth century acquired by Mr. A. W. Franks, F.R.S., and presented by him in 1867 to the British Museum. This relic is formed of the bone of a whale (which, according to the inscription, was stranded at "Fergen-berig"), and measures 9 in. by 7½ in., and 5½ in. high. It is carved in relief with various subjects, classical, Scriptural, and local, accompanied by Anglo-Saxon inscriptions of the eighth or ninth century, in Runic character, and by one in the Latin language and character. It was found in the possession of a family at Auzon, in the

XUM

Haute-Loire, and may have once belonged to the neighbouring church of Brioude. Stripped as it is of its original silver mounting, and imperfect in some of its parts, the casket is of the greatest interest to the student of early palæography. The style of the letters and the peculiar interlacing ornaments and details of the carved figures enable the editors to attach a date without difficulty to this precious relic. With bountiful supplies of material such as this before the Society the work may be carried on for many years ere the ramifications of the science are illustrated; seals and early coins, for example, contribute largely to palæography, and perhaps hereafter the Society may turn its attention to these subdivisions more persistently than hitherto; but it will be a long time before MS. examples of the art are exhausted, although the editors have spared no pains to select typical specimens and critically valuable handwritings from the rich collections under their charge.

SANSKRIT MSS. IN JAPAN.

Oxford, June, 1882.

THE following letter from the Rev. Bunyiu Nanjio may perhaps be of interest to some of your readers as the reply of a real Buddhist priest to an English reviewer. I have little to add beyond expressing my thanks for your kind notice of my edition of the 'Diamond-Cutter.' I should be glad if your reviewer's hope of discovering the Sanskrit text amongst the Hodgson Sanskrit texts of Nepal might be realized. The copy of the 'Kâlakakra' which Dr. Edkins sent to the India Office is unfortunately lost, as I stated in my 'Selected Essays,' vol. ii. p. 331. The reason why Klaproth's remarks on the Tendai and Singon schools of Buddhists in Japan still using Sanskrit in their prayers and copying Buddhist books in Bon zi characters were never followed up by any Sanskrit scholars was most likely their being aware that these schools possess little more than Dhâranîs. Your reviewer will be glad to know that, to judge from a fac-simile, the oldest Sanskrit MS. in Japan—in fact the oldest Sanskrit MS. in existence anywhere—is really a palm leaf (see 'Selected Essays,' vol. ii. p. 370, and 'Catalogue of Japanese and Chinese Books and Manuscripts lately added to the Bodleian Library,' Nos. 45B and 46A).

F. MAX MÜLLER.

Oxford, June 10, 1882.

MY DEAR SIR,—I have carefully read the review of your edition of the 'Vagrakkhedikâ' published in the *Athenæum* of to-day. There are a few things in it which I wish to make clear both to yourself and to others:—

1. On p. 726, col. ii., we read: "The idea of the title as explained in Kumârajiva's edition is that the doctrine of this Sûtra is able to pierce or penetrate or cut like a diamond," &c. Does the reviewer mean by "Kumârajiva's edition" an edition of his translation accompanied by a Chinese commentary compiled at a later period, such as No. 1615 of the Chinese Tripitaka in the India Office Library? This commentary was compiled by two Chinese priests in A.D. 1378, and in it such an explanation is certainly given. But Kumâragîva himself does not give any explanation of the title at all.

2. In the same column the Japanese term Bon-zi is identified with "Devanâgarî." But the term means literally "Brahma-letter," or the Sanskrit alphabet, and no more. This alphabet is not exactly the same in form as what is called the Devanâgarî. Specimens of this Japanese handwriting of the Bon-zi are to be seen in the first two fac-similes at the end of your edition of the 'Vagrakkhedikâ.'

3. In col. iii. it is asked whether the Shinshu and "Itskô" are the same sect. Of course they are. Our sect, the Shinshu, has been and is popularly called by two other names, though its founder Shinran called it Zîôdo-shinshu, now shortened into Shinshu. One of the two popular names is Ikkô-shu (Itsu-kô-shu), or "The Sect of the Undivided (Thought on Amitâyus Buddha)," and the other Monto-shu, or "The Sect of the Followers (of Buddha)."

4. On p. 727, col. i., there are some remarks about two literal renderings which I made for you about eighteen months ago, so that I feel rather responsible for these matters.

In the first place, it seems that I translated the title 'Son-shio-shio-shin-zu' rather too literally into 'Honourable-excellent-small-mind-dhâranî.' I am very glad to learn that "there are ten *chiu* (Jap. *zu*) known in China, and called 'little' or 'short' (*shio*)"; and I should like to know the exact titles of these ten *chiu*. But as to the compound *shin-chiu* I must beg the reviewer's pardon, because it does mean really *mind* (or heart)-dhâranî (or charm, Shin-zu, in Jap. "Go sound," Sin-*kh*eu in Chin.); and it does not mean "*spiritual* or *sacred* charm" (Zin-zu, in Jap. "Go sound," Shăn-*kh*eu in Chin.). There are, of course, many Chinese characters of the same sound *shin*, and I am sorry to observe that the reviewer mistook the character which I meant. Moreover, the text of the Dhâranî, or charm, in question is quite different from that of the 'Son-shio-dhâranî,' which latter is properly entitled 'Ushnîsha-vigaya-dhâranî.' This Sanskrit title is given in the text itself. Whether the compound "Son-shio" is a literal rendering of "ushnîsha-vigaya" I do not know. The full Chinese title of this Dhâranî is 'Butsu-chio-son-shio-da-ra-ni,' lit. 'Buddha-head-honourable (or honoured)-excellent (or excelling)-dhâranî,' and this may be restored to 'Buddhoshnîsha-vigaya-dhâranî.' Thus I can see that "Son-shio," or honourable-excellent, is equal to the word "vigaya" only, while "Butsu-chio" or "Buddhoshnîsha" is commonly omitted.

There is unfortunately no Sanskrit title in the 'Son-shio-shio-shin-zu,' which is very short indeed, and if a correction is required at all I should rather wish to render the title by '(Ushnîsha-) vigaya-kshudra-hridaya-dhâranî.' But this I leave to your judgment.

In the second place, the rendering of the title *hosshi* by "law-teacher" is, of course, quite literal, and if "doctor of theology" is not misleading I have no objection to that title.

In conclusion I have to thank the reviewer for his kindness in instructing me how I should render our own familiar phrases into more idiomatic English, of which I am, of course, very ignorant still. Your obliged pupil,

BUNYIU NANJIO.

*** By "Kumârajiva's edition" of the book under review we meant an edition of Kumârajiva's translation, with notes and paraphrase, published at Canton during last century. Klaproth is responsible for rendering "Bon zi" by "Devanâgarî" characters. We are glad to know that Klaproth's remark about the Itskô sect is confirmed by a "real priest" of that order. We fear we cannot give Mr. Bunyiu Nanjio the titles of the ten small *chiu* until we introduce Chinese type into the columns of the *Athenæum*. With respect to the "shin-zu," of course if *shin* be the equivalent of "hridaya" there is nothing more to say, except that we do not think that, in a Buddhist sense at least, this word can ever be confounded with *manas*, and therefore cannot be translated justly by "mind." But whilst on the one hand we have the expression in Chinese of "short-spiritual-charm," we have never yet seen the phrase "short-heart-charm." With respect to the phrase "Son-shio," Mr. Wylie long ago settled its meaning; he translates it "honoured diadem," and to that rendering we give our support.

SHAKSPEARE.

THE new edition of Mr. Halliwell-Phillipps's 'Outlines' contains some interesting remarks on the Davenant scandal. On October 9th, 1605, Shakspeare's company, as Mr. Phillipps has discovered, gave a performance at Oxford before the Mayor and Corporation; and if the poet was one of the performers, he probably lodged at the Crown Inn, for which John Davenant had taken out a licence in 1604. William Davenant was born on the 3rd of March, 1606, and Mr. Phillipps remarks:—

"It was the general belief in Oxford, in the latter part of the seventeenth century, that Shakespeare was William Davenant's godfather, and, from the great regard in which the poet is said to have been held by the worthy innkeeper, the tradition is, in all probability, correct. There was also current in the same town a favourite anecdote, in which a person was warned not to speak of his godfather lest he should incur the risk of breaking the Third Commandment. This was a kind of representative story, one which could be told of any individual at the pleasure of the narrator, and it is found in the generic form in a collection of tavern pleasantries made by Taylor, the Water-Poet, in 1629. This last fact alone is sufficient to invest a personal application with the gravest doubt, and to lead to the inference that the subsequent version related of Shakespeare was altogether unauthorized."

Mr. Phillipps adduces a new fact bearing on the matter:—

"There is preserved at Alnwick Castle a very elaborate manuscript poem on the Oxford gossip of the time of James I., including especially everything that could be raked up against its innkeepers and taverns, and in that manuscript there is no mention either of the Crown Inn or the Davenants."

Mr. Phillipps prints Davenant's will, which is too long to quote here, and adds a curious poem "on Mr. Davenantt, who died att Oxford in his Maioralty a fortnight after his wife," from a manuscript volume of miscellanies, of the time of Charles I., preserved in the library of the Earl of Warwick, verbally corrected in four places by the aid of a transcript made by Haslewood from another manuscript:—

Well, sceince th'art deade, if thou canst mortalls heare,
Take this just tribute of a funerall teare;
Each day I see a corse, and now no knell
Is more familiare then a passing-bell;
All die, no fix'd inheritance men have,
Save that they are freeholders to the grave.
Only I truly greive, when vertues brood
Becomes wormes meate, and is the cankers foode.
Alas, that unrelenting death should bee
At odds with goodnesse! Fairest budds we see
Are soonest cropp't; who know the fewest crimes,
Tis theire prerogative to die bee-times,
Enlargd from this worlds misery; and thus hee,
Whom wee now waile, made hast to bee made free.
There needes no loud hyperbole sett him foorth,
Nor sawcy elegy to bellowe his worth;
His life was an encomium large enough;
True gold doth neede no foyles to sett itt off.
Hee had choyce giftes of nature and of arte;
Neither was Fortune wanting on her parte
To him in honours, wealth or progeny:
Hee was on all sides blest. Why should hee dye?
And yett why should he live, his mate being gone,
And turtle like sigh out an endlese moone?
No, no, hee loved her better, and would not
So easely lose what hee so hardly gott.
Hee liv'd to pay the last rites to his bride;
That done, hee pin'd out fourteene dayes and died.
Thrice happy paire! Oh, could my simple verse
Reare you a lasting trophee ore your hearse,
You should vie yeares with Time; had you your due,
Eternety were as short liv'd as you.
Farewell, and in one grave now you are deade,
Sleepe ondisturb'ed as in your marriage-bed.

SALE.

AN important sale of autograph letters forming the cabinet of a French collector took place at the rooms of Messrs. Sotheby, Wilkinson & Hodge on Monday last, and, although comprising only 163 lots, produced 2,088*l.* 19*s.* Among the rarer articles a letter of Charles, Duc d'Angoulême, natural son of Charles IX., sold for 20*l.*; a letter of Queen Anne, 30*l.*; J. B. Colbert, 16*l.*; Henri II., Prince de Condé, 80*l.*;

XUM

Louis II., Prince de Condé, 91*l.*; Oliver Cromwell (signature only), 10*l.* 10*s.*; N. Fouquet, two letters, each 21*l.*; Jeanne d'Albret, Reine de Navarre, 39*l.*; Queen Henrietta Maria to Cardinal Mazarin, 21*l.*; Louis XIII., 44 letters, 405*l.*; Marquis de Louvois, 19*l.* 15*s.*; Mary I. of England, 42*l.*; Marie Leczinska, Queen of Louis XV., 94 letters, 515*l.*; Gaston d'Orléans, Correspondence, 120*l.*; Comte de Soissons, 63*l.* 10*s.*; Marshal Turenne, 110*l.*; 42 letters addressed to Cardinal Richelieu, 26*l.*; 57 letters addressed to Cardinal Mazarin, 22*l.*; Lettres des grandes Dames, 38*l.*

THE FOLK-LORE SOCIETY.

THE Folk-lore Society was to hold its annual meeting yesterday (Friday). The most important portion of the annual report is that relating to the proceedings of the Folk-tale Committee. This committee was appointed to "frame a standard scheme of folk-tale classification, to ascertain what steps should be taken for the classifying and indexing of existing collections of folk-tales in accordance with such scheme, and to devise a system of folk-tale terminology." It is admitted that the existing schemes of Von Hahn and Baring Gould are inadequate to the requirements of folk-tale studies, and the Committee, rightly as we think, prefer beginning *de novo*. They consider that before a scheme of classification could be framed a thorough investigation into the incidents and formulæ of the tales would be required. In order to accomplish this the following sub-departments of work will have to be undertaken: (1) The fixing of a generic title for each story, and the abolition of the variant titles of the same story which now obtain in different collections; (2) The determination of a common terminology for the study of stories and for each description of story; (3) The determination of a common terminology for each story-incident; (4) The compilation of an index of story-incidents; (5) The tabulation of all stories in printed collections upon a common recognized plan.

The Committee have set themselves energetically to accomplish the last section of work as the first necessary step to the ultimate aim. They have prepared specimen forms of the tabulation, and will ask the assistance of all interested in the subject. If once they succeed in getting a good collection of these tabulated stories, the work of classification will follow comparatively easily. Many influential students of folk-lore are interesting themselves in this subject, and with the aid of Prof. Sayce, Mr. Ralston, Mr. Lang, Mr. Nutt, Mr. Clodd, Mr. Wheatley, and Mr. Brabrook, we ought to obtain some really substantial results.

Literary Gossip.

IT is likely that a well-known publishing house will start a new magazine before long.

THE Bishop of Limerick has just brought home from Egypt some fragments of Greek and of Coptic papyri which may prove of great interest. The Greek fragments are from an hexameter poem on heroic subjects, the names Aphrodite, Polydeuces, and Hippolytus being clearly legible. Portions of some thirty lines are preserved, but mutilated at both ends. The bishop believes them to belong to some of the Cyclic poets, but he has not yet had time to study the question more than superficially. He will probably publish the text in an early number of *Hermathena*, with a full description of the papyri.

MR. SHAPIRA, of Jerusalem, has arrived in England with a new collection of Hebrew-Arabic manuscripts.

MR. T. H. S. ESCOTT, whose appointment to the editorship of the *Fortnightly Review* has been announced by the daily press, was formerly a scholar of Queen's College, Oxford, and graduated in high classical honours in 1865. He has had seventeen years' active experience on the London press, during which time he has contributed largely to the leading reviews.

THE Folk-lore Society bids fair to be the parent of many continental offspring. The annual report of the Council, which we have noticed in another column, mentions the formation of kindred societies in Spain, Portugal, and Norway, and now it is projected to form another society for Styria, Carinthia, and Carniola, under the guidance of Prof. Hugo Schuchardt.

Bell's Weekly Messenger has passed out of the hands of some of its old proprietors, and Mr. Walter Darkin, for several years its publisher, has now become the largest shareholder. "Old Bell" has had a rather curious history, being at one time a political organ with strong Tory leanings, and having for a short period so pronounced a Liberal as Leigh Hunt for its editor. Some years ago polities were given up, and the paper has since devoted itself almost exclusively to agriculture and the advocacy of the interests of the farmers. Leigh Hunt, in his autobiography, has in his easy way delightfully sketched John Bell, the publisher, who founded this paper, and who, by the way, he tells us, "was the first printer who confined the small letter *s* to its present shape, and rejected altogether the older form." Leigh Hunt writes:—

"About the period of my writing the above essays circumstances introduced me to the acquaintance of Mr. Bell, the proprietor of the *Weekly Messenger*. In his house in the Strand I used to hear of politics and dramatic criticisms and of the persons who wrote them. Mr. Bell had been well known as a bookseller and speculator in elegant typography. It is to him the public are indebted for the small editions of the poets that preceded Cooke's."

SIR ROBERT TORRENS, K.C.M.G., has written an essay on the transfer of land by registration under the duplicate method operative in British colonies, which Messrs. Cassell, Petter, Galpin & Co. are about to publish for the Cobden Club.

THE first institution to be recognized as a public hostel by Cambridge University will probably be Cavendish College, which is now a familiar feature in the railway journey between Shelford and Cambridge, standing in twenty acres of ground, and capable of accommodating 117 students. The students have increased from ten in 1876 to eighty-seven at the present time, and the majority of these have hitherto become non-collegiate students. The admission of the college to the rank of a public hostel will simplify its administration, and will improve its standing by bringing it into direct relations with the University, instead of leaving its students to be recognized only as non-collegiate members of the University.

THE Syndics of the Cambridge University Library in their recent annual report specially call attention to the valuable donations of manuscripts and books made by Mr. Samuel Sandars, of Trinity College, who has in past years added very choice books to the library. Among his recent gifts are Sir John Mandeville's 'Travels,' printed at Westminster by Wynkyn de Worde, 1499, 4to., the only known copy of the first printed edition; 'Horæ B. Mariæ,' printed on vellum at Paris by Thielman Kerver, 1521, 8vo.; a collection of grammatical treatises, in Latin and English, by John Drury, schoolmaster of Beccles, written at that place by one Hardgrave in 1434–5, 4to. MS.; English statutes and law treatises, written on vellum early in the fifteenth century, 12mo. MS.; the 'Historia Alexandri Magni' of Guillelminus de Spolete, and a collection of "Narrations" from the 'Gesta Romanorum,' &c., both written in England early in the fifteenth century, 4to. MS.

THE demand for the Sanskrit manuscripts obtained through Dr. Wright some time ago from Nepal, and now in the Cambridge University Library, has been so constant that the Library Syndicate have authorized Mr. C. Bendall, Fellow of Gonville and Caius College, to prepare a catalogue of the Northern Buddhist Sanskrit manuscripts in the library; and the University Press Syndicate will defray the cost of printing the work.

WE hear that Mr. Harrison Ainsworth's library will be sold at Messrs. Sotheby's rooms towards the end of this month. Mr. Ainsworth was a large collector of criminal literature, which forms an important feature of his library. There are a number of MSS., accumulated during Mr. Ainsworth's editorship of *Bentley's Miscellany* and other magazines.

THE vacancies caused on the Council of the Hellenic Society by Sir C. W. Dilke's becoming a Vice-President, and by the retirement of the Bishop of Lincoln, the Dean of Christchurch, Mr. J. Bryce, M.P., Prof. A. Goodwin, and Mr. Cotter Morison have been filled by the election of Mr. J. Fergusson, Mr. W. Leaf, Mr. F. Pollock, Mr. P. Ralli, M.P., Mr. W. G. Rutherford, and Mr. E. B. Tylor.

MESSRS. HANSARD'S Monthly List of Parliamentary Papers for May includes 56 Reports and Papers, 55 Bills, and 36 Papers by Command. Among the first will be found a Statement of Accounts of Life Assurance and Annuity Business, and Abstracts of Actuarial Reports, for the Year 1881; a Return of the Number of Human Corpses found in the Thames in each Year, 1877 to 1881; a Return of the Number of Persons Drowned and the Number of Lives Saved from Drowning during the Year 1880; and Copies of the Instructions issued by the late Sir Richard Griffith in 1853, and of the Instructions given by the Land Law Commissioners of 1881 to the Assistant Commissioners. Of the Bills, 23 are confirmatory of Provisional Orders. The Papers by Command include a Report on the Progress of the Ordnance Survey to 31st December, 1881; the Forty-third Report of the Registrar-General on Births, Deaths, and Marriages in England and Wales (for the Year 1880); and a Return of Judicial Rents fixed by Sub-Commissions and Civil Bill Courts to 15th April, 1882, under the Irish Land Commission.

ARRANGEMENTS have recently been made by the Holy Synod of the Russian Church for the translation of the whole Bible and of several service books into the Lettish and Esthonian languages by competent scholars.

ON Saturday last was celebrated the four

hundredth anniversary of the introduction of printing into Vienna. An exhibition was thrown open of specimens of Viennese printing since 1482. Among the objects shown is a collection of the newspapers issued in the Austrian capital during 1848.

A HISTORY of the Old Catholics, by A. M. E. Scarth, will be published shortly if sufficient subscribers can be obtained. Mr. W. Hamilton, who lately wrote the lives of the Poets Laureate, intends to issue a record of a very different movement, 'The Æsthetic Movement in England.'

A NEW peasant-poet has appeared in Russia. N. A. Panof, the author of a volume of poems recently published under the title of 'Dumy i Pyesni,' was born in 1861, the son of a Samara peasant. He spent his childhood in his native village. After his father's death he removed to the town of Syzran, where his education was carried on until the necessity of making a living compelled him to leave it unfinished. While at school he persuaded his fellow students to start a literary journal, to which his first poetical essays were contributed. The *Novoe Vremya*, in reviewing his book, speaks with praise of many of the poems it contains, especially of one called 'A Storm on the Volga,' written in the rhymeless metre of the popular songs.

GREAT preparations are being made at Assisi for the celebration of the seventh centenary of the birth of St. Francis. It is expected that an address will be delivered by M. Cesare Cantù.

COUNT VLADIMIR ALEXANDROVICH SOLLOGUB, who died on June 16th at Homburg, was one of the few Russian authors whose names have become familiar out of their own country. One of his works was successfully translated into English, under the title of 'The Tarantass: Travelling Impressions of Young Russia' (London, 1850). Several of his stories have appeared in French versions, one of them, 'La Pharmacienne,' having been translated by M. Xavier Marmier; and a comedy, written by the author in French under the title of 'Une Preuve d'Amitié,' was performed at the Gymnase in 1859. He began his literary career in 1837, with a story called 'Two Students.' Several other tales followed, a selection of which was published in 1842. In 1855 a collection of his works issued from the press. In the interval he had written several novels, two or three plays, and a 'Life of General Kotlyarevsky.' In 1856 appeared his comedy 'The Chinovnik,' in which an incorruptible official was brought upon the scene. After this he wrote but little, with the exception of some short dramatic pieces, and a 'Diary of the Events of the War,' which he privately printed in 1878. He was born in St. Petersburg in 1814, and educated in the University of Dorpat. He was at one time attached to the Russian Embassy at Vienna, but he spent the greater part of his life in the public service—first in the Foreign Office and then in the Ministry of the Interior.

MR. R. C. BROWNE writes:—

"Your correspondent Mr. Peacock may be interested to know that the extract from Clement Walker, given by him in the *Athenæum* of June 10th, may be found inserted in its proper place in Cobbett's 'Parliamentary History,' ii. 834."

THE death is announced of Dr. F. W. A. Mullach, the editor of the well-known collection of 'Fragmenta Philosophorum Græcorum,' published by Didot.

WE hear from Benares that the *Pandit* will appear again. The first numbers are to contain Mâdhava's 'Dhâtuvṛitti,' a translation of the 'Vedântaparibhâshâs,' and several more philosophical texts. Great regret was expressed by Sanskrit scholars in Europe when the publication of the *Pandit* came to an end. It will depend on the number of subscribers whether the undertaking can again be successfully carried on.

SCIENCE

Ants, Bees, and Wasps: a Record of Observations on the Habits of the Social Hymenoptera. By Sir John Lubbock, Bart., M.P., F.R.S. (Kegan Paul, Trench & Co.)

THOSE who take an interest in one of the most fascinating branches of natural history will thank Sir John Lubbock for having published in book form the subject-matter (extended and revised) of a series of papers read by him before the Linnean Society of London, and of two Royal Institution lectures. With no wish to appear to slight the works of a host of other illustrious labourers in the delightful field of insect biology, we have no hesitation in saying that the author has presented us with the most valuable series of observations on a special subject that has ever been produced, charmingly written, full of logical deductions, and, when we consider his multitudinous engagements, a remarkable illustration of economy of time; for although he gratefully acknowledges the occasional assistance derived from his daughters and other members of his household, the major part of his observations were absolutely direct; and even when some few were not so, his was the power that set the machinery in motion. As a contribution to insect psychology it will be long before this book finds a parallel.

Much as we desire to reproduce many of the author's remarks in his own words, it is obviously impossible in the space of a review to do more than allude to the subject-matter of each chapter.

In the introduction it is asserted that in intelligence ants "have fair claim to rank next to men," just as the anthropoid apes approach him most nearly in structure. (On this point we cannot resist a passing remark to the effect that it is extremely desirable that those observers who have opportunities of studying the white ants —Termitidæ—should adopt our author's methods, for although valuable information has been published concerning them, we are yet much in the dark. The varied conditions of a community of white ants are often more complex than even among ants, and we have the striking fact that whereas they were certainly amongst the first insects to appear on the earth's surface, and have suffered but little modification since, the true ants are of comparatively recent development.) The apparatus employed for observing ants in captivity is fully described, as is also the plan adopted for marking certain individuals, on which so much of the success of the observations depended. The subject of metamorphoses is detailed—here we detect, p. 7, almost the only slip in the work, the pupæ being said to sometimes spin a cocoon, sometimes not; "larvæ" was of course intended. As to length of life, it is stated that the author had in December, 1881, two queens that had lived with him since 1874 (still alive in March, 1882, according to the preface), and has had the same workers since 1875. On the subject of the sting it is considered (in opposition to the views of some authors) that ancestral ants possessed a sting, and that its rudimentary condition in many existing species is due to desuetude. The varying conditions in individuals comprising communities are discussed for many species, as is also the manner in which these are told off for special duties.

Chapter ii. is on the formation and maintenance of nests and on the division of labour. The author concludes that, at any rate in some cases, isolated queens are capable of founding a new community. As in bees and wasps, worker ants occasionally produce fertile eggs; this was proved by isolating nests containing no queen, and apparently the produce is exclusively male under these circumstances. It is concluded, although perhaps scarcely absolutely proved, that, like bees, ants have the power of developing the produce of a given egg into either a queen or a worker. The question of division of labour is treated in a masterly manner from a multitude of patient observations. In connexion with this is brought forward the remarkable fact that in two species (one Mexican, the other Australian) certain individuals are told off to become animated honey-pots, receiving the honey till the abdomen becomes enormously distended, and dealing it out as required. A former observer had imagined that the abdomen consisted solely of a gigantic crop, the other organs being absent. Our author points out the absurdity of this, and he might have given as a parallel instance Termes, in which the gravid abdomen is almost entirely occupied by the enormously distended ovaries, yet the other organs exist.

The relation of ants to plants is the subject of chapter iii., in which the harvesting ants, which gave rise to Solomon's injunction to "go to the ant," are fully discussed. The author seems to agree with most modern writers in believing that this storage of grain is not directly for food; it could scarcely be so in insects that take liquid food only for the most part. To such an extent is this carried out that ancient rules were laid down as to the ownership of the grain thus stored. Our author observes that the framers of these rules do not appear to have considered the rights of the ants themselves. Our space will not allow us to allude to the relations of ants and plants in connexion with the fertility, and even absolute existence, of the latter.

Chapter iv., on the relation of ants to other animals, is perhaps the most fascinating of all, and must be read carefully to be thoroughly appreciated. We find them described as warriors, killing and making prisoners with all the fury of which savage (let us also say "civilized") man is capable; as stock-keepers, tending and rearing Aphides with the greatest care, sometimes much (apparently) to the advantage of the

latter, as the eggs are brought into the nest in the autumn and allowed to remain there during the cold winter months to hatch, the young Aphides being afterwards replaced on their proper plants; and as slave-makers. On the last subject we are especially sorry we cannot reproduce more of the author's own words, so graphic are his descriptions; an extract must suffice:

"*Formica sanguinea* may be assumed to have comparatively recently taken to slave-making, and has not yet been materially affected. Polyergus, on the contrary, already illustrates the lowering tendency of slavery. They have lost their knowledge of art, their natural affection for their young, and even their instinct of feeding! They are, however, bold and powerful marauders. In Strongylognathus the enervating influence of slavery has gone further, and told even on bodily strength. They are no longer able to capture their slaves in fair and open warfare. Still they retain a semblance of authority, and will fight bravely, though in vain. In Anergates we come to the last scene of this sad history. Gradually they took to keeping slaves; maintained for a time their strength and agility, though losing by degrees their independence, their arts, and even many of their instincts; gradually even their bodily force dwindled away, until they sank to their present degraded condition, the miserable representatives of far superior ancestors, maintaining a precarious existence as contemptible parasites of their former slaves."

We cannot go into details respecting the numerous inquilines of other orders of insects (chiefly beetles) found in ants' nests, which the ants not only never molest, but even take great care of, sometimes, as in Aphides, before alluded to, for the sake of their secretions, sometimes for no apparent reason.

Chapters v., "Behaviour to Relations"; vi., "Recognition of Friends"; and vii., "Power of Communication," may be briefly considered together. From a purely psychological point of view they are the most interesting of all, and in them especially the author shows his great capacity for devising experiments by which to test the intellectual powers of his pets. We can only summarize the results. One point is certain, there are ants and ants, and the same degree of intelligence is not possessed by all in common. Hatred is a stronger passion than affection. Ants of the same nest never quarrel. They recognize friends, and attack or neglect ants introduced from other nests; and sympathy and affection, if often apparently absent, are certainly sometimes shown in a marked degree. The recognition of friends does not apply only to the perfect insects in a community, but extends to those produced from larvæ and pupæ that had purposely been removed for a time. As to the means whereby this recognition is effected no special decision appears to be arrived at; but one thing appears certain, it cannot be by means of a password. As to the power of communication, the experiments proved that a "find" of larvæ or other food was somehow communicated to friends, so that they might share the feast, and the author thinks "they certainly seem to indicate the possession by ants of something approaching to language."

Chapters viii. and ix. are on the senses and general intelligence of ants. With regard to *sight*, the author is inclined to adopt the mosaic theory in connexion with the compound eyes, though acknowledging the difficulties that beset it. The experiments with regard to the power of distinguishing colours are very elaborate, and tend to show that ants possess the power of perceiving the ultra-violet rays in the spectrum, as a distinct colour of which we can form no idea, and that the colours of objects and the general aspect of nature must to them be very different from those presented to us. Ants *hear*, and the author is disposed to consider they perceive sounds which we cannot, though apparently insensible to others that have the greatest effect upon us; he is inclined to think that certain curious structures in the antennæ and tibiæ may be auditory organs. *Smell* is very highly developed. The chapter on general intelligence as exhibited by ants when placed under unusual conditions does not show them in a very favourable light.

Chapters x. and xi. are on bees and wasps respectively, and detail the results of parallel experiments with them, with much the same results. Of course the now well-known "tame wasp" receives her due share of attention. The author originally intended to experiment principally on bees, but found ants better adapted to his purpose. The volume concludes with a number of appendices, principally consisting of tables giving the minute details of the experiments on which the arguments in the body of the work are based. From out of this mass we select one at random; it is headed "A Day's Work," pp. 423–426, and is an account of the visits paid to a supply of honey by a marked wasp on September 10th, 1875. Commencing at about seven o'clock in the morning and ending at about a quarter to seven in the evening, she paid during that time ninety-four visits to the honey, notwithstanding sundry interruptions. One is in doubt which more to admire, the patience and industry of the wasp or of the observer.

We have said enough to indicate the tendency and scope of Sir John Lubbock's observations. Naturally many problems remain unsolved, or only partially solved. If he had proved nothing he would nevertheless have merited no ordinary praise for having instituted a series of elaborate experiments, upon which no doubt he and his successors in this field of inquiry will yet be able to improve.

ASTRONOMICAL NOTES.

THE atmosphere being exceptionally transparent at Athens on the 10th of June, Dr. Julius Schmidt succeeded in obtaining an observation of Wells's comet there about three o'clock in the afternoon with a low power in his 6-ft. refractor. The comet was distant only about 2°·8 from the nearest limb of the sun, being at its perihelion the same night. The following are its places for next week, from the ephemeris of Dr. E. Lamp, calculated for midnight at Berlin:—

Date.	R.A. h. m. s.	N.P.D. °
July 3	9 50 28	78 38
,, 4	9 57 25	78 55
,, 5	10 4 2	79 11
,, 6	10 10 22	79 27
,, 7	10 16 25	79 43
,, 8	10 22 12	79 59

It will be noticed that the comet will be in the constellation Leo and not far from the planet Mars. As it will not set until about two hours after the sun, it may probably be observed, in the absence of moonlight, with a tolerably good telescope (but fainter each night) until about the last of the above dates. Possibly the observations may be continued somewhat longer with the more powerful instruments.

Prof. Ormond Stone, of the Cincinnati Observatory, Ohio, has recently been appointed director of the Leander M'Cormick Observatory of the University of Virginia.

The arrangements for the new Lick Observatory at Mount Hamilton, California, are progressing. The trustees have ordered a meridian circle with six inches aperture from Messrs. Repsold, of Hamburg, of the same design as that of the Strasbourg Observatory. The object glass of the instrument, as well as those of its collimators, will be made by Alvan Clark & Sons. There are to be two divided circles, each provided with four reading microscopes; and the axis of revolution will itself be a telescope, with collimators east and west to rectify its position.

SOCIETIES.

GEOGRAPHICAL.—*June* 26.—Right Hon. Lord Aberdare, President, in the chair.—The following gentlemen were elected Fellows: Capt. I. Reeves, Surgeon-Major H. F. L. Melladow, Commander M. H. Drummond, Rev. W. Deans Cowan, Messrs. A. J. R. Boughton-Knight, J. Bowick, H. St. John Browne, E. S. Cooper, J. Geddie, J. H. Gubbins, S. C. Hadley, C. Maigatter, H. Moss, W. H. A. Sleigh, and S. C. Tompkins.—The papers read were, 'On a Sketch Survey of the Ancobra and Prince's Rivers, and of the Takwa Range, Gold Coast,' by Commander V. J. Cameron,—and 'On the Kong Mountains,' by Capt. R. F. Burton.

SOCIETY OF ANTIQUARIES.—*June* 22.—The Earl of Carnarvon, President, in the chair.—Mr. A. W. Franks exhibited and presented a folio volume, in its original binding of red morocco, containing 107 drawings of ancient sculptures formerly in the collection of the Marches del Carpio, executed in 1682, and containing specimens of ancient sculpture which have many of them eluded discovery.—Mr. A. J. Evans exhibited an interesting series of ancient gems which he had himself collected from the sites of ancient cities of Dalmatia; and in connexion with this exhibition Mr. E. Freeman, at the request of the President, favoured the Society with an address on the past glories of those ancient cities, and on the prospects which they held out of great destinies in time to come.—Mr. F. J. Baigent communicated an elaborate paper on the family of Cufaude of Cufaude, in Hampshire, illustrated by an illuminated pedigree, formed of two sheets of vellum which had been rescued from destruction a hundred years ago by an ancestor of the Chute family, who found it used for the purpose of keeping out wind and rain from a casement of a cottage at Basingstoke.

STATISTICAL.—*June* 27.—Sir J. Caird, President, in the chair.—The Report of the Council, the Financial Statements of the Treasurer, and the Report of the Auditors, having been read, were adopted unanimously by the meeting, the documents referred to indicating the continued progress of the Society.—The under-mentioned were unanimously elected to be the President, Council, and Officers of the Society for the ensuing year: *President*, R. Giffen; *Council*, Major-General H. P. Babbage, A. H. Bailey, T. G. Balfour, A. E. Bateman, S. Bourne, Sir G. Campbell, J. O. Chadwick, H. Chubb, Hyde Clarke, L. L. Cohen, Major P. G. Craigie, Right Hon. the Earl of Dunraven, R. Hamilton, A. S. Harvey, F. Hendriks, N. A. Humphreys, W. Hooper, R. Lawson, Prof. L. Levi, Sir J. Lubbock, J. B. Martin, R. B. Martin, F. G. P. Neison, E. C. Nepean, R. H. Patterson, F. Purdy, Sir R. W. Rawson, Sir W. R. Robinson, R. D. Urlin, and R. P. Williams; *Treasurer*, R. B. Martin; *Secretaries*, H. Chubb, J. B. Martin, and A. E. Bateman; *Foreign Secretary*, J. B. Martin.

ZOOLOGICAL.—*June* 20.—Dr. A. Günther, V.P., in the chair.—The Secretary read a report on the additions made to the Society's menagerie during May, and called special attention to four pigmy hogs (*Porcula salvania*), a Mediterranean seal (*Monachus albiventer*), two male argus pheasants (*Argus giganteus*), a koala (*Phascolarctus cinereus*), a jackass penguin (*Spheniscus magellanicus*), and a fine pair of great ant-eaters (*Myrmecophaga jubata*). He then exhibited a series of the diurnal and nocturnal lepidopterous insects bred in the insect house during the present season, and called attention to several specimens of clear-winged moths (Sesiidæ), a group of insects which had not before been exhibited in the insect house. The cocoon of *Cricula trifenestrata*, together with the imago, was also exhibited.—Mr. W. A. Forbes made remarks on the presence of a rudimentary hallux in certain birds—

the albatrosses and two genera of woodpeckers (Tiga and Picoïdes), commonly described as being three-toed, and exhibited preparations showing its condition in the birds in question.—Prof. Owen read the twenty-fifth of his series of memoirs on the Dinornis. The present communication gave a description of the head and feet, with their dried integuments, of an individual of a species proposed to be called *Dinornis didina*. These specimens, being parts of one individual, tended to elucidate in an unlooked-for degree the external characters of the moa. A second communication from Prof. Owen contained some observations on *Trichina spiralis*.—Papers were also read: by Prof. E. R. Lankester, on the valves of the heart of *Ornithorhynchus paradoxus*, and on the *Fossa ovalis* of the Monotremes,—by Prof. Huxley, on the respiratory organs of Apteryx, which he showed did not differ fundamentally from the Avian type, pointing out that neither of the structures that had been termed diaphragms in the Apteryx was really in correspondence with the mammalian diaphragm,—by Mr. W. A. Forbes, the sixth of his contributions to the anatomy of Passerine birds, in which he showed that Xenicus and Acanthisitta, hitherto considered to be allied to Certhia, Sitta, and Sittella, were really mesomyodian forms, most nearly allied perhaps to Pitta; the discovery of such low forms of Passerine birds in New Zealand was a fact of considerable interest, none of the allied groups being at all represented there at the present day,—from Mr. S. Hanley, on the shells of the genus Leptomya, to which were added the descriptions of two new species,—by Mr. Sclater, on Rüppell's parrot, showing that the more brightly-coloured individuals, ordinarily supposed to be the males of this parrot, were really the females,—by Mr. Sclater, on two new species of the genus Synallaxis, from the collection of Messrs. Salvin and Godman,—from Prof. M. Watson, on the muscular anatomy of Proteles as compared with that of Hyæna and Viverra,—by Mr. O. Thomas, on a new species of rat from China, which he proposed to call *Mus Edwardsi*,—from Mr. E. W. White, on the birds collected by him in the Argentine Republic,—by Mr. R. B. Sharpe, on two apparently new species of Erythropygia, one from the Zambesi, the other from the Congo river, which he proposed to call respectively *E. Zambesiana* and *E. ruficauda*; and on a new flycatcher obtained by the late Governor Ussher on the Gold Coast, which the author proposed to call *Muscicapa Ussheri*,—and from Mr. F. Moore, on the Lepidoptera collected by the Rev. J. H. Hocking, chiefly in the Kangra district, N.W. Himalaya. The present communication, being the second on the same collection, contained the descriptions of seven new genera and of forty-eight new species. An account of the transformation of a number of the species was also given.—This meeting closes the present session. There will be no more scientific meetings until November next.

PHYSICAL.—*June* 24.—Prof. Clifton in the chair.—Prof. B. Price and Principal V. Jones were elected Members.—Prof. Bjerknes, of Christiania, delivered a lecture on the hydrodynamic analogies to the phenomena of electricity and magnetism which he has established, and illustrated it by a number of beautiful experiments showing the attraction and repulsion between small bodies vibrating in water.—The Society will meet again in November.

ARISTOTELIAN.—*June* 19.—Mr. S. H. Hodgson, President, in the chair.—Mr. E. Hawksley Rhodes read a paper 'On Descartes,' which was followed by a discussion.

SHORTHAND.—*June* 21.—*Annual Meeting.*—Mr. C. Walford in the chair.—The report presented by the Council stated that ninety-five members had joined during the year; that the upholders of the various current shorthand systems had shown themselves capable of sinking individual differences of opinion and joining together heartily in endeavouring to carry out the aims of the Society; that the magazine of the Society had proved useful and interesting, and that its future career was limited only by the funds at the disposal of the Society. With the object of increasing the usefulness of this medium of communication between members of the Society, and between this and other societies of a kindred nature, the Council called on all interested in shorthand, whether as writers or employers of shorthand skill, to support the Society. The Council expressed the indebtedness of the Society to the *Athenæum* for the regular notices of its proceedings. The report was unanimously adopted.—The following list of officers for the ensuing year was also unanimously adopted: *President*, Mr. C. Walford; *Vice-Presidents*, Mr. T. A. Reed, Rev. W. H. Hechler, and Mr. C. W. H. Wyman; *Council*, Prof. Everett, Messrs. J. E. Bailey, W. E. Baxter, T. J. Clarkson, J. Douglas, J. Westby-Gibson, W. Goddard, W. J. Ingram, A. L. Lewis, E. Pocknell, H. Richter, J. B. Rundell, A. B. Sparkhall, S. Timmins, F. Turner, and T. Wright; *Hon. Treasurer*, Mr. J. G. Petrie; *Hon. Secretary*, Mr. H. H. Pestell; *Hon. Foreign Secretary*, Herr H. Richter.

MEETINGS FOR THE ENSUING WEEK.

MON. Asiatic, 4.—'Buddhist Caves of Afghanistan' and 'Identification of a Sculptured Tope with Sanchi,' Mr. W. Simpson; 'Observations on Chinese Written Laws,' Mr. C. Gardner.
— Royal Institution, 5.—General Monthly.
— Aristotelian, 7½.—Election of Officers; Discussion, 'Subject and Object.'
TUES. Archæological Institute, 4.
WED. Entomological, 7.
FRI. United Service Institution, 3.—'Training and Organization of Artillery Volunteers,' Capt. E. C. Wace.
SAT. Botanic, 3½.—Election of Fellows.

Science Gossip.

THE Chevalier E. von Hesse Wartegg, who has just returned from a scientific journey in Mexico, New Mexico, and Arizona, is exhibiting several hundreds of photographs, arms, pottery, and recent stone implements of the Pueblo Indians of Laguna, Acoma, &c., in the Map Room of the Royal Geographical Society.

MESSRS. SIMPKIN, MARSHALL & Co. will shortly publish a new edition of 'The Sportsman's Handbook to Practical Collecting and Preserving Trophies,' by Mr. Rowland Ward, F.Z.S., in which considerable additions to both text and illustrations will be made in that part of the book which treats of practical taxidermy, concerning which it is an authority; and the latest information as to the fields for great game shooting will be included.

THE Parkes Museum, which was first instituted in 1876, as a memorial to the late Dr. Edmund Parkes, was incorporated on Wednesday.

PROF. CHRYSTAL, of the Edinburgh University, has received from the Royal Society of Edinburgh the Keith Prize for the biennial period 1879–81, on account of his paper 'On the Differential Telephone,' which was published in the Society's *Transactions* for 1879–1880.

M. NICHOLAS DE KABATH, of Paris, has constructed an accumulator designed to give a large accumulating surface. Each plate is composed of a set of strips of lead $\frac{1}{10}$ millimètre thick; these are alternately flat and corrugated, so as to form a plate 8 or 9 centimètres wide, built up of about 100 slips. They are kept together by a perforated lead plate entirely surrounding them, but permitting a free circulation of the liquid employed, which is dilute sulphuric acid. In forming a cell M. de Kabath puts twelve of these plates into a wooden case having two terminals, which are plain sheets of lead.

FINE ARTS

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The NINETY-SEVENTH EXHIBITION is NOW OPEN, 5a, Pall Mall East, from Ten to Six.—Admission, 1s. Catalogue, 6d.; Illustrated ditto, 1s.
ALFRED D. FRIPP, Secretary.

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

The LION AT HOME, by ROSA BONHEUR.—This splendid Chef-d'œuvre, the latest production of this celebrated Artist, also the complete Engraved Works of Rosa Bonheur, NOW ON EXHIBITION at L. H. LEFEVRE'S Gallery, 1a, King-street, St. James's, S.W.—Admission, 1s. Ten to Six.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

The Priory of St. Mary Overie, Southwark. By F. T. Dollman. Illustrated. (Dryden Press, Long Acre.)

MR. FRANCIS T. DOLLMAN, an accomplished draughtsman and enthusiastic archæologist, has devoted nearly fourteen years to the production of this exhaustive treatise and abundant series of beautiful drawings, giving the history and architecture of a church which, although wrecked by shameless neglect, and damaged by ruthless "restorations," is yet worthy to be a cathedral, should a bishop be needed in the region of which it is the most beautiful ornament. Of records of its antiquity we have nothing older than Dugdale's citation from a MS. in C.C.C., Oxford, to the effect that William Giffard, Bishop of Winchester, "fundavit Monasterium S. Mariæ Overie in Suthwarke," for canons secular, in the latter part of the eleventh century. Dugdale, however, effectually demolished his own authority. There can be little doubt that Giffard founded his religious house on a site where one of another kind had long existed. Domesday says that on the territory of Odo, Bishop of Bayeux, in Southwark stood in 1083 "unum monasterium." There was, as Bishop Tanner said, no pretence of another such establishment in that district. The tradition quoted by B. Linstede, the last prior of St. Mary's,—Aubrey's "cowardly and traitorous prior,"—to the effect that one Mary, daughter of a ferryman, built a nunnery there, and gave to it the profits of the ferry, by means of which London Bridge was constructed, is absurd and self-contradictory. The substitution of the bridge for the ferry would have destroyed the endowment, and it is certain that in the time of Henry I. London Bridge was maintained by a general tax. The cost of London Bridge was far beyond the resources of any religious establishment. What that cost was supposed to be may be guessed by those who remember the old idea that, during the building of the piers of the bridge, the whole Thames was diverted through a trench which extended from Battersea to Rotherhithe.

It is certain that so late as the 23rd of Edward I. the monks pleaded poverty for an exemption from taxation, declaring their church had been a ruin for thirty years, and that they had not yet been able to build the tower. This statement seems to be confirmed by the existing structure, which shows that till long after that date the tower did not reach much higher than the open gallery above the four large arches. According to Stow, the priory, like many other monastic establishments, was burnt about 1207, and, according to a MS. quoted by Mr. Dollman, and supported by well-known authorities, again in 1213, when London Bridge, the chapel, and the houses on that structure were likewise consumed. In that year the canons of St. Mary built a hospital near their priory and dedicated it to St. Thomas, an institution which is not unknown to us. This was removed to another site in 1228. St. Mary's Church was certainly in a serviceable condition, for we have found in the *Liber Albus* of London that in this very year one Henry de Buke slew one Le Ireis le Tynlour (Irish Tiler) in Fleet Street with a knife, and then fled to the church of St. Mary at Southwark, and, "having there acknowledged the deed in presence of the chamberlain and sheriffs, abjured the realm."

The real founder of the church was Peter de Rupibus, Bishop of Winchester, during whose rule the lucky assassin escaped. Peter erected the chapel on the south side of the choir, and probably reconstructed the old nave of the church. He cased the Norman works with Caen stone in order to assimilate them with the newer portions. The choir and retrochoirs and their aisles are of later date—at least the upper parts appear to be so, although Mr. Dollman does not think so.

The forms here are more developed and obviously in better taste than those of the old nave. It appears to us that possibly the recasing of the Norman work was done after the more eastern parts were complete.

It was in this eastern portion, or, rather, in the Lady Chapel beyond it, that in 1555 were conducted the trials of Hooper, Bishop of Gloucester, John Rogers, Dr. R. Taylor, John Bradford, Dr. E. Crome, Dr. Ferrar, and Mr. L. Saunders; and here they were condemned. Here shortly afterwards were brought the viscera of Bishop Gardiner; here his corpse set forth in a stately procession to his tomb at Winchester, including, as Stowe recorded, "a picture [statue] made like unto him, lying on his coffin, with a miter on the head, a coape of cloth of gold on ye body of the picture, gloves on the hands, rings on ye fingers."

The history of the church from this time forward is neither more nor less than a record of the decline of reverence, sincerity, and knowledge of art. At the Reformation the Lady Chapel was let as a bakehouse, and included, it was said, a hog-trough and ovens. In 1541 the parish, united with the adjoining St. Margaret's, became by Act of Parliament the parish of St. Saviour, Southwark. Sir Thomas Wyatt, taking possession of the church, converted it into a fort, which the Lieutenant of the Tower proceeded to batter with culverins and demi-cannons to boot. Nevertheless the Duke of Somerset, one of the proudest of peers, and Sir Thomas Audeley, a famous captain, were in 1554 interred with pomp within the church. The old screen was taken down; the rood loft and other "superstitious" apparatus were abolished, and a screen that must have been wonderfully hideous was set up. In 1576 the baker was turned out, and the parish authorities found the chapel used as a stable. In 1578 some parts of the edifice were repaired, but in 1607 the Lady Chapel was in the occupation of Wilson, a baker, who obtained leave to remove the tomb of "a certain Cade" because it inconvenienced him in his business. In 1676 the eastern portion of the church was damaged by the fire which destroyed Chaucer's Tabard Inn. The windows, as shown in Hollar's view (1647), were reduced from four to three! that is if Hollar is to be trusted, of which we are by no means sure, knowing how he delineated old St. Paul's. In 1689 the pinnacles of the tower were altered from their original design and the buttresses were removed. In the interior, in 1703, wonderful things were done; "a Corinthian altar-screen" was erected, and whole-length, fully dressed effigies of Moses and Aaron, such as appeared in many a church at that time, flanked the communion table, "the whole being very well liked and approved of," as the parish records say. The repairs of this date cost 2,600*l.*, and included much comfortable wainscoting. In 1734 the south sides were "coated with brick"; in the next year the beautiful stone tracery, which is distinguishable in the old views transcribed by Mr. Dollman, was taken out. In 1758 the north side of the west end was coated with brick, and the Magdalene Chapel was "coated with cement." About 1764 the ancient roof, which seems to have existed until this period, was taken away and a flat leaden one substituted, and the gable over the south transept was changed into a pantile hipped roof! The embattled parapets of Hollar's view were removed, and timber framework covered with tiles made to enclose the two northernmost bays. The vaults under the church were piled with coffins seven feet deep. It must be noticed that the beauty of the church appears, even during these evil days, to have been recognized. At last there was unmistakable evidence that the whole structure was about to fall, and the tower, endangered by the mad practice of ringing the bells in the modern mode, had to be strengthened by an ingeniously devised system of iron ties. In 1821 there was a talk of pulling down the old church and building a new one to "fit the tower"! "Restoration," as it was then understood, culminated in a plan to "produce a suitable Gothic building at a moderate expense" in fifteen months, and at the cost of 13,446*l.* This project was discussed, and happily rejected, but by a very narrow majority.

In 1832 it was proposed to demolish the whole of the Lady Chapel, and not even the election of a beadle, let alone a churchwarden, could have troubled St. Saviour's parishioners more deeply than did the question whether or not this chapel should be "restored" or destroyed. At last Mr. Gwilt was employed to restore the chapel. But so late as 1838 the ruins of the old nave, with the west portal, one of the most magnificent works of its class, a stately Norman doorway, and every relic of that part of the old building were demolished. In 1839 a new nave was built, and described as a specimen of the "pure Gothic style." Many persons have asked what became of the fine architectural fragments removed from this church during the last-mentioned operations. We have reason to believe that they were included in the museum of Mr. Cottingham, and long adorned the interior and exterior of his house in the Waterloo Road for the edification of passers-by. Well painted, they withstood the weather.

While all this was going on it is easy to suppose that Pugin assaulted the rebuilders even more than the iconoclasts. He called on the art and church loving worlds to "weep" over the mutilated condition of the desecrated structure, but he addressed a deaf world. What he deplored remains as he left it. Rather than it should be "restored" again let the genuine parts of the old building, which are but few, remain as they are. Let the wonderful Gothic architecture of the third decade of the nineteenth century remain as it is. Let what exists of the church which holds the tomb of Gower, the mortal remains of Massinger, of Shakspeare's brother Edmund, "a player," of John Fletcher, of Henslowe, and of Lancelot Andrews, stand as it is. Keep it, preserve it, prop it up, strengthen its foundations, walls, and roofs, so that it may stand without further sophistication.

Old St. Mary Overies and St. Saviour's, Southwark, are injured beyond recovery. But of their history and of the men who had to deal with them this volume, with its fine drawings and abundant details, is the best record the historian, and above all the architect, can hope for.

NEW PRINTS.

MESSRS. P. AND D. COLNAGHI & Co. have issued a new etching by M. C. Waltner, after G. Mason's beautiful landscape with figures known as 'The Evening Hymn.' A re-mark proof lies before us. The etching, although somewhat dark and over soft, is not confused nor blurred. It is instinct with the spirit and poetry of the design, and is a fair translation of the original colour and tones. The chiaroscuro is excellent. The engraver has succeeded in reproducing the beauty of the faces and the gracefulness of the actions. Like all translations of the kind, the print needs abundance of light to be seen properly. On the whole it is a satisfactory and beautiful work.

From the same publishers we have received an artist's proof of a plate mezzotinted by Mr. S. Cousins after a picture by Greuze, which is one of the choice pictures in Earl Dudley's collection. It is called 'A Golden Pippin,' and represents a little girl leaning her elbows on a table, on which are an apple and a piece of bread. It is very nearly impossible to give in mezzotint the lucidity and soft sparkle of Greuze's technique. Mr. Cousins has succeeded as well as the process allowed him, while in reproducing the tender, ingenuous, and charmingly natural grace of the expression the print is extraordinarily happy. Prints after Greuze are rarely good for much; this is a beautiful exception, and to those who enjoy his pictures it will be doubly welcome because it is devoid of that *soupçon* of desire which taints so many of them.

Mr. Lefèvre has sent us a re-mark proof of a brilliant, firm, and crisp etching by M. Lhuillier, one of the soundest and most learned of its class, after Mr. Eyre Crowe's upright picture called 'Brothers of the Brush.' It would be hard to praise too highly the fineness and fidelity of this admirable specimen of modern art, in which the peculiar skill of the engraver suited the technique of the painter with rare good fortune. The picture was at the Academy in 1873. The etcher has given the neat and incisive, broad and yet searching touch of the painter, drawn the figures with remarkable solidity, translated their actions with animation, and, with one exception, preserved the chiaroscuro of his model with felicity. The exception is that the white clothing of the workmen has been lowered too much, so that the local colour of their figures is not accentuated sharply enough against the wall of the house. This is a trivial defect where all else is satisfactory.

Mr. John Park has etched with good fortune a plate after Mr. H. MacCallum's 'Rocked in the Cradle of the Deep,' a work which could not reward the pains and skill of an artist who has conscientiously striven to reproduce its rough handling while adding refinements of tone and finishing the rudely painted figures. He could not impart true modelling to the representation of the water, but he has given air to the distance and softened the middle distance. He has cleverly evaded the difficulties of the garish colour. Mr. Dunthorne publishes the print.

Messrs. Riddle & Couchman, Southwark Bridge Road, have published a mezzotint by Mr. J. B. Pratt, after a picture called 'Dispersing a Flying Column,' by Mr. B. Goddard. The painter could doubtless tell what led him to depict the onslaught of two ponies on a party of geese. The design is worthy of the humour of the title. The engraver's work is fairly good. It will be kind to say no more of this work, and to hope the painter, etcher, and publishers will produce nothing more of the kind.

Messrs. Field & Tuer have issued Mr. T. J. Ellis's 'Six Etchings of well-known Views in Kensington Gardens and Hyde Park,' in a folio with a descriptive text by the Rev. W. J. Loftie. The text is of the briefest. The typographical and binder's parts of this publication are excellent. The etchings are of a very primitive kind, and so completely devoid of art that it is con-

ceivable the draughtsman purposely drew the figures badly—see the queer monsters in 'Rotten Row'—and disposed them without regard to proportion; compare in the same work the huge man who gossips with the lady mounted on a horse which is hardly so big as he is. Tact like that of a drawing master of the old-fashioned kind is shown in the sunlight of one or two of the etchings and in the handling of the foliage on some of them, and there is noteworthy feeling for the character of twilight in 'The Albert Memorial.' Otherwise these plates are beneath criticism.

SALES.

MESSRS. CHRISTIE, MANSON & WOODS sold on the 24th ult. the Italian pictures and historical portraits from Hamilton Palace. The following are the prices of the more important works:—P. Veronese, A Sacrifice, 304*l*. L. Da Vinci, Portrait of a Gentleman, in a black dress and cap, 525*l*. Fra Angelico, Heads of the Virgin and Announcing Angel (a pair), 1,312*l*. A. Mantegna, St. Sebastian and St. George, 441*l*.; Luigi Gonzaga, Sixth Lord and Second Marquis of Mantua, and his Wife, Barbara of Brandenburg, 210*l*.; A Pair of Upright Panels, painted with figures of vestals, 1,785*l*. G. A. Pordenone, The Holy Family, with the Magdalen, 451*l*. F. Francia, The Madonna and Child, attended by a monk and a nun, 262*l*. Pietro Della Vecchia, The Four Fathers of the Church, 472*l*. G. B. Cima, The Madonna with the Infant Christ in her Lap, holding a bird, 651*l*. Bassano, A Pair of Wings of a Triptych, representing incidents in the journey of the Israelites, 609*l*. S. Botticelli, The Adoration of the Magi, 1,627*l*.; The Assumption of the Virgin, 4,777*l*. Bronzino, Portrait of Leonora di Toledo, Wife of Cosmo di Medici, 1,837*l*. Sasso Ferrato, The Madonna in Prayer, 383*l*. M. Venusti, The Madonna and Child, with St. Elizabeth and St. John, 430*l*.; Christ driving out the Money-changers (from the design of M. Angelo), 1,428*l*.; The Adoration of the Magi, 1,218*l*. Perugino, The Madonna, her hands clasped in prayer, 504*l*. Titian, The Artist's Daughter, carrying a basket of fruit, 735*l*. Tintoret, Portrait of an Admiral in Armour, with crimson staff, holding a baton in his right hand, 1,155*l*. Giorgione, The Story of Myrrha, 1,417*l*.; A Venetian General in Half Armour and Trunk Hose, with sword, 530*l*. Pannini, Roman Ruins, with figures sacrificing, 215*l*. G. Sansovino, drawing in bistre, Decorations of the Church of S. Maria del Fiore, Florence, at the visit made to that city by Pope Leo X., 1514, 315*l*. The most important piece of sculpture included in the sale of June 19th was 'A Bust of the Emperor Augustus,' which fetched 1,732*l*. On June 26th Thorwaldsen's bust of Napoleon was sold.

The public interest in this sale shows no abatement, and the hundred pictures sold last Saturday deserved more attention than the eighty which were dispersed on the previous occasion. The most important examples may be noted. Angelico's 'Head of the Virgin,' a charming tempera picture in good condition, is inferior to the fellow fragment, the 'Head of the Announcing Angel,' which is perfect, and valuable for the spirituality and exaltation of the glad expression, the delicacy of the drawing of the hands, and the punctured pattern of the nimbus. Mr. Winkworth bought both these heads. Of the Mantegnas, "A Pair of Upright Panels, with the figures of vestals in [gold] monochrome on an agate ground" (lot 398), is unchallengeable; in it marvellous draughtsmanship, perfect finish, and Mantegnesque classicism are seen at their best. The 'Luigi Gonzaga and his Wife,' lot 393, sold to M. Cernuschi, of Paris, shows no trace of the skill of the Mantuan; under much repainting may be traced something like the style and handling of Marco Zoppo. Messrs. Crowe and Cavalcaselle, 'North Italy,' i. 388, while refusing to ascribe these portraits to Andrea Mantegna, recognized in them the style of Francesco, or Ludovico, his son. The suggestion is plausible. The verisimilitude of the heads is attested by the frescoes in the castle at Mantua. 'SS. Sebastian and George,' lot 377, which Mr. J. E. Taylor secured, beautiful miniatures, are a solid manifestation of the Peruginesque manner, and have nothing to do with the Paduan master. They are at once searching and deficient in spirituality, yet hardly Raphaelesque enough to be by Perruzzi, to whom some have awarded them. Lo Spagna's is a not improbable name for their author. Possibly not by Da Vinci, and more like a Beltraffio, is the 'Portrait of a Gentleman,' lot 344. It is difficult to say that Antonello da Messina painted the other 'Portrait of a Gentleman,' lot 343. A genuine but repainted Antonello is in to-day's sale, lot 751. Titian had nothing to do with the 'View near the Coast,' lot 355; yet if the bust of the 'Venetian Nobleman,' in a black dress trimmed with grey fur, lot 387, is not Bassano's, which we doubt, it may well be Vecellio's. The best Tintoret of last Saturday's sale is the superb and poetical 'Moses striking the Rock,' lot 392. It was sold for a mere trifle, under two hundred pounds. 'The Admiral in Armour,' lot 410, which Messrs. Colnaghi bought, is sumptuously coloured. The Cima, 'Madonna with Christ,' lot 395, is a pretty gem, which has been elaborately and cleverly repainted in many parts. It fell to Messrs. Agnew. Botticelli's 'Adoration of the Magi,' lot 397, is a poem in his finest style, and, we think, intact. Vasari says the artist painted this subject for the Casa Pucci. 'The Assumption of the Virgin,' by the same artist, is one of the greatest poems ever painted, worthy of Great Britain's treasure-house. It was, according to Vasari, executed for Matteo Palmieri and placed in the church of S. Pietro Maggiore at Florence; both painter and patron got into trouble on account of certain heterodox suggestions of the design, therefore the altar to which it belonged was interdicted and the picture covered. It was No. 191 at the Academy in 1873, with the 'Adoration of the Magi.' The "Giorgione" who painted the 'Story of Myrrha,' so called ('Hippomenes and Atalanta'?), lot 383, a lovely picture in many ways, seems to us to have likewise produced the famous 'Fête Champêtre' which bears the same artist's name in the Louvre. We question Barbarelli's share in either, and prefer the work before us to the Louvre picture, notwithstanding the charm of Rossetti's sonnet to the latter. See Crowe and Cavalcaselle, 'North Italy,' ii. 168. Bronzino's 'Leonora di Toledo and her Son,' lot 399, sold to Mr. Vokins, is very fine indeed, and painted with the care of a sculptor. If Francia had anything to do with 'The Madonna and Child,' lot 382, it was one of his pot-boilers. The group of three portraits on our left of Tintoret's 'Descent from the Cross,' lot 348, gives much interest to an unlucky composition. The three heads are marvels. Veronese's brilliant and rich 'Sacrifice,' lot 324, is genuine and fine.

Messrs. Sotheby, Wilkinson & Hodge sold by auction on Friday and Saturday in last week a collection of Greek and Roman coins. The following are some of the higher prices that were realized: Camarina, tetradrachm, *obv.* laurelled female head, *rev.* quadriga to left, 19*l*. Naxus, tetradrachm, *obv.* head of the Indian Bacchus, *rev.* old Silenus naked, 30*l*. Macedonia, tetradrachm, head of Diana to right, *rev.* wreath of oak enclosing ΜΑΚΕΔΟΝΩΝ, 13*l*. Philip V., *obv.* head of Perseus helmeted, *rev.* club within a wreath of oak, 12*l*. Mithridates VI., tetradrachm, *obv.* head diademed, *rev.* Pegasus feeding, 12*l*. Ariarathes, *obv.* head, *rev.* Pegasus drinking, 12*l*. Scepsis, *obv.* winged sea-horse, *rev.* palm tree, &c., 12*l*. 5*s*. Mausolus, tetradrachm, *obv.* head of Apollo, *rev.* Carian Jupiter to right, holding a two-headed axe, 22*l*. 2*s*. 6*d*. Tryphon, drachm, *obv.* portrait, 13*l*. 10*s*. Double daric of Darius Hystaspes, 13*l*. Alexander the Great, *obv.* head with elephant head-dress, *rev.* Jupiter type, 25*l*. Ptolemæus I., head to right, *rev.* quadriga of elephants to left, 20*l*. 10*s*. Roman:—Julius Cæsar, *obv.* laureated head, *rev.* Julius Octavus, 16*l*. Otacilia, *obv.* bust of the empress, *rev.* inscription, 25*l*. Glycerius, quinarius, *rev.* cross within wreath, 14*l*. 15*s*. Total of two days' sale, 1,302*l*. 9*s*.

NOTES FROM ROME.

The Compital Shrine.—The ancient Roman practice of placing shrines of domestic gods at the corner of the principal streets of each quarter was raised to the dignity of a public institution by Augustus. See Suetonius, 'Octav.' 31:—"Compitales Lares ornare bis in anno instituit, vernis floribus et æstivis." Under Constantine 424 of these popular shrines were numbered in Rome, and, as in many other instances, the practice was adopted and followed down to our times by the Christian population. No ancient compital shrine had yet been found, although many inscriptions belonging to them had been copied by former epigraphists. They are of the utmost importance, because the name of the street at the corner of which they stood is always written upon them.

At the western end of our excavations, a few yards from the temple of Vesta, one of these chapels has been discovered. It stands on a raised platform or pedestal against a brick wall. The entablature was supported by two half columns at the back, and two full columns in front, of the Composite order and of fluted Carrara marble. On the frieze is engraved the following inscription, in beautiful letters of the golden age: SENATVS POPVLVSQVE ROMANVS PECVNIA PVBLICA FACIENDAM CVRAVIT. Underneath there was (very likely) a statue of Mercury, its socle, inscribed DEO MERCVRIO, having been found not very far away. The name and the history of this elegant monument have been revealed by an inscription found three years ago at S. Paul's outside the Walls, according to which some devotees had restored, A.D. 223, *œdiculam regionis* viii. (Forum Romanum) *vico Vestæ*. Vesta's temple is separated from that of Castor and Pollux by a lane, which is evidently the Vicus Vestæ mentioned above. We are actually engaged in restoring the architectural pieces of the shrine to their proper places, everything having been found scattered far and wide around.

The Plan of Rome.—In demolishing a mediæval wall at the northern end of the Porticus Margaritaria we came across a precious fragment of the plan of Rome engraved on marble, A.D. 211, under Severus and Caracalla—a discovery quite unprecedented and unexpected, because all the existing fragments had been found, without exception, in the garden of SS. Cosma e Damiano, first by Antonio Dosio under Pius IV., then by Efisio Tocco in 1868. The new piece contains the plan of the south-west corner of the temple of Castor and Pollux, inscribed CASTORIS, which was the popular and simplest way of naming the temple. Every one knows the joke of Bibulus, the colleague of Julius Cæsar in the censorship, who complained that all the good things accomplished together were attributed by the Romans to Cæsar alone. "There happens to me," said Bibulus, "what happens to Pollux: he is never mentioned in connexion with his brother Castor, although they have an equal right over the temple. I work as hard as Cæsar, and spend as much money as he does, and he reaps all the benefit from it."

At the back of the temple the plan shows a street diverging at a right angle from the Vicus Tuscus, and running up the slope of the Velia in a parallel direction with the Sacra Via. This must be the famous Nova Via, the pavement of which had already been found in 1789 under the front wall of the Farnese gardens. Another important landmark shown by the plan is a stairway connecting the Porta Romanula of the Palatine with the Forum. It appears that people coming out of the Palatine by the Clivus

Victoriæ on reaching the gate (the lintel of which is some fifty feet above the Forum) could go down in two different directions: by a carriage street, turning left towards the church of S. Teodoro, and by a staircase, turning right towards the church of S. Maria Liberatrice. These steps are described by Varro when he says that the Porta Romanula was connected with the Nova Via by *gradus*, named, according to Suetonius, *scalæ annulariæ*. They are not steps properly called, but slopes or inclined planes, intersected at regular distances by a flight of six steps. Both ends of this passage have already been brought to light: the upper one by the late Baron Visconti in 1864, the lower one in the course of our recent excavations. The steps are of travertine and much worn, in fact they are reduced to one-half of their original height.

The scientific world must feel grateful to Commendatore Baccelli, the Minister of Public Instruction, and to Senatore Fiorelli, the head of the Department of Antiquities, for these extensive and useful works, carried on with a quick and determined hand among difficulties of every description. What has already been accomplished is simply a show, a promise of what will come next. The large granaries and manufactories belonging to the Borghese family, which occupy and disfigure the north-east corner of the Palatine, between S. M. Liberatrice and S. Teodoro, are being purchased and will disappear very soon. The same fate awaits the church of S. Maria, which is of no artistic value whatever, and, besides, rests on the ruins of a more ancient church. It was discovered at the beginning of last century, and it is minutely described by Valesio and Cancellieri. A bridge will be thrown across the Forum, from the Via della Salara Vecchia to the Via di S. Teodoro, with a side branch leading to the Arch of Titus. Communications being thus restored between the Subura and the Velabrum, we shall indulge recklessly in excavating whatever can be excavated—the Curia, the Secretarium Senatus, the Basilica Emilia, the temple of Janus, and all the other buildings which faced the Forum on the east side. RODOLFO LANCIANI.

Fine-Art Gossip.

MR. BURTON earned the thanks of all who are interested in the National Gallery and the artistic credit of England by acquiring on Saturday last at relatively small prices the most desirable pictures included that day in the Hamilton sale. Botticelli's stupendous 'Assumption of the Virgin' is an epoch-making masterpiece of that class which, if small in numbers, must be considered the highest. 'The Adoration of the Magi' is a typical example of a very noble kind. The two pictures show Botticelli in the most favourable light as a master capable of much finer things than the groups of 'Virgin and Child' in which our galleries abound, and which are not much superior to the rondels of Della Robbia. The "Upright Panels" (lot 398), by Mantegna (see Messrs. Crow and Cavalcaselle's 'North Italy,' i. 395), add new splendour to the national collection. The "Giorgione" is worthy of the Salon Carré. The 'Portrait of a Gentleman, in a Black Dress and Cap,' lot 344, may not be by Da Vinci, but it is a very fine piece of work.

A "MEMORIAL EDITION" of the works of Thomas Bewick is to be produced at Newcastle, by the special desire of Miss Bewick. It is to be the work of a Newcastle press — in fact, produced in Bewick's own house — and printed on paper made at a local mill, with impressions from the original woodblocks with which his 'Birds,' 'Quadrupeds,' and 'Æsop's Fables' were illustrated. Only 650 copies will be struck off. Mr. Quaritch will publish the work in five octavo volumes (a volume of memoir being added to the two volumes of 'Birds,' one of 'Quadrupeds,' and one of 'Æsop's Fables').

MR. D. C. THOMSON'S 'Life and Works of Thomas Bewick' will be issued very soon. It will largely exceed the original limits of letterpress and illustrations. It is dedicated to Mr. Ruskin. The work will be published at the *Art Journal* office.

THE five newly bought pictures by Gonzales Coques have been placed on a screen in Room XII. of the National Gallery.

THE Horners' Company of London purpose to hold an exhibition of articles, ancient and modern, British or foreign, made of horn, or of which that material is a component, exclusive of ivory, bone, or tortoiseshell, at the Mansion House, on the 18th, 19th, and 20th of October next. Prizes will be given to members of the trade. The Company invite the co-operation of gold and silver smiths, and owners of articles of ancient and modern art and utility, in furthering the objects in view. Further information may be obtained of Mr. C. H. Compton, 19, Great George Street, Westminster.

MESSRS. H. GRAVES & Co. are exhibiting in Pall Mall Mr. F. Feller's historical picture, 'The Last Eleven at Maiwand.'

IT has been determined that next year shall be held the first of that series of triennial exhibitions, supplementary to, but quite independent of, the *Salon* of that year, which form part of the scheme according to which the annual *Salons* have been placed under the direction of elected representatives of those who practise the several branches of fine art. The triennial gathering will be under the exclusive control of the French Government, and comprise the more remarkable productions of the previous three years. The triennial exhibition will be held in the Palais de l'Industrie, and, it is said, during the month of July.

THE *Salon*, which was closed on the 20th ult. and was opened on the 1st of May, was visited by 564,933 persons, 13,800 of whom paid five francs for admission; 24,133 paid two francs each; 232,000 paid one franc each. There were 294,000 gratuituous *entrées*. The total receipts from these sources were 349,266 francs. The profits of the buffet and the catalogue raised the total receipts to 386,266 francs.

AN influential deputation, consisting, among others, of the Greek Archbishop, the Cadi, and Mufti of Cyprus, waited upon the Governor on Thursday, the 15th ult., in order to present a petition for the formation of a museum in Cyprus. His Excellency approved of the scheme, and a council was appointed and held its first sitting at Government House on the same day. At this meeting Mr. H. H. Kitchener, R.E., was appointed curator of the museum and honorary secretary. A list was opened for subscriptions, and the sum of 110*l.* was announced as a first instalment towards the establishment of the new museum. Subscriptions are urgently needed, and will be acknowledged by the honorary secretary, Nicosia, Cyprus. The country is so full of antiquities that no difficulty should be experienced in getting assistance towards making the museum a complete treasure-house of Greek, Cypriote, and Phœnician art.

MUSIC

THE WEEK.

DRURY LANE.—German Opera: Close of the Season.
ST. JAMES'S HALL.—Symphony and Richter Concerts.

THE second performance of Wagner's 'Tristan und Isolde,' given at Drury Lane last Saturday evening, was in every respect as great a success as the first. It was evident that the unfavourable notices of a large and influential portion of the press, if they had not stimulated curiosity, had at least been powerless to repress it; for the house was well filled in every part, while the genuine enthusiasm of the audience was unmistakably shown after each fall of the curtain. That the interest manifested in the drama is only partially due to the music may be at once conceded; as we said last week, there is a great deal which apart from its connexion with the drama and the action would be tedious, if not insufferable. Such, for instance, are Isolde's outburst of rage in the opening scene of the first act, King Marke's long solo in the second, and a great deal of the scene between Tristan and Kurwenal in the third. Yet it is precisely in these and similar passages that Wagner most fully justifies his theories, and shows how by uniting music with the other arts upon a strictly equal footing an overpowering total effect may be produced. We are not for a moment maintaining that 'Tristan' is a greater work than, let us say, 'Fidelio.' Such a proposition would be absurd. The two works belong to two different domains of art, and comparison is no more possible between them than between a picture and a sculpture. Mozart, Beethoven, Weber, and others have shown what is possible in the domain of *opera*, properly so called; Wagner gives us instead what at Bayreuth he truly described as a "new art"—the *music-drama;* and if it is to be fairly appreciated it must be looked at from the composer's own standpoint, and not compared with other art works with which it has hardly anything in common.

We mentioned last week that, like the 'Ring des Nibelungen,' 'Tristan' is constructed entirely on a few "Leitmotive." The systematic introduction of the "Leitmotif" is unquestionably due to Weber; but Wagner has developed it to a far greater extent than his predecessor. It would be easy to give numerous instances of the extreme felicity with which the composer has treated these "representative themes"; but one will suffice to indicate to those unacquainted with the work Wagner's *modus operandi*. One of the most important and significant of the themes is the "death motive," which occurs first to Isolde's words (Act I. scene ii.):—

"Tod-geweihtes Haupt!
Tod-geweihtes Herz!"

The fine progression of the harmony here—unusual, but quite justifiable by rule—arrests the attention and renders it easy to recognize the theme on its recurrence. Wagner uses it in many places with great suggestiveness. For example, in the interview between Tristan and Isolde in the first act, when she offers him what she believes to be the fatal draught, with the mocking words:

In kurzer Frist
Steh'n wir—vor König Marke,

the death theme in the orchestra tells us what is passing through her mind. Even more striking, perhaps, is the passage in the first scene of the second act, where Isolde extinguishes the torch and gives the signal for her lover's approach. Her passion and impatience have reached a climax, the various love themes are surging more and more vehemently through the orchestra, and at the moment that she throws down the torch the menacing death theme is sounded *fortissimo* by the trumpets, and is distinctly

heard in the middle of the love melodies, which are still pursuing their impetuous course. Isolde knows not that by her act she is sealing the fate both of Tristan and herself, but, with deep poetic significance, the future of the drama is foreshadowed in the orchestra by the introduction of the death theme at the very point where at first sight it would seem least appropriate.

It has been objected that music constructed on such a plan as this becomes a mere intellectual exercise, and that it is impossible to understand it without such a careful study of the score as cannot be expected save from a very small minority of the audience. We fully admit that to appreciate completely the music of 'Tristan' great familiarity with it is needed; yet the objection urged against the work on this score is more apparent than real. The fact is that Wagner's chief themes are in themselves so striking that they appeal to the emotions altogether apart from the intellect. For example, we know from the analysis of the music published by Herr von Wolzogen, and doubtless authorized by the composer himself, that in the magnificent introduction to the second act one of the themes is intended to represent the impatience of Isolde, another her love call, and a third the rapture of the lovers; but the music itself is so full of charm that, although its full significance is only felt by those who hold the clue, its emotional power exerts itself over those who have not the least idea of the meaning of the separate themes. So, again, in the opening of the third act, it is not needful for the hearer to be informed that one of the themes depicts Tristan's longing for Isolde, and another the solitude and desolation of his old home, in order to be profoundly impressed with the feeling of melancholy produced by the music. It is doubtful whether any other composer could successfully work on Wagner's lines; unless the themes are in themselves full of power and beauty their treatment must necessarily become wearisome. The great triumph of the composer of 'Tristan' is that he sustains the hearer's interest without flagging to the last bar.

In one important respect we think Wagner has unquestionably laid himself open to criticism: he has shown scarcely any consideration for the capabilities of the human voice. It is a part of his system that the centre of gravity of the musical interest should be transferred from the voice to the orchestra, though we confess we do not see why this must necessarily be the case; but if it be, that is no reason why intervals should be frequently written for the singers which it is all but impossible for them to take in tune. In all Wagner's later works the voice parts are chiefly declamatory; but in 'Tristan' these parts are often so unvocal that even such experienced singers as Frau Sucher, Fräulein Brandt, and Herr Winkelmann were sometimes at fault. For this the composer, not the singers, must bear the blame. The chief parts, moreover, are not only of the greatest difficulty, but excessively fatiguing, owing to the frequent use of high notes. It is to be regretted that Wagner should have in this matter followed the bad example set by Beethoven in his Mass in D, of treating the voices as if they were instruments which could be used in their upper register for an unlimited time. The strongest voice in the world would be ruined by too frequent singing of such a part as that of Tristan.

The second performance of Wagner's masterpiece was even finer than the first, for the singers were more at ease in their parts. Again Frau Sucher was incomparable as Isolde; finer tragic acting has seldom been seen on the stage than hers in the first and third acts. Herr Winkelmann, though perhaps slightly wanting in tenderness in the great love scene of the second act, was superb in the scene with Kurwenal in the third; while Fräulein Brandt, Dr. Kraus, and Herr Gura satisfied every requirement in their respective parts. The orchestra was admirable, and the enthusiasm of the audience quite as marked as at the first performance. We believe that when it becomes better known 'Tristan und Isolde' will be, next to 'Die Meistersinger,' the work of Wagner's which will prove most attractive to the public.

The remaining performances of the season, which closed last night, were repetitions of 'Fidelio,' 'Euryanthe,' and 'Die Meistersinger.' Herren Franke and Pollini have earned the best thanks of musicians for presenting German opera on a really adequate scale. Besides giving the opportunity of becoming acquainted with Wagner's later works, they have brought forward 'Tannhäuser' and 'Lohengrin' with such completeness that it is scarcely too much to say that these works have been heard at Drury Lane for the first time in London. It is satisfactory to find that the success of the experiment has been such as to induce the directors to announce another season of German opera for next year. We would suggest the advisability of their enlarging their *répertoire* then. 'Der Freischütz,' Mozart's delightful 'Entführung,' Spohr's 'Jessonda,' and Schumann's 'Genoveva' are works the performance of which would be heartily welcomed by musicians.

The competitive spirit which has been so active in musical work this season received a further exemplification last week, when Beethoven's 'Missa Solennis' in D was performed under Mr. Halle's direction at the last Symphony Concert. This great work had been heard only a few days previously under Herr Richter, and comparisons were, therefore, certain to be instituted, especially as the earlier rendering had been in some respects of phenomenal excellence. The chorus singing on that occasion was remarkable for firmness of attack and precision even in the most trying passages; but if there were less vigour and energy in the interpretation of Thursday week, the choir trained by Mr. Otto Peiniger did their work very creditably, and indeed admirably, considering the arduous nature of the music. Only in the "Credo" were there any palpable symptoms of wavering or fatigue. The quartet of soloists could not have been more carefully selected. Madame Albani sang the soprano part with beautiful expression, Miss Orridge and Mr. Shakespeare were commendable, and Mr. F. King was a great improvement upon his predecessor in the bass music. Previous to the Mass a fine performance of Beethoven's C minor Symphony was given. The season will be remembered chiefly on account of the performance of Schumann's music to 'Faust' for the first time in its entirety; and if the enterprise has not met with a satisfactory amount of support, the cause must be traced not to indifference on the part of the public, but to the absorbing interest of other undertakings proceeding at the same time.

The last Richter Concert on Monday had a programme consisting of but three items. The opening piece was Gade's overture, 'Nachklänge von Ossian,' Op. 1, which, so far as we recollect, has only been performed once before, at a Crystal Palace concert, some fifteen years ago. Though obviously an early work, the overture has much of that weird Northern feeling which constitutes Gade's principal claim to originality as a composer, and which, of course, is well suited to the subject of which it is an illustration. The themes are interesting and the treatment is musicianly, if slightly diffuse. Mr. Dannreuther, who played Liszt's Pianoforte Concerto in A, No. 2, may be heartily commended on his performance if not on his choice. Save for one beautiful theme, this concerto, or, more properly speaking, rhapsody, is a compound of ugliness and pretentious commonplace. The pianist did everything that was possible to make it appear interesting, but the audience was not impressed, judging by the lukewarm applause. Beethoven's Ninth Symphony, which has so frequently formed the climax to a musical campaign, was once more selected for that purpose, and the performance may be justly characterized as magnificent, the orchestra and chorus being equally above reproach. Indeed, except at the Leeds Festival, we have never heard the choral movements given with such power and unfailing accuracy. The soloists were members of the German opera company, namely, Frau Peschka-Leutner, Fräulein Brandt, Herr Winkelmann, and Herr Gura. At the close of the concert there was a demonstration in favour of Herr Richter, which it is hardly necessary to say was well deserved. Although no important works have been heard for the first time during the past season, owing chiefly to the exhausting rehearsals for the German opera, the performances generally have been of the highest excellence, and the reputation of the enterprise has, therefore, been well maintained.

JOACHIM RAFF.

By the death of Joachim Raff Germany loses one of her most prominent musicians. Born at Lachen, in Switzerland, on May 27th, 1822, during a visit to that town of his parents, who were residents of Würtemberg, he received his education first at Würtemberg and afterwards at a Jesuit Lyceum at Schwytz. As his limited means did not allow him to continue his studies at a university, he adopted the profession of schoolmaster, devoting his leisure to the cultivation of music. He taught himself the piano, violin, and organ, and made various attempts at composition. Some of these he sent in 1843 to Mendelssohn, who recommended them to the publishers Breitkopf & Härtel, of Leipzig. This success encouraged him to devote himself entirely to music; and he was fortunate some time after in making the acquaintance of Liszt, with whom he came to Cologne, where he settled. In this city he met Mendelssohn, and he had already arranged to follow him to Leipzig in order to pursue his musical studies, when the death of Mendelssohn frustrated his plans. Raff next went to Stuttgart, where he underwent a severe course of theoretical training. Here he was

fortunate in making the acquaintance of Dr. Hans von Bülow, who recognized his great talent, and produced at a benefit concert a Concertstück which Raff had written for him. In 1850 the composer removed to Weimar in order to be with Liszt. Here his first opera, 'King Alfred,' was produced with success. In 1856 he settled in Wiesbaden, where he obtained an excellent connexion as a pianoforte teacher, mean time composing and publishing a large number of pieces, mostly for the piano. In 1859 he married Doris Genast, an actress on the Wiesbaden stage. The record of his life for many succeeding years is little more than the record of the compositions which poured in an ever increasing stream from his pen. In 1878 Raff was appointed Director of the new Conservatoire of Music at Frankfort-on-the-Main, a post which he held till his death.

Joachim Raff was one of the most voluminous of modern composers; his published works reach considerably over Op. 200, and belong to nearly every class of composition. Among the most important are ten symphonies; a sinfonietta for wind instruments; five overtures for full orchestra; two concertos and a suite for violin and orchestra; a concerto for violoncello; a concerto, a Concertstück, and a suite for piano and orchestra; an octet, a sextet, and eight quartets for strings; one quintet, two quartets, and four trios for piano and strings; more than twenty pieces of various kinds for piano and violin; and an enormous number of compositions of all descriptions for piano solo and duet. In vocal music he has written three operas, an oratorio, several cantatas and scenas with orchestral accompaniment, nearly fifty part-songs, and about eighty songs for a single voice.

Of all those who may justly be termed great composers, Raff is one of the most unequal. His best works, among which we reckon his second Symphony in C, his third ('Im Walde'), and the 'Lenore' Symphony, very nearly approach, if they do not equal, the greatest masterpieces of their class. Raff possessed not only great fluency of expression, but real poetry of idea, while his mastery of the technical part of composition is truly astonishing when it is remembered that he was to a very large extent self-taught. The elaborate counterpoint and ingenious canons to be met with in many of his scores would not have disgraced Sebastian Bach himself. In his favourable moments also he shows the possession of a vigour and an *élan* (to use the expressive French word) which carry the hearer along irresistibly. But his reputation would have been even greater had he written less. His facility seems too often to have tempted him to write *invitâ Minervâ*; his great fault, especially in his later works, is diffuseness. He seems to have exulted in the display of all possible ingenuity in the development of themes which too often were unworthy of the pains spent over them. In some of his most recent symphonies, which have been given at the Crystal Palace, this characteristic has been very noticeable. On the other hand, many of his smaller pianoforte pieces are full of charm. It is too early at present to foretell the place which Raff is likely to take in the musical history of the nineteenth century; but as one of the most distinguished composers of the romantic school of which Schumann was the founder, it is probable that in the future he will not be altogether forgotten.

Musical Gossip.

The engagement of Madame Pauline Lucca at the Royal Italian Opera has naturally led to a revival of 'Fra Diavolo,' the character of Zerlina being one in which the German artist was ever most successful. Although Auber's sparkling opera is ill suited for performance in Italian, and on so large a stage as that of Covent Garden, the increasing proportion of French and Belgian singers now in the company renders the presentation of works of this school less inconsistent than formerly. Meanwhile the genuine Italian element continues to dwindle, and opera in that language is rapidly becoming an anachronism. The first novelty of the season, M. Lenepveu's 'Velleda,' is announced for production on Tuesday next.

We have much pleasure in announcing that Mr. H. Franke and Messrs. Schulz-Curtius have made up their differences and re-entered into partnership. In the interests of art this is a matter for congratulation; for while the rival series of concerts given during the present season have both deserved the support of the public on their own merits, it cannot be doubted that they have been mutually injurious, and that neither has been so successful as it would otherwise have been. The supply of high-class orchestral concerts during the past two months has been decidedly in excess of the demand. Under the combined management of Messrs. Franke and Schulz-Curtius it is announced that six grand orchestral concerts will be given in St. James's Hall next autumn, that a second season of German opera will be given in May and June of next year, and that a series of nine orchestral concerts will also take place in April, May, and June, 1883.

Mr. Turle, one of the most respected as well as one of the oldest members of the musical profession in this country, died on Wednesday last in the eighty-first year of his age. Mr. Turle for the long period of fifty-eight years acted as Organist of Westminster Abbey. He began to officiate in 1817, was formally named deputy to Mr. Greatorex in 1819, and was appointed Organist and Master of the Choristers by Dean Ireland in 1831. In 1875 he was, at his own request, relieved of all active work by the appointment of a permanent deputy. Mr. Turle was a friend of Spohr and Mendelssohn, and assisted the latter in bringing out his 'St. Paul' at Birmingham. The first public funeral at which he played the organ was that of Castlereagh.

The concert of the Students of Madame Sainton-Dolby's Vocal Academy was given at Steinway Hall on Thursday afternoon. As in previous years, the average standard of excellence shown by the students was very high, Miss Fusselle, Miss Blackwell, Miss Hilda Coward, Miss Woodhatch, and Miss Amy Carter particularly distinguishing themselves. The choruses, given by the whole body of students under the direction of M. Sainton, were charmingly rendered; and the whole concert bore testimony to the excellent teaching of her who was formerly our first English contralto.

The summer orchestral concert of the Royal Academy of Music was given in St. James's Hall on Wednesday afternoon. The compositions by students brought forward were two concert overtures, by Mr. John Cullen and Mr. J. E. West, and a "Credo" by Mr. George J. Bennett. We have before remarked the ability shown by the very young composer last named, and the present example exhibits even greater promise. Mr. Bennett treats his subject in a dignified church-like manner, yet with ample freedom of expression and great command over contrapuntal resources. In brief, he writes like an experienced musician rather than a mere learner, and his future success seems a matter only of sustained effort and perseverance. A Pianoforte Concerto in E, effectively written for the solo instrument by Mr. F. B. Jewson, one of the professors of the institution, served to display the uncommon executive ability of Miss Dinah Shapley; and among the most commendable performances were those of Miss Thudichum, soprano; Miss Hilda Wilson, contralto; and Mr. Frank Arnold, violinist. Mr. Shakespeare conducted the concert, which was on the whole a marked success.

The annual concert of the Royal Normal College and Academy of Music for the Blind will be given at the Guildhall this afternoon. After the concert there will be a presentation of prizes by the Lady Mayoress.

Mr. R. Harvey Löhr gave a concert at the Royal Academy Concert Room on Thursday last, at which, among other works, a clever and well-written pianoforte quartet from his own pen was produced.

A concert, announced to be for the benefit of the widow of the Italian composer Fabio Campana, was given by Signor Pirani on Tuesday afternoon at St. James's Hall. The entertainment might have been more appropriately termed a pianoforte recital, as, with the exception of a few songs contributed by Signora Alice Barbi, the programme consisted entirely of works for the piano, of which Signor Pirani is a professor at the Cologne Conservatoire. The first impression derived from a performance of Beethoven's Sonata in D minor, Op. 31, was unfavourable; but the pianist was far more successful in some of Chopin's pieces, including the 'Polonaise' in C sharp minor and the Scherzo in B minor, and is evidently a capable performer.

Mr. George Riseley concluded his series of twelve subscription concerts at the Colston Hall, Bristol, on the 19th ult. A list of the principal works performed during the past six seasons at these concerts was printed in the programme. From this it appears that Mr. Riseley has brought forward no fewer than thirty symphonies, twenty-four concertos, eighty-six overtures, ninety-nine miscellaneous orchestral pieces, and eight choral works, besides instrumental solos and dance music. The works of English composers have received a large share of attention, forty-three pieces, by twenty-three different composers, having been produced, many of them for the first time. Bristol is certainly exceptionally favoured in musical matters, and it will be a disgrace to the city if Mr. Riseley's spirited enterprise, carried on entirely at his own risk, is not supported as it deserves.

DRAMA

THE WEEK.

Gaiety.—Performances of the Comédie Française: 'Les Précieuses Ridicules,' 'Gringoire,' 'Ruy Blas'; Recitations of M. Coquelin *cadet*.
Adelphi.—Reappearance of Mr. Edwin Booth: 'Richelieu.'

M. Coquelin has now appeared in half a dozen of the best parts in his repertory. Mascarille in 'Les Précieuses Ridicules' is, on the whole, the finest performance he has yet given. A character like Mascarille, however, though it affords opportunity for a marvellous display of capacity, furnishes no such instance of the conquest of difficulty as is witnessed in the representation of Destournelles in 'Mdlle. de la Seiglière.' It was said of Stephen Kemble that he could play Falstaff without padding. In like manner it might be said that M. Coquelin could play Mascarille without making up. The curiously mobile face, which is so important a possession to M. Coquelin, and the voice breaking into falsetto when strained above a given pitch, are exactly characteristic of the vain, amusing, ingenious scamp whom Molière brings forward under the name of Mascarille or Scapin. A performance at once more ludicrous and more artistic than the representation of the would-be Marquis airing his ineffable graces before the two *précieuses*, and challenging them to admire his *petite-oie* and his canons or to feel his scars, the stage cannot supply. M. Coquelin's attitudes are marvellous in their vulgar ease and inso-

lence. Gringoire shows intensity and poetical elevation which are outside M. Coquelin's ordinary method. His ability to present a character like this furnishes proof how wide is his range. The expression of dismay and despair that comes over the face of Gringoire upon learning that the man to whom he has been reciting the ballads concerning the "verger du Roi Louis" is, in fact, that very Roi Louis, and finding that, instead of the dainties on which he has counted, his supper will be like that of Polonius, "Not where he eats, but where he is eaten," is as fine as anything in modern art. Don César de Bazan supplies M. Coquelin with another character not wholly unlike Don Annibal. His performance of it is thoroughly vivacious and effective. Of the other members of the company who have been here during the whole of M. Coquelin's engagement, M. Febvre is the most noteworthy. His Don Salluste is perfect. M. Coquelin *cadet* is wholly a droll, though a very clever droll. In a part like Jodelet he is acceptable; in the *laquais* in 'Ruy Blas' he is inimitable. To assign to him, however, a part like Louis XI. is a dangerous experiment. In some monologues he delivered M. Coquelin *cadet* was thoroughly diverting. M. Sylvain, M. Garraud, and M. Boucher remain where they were, and Mdlle. Barretta has advanced in public estimation. Her Madelon in 'Les Précieuses Ridicules' was moderately good; her Loyse in 'Gringoire' was excellent. The representation of 'Ruy Blas' brought to the front two or three actors who had not before been seen this season. Mdlle. Bartet, indeed, who played the Queen, is a very tender, graceful, and accomplished actress, with a style modelled to a certain extent upon that of Mdlle. Bernhardt. Her performance was admirably truthful and natural. M. Chameroy was excellent as Don Guritan. To the make-up of M. Mounet Sully as Ruy Blas we cannot reconcile ourselves. That the performance displays much subtlety, and rises at one point into greatness, may be conceded. It is, however, unpicturesque and unchivalrous, and fails to win us into acceptance of a treatment the reverse of that accorded the character by Fechter. These entertainments have scarcely met with the success they deserve. From the standpoint of art they are, taken collectively, much better than the representations of 'Frou-Frou' and 'La Dame aux Camélias' with which the French season commenced.

Mr. Booth's reappearance in London has been driven late in the season. It is doubtful accordingly whether his Richelieu will take the hold upon the public to which its merits entitle it. A picturesque, intelligent, and effective performance it is. If the character seems less grimly cynical than in previous representations, the reading is warranted by the text, and deserves the applause with which it is greeted. Among those by whom Mr. Booth is supported are Mr. Brooke, Mr. Pateman, Miss Pateman, and Mr. W. Younge.

To CORRESPONDENTS.—H. B. L.—W. M.—A. D.—F. C. B.—W. B.—received.

S. F.—You should address such a question to *Notes and Queries*.

F. H.—It is too entirely a business matter to be noticed.

OLD SUBSCRIBER.—Thanks.

No notice can be taken of anonymous communications.

SAMPSON LOW, MARSTON & CO.'S
NEW BOOKS.

The RUSSIAN ADVANCE TOWARDS INDIA. By CHARLES MARVIN. Demy 8vo. cloth, 16s. [*Ready.*

NOW READY, AN ENTIRELY NEW WORK BY THE LATE
THOMAS CARLYLE.

REMINISCENCES of MY IRISH JOURNEY in 1849. By THOMAS CARLYLE. With a Preface by J. A. FROUDE. Crown 8vo. cloth extra, price 7s. 6d.

The INVASION of ENGLAND; Told Twenty Years After. By COLONEL B. Crown 8vo. fancy cloth, 2s 6d. [*Ready.*

"And saw two hosts conflicting in the air,
And shadows doubtless of the unborn time
Cast on the mirror of the night."

Now ready, demy 8vo. cloth extra, 12s. 6d.

SHAKESPEARE'S TRAGEDY of HAMLET. Edited by KARL ELZE, in the Spelling of Shakespeare's own Time.

The New Addition to the Series of "ENGLISH PHILOSOPHERS," crown 8vo. price 3s. 6d. each, is

SHAFTESBURY and HUTCHESON. By THOMAS FOWLER, M.A., LL.D. (Edinb.) F.S.A., President of Corpus Christi College, and Professor of Logic in the University of Oxford; late Fellow of Lincoln College.

PEACE and WAR in the TRANS- VAAL: a Story of the Boer Rebellion. By Mrs. WALTER H. C. LONG. Small post 8vo cloth extra. 3s. 6d.

"It does not often fall to the lot of a reviewer to express a wish that the book under notice were longer. This is the case, nevertheless, with Mrs. Long's modest little volume."—*Globe.*

BEAUTIFUL HOUSES; being a Description of certain well-known Artistic Houses. By Mrs. HAWEIS. With a Preface. Fcap. 8vo. parchment binding, 4s.

The Contents of this Book:—Sir Frederic Leighton's House.—Mr. William Burges's House.—Mr. Alma Tadema's House.—The British Embassy in Rome.—Mr. G. H. Boughton's House.—Mr. Alfred Morrison's House.—At the Villa Campana.—Mr. Reuben Sassoon's House.—Ashley Park.—Mr. Heseltine's Rooms.—Mr. Stevenson's House.—A Bijou House.

Now ready, folio, cloth extra, 7s. 6d.

Vol. III. of DECORATION. Full of Illustrations.

PRUDENCE: a Story of Æsthetic London By LUCY C. LILLIE. Illustrated by George Du Maurier. Small post 8vo. cloth extra, 5s.

The LAND of the BEY. Being Impressions of Tunis under the French. By T. WEMYSS REID, Author of 'Charlotte Brontë: a Monograph,' &c. 1 vol. crown 8vo. cloth extra, 10s. 6d.

MY WATCH BELOW; or, Yarns Spun while Off Duty. By "A SEAFARER." Crown 8vo. fancy boards, 2s. 6d. [*Now ready.*

EPISODES in the LIFE of an INDIAN CHAPLAIN. Crown 8vo. cloth extra. With numerous Illustrations. [*Nearly ready.*

SIX MONTHS in PERSIA. By E. STACK. 2 vols. crown 8vo. cloth. [*Nearly ready.*

THE GREAT MUSICIANS. EDITED BY FRANCIS HUEFFER.
THE NEW VOLUME IS
SEBASTIAN BACH. By Reginald LANE POOLE, M.A. Crown 8vo. cloth extra, 3s.

The New Addition to LOW'S STANDARD NOVELS, crown 8vo. cloth, price 6s. each, is

ADELA CATHCART. By George MAC DONALD, LL.D. Crown 8vo. cloth extra, 6s.

AT ALL LIBRARIES.

Now ready, 3 vols. crown 8vo. 31s. 6d.
BY THE AUTHOR OF 'THE GAMEKEEPER AT HOME,'
BEVIS: the Story of a Boy. By RICHARD JEFFERIES.

ONE of "US": a Novel. By Edmund RANDOLPH, late 60th Regiment. 3 vols. 31s. 6d.

The NEW VOLUMES of the ROSE LIBRARY are:—
The UNDISCOVERED COUNTRY. By W. D. HOWELLS. 1s.

A GENTLEMAN of LEISURE. By EDGAR FAWCETT. 1s.

The CLIENTS of Dr. BERNAGIUS. By LUCIEN BIART. 2 vols. 1s. each.

Now ready, 1s. 6d. quarto, the Seventy-Ninth Monthly Part of
MEN of MARK, for JULY. Containing Permanent Cabinet Photographs, taken from Life, of HENRY IRVING, Dr. B. W. RICHARDSON, the BISHOP of LIVERPOOL.

London:
SAMPSON LOW, MARSTON, SEARLE & RIVINGTON,
Crown Buildings, 188, Fleet-street, E.C.

LONDON SOCIETY.

ANECDOTE CORNER, the new Monthly Feature in LONDON SOCIETY, is one of the most amusing and enjoyable things now current in Magazine Literature, blending a fund of good Stories; Jest, Witticism, Humour, and Drollery; Puns, Quips, and Repartee; Sayings Playful and Sarcastic; Whims, Banter, and Waggery; Bon-Mots, Jeux d'Esprit, and Epigrams, arranged in Groups embracing all Classes of English Society.

The CONTRIBUTORS to ANECDOTE CORNER for JULY are: Willmott Dixon—Charles Hervey—Henry S. Leigh—Byron Webber—Frederick Arnold—The Author of 'Lady Beauty'—Peter Peppercorn—The Nicotian Philosopher—The Anecdote Hunter—The Editor, and others.

ANECDOTE CORNER opens in the JULY Number, being the first of a New Volume. Price 1s. Monthly.

A CLUSTER of ORIGINAL ANEC- DOTES.—See the JULY Number.

JOHN WESLEY in a "FIX" and OUT of IT.—See the Original Anecdote in the JULY Number.

"ELIA," an Unpublished Story of.— See ANECDOTE CORNER for JULY.

ROYAL ACADEMY: a Story of this Year's.—See ANECDOTE CORNER for JULY.

DOUGLAS JERROLD.—His Portrait is given in the JULY Number.

HEPWORTH DIXON and his CON- TRIBUTORS.—See ANECDOTE CORNER for JULY.

DR. DORAN.—Reminiscences and Portrait of, in the JULY Number.

HORNE TOOKE'S Jokes and Squibs. —See ANECDOTE CORNER for JULY.

EDISON'S MARRIAGE.—See ANEC- DOTE CORNER for JULY.

OXFORD STORIES.—See ANEC- DOTE CORNER for JULY.

LITERATURE

Records of Later Life. By Frances Anne Kemble. 3 vols. (Bentley & Son.)

IT was in the year 1757, in the dingy little market town of Prescot in South Lancashire, that John Kemble was born. This grandfather of Miss Fanny Kemble was the child of some strolling comedians, and the accident of his birth at Prescot is commemorated by the narrow street that is called after him. From that day to this the family of Kemble has always been associated with the stage, but with the stage in its noblest aspect. Harriet Martineau, indeed, writing in one of her more vicious moods, says, "There was a green-room cast of mind about them all from which Macready was marvellously free. He saw life by daylight and they by stage lamps, and that was the difference."

However this may be, the Kembles have in their own line been a distinguished family, and it is a pleasure to receive these further records of the life of not the least interesting of her race. At the same time bookbuyers will feel some dismay at the thoughts of the room required by Miss Fanny Kemble for her autobiography. We have already her American journals, her 'Year of Consolation,' her Southern diary, and her 'Records of a Girlhood,' and now appear these three volumes of 'Records of Later Life.' They contain the history of but fourteen years—from 1834 to 1848—so that some seven or eight more at least will be required in order to complete a memoir planned on such a scale. Now it is certainly no want of gallantry on our part, but libraries have their limits, and the idea of eighteen volumes all devoted to the sayings and doings, the thoughts and fancies, of Miss Fanny Kemble is rather terrible. There is a sense of want of proportion as regards the biographies of people no less eminent. There is as regards ourselves a feeling that we may weary of these constant partridges before we can make an end of them. However, the author herself seems to have no misgivings. Possibly she does not remember the warning maxim of La Rochefoucauld, "L'extrême plaisir que nous prenons à parler de nous-mêmes nous doit faire craindre de n'en donner guère à ceux qui nous écoutent."

Then, too, the plan of these 'Records' strikes us as very odd. Of course "Reminiscences," "Recollections," and similar books published in the author's lifetime are common enough, and regular autobiographies published after death are common also. But the publication during life of an autobiography made up mainly of the author's own letters is decidedly unusual. There are connecting links of narrative, but scarcely any letters except those from the autobiographer herself. That these letters are all worth printing is more than we can say, but many of them are excellent and leave (as no doubt they were intended to leave) a very pleasant impression of the writer. The reader learns a great deal about Mrs. Kemble's religious views, her life in America, and her opinions of her contemporaries. At the same time her reticence about the most important period of her life will be perplexing to the general reader. Her first letter, which is to Mrs. Jameson, says:—

"However stoutly your incredulity may have held out hitherto against the various 'authentic' reports of my marriage, I beg you will, upon receipt of this, immediately believe that I was married on the 7th of June last, and have now been a wife nearly five mortal months."

But though it is clear that Mr. Butler did exist, he is scarcely mentioned except in the most incidental way, and Sydney Smith's joke that "this pleasing and intelligent young lady laboured under the singular and distressingly insane idea that she had contracted a marriage with an American," seems hardly farfetched. The reader should have been told more or nothing. As it is, this part of the autobiography is half unintelligible, and yet Mrs. Butler could have told nothing which would have justly forfeited the sympathy of her readers. She was

strong in all
Save that strong Patience which outwearies Fate.

However, we must take these 'Records' as we find them, and not supplement an uncomfortable private story by details gleaned from other sources.

The present instalment of Mrs. Butler's life begins, as has been said, with her marriage in America to Mr. Butler, and she gives a graphic description of her new home near Philadelphia. "Butler Place," as it was rather magniloquently called, was "in no respect superior to a second-rate farmhouse in England," the climate was abominable, and gardening was all but impossible. Mrs. Butler's nearest friends were at Philadelphia, and could only be reached after driving "five or six miles of hideous and execrable turnpike road, without shade, and aridly detestable in the glare, heat, and dust of summer, and almost dangerously impassable in winter." The friends to whom she appears to have been most attached were Dr. Furness, the Unitarian minister of Philadelphia, and his family, and there can be no doubt that the strong anti-slavery opinions which Mrs. Butler now imbibed were in large measure due to her intercourse with them. Miss Bremer in her 'Homes of the New World' describes Dr. Furness as

"so absorbed by his anti-slavery feelings that his life and mind suffer in consequence, and I believe that he would with the greatest pleasure suffer death if by that means slavery could be abolished; and his lovely daughter would gladly suffer with him, a Valkyria in soul and bearing."

It is certain that Dr. Furness always had the power of fascinating and impressing those he met by the noble simplicity of his character; and it is not wonderful that Mrs. Butler felt its influence. Harriet Martineau also chanced to be touring in the neighbourhood at that particular time, and she, too, was beginning a crusade as an abolitionist. Mrs. Butler had, moreover, been studying Dr. Channing's writings, and her convictions with regard to slavery were becoming very strong and very pronounced. But unfortunately, as she writes to a friend, "we are slave-owners and live by slave labour," and the difficulty of her position was obvious. She might be anxious to have an "opportunity of at once placing our slaves upon a more humane and Christian footing," but it was hardly likely that her husband and her husband's family should warmly sympathize with her views. However, she was to have no chance of trying any social experiments in the South just at first, and when Mr. Butler went to his rice-swamps in Georgia she returned to England. Of her life in England we shall speak presently; she remained here about a year, and then went back to her American home. It was at the beginning of the winter of 1838 that she first made practical acquaintance with the slave life of the Southern States. She did not undertake the journey, a very long and arduous one, with any feeling of pleasure. She must have learnt by this time that social experiments would not be tolerated, and

"the whole manner of existence is repugnant to my feelings.....Society or the shadow of it is not to be dreamt of; and our residence, as far as I can learn, is to be a half-furnished house in the midst of rice-swamps, where our habitual company will be our slaves, and our occasional visitors an alligator or two from the Altamaha."

Mrs. Butler seems to have found the reality worse than she anticipated, and her vivid and picturesque letters describe what that reality was:—

"Right and left as the eye follows the broad and brimming surface of this vast body of turbid water, it rests on nothing but low swamp-lands, where the rattling sedges, like a tawny forest of reeds, make warm winter shelters for the snakes and alligators, which the summer sun will lure in scores from their lurking places; or hoary woods, upon whose straggling upper boughs, all hung with grey mosses like dishevelled hair, the bald-headed eagle stoops from the sky, and among whose undergrowth of varnished evergreens the mocking-birds, even at this season, keep a resounding jubilee."

The place was certainly no paradise, but if it had been, the "peculiar institution" would have spoilt it all in the eyes of this English mistress of a slave plantation. It appears that her husband's family had believed that the sight of slavery as it really existed in an estate which was humanely managed would have softened her prejudices, but it certainly did nothing of the sort:—

"The wrong strikes me more forcibly every hour I live here. The theory of human property is more revolting to every sentiment of humanity; and the evil effect of such a state of things *upon the whites*, who inflict the wrong, impresses me as I did not anticipate that it would, with still more force."

Again, she writes of the slaves:—

"There is no attempt made to improve their condition; to teach them decency, order, cleanliness, self-respect; to open their minds or enlighten their understandings."

As it is quite clear that Mrs. Butler had the courage of her opinions, and by no means kept them to herself, it must soon have become evident that her visit to the South was not exactly a success. It is curious to contrast Mrs. Butler's account of a slave plantation with the very amusing but almost forgotten 'Journal of a West India Proprietor,' by Monk Lewis, in which all the humorous and cheerful side of negro slavery is so brought out as to leave a really pleasant impression. Mrs. Butler herself could not have been more anxious than Lewis to see the slaves happy, but she was deeply convinced of the wickedness of the system, and he was never troubled by any misgivings of the kind.

The following winter she was not to spend in Georgia, owing to

"Mr. J—— B——'s decided opposition to my doing so. He was part proprietor of the plantation, and positively stipulated that I should not again be taken thither, considering my presence there as a mere source of distress to myself, annoyance to others, and danger to the property."

Mrs. Butler decided, therefore, on going again to England to live with her father, who was ill; and certainly English society did what it could to make up to her for her monotonous existence in America, which she complained was

"to be left day after day in the solitude of an absolutely lonely life; to be deprived of all stimulus from without; to hear no music; to see no works of art; to hear no intellectually brilliant or even tolerably cultivated or interesting conversation."

In 1843 there was, however, another visit to America, but we hear nothing of either the Butler house or the Georgian estate. She soon returned to England, but no particulars are supplied beyond what may be inferred from the remark that "the days were not yet, either in England or America, when a married woman could claim or hold independently money which she either earned or inherited." When she next visited America, in 1848, she gained sufficient by her public readings "to realize my long-cherished hope of purchasing a small cottage and a few acres of land in the beautiful and beloved neighbourhood of Lenox." And there, in the lake country of Western Massachusetts, with her old and tried friends the Sedgwicks—as fervent abolitionists as she could desire—close by, these 'Records' leave her.

But we have still to speak of what will be the more generally attractive part of this book—Mrs. Kemble's (for by this name she is now best known) life in London and estimate of noted persons. She is certainly very frank and outspoken in her comments, but they are not unkind, and she spares living people. The person she seems to have disliked most cordially was Lady Holland—but who could have liked Lady Holland? She was domineering at all times, and when it pleased her she could be positively cruel; and yet, mainly for her husband's sake, and partly for the sake of Holland House itself, wits and statesmen, men of letters and men of the world, submitted meekly to her tyranny. Here is an agreeable story of the lady. Landseer

"was walking one day by the side of Lady Holland's wheel-chair in the grounds of Holland House, and stopping at a particularly pretty spot had said, 'Oh, Lady Holland! this is the part of your place of which the Duchess of Bedford has such a charming view from her house on the hill above.' 'Is it?' said Lady Holland; and immediately gave orders that the paling fence round that part of her grounds should be raised, so as to cut off the duchess's view into them."

But the time came when Lord Holland died and his wife no longer lived at Holland House, and then, as Lady Morley said, "she is the most miserable woman in England; she is entirely alone now, and she cannot bear to be alone."

Lady Morley herself is now nearly forgotten, and there are comparatively few who will remember her 'Spruggins Family,' one of the most humorous books of its sort ever published. But in her day she was a "universal social favourite," and Mrs. Kemble gives a very pleasant account of her. Lady Dacre, too, to whom many of these letters are addressed, must have been a delightful woman, but who now knows about her sonnets from Petrarch and her sculptured figure of a white horse? Miss Berry was another friend of Mrs. Kemble's, and there is an amusing recollection of a conversation in her *salon*. Lady Sale, the Afghan heroine, was expected in London, and there was a discussion as to the welcome she would receive:—

"Miss Berry, who, for some reason or other, did not admire Lady Sale as much as everybody else did, said she should not ask her to come to her house. 'Oh, yes! Pooh! pooh! you will,' exclaimed Sydney Smith; 'you'll have her, he'll have her, they'll have her, we'll have her. She'll be Sale by auction!' Later on that same evening, it being asked what Lord Dalhousie would get for his successful exploit in carrying off the gates of some Indian town, 'Why,' cried Lady Morley, 'he will be created Duke Samson Afghanistes.'"

Mrs. Kemble has rather spoiled this last story by confusing Lord Dalhousie with Lord Ellenborough.

Mrs. Grote was odd and brusque enough—Sydney Smith called her *grotesque*—but she was an audaciously clever woman, and could hold her own among the no less clever women of her day. And now that brilliant circle is all broken up and one woman alone remains to remind us how bright was the wit and how gay the talk of the generation that has passed. So long as Mrs. Procter is still with us we are not quite dependent on merely printed recollections.

There are many good stories of Sydney Smith and Rogers scattered through these volumes, and some interesting traits of Charles Greville (of the 'Memoirs'), while Thackeray, Moore, Channing, and other notable people appear here and there. But the book has a fatal want: there is no index or table of contents; and whereas for certain purposes of reference these 'Records,' as illustrating English society and American life forty years ago, might have been of service, they are now all but useless.

We cannot undertake to criticize Mrs. Kemble's views on theology, society, philanthropy, and, indeed, every other subject, but it would be difficult not to feel something of sympathy towards the writer. She always says well what she has to say, and there is often something of real nobility about her views. All through the book, moreover, there are amusing passages and a certain sense of fun. There is a delightful story of a lady who was given to the absurdity of consulting a "Planchette," but who told Mrs. Kemble she should give up doing so on account of the language it used.

"'It!—the language *it* uses!' ejaculated I. 'Yes,' she pursued, with increasing solemnity, 'the language it uses is so reprehensible that it will be quite impossible for us to consult or to have anything further to do with it.' 'Really,' said I, hardly able to utter for suppressed laughter, 'and may I ask, may I inquire, what language it does use?'.....'Why,' returned Mrs. ——, with some decorous hesitation and reluctance to utter the words that followed, 'the last time we consulted it it told us we were all a pack of damned fools.' 'Oh!' exploded I, 'I believe in Planchette, I believe in Planchette.'"

The account of old Lady Berkeley and the Berkeley family in the second volume is amusing, and incidentally there is curious mention of another lady of a sadder notoriety in her day. It has been suspected that Mademoiselle de Luzzy, who was implicated in the De Praslin tragedy, was the original of Miriam in Hawthorne's 'Transformation,' and we here learn that this unhappy woman went to America, married a country clergyman, and settled at Stockbridge in Massachusetts, near which Hawthorne at one time lived.

We will end by putting Mrs. Kemble right in one small matter. The lines on a fallen leaf which she quotes (and misquotes) are not by Millevoye, but by Arnault, and are as follows:—

Je vais où le vent me mène,
Sans me plaindre ou m'effrayer;
Je vais où va toute chose,
Où va la feuille de rose
Et la feuille de laurier.

The Sarva Dars'ana Samgraha; or, Review of the Different Systems of Hindu Philosophy. By Mādhava Achārya. Translated by E. B. Cowell and A. E. Gough. (Trübner & Co.)

INDIA is more than any other country given to religious speculation. This speculation keeps, however, within certain limits in consequence of the veneration for antiquity inherent in the Indian mind. It is from first to last only a gradual development. Much as the systems may differ, we can trace the history of Indian philosophy from the time when the first hymns were chanted up to the Brahma Samāj, the latest and perhaps most promising of Indian speculations. Indian philosophy was, moreover, never to any degree influenced by foreign contact. It was of indigenous growth, and can as such be best understood by the Indians themselves. Happily for us, they have handed down the aphorisms of most of their philosophies, which may be regarded as a convenient summary of their religious views. Although in their own method of handing down these aphorisms they do not give any clue to the gradual development, European science can do this work for them.

In the fourteenth century of our era we find among the Indians sixteen principal

philosophical sects, of which we have from the hand of one of the heads of the Vedāntic or pantheistic school a most valuable record. The book is called the 'Sarva Dars'ana Samgraha,' "a review of the different systems of Hindu philosophy," and was written by Mādhava, better known as Sāyaṇâchārya, whom Dr. Burnell has pretty conclusively proved to be the famous commentator on the 'Rigveda.' He lived in the beginning of the fourteenth century, and was elected in 1331 the head of the Smārta order in the "Maṭh," or monastery, of Çringeri, in the Mysore territory. This order was founded by S'ankara Achārya in the eighth century of our era, through whose exertions mainly the Vedāntic school of philosophy attained to the high rank which it now holds. This book is, of course, written from a Vedāntic point of view, but still the author has kept singularly free from misrepresentation. He enters thoroughly into the spirit of the several schools, the doctrines of which he describes. Indeed, no better proof could be given of the great value of the book than that it served as a guide to Prof. Wilson in drawing up his 'Sketch of the Religious Sects of the Hindus.' The 'Sarva Dars'ana Samgraha,' we learn from the preface, was first published in the "Bibliotheca Indica," and was then translated by Prof. Cowell and Mr. Gough in the *Pandit*, a paper which, we are glad to hear, has been revived. The editor of "Trübner's Oriental Series" has done a signal service to students of philosophy and Indian literature in including a reprint of the translation in this important collection.

It is needless for us to say that the authority of Mādhava is not in all the systems he represents equally to be relied upon, and it is also needless to add that he arranges all the different philosophical systems from a Vedāntic point of view, apart from chronological considerations. Thus he commences his enumeration with that system which is furthest removed from Vedāntic speculation, and concludes it with that which nearest approaches it, omitting, however, the Vedānta itself. The first, therefore, is the so-called Chārvāka system. The followers of this system form the oldest of the Indian materialistic schools, whose doctrine is well embraced in the quatrain:—

> While life is yours, live joyously;
> None can escape Death's searching eye;
> When once this frame of ours they burn,
> How shall it e'er again return?

In derision, perhaps, they ascribe their doctrine to Brihaspati, the preceptor of the gods. The best existing account of this sect is found in this book, for its Sūtras, in which its principles were inculcated, are now lost.

Then follow in the enumeration the Bauddha and Jaina systems: for the elucidation of them Mādhava had only second-hand sources, and we cannot therefore wonder if what he says of these two systems, with which he had moreover little sympathy, is not always trustworthy. It is happily possible to correct him wherever he is wrong. The original writings of these two important sects have been preserved, and bid fair to be published in a short time. After the exposition of these two systems, Mādhava proceeds to a system the origin of which dates some 1,500 years later, viz., that of Rāmānuja.

We have no space to give a detailed account of what Mādhava says of the different sects. His account, however, establishes beyond controversy the fact of a continuity running throughout Indian philosophy. We see this in the Saiva schools, which arose in the southern part of India in the seventh century of our era; in the earlier orthodox systems, viz., the two Sānkhyas, the Yoga, the Nyāya, the Vais'eshika, and the Mimāṁsa; and again in the heterodox systems of Buddhism and Jainism.

The translation is trustworthy throughout. A protracted sojourn in India, where there is a living tradition, has familiarized the translators with Indian thought. Wherever they have found it necessary to adopt another reading than that given in the "Bibliotheca Indica," a foot-note is appended. Their conjectures are all striking, and the alterations are never of a violent character.

It is a pity that the editors have added neither an index nor an introduction to their translation. The student is thus entirely left to his own resources. We hope, however, that in a succeeding edition, which there is little doubt will soon become necessary, both these omissions may be remedied.

The Gallican Church and the Revolution: a Sequel to the History of the Church of France from the Concordat of Bologna to the Revolution. By the Rev. W. Henley Jervis, M.A. (Kegan Paul, Trench & Co.)

MR. JERVIS'S former work had a concluding chapter which dealt with the period of the Revolution and discussed the Concordat of 1802. His present volume goes over this ground again, and also treats the period of the empire. Perhaps Mr. Jervis has not made it quite sufficiently clear to himself whether he intends it to be regarded as a new work or only as the concluding volume of the old one. At least the reader of this volume feels that too much is taken for granted, and that too little explanation is given of the author's general principles. The truth is that he is expected, somewhat unreasonably, to look for these in the former work.

Mr. Jervis writes as a "Catholic" of the modern school. Accordingly his general view of French ecclesiastical history is not such as the ordinary English reader apprehends without a certain effort. He has no sympathy with liberal notions in religion; and though his language is not intemperate, yet he is never moved in telling the story of the rebellion of the French against Christianity to express any misgiving that perhaps Christianity had been put before them in a form too rigid and inelastic. Corruptions and abuses in the Church of the old *régime* he is ready to allow, though he follows De Tocqueville in thinking that even these have been exaggerated; but he rejects the notion that the Church ought to have taken any pains to adapt itself, even in organization, to say nothing of doctrine, to a new time. "The organization of the Church," he writes,

> "is divine and changeless. Its external policy, its doctrine, its laws, its ordinances, as they were received in the days, *e.g.*, of Augustine or Gregory the Great, are no mere matters of curiosity for the antiquary or of criticism for the scholar, but matters of universal interest, facts of ever-enduring moment, decisions for all time."

Nevertheless, Mr. Jervis orthodoxy, though so firm, is not quite in agreement with English orthodoxy; for he is not a Protestant, at least as that name is now commonly understood. He may be a good Anglican of the age of Queen Elizabeth, but he is not a modern Protestant. At the position from which he observes the ecclesiastical controversy of France, not only Voltaire and the Encyclopedists, but even the Jansenists, appear to be on the opposite side. And yet, to complete the perplexity of the unprofessional English reader, he is no Papist or Ultramontane, but a Gallican—only not a pseudo-Gallican of the later type, but a genuine Gallican of the school of Bossuet.

It may be questioned whether such unchangeableness as Mr. Jervis claims for the Church is really possible to the Church or to any other institution, and whether Mr. Jervis is philosophical in imagining it to be so. Indeed, it is hard to understand how the uncompromising expressions quoted above can be reconciled with others which he uses on the very same page, where he says of the Church, "Viewed comprehensively it is the perpetual *outgrowth* of God's new creation, the uninterrupted *development* of the kingdom of grace." But his strong ecclesiastical views qualify him to write ecclesiastical history. It is a principal merit of Mr. Jervis's book that he has distinct and clear perception of what religion was in France at the time of the Revolution, and can take an interest in and appreciate all the different varieties of it. For it is a capital error in the current English view of the Revolution that we regard the whole ecclesiastical side of it with contempt, from an opinion that religion was then wholly dead and obsolete in France, and therefore all dispute and discussion about it insincere and, as Carlyle would say, "forgettable." The Liberal view of the Revolution as represented by Thiers and the prophetic view of it taken by Carlyle are here equally misleading. The one school regards everything religious as simply tiresome and childish, while Mr. Carlyle is so tremendously in earnest that he comes practically to the same conclusion, for the religion of plain people always seems to him a mere sham. The mischief, in fact, lies deeper and spreads out in history far beyond the French Revolution. It has its root in the very practice of separating ecclesiastical from political history. No such separation ought ever to have been made. The result of it has been that ecclesiastical history has become a mere professional study, while political history has been profoundly falsified, and exhibits human affairs as far more rationalistic and secular than they ever were. Mr. Jervis's book itself is far too professional; he should have gone much more deeply than he has done into what is called the secular history of the period; but it is useful as an antidote to the ordinary histories of the Revolution and Napoleon, from which the reader would never gather the prodigious part which the religious question played.

The book appears to be sound, careful, and learned. It is so far interesting that

XUM

we have found no difficulty in reading it. But it is a *plain* book, of which nothing higher can be said than that it tells its story clearly, and that, so far as we are able to judge—we do not write as canonists—it is accurate; also that it is no mere compilation, but the result of genuine study; and that the author's views of general history, though not at all remarkable, are intelligent. We do not observe that he pretends to have discovered anything, and yet perhaps some of his views may be novel to most English readers, since the subject lies a little beyond the range of their sympathies.

One of his principal points is that the judgment usually passed upon the great act of Revolutionary legislation in ecclesiastical matters, the Constitution Civile du Clergé, is entirely erroneous. This judgment is thus expressed by M. Thiers:—

"The Assembly in reforming abuses made no aggression upon ecclesiastical dogmas, nor did it attack the authority of the Pope. With regard to its rights, it is clear to every candid mind that the Assembly did not exceed them by legislating as to the temporalities of the Church."

This sentence seems to most people to strike the right note, to express in moderate language a proper and manly jealousy of ecclesiastical tyranny, and would, therefore, be generally accepted in England as expressing the evidently sound Liberal opinion. Mr. Fyffe, who is as good a judge as any writer of what is the proper thing to say, echoes it without misgiving. It will probably not shake this general opinion that Mr. Jervis, a clerical writer, pronounces it "a misrepresentation industriously propagated by the 'patriots' throughout the Revolutionary struggle," and asserts that "the argument is inconsistent with historical fact."

Perhaps it may be more effective to point out that the Constitution Civile, whether or not it was a justifiable measure, was so far from being a Liberal measure that it was directly opposed to Liberal principles, especially as they are understood in England. The Constitution Civile was an act of high-handed interference upon the part of the State with the management of the Church; it was, in fact, the most resolute attempt ever made to create a State Church. The Revolution here undertook to imitate the Tudor kings, to create a Gallican Church on the model of the Anglican, and at one stroke to turn the French clergy into functionaries of the State. M. de Pressensé, who is a Liberal, has seen this just as clearly as Mr. Jervis, who is not. It is not easy to understand how those who are in the habit of ridiculing "Churches made by Act of Parliament" can approve the Constitution Civile, which, not indirectly or constructively, but in the most open and direct manner, undertook to make a new Gallican Church. But it is still more surprising that the Constitution Civile can ever be represented as a measure not merely just and agreeable to Liberal principles, but judicious and statesmanlike, and altogether to be approved under the circumstances. That this can be done even by English writers shows with what languid interest, with what slight attention, Englishmen study the French Revolution. We catch the tone of the French writers who tell us the story of it, and repeat confidingly after them the most astonishing judgments. Mr. Jervis may help us here again because, unlike these French historians, he regards religion seriously, and comes to the religious question as it stood in 1790 with a good historical knowledge of its earlier phases. Most of us confuse the ecclesiastical reform of 1790 with the anti-Christian crusade of 1793. We forget that the latter was caused by the failure of the former, that what finally embittered the French mind against religion was precisely the religious war that sprang out of the Constitution Civile. By an anachronism we suppose the Constitution Civile to have been simply a demonstration of general lay Liberalism against ecclesiastical authority. We altogether underrate the amount of real religious and Christian feeling that went to the composition of the Constitution Civile; we overlook that it sprang rather out of a sort of Protestant, reforming, or Puritanical zeal than out of either religious indifference or active opposition to theology. Like M. de Pressensé, and still more like M. Crétineau-Joly, Mr. Jervis sees in the Constitution Civile a victory of Jansenism, and he shows by quotations how truly the dispute was a controversy between rival theological schools.

He argues very justly that it is untrue to say that the Constitution "made no aggression upon ecclesiastical dogmas." The dogmas of a Church are those propositions to which the Church itself attaches a vital importance. The Constitution attacked the authority of the Pope: had the Church ever regarded this as an unimportant article? But by insisting on the Jansenist character of the act he helps the reader to understand the wantonness of it. It was in a great measure the vindictive act of an embittered religious party. He points out the disastrous influence it had on the course of the Revolution, but—as he does not willingly travel out of the purely ecclesiastical domain—not with sufficient force. What made the Revolution, which had begun with such high hopes, darken so suddenly and so portentously? The cause was mainly the religious war that began with the Constitution Civile. There is something, perhaps, which we shall never quite fathom in the madness of the Constituent Assembly, which instead of reducing as much as possible the difficulties of the enormous task before it, instead of attacking the problems in detail and postponing all that could be postponed in order at least to gain time, seemed to take pleasure in multiplying its tasks and its dangers, and in crowding them together. But if it be asked why it chose, *de gaieté de cœur*, to add a religious revolution and an irreconcilable religious war to the political revolution, perhaps the best answer is that the old Jansenist controversy, which had lasted for a hundred years and grown ever more embittered, could not but break out in that critical moment.

It is interesting to read a consecutive English narrative of the ecclesiastical policy of Napoleon. Mr. Jervis has made a good study of Consalvi's 'Memoirs.' But here, as elsewhere, he is only plain and clear, and he is somewhat drily professional, looking at religion with the eyes rather of a lawyer than of a divine. Something more impressive might have been written on the death and faint, phantom-like resurrection of Christianity in France. Nor does Mr. Jervis make much effort to enter into the ecclesiastical ideas of Napoleon, which, however, might repay some examination. Napoleon is too secular a personage to interest him beyond a certain point. And yet one would think that to a man well read in Church history few subjects could be more attractive than Napoleon's attempt to revive the mediæval theocracy. How far was he serious, and how far did he himself understand the mediæval theory of Church and empire? It would have given rare satisfaction to one of Mr. Freeman's school to light on such a sentence in the Napoleon correspondence as this, which Mr. Jervis quotes from a letter to the Pope: "Your Holiness is sovereign of Rome, but I am its emperor." Napoleon then knew of that necessary connexion between the name "emperor" and the city of Rome of which we have heard so much. We need not be surprised, perhaps, that the Pope himself meets this doctrine with a direct denial: "Your Majesty has been elected, crowned, anointed, acknowledged Emperor of the French, but not Emperor of Rome. There does not exist an Emperor of Rome; none can exist." But it is, perhaps, a little surprising that this curious controversy suggests no reflections to Mr. Jervis.

His final conclusion is much what might have been expected. Lamennais and his friends fell into "dangerous error," and were justly condemned by the Holy See. The growth of Ultramontanism in the circumstances of recent times has been natural, but has brought with it a blindness to "other truths equally impregnable, of which the Gallican theologians of old were such illustrious advocates." "A return to Gallican doctrine" is to be desired. This is the way "definitively to reconcile those two great conflicting powers, faith and freedom."

THE BOOKS OF THE ANCIENTS.

Das Antike Buchwesen in seinem Verhältniss zur Literatur, mit Beiträgen zur Textgeschichte des Theokrit, Catull, Properz und Anderen Autoren. Von Theodor Birt. (Berlin, Hertz.)

WITH the thoroughness of his nation Herr Birt has investigated every conceivable point that can be raised in connexion with the book in antiquity. Not content to pass lightly over the surface, as M. Egger did when in his charming little 'Histoire du Livre' he threw the results of years of study into a popular narrative, the German scholar is at pains to give chapter and verse for every statement, however apparently trivial. This makes the book rather troublesome to read. It is necessary to wade through much superfluous detail before we come upon the main deductions from it. Where Herr Birt does allow himself general reflections on the conditions of literature in antiquity he is always both interesting and instructive. His style in such passages is singularly terse and vigorous. The glow of the enthusiast may be felt even through the precise statements of the scholar. Indeed, an extremely readable little volume might be made by stringing together the passages in which the author sums up his results. As the book stands they are embedded in such a mass of detail that nothing but the keenest interest

in the minute questions discussed can carry the reader steadily through it. It is time, however, that we touched on at least a few of these questions, to give our readers some idea of their interest and variety.

The name of "book" suggests to our minds so familiar and definite an idea that we are apt to forget the roll of papyrus or of parchment, the tablets smeared with wax, and other phenomena which the name originally implied. All terms for books in Greek and Latin, as in English, primarily described the *material* on which they were written, but these terms, in accordance with well-known laws, soon lost their strict significance. So, though *βίβλος* and *βίβλιον* may with rare exceptions be assumed to mean the roll of papyrus, we find the Latin *liber* (bark) applied to the same rolls, and, in the Middle Ages, the word *cortex* also put to this use. *Volumen*, on the other hand, which exactly described the *form* of book commonest in antiquity, has in our "volume" entirely lost its original meaning. Herr Birt, after a short but excellent introduction to his subject, deals exhaustively in his first chapter with these questions of terminology, and brings out many interesting points to which we have no space to refer. It is curious, however, to see how early certain words acquire a double meaning. Thus both *βίβλος* and *liber* were used, like our "book," to mean not only a complete work, but also a division of it. One fact in the history of book-material seems clearly established by Herr Birt—namely, that papyrus was far more used than parchment until the third or fourth century A.D., though parchment is referred to by Martial and his contemporaries. It is after this somewhat surprising to learn, on the authority of Martial himself, that books on parchment were nevertheless cheaper than books on papyrus. In a list of presents (book xiv.) to be given respectively by a rich and a poor man a copy of the 'Batrachomyomachia' is set against a complete Homer on parchment, the 'Culex' in the same way against the complete works of Virgil, and a single play of Menander against all Cicero's writings. It is not expressly stated that the smaller book of each pair was on papyrus, but parchment is invariably mentioned in the contrary case, so that we may fairly assume that papyrus was the material of the books not otherwise described.

A careful investigation into the average length and breadth of the papyrus roll yields results of some interest. Naturally the actual formation of the material was the basis of practice. Hence arose a usage which ultimately fixed the hexameter line as the normal limit of breadth, not merely in poetry, but in prose—a limit that is not often exceeded even in modern printing. Similarly writers acquired the habit of passing from one papyrus leaf to another at some natural break or climax in the subject, just as the novelist of to-day learns to construct his story so as to meet the requirements of periodical publication. We can touch but lightly on the intricate question of stichometry as opposed to gnomometry, space not permitting us to discuss it at length. Broadly the question is whether the ancient writers divided their books according to subject or according to some standard measure of lines or *στίχοι*, each containing a fixed number of words. To us the latter idea seems so artificial as to be hardly credible, but the evidence collected by the late Ch. Graux and now supplemented by Herr Birt is too abundant to be overlooked. For detailed information on this and many other technical points we must refer our readers to the book itself. We will touch in conclusion on a few questions of larger scope.

Having traced the development of the book through its various stages, Herr Birt comes in due course to the question of publication. What did the publication of a book imply in antiquity? As far as Greece is concerned we can hardly answer the question. But it may be said with certainty that in Rome there were men who employed scribes, just as the publisher of to-day employs printers, to multiply copies of books for sale. The name of the Sosii will occur to all. Herr Birt agrees with M. Boissier in regarding Atticus as not merely Cicero's most intimate friend, but as his publisher. Certain phrases in their correspondence can hardly be otherwise explained. Indeed, it would appear that Atticus published other people's books also, and as we do not gather that the author had any interest in the sale we may assume that the publisher found the business fairly profitable. That there was a flourishing book trade at Alexandria during the period of her literary supremacy cannot reasonably be doubted; but unfortunately the evidence is so scanty that not even the industry of our present author has been able to find anything of consequence. The case is not much better when we go back to Athens. In a period when literary activity was greater and more lasting in its results than in almost any other before or since it is surprising how little can be discovered of the actual production and distribution of books.

The pre-Alexandrian period in the history of books is treated as fully as the evidence will admit in the last chapter, which to many readers will be the most interesting of all. Indeed, it is disappointing to find that this part of the subject is relegated to an appendix, in form at least, if not in name. Few things can be of more interest than to know in what form the immortal writings of the Greek poets, historians, and philosophers were first given to the world. When we read of the whole Iliad and Odyssey being written out on one continuous scroll we find our faith sorely tested; but the very existence of the myth, if myth it be, throws light on the literary conditions of the time. Herr Birt maintains that the present divisions of many well-known works were due to Alexandrian grammarians. Not only Homer, but Thucydides, Herodotus, Xenophon, and Plato, and many other authors can be proved to have originally existed in one continuous roll, without any division but such as the sense here and there required. It was not till Alexandrian times that this system of large rolls, with its obvious inconveniences, gradually gave place to the smaller rolls which afterwards found favour in Rome. The next stage was the parchment codex of the third or fourth century A.D., in which form as multiplied by monkish scribes classical, and we may add Biblical, literature has mainly come down to us; for the number of papyri that have survived is infinitesimal. The perishable nature of the material sufficiently accounts for this, and our author shows that the destruction of the Alexandrian libraries was even a greater disaster than is commonly imagined; for these were something more than libraries in the usual sense—they were huge book-stores, the object of the royal collector apparently being to buy up not only as many books, but as many copies of each book, as he could lay his hands on. Other causes for the destruction of ancient MSS. are pointed out by Herr Birt in an interesting chapter, where he also sketches in some detail the history of the text of Catullus, Propertius, Tibullus, and other Roman poets. That we depend for our texts of the classics on copies not only not contemporary, but for the most part at least ten or twelve centuries later than the time of their composition, is a cardinal fact in the history of literature which should never be lost sight of.

We must now close our sketch of a most interesting and valuable work. It is a storehouse of information, but the reader will find that, whether owing to the intricacy of the subject or to some want of method on the part of the author, a fair view of the book as a whole can only be gained by patiently plodding through it from the first page to the last. No serious student, however, will regret the time thus occupied.

NOVELS OF THE WEEK.

One of Us. By E. Randolph, Jun. 3 vols. (Sampson Low & Co.)
Madge Allerton. By Annie Cazenove. (Walter Smith.)
Sissie. By E. J. Worboise. (Clarke & Co.)

BOTH in design and in execution 'One of Us' is curious. Mesmerism and its kindred forces are the pivot upon which the plot of the story turns, and the many advantageous points which their vague and indeterminate influences afford are utilized with some skill by Mr. Randolph. If the central subject of the book is uncommon, so also is its construction. No one who reads the first two volumes would be prepared for the complete change that takes place in the third. The transition is almost melo-dramatic in its startling suddenness, for, with little to rouse the suspicions of the wariest veteran, we suddenly pass from the level plains of domestic life into the abyss of sensational tragedy. The ancient fable is outdone: without premonitory symptoms the mouse brings forth a mountain. In the early portions of the novel Mr. Randolph introduces the reader to the ill-assorted company which an ambitious hostess has gathered from every part of the habitable globe and collected in a country house. In some of his social sketches he displays considerable humour, though the fun is not always of the most refined character; and had these sketches been more lifelike he might have amused his readers at the risk of offending the more fastidious. If his pictures are drawn from nature he must have been exceptionally unfortunate in his experiences, and if they are intentional caricatures it is a mistake to seek effect by distorting features beyond recognition. Mr. Randolph is seen to more advantage in the field of sensational writing. Here he shows liveliness and power of description, and can give more legitimate play to his imagination when he deals with

the mysterious influences upon which the interest of his story depends. A sprightly novel, full of action and bustle, may in the future be expected from Mr. Randolph's pen; but the ordinary and simple details of social life can only be effectively handled by one who possesses more trained experience and more delicate taste than Mr. Randolph at present commands.

Madge Allerton is the elder of two girls whose lot it is to be born to a country life, surrounded by all that wealth can give to make it pleasant. A perfectly unchequered career of prosperity in the retirement of an English country district, which is only diversified by the occasional arrival of desirable friends, is certainly a somewhat difficult subject for romance. It requires the pen of an Austen to make much of heroines so comfortably commonplace, and the present writer is not a Miss Austen. However, she conveys a pretty distinct idea of the ladies we have mentioned. One is short and sensible, the other tall and coquettish, and they act their parts pretty consistently in the uneventful drama. Their mother is an invalid, and they are a good deal dependent for counsel upon a certain Mrs. Vernon, who calls them "childie," and generally treats them tenderly. There are, of course, some young men of an unobjectionable sort mixed up with the story, and we go in their company to lawn tennis parties, school treats, church, and other country excitements. According to a growing fashion, an extract from the sermon is given. The moral is excellent, still the practice is not to our liking. The boys, Mrs. Vernon's children, are described with a good deal of sympathy, which description is perhaps the best part of the book, unless its brevity be considered its chief merit.

Somewhat more than 520 pages of close print form the medium for the inculcation of moral truth in Miss Worboise's last tale. The heroine is a good girl who at sixteen becomes the right hand of her father, a poor doctor who is nearly ruined by a selfish wife and extravagant sons. "Sissie," after discharging successfully the functions of a maid-of-all-work, a companion, and a governess, marries a virtuous and wealthy Nonconformist, while her wicked brothers, who have taken orders in the Church of England, in vain beseech his assistance for their professional advancement. The worst error of this discreet and admirable damsel is her reference to her companion Flora as a "young lady friend." In essentials she is blameless. The reader will find all the author's characteristic merits and defects embodied in the tale, and perhaps an unusual amount of good advice to girls. Yet it is difficult to recommend its perusal to any one who has anything else to do.

BOOKS OF TRAVEL AND GUIDE-BOOKS.

The Land of the Bey: being Impressions of Tunis under the French. By T. Wemyss Reid. (Sampson Low & Co.)—Mr. Reid possesses the facile pen of the daily journalist. He sets out with the high spirits of a man entering on the enjoyment of a hard-won holiday, and he easily carries the reader along with him from Leeds to Folkestone, to Paris, to Marseilles, and to Tunis. It is pleasant to find oneself in the company of a gentleman of such cheerful humour. For "impressions of Tunis under the French" Mr. Reid gives particulars of the duties and the worries of the excellent English Consul-General, Mr. Reade; describes pleasant and sentimental visits to the ruined cisterns of Carthage and the English burial-ground; and regales his readers with a sufficiently lively account of how he set out for Kairwan, but got only as far as Susa, and how he returned to Tunis through a delightful Mediterranean storm to say farewell. But when he approaches any point touching on the curious state of Tunisian society during the Punic War of M. Roustan he either turns from it or skims over it with the vaguest word, and this while he makes us conscious he has much he could say which would be of interest and value. It is difficult to understand what considerations of propriety or expediency demand such silence as Mr. Reid has imposed on himself, or why in his final chapter (in which he alludes in a hurried, summary fashion to such things as his readers expected his whole record to be occupied with) he should mysteriously hint at Madame Elias under cover of the phrase "a fair and frail Helen," and at M. Roustan under the phrase "a very powerful person in Tunis," especially since he confesses incidentally in this very chapter that he was the "special correspondent" who wrote those letters on Tunisian affairs which appeared in the *Standard* newspaper last October and November, and as he must know that since he wrote his diary the exposure of "the truth about Tunis," which he expected would soon be made, has been made very thoroughly in the speeches of M. Camille Pelletan and in the Roustan-Rochefort trial. It is indeed possible that Mr. Reid anticipated these revelations would be so searching as to leave him not a word to say; but yet English people would have been glad to know for themselves whether the evidence in detail of an attentive and tolerably unbiassed Englishman tallied with that of Frenchmen suspected of being factious. Mr. Reid has, in fact, erred on the side of caution. There is no doubt that so experienced an observer formed a pretty clear conception of how matters stood at Tunis last November; but he has not taken his readers into his confidence.

A Winter in Tangier, and Home through Spain. By Mrs. Howard-Vyse. (Hatchards.)—Mrs. Howard-Vyse's volume is altogether without form, if not altogether void. It might be well enough as a diary in manuscript for private reading, but it is difficult to see why it should be published as a book; style it has none to give it literary value, and what it has of practical value might have been clearly and sufficiently made public in a magazine article. It is mainly addressed to those "who seek for a mild winter climate," and to such Mrs. Howard-Vyse's notes on food, expenses (M. Bruzaud, of "The Hotel in the Garden," seems to have raised his tariff during the last two years), and the beneficial effect of Moorish air, and of Moorish wet even, on the delicate lungs of her husband will be of great interest. The larger public, which is not seeking for a health resort, and does not take an interest in the politics of Barbary, will find nothing to add to the accounts which have already been published by more competent writers. Not only so, but they will find that Mrs. Howard-Vyse makes some odd mistakes, from which a little preparatory reading or more accurate listening would have saved her. For instance, the Grand Shereef of Wazan is carelessly talked of as "the Shereef of this place" (Tangier); she speaks of crossing "the river Ouad," on the road to Tetuan, apparently ignorant that "Ouad" (or "Wad") means "river," and that the name of the stream is "Wad Ras"; and she hides such familiar names as Mequinez (Meknez) in such arbitrary spelling as "Mackness." The following sentences are a curious medley of mistakes:—"Count C. intends to try to go across the country from [Fez] to Oran.....The last Englishman who made that part of that journey and against all advice was Mr. John Davidson, in 1836—a most energetic traveller and very scientific man. After encountering great hardships and difficulties, he reached Rabat, 150 miles from Tangier, Mogador, and Morocco..... The result was that he was murdered at Swekeya." Has Mrs. Howard-Vyse not read or heard of Capt. Colvile's 'Ride in Petticoats and Slippers' (see *Athen.* No. 2747, June 19th, 1880) from Fez to the Algerian frontier and on to Oran? and does she not know that Oran is east of Fez and Rabat west, on the Atlantic coast? What, then, has this talk about Davidson's journey (which came to a fatal end several hundred miles south of Rabat)—what has this to do with Count C.'s design?

Madeira: its Scenery, and How to see It. By Ellen M. Taylor. (Stanford.)—Although the "climate and resources of Madeira" have already—so the author tells us—been dealt with by a competent writer, a handbook to the island is still needed, and the volume before us is written to supply the want. For this purpose the book appears very well put together. Besides the usual information needed by the traveller or intending resident as to steamers, lodgings, prices, &c., the author supplies a sketch of the history of the island and some account of its chief products. She modestly disclaims any intention of treating scientific matters, and carries this so far that in place of describing a certain fossil bed, she prefers to print the account by Darwin of a similar phenomenon in New Zealand. Clear and precise directions are copiously given for various excursions, long and short, while a general impression of the life led and of the scenery is furnished by a series of lively letters, which adequately fulfil this end, and do not contain a larger amount of superlatives than may be fairly conceded to a lady on a picnicking expedition in such a beautiful region.

To the hurrying tourist Mr. R. N. Worth's *Guide to Dorsetshire: Coast, Rail, and Road* (Stanford) will be acceptable. It detains by no tedious discourse upon place or object, but goes rapidly and pleasantly on from sea margin to primæval barrow, and from mediæval church and castle to the latest Wesleyan chapel, not forgetting to tell the wearied traveller of the Red Lion or the temperance hotel. To the geological inquirer Mr. Worth will be more satisfactory than to the student of ancient architecture, who will hardly find him a competent instructor. He hints at, rather than describes or points out, the details which make a building deserving of attention, leaving the visitor to find for himself the special features of interest. In this respect the new Guide is of slighter texture than Murray's Handbook, which, however, has the disadvantage thus far of being bound up with Somerset and Wilts. Dorset is not a particularly rich architectural field, and consequently there was opportunity for sufficient description of such ancient buildings as are to be found. But Mr. Worth's studies have hardly embraced constructive detail, or he would not be satisfied with off-hand remarks that the work of one church is "noteworthy," and of another that it has details "worthy of note," without saying what these details are. Of Bere Regis it is said that the church contains "good illustrative features of Norman, Early English, and Perpendicular," but no mention is made of its fine early wooden roof, for which it might chiefly be visited. Of St. Mary's, Bridport, which claims to hold the third place among the churches of the county, Sherborne and Wimborne being the other two, the almost unique little oriel of the priest's chamber over the south porch is unnoticed. Ford Abbey, with its remarkable combination of early and late Cistercian arrangements in connexion with the showy creations of Inigo Jones, is despatched in a small half page. The slight notice of Sherborne Castle is so confused with that of the Tudor fabric which lies across a broad water in the distance that the two structures might be taken by the reader to be on the same site. No description is given of the later building, it

being simply said that Sir Walter Raleigh "built the centre of the present mansion, where his arms may yet be seen." We might continue our strictures, but end with the remark that if Mr. Stanford intends his guides to rival Murray's handbooks he must look more carefully to the description of architectural remains.

PHILOLOGICAL BOOKS.

M. Valerii Martialis Epigrammaton. Lib. I. Edited by J. Flach. (Tübingen, Laupp.)—This edition gives an *apparatus criticus* and a fairly exhaustive commentary in foot-notes, which would doubtless be rendered into English (from Latin) by one of our numerous piratical "editors" if the work were to arrive at or near completion; but we gather that our editor does not intend to further anticipate Friedländer's long-promised edition of Martial's epigrams. Herr Flach shows considerable learning and industry, but his judgment is not always remarkable. For instance, "licet dicam" (vii. 2) is neither *quamvis, &c.*, nor *cogor dicere*, but "I venture to say" more nearly. On lxvi. 8, "quæ trita duro non inhorruit mento," it is asked, "When used the Romans to kiss with the chin?" This is not to the point, for we have heard children object to a rough chin after being kissed in ordinary fashion. On *ib.* 10 we are told that the *frons* of a book corresponds to our "title-page." It is the end formed of the edges of the roll when rolled up. In this case and others —*e.g.*, on "arator," lv. 3—Herr Flach might have found benefit from consulting Paley and Stone, who give more than half the book. We do not advocate expurgation, but we think it unnecessary to give parallels to indecent language unless some rare point of grammar or etymology demands elucidation. Surely the anticipation of "vade salutatum" (lxx. 1) by Ovid is as likely as not to be a mere coincidence. The pedigrees of phrases seem often to be traced as arbitrarily as those of *novi homines*. We notice divers *leviora menda* which we are asked to correct. In lxvii., "Liber homo es nimium, dicis mihi, Ceryle, semper. In te qui(s) dicit, Ceryle, liber homo est?" we render the pentameter: "In your case, Cerylus, who says, 'He is an ingenuous fellow'?" Cerylus is a humbug and a prude. Notwithstanding a shrewd suspicion that Herr Flach is not a sufficiently keen humourist to be a born exponent of Martial, we are glad to acknowledge the substantial merits of his work.

In an inaugural dissertation for the degree of Doctor of Philosophy at the University of Göttingen, Mr. Arthur Napier has ably discussed the authorship, and attempted with some success to settle the text, of certain Anglo-Saxon homilies which Wanley may be said to have discovered nearly two hundred years ago and first attributed to their true author. Up to the time of the appearance of Hickes's 'Thesaurus' these homilies had been given to a Bishop Lupus, whom nobody knew anything about. Wanley showed that Lupus was none other than Wulfstan, who was Archbishop of York during the period of the Danish invasion and who died in 1023. Since Wanley's days few scholars have paid much attention to these sermons, and no one has ever till now bestowed much critical study upon them. In this treatise—*Ueber die Werke des Altenglischen Erzbischofs Wulfstan*—Mr. Napier has exhibited proofs of trained and careful scholarship. From a student so sober, diligent, and acute, we are pretty sure to get some more important researches by-and-by.

Simplified Grammar of Hindûstânî, Persian, and Arabic. By E. H. Palmer. (Trübner & Co.)—This little volume is the first of a collection of simplified grammars of the principal Oriental and European languages, edited by Prof. Palmer, of Cambridge, whose name is a guarantee both for a scholarlike treatment of the subject-matter and for a style concise and clear enough to make this series eminently adapted for practical purposes. The principles that underlie the system of each language are carefully explained, and by excluding all technical terms, all the old classifications, paradigms, and tables, the author has succeeded in condensing the necessary rules of Hindûstânî into twenty-seven pages, those of Persian into the same narrow space, and the whole Arabic grammar into fifty pages. And in this small compass both accidence and syntax are fully discussed and made, as the common phrase goes, "comprehensible even to the dullest mind." In our opinion a little more scientific dignity would have done no harm to the clearness of the style, and the algebraic formulas employed in the explanation of Arabic conjugations might well have been dispensed with. We venture to think that candidates for the Indian Civil Service, whose requirements are particularly kept in view, are, or at least ought to be, advanced enough in mental training to understand even the complicated structure of Arabic accidence without a queer expedient like this. Another question is whether it would not have been advisable to adopt in some way the system of Petermann's 'Porta Linguarum Orientalium,' by adding in each case a little chrestomathy with glossary, and a short list of the best text-editions, grammars, and dictionaries, as a guide for further study. We cannot discuss here in detail the contents of these grammatical primers; upon the whole they answer their purpose pretty well, but a few alterations in the wording of certain paragraphs would decidedly be a great improvement. The statement, for instance, p. 103, in the chapter on "relative sentences" in Arabic, about the use of *man* and *má* as relative pronouns for *indefinite* antecedents is altogether misleading; *man* and *mâ* simply mean "he who," "that which," whereas no pronoun at all is employed in relative clauses governed by indefinite nouns. The translation given to *fa'ala* and *dharaba*, p. 73, viz., "he does" and "he strikes," is not only in contradiction with established facts, but even with the author's own remarks in the previous page. Very funny, too, is the comparison drawn (p. 39) between the hesitating English "eh," in sentences like "I am going—eh—to," and the *h*, which forms in Persian a past participle! That the Persian language besides has no real adjectives, as we learn from p. 30, is another novel theory. We look forward with a certain interest to the following volumes, which are to contain grammars of the Keltic, Slavonic, Scandinavian, and most of the remaining Eastern languages.

Portugal has at length woke up. Prof. de Vasconcellos Abreu has published a Sanskrit grammar in the Portuguese language after the most esteemed German models.

One of the Scottish Free Church missionaries, the Rev. John Inglis, has published (Williams & Norgate) a dictionary of the Ancityumese language in two parts, both from and into English, with an introduction containing notices of the missions to the native races of New Zealand and the New Hebrides, and illustrations of the principles and peculiarities of the language.

Father Angelus Maffei (Jesuit) has published this year at Mangalore, on the west coast of India, a really very creditable grammar of the Konkani language, accompanied by a translation of nine chapters of the Old and New Testament in the Kanarese character, which are valuable as a text to illustrate his grammar. It must be remembered that there are three sufficiently distinct varieties of Konkani, itself a dialect of Maráthi, and that this grammar applies only to the third variety, as spoken in South Kanara and greatly affected by the contact of Dravidian languages. The learned author promises a dictionary also if means are forthcoming.

Bishop Steere has published a most useful little volume, *Swahili Exercises* (Bell & Sons), primarily for the use of the University missionaries to Central Africa, but supplying a want felt by the general public. His excellent grammar, Dr. Krapf's dictionary, and now this volume of 'Exercises' place within the reach of all the study of this important language, this *lingua franca*, which is destined to occupy the same position in Central Africa, south of the Equator and north of the tropic of Capricorn, as Hindûstânî does in British India.

Under the title of *La Religione e le Lingue dell' India*, an excellent translation of Mr. Cust's well-known book has been issued by Hoepli of Milan. The translator has had the advantage of the help of Count A. de Gubernatis, who contributes a few lines of preface.

Prof. Bartsch, of Heidelberg, has published some translations into German of French ballads, under the title of *Alte Französische Volkslieder* (Trübner). The accomplished professor has prefixed an introduction which is characterized by his usual learning and thorough knowledge of his subject.

OUR LIBRARY TABLE.

In his *Cavalry Life; or, Sketches and Stories in Barracks and Out*, 2 vols. (Chatto & Windus), Mr. J. S. Winter proposes to correct the popular misapprehension regarding the social life of officers, and the method he adopts is the following. He strings together a series of short tales, some with a little connexion, some with none, in which he illustrates a soldier's life as seen by those behind the curtain. "I simply take a real soldier out of a real regiment, and give him somebody else's real name; I put real jokes into his mouth, and relate real incidents which happened to him or somebody else." Unluckily the incidents are in many cases such as never happened, and several slight circumstances show that the author has no personal knowledge of the army, and has either been hoaxed or has given free play to his imagination. Mock courts-martial by officers on their fellows have not been unfrequent, and the penalties inflicted have sometimes been of a most objectionable nature. We, however, positively refuse to believe that an ante-room court-martial ever sentenced two cavalry subalterns to receive thirty strokes from a birch rod, and that the punishment was actually inflicted without the inflicters being punished for their atrocious conduct. Again, as to practical jokes, there are scarcely any extremities to which officers have not proceeded when "drawing" or "making hay" in a comrade's room, though happily such horseplay is much less frequent now than it was ten years ago. It may, however, be positively affirmed that for a subaltern to empty the contents of a mustard pot on the bald head of a senior captain who had risen from the ranks, in the very mess-room, is a thing unheard of, and if it had happened would have brought down condign punishment on the snob who offended. Indeed, if we are to believe Mr. Winter, British cavalry officers are the most foolish, vulgar set of men who ever wore uniform. Our doubts as to Mr. Winter's personal acquaintance with military life are strengthened by his writing "brigadier major" for brigade major, and that not once, but twice.

Henri Dominique Lacordaire, a Biographical Sketch, by H. L. S. Lear (Rivingtons), is written in an enthusiastic strain. Lacordaire, though noble-minded and eloquent, was not the great man his biographer would make him out to be; and the tone in which a man of really commanding intellect—Lamennais—is spoken of makes apparent the writer's want of critical judgment. Mr. Matthew Arnold's little sketch of Lacordaire at Sorèze gives a juster idea of the man than these three hundred and odd pages.

We have received a diplomatic and consular *Supplément à l'Almanach de Gotha* for the present year. It is useful, but there are a great many errors in its pages, of which the most amusing is perhaps that of "Titus" for "Mr. St. John," as British Minister at Guatemala. The list of secretaries and *attachés* is far from complete.

XUM

To Mr. Wheatley we are indebted for the compilation of the excellent *Index of Obituary Notices for the Year* 1880, published by the Index Society.

WE have on our table *Panjab Customary Law*, 3 vols., edited by C. L. Tupper (Calcutta, Government Printing Office),—*History of Medicine in Massachusetts*, by S. A. Green (Trübner),—*Sensation and Pain*, by C. F. Taylor (New York, Putnam),—*The Study of Trance, Muscle-Reading*, by G. M. Beard (The Author),—*The Food we Eat*, by J. M. Fothergill (Griffith & Farran),—*The Care and Treatment of the Insane in Private Dwellings*, by L. A. Weatherly (Griffith & Farran),—*Hospitals and the State*, by H. C. Burdett (Churchill),—*Health Lectures for the People*, Second Series (Edinburgh, Macniven & Wallace),—and *The Number of Deaths from Accident, Negligence, and Violence in the United Kingdom*, by C. Walford (Stanford).

THE SCOTTISH EDUCATION BILL.

Aberdeen, June 26, 1882.

MR. LEWIS'S statement in your columns of June 17th is confirmatory of all that I said about the opposition to the Educational Endowments (Scotland) Bill. He himself suggests that he is now in the foreground, and if I were to use exaggerated language like his own, I should not be far wrong if I said that *he* is the opposition. The intelligent reader can, therefore, gather from his communication the character of the opposition. His reply abounds in such epithets as "extraordinary," "astounding," "simply inconceivable," and "marvellous"—epithets which no one who knows Mr. Lewis will apply to anything he may say. Those who differ in opinion from him are "covetous educationists or self-accused conspirators"; they form a "university clique," they are "advocates of spoliation," they introduce "Bills of a confiscatory and reactionary character," they are guilty of "slanders and imputations" on Mr. Lewis, and of other fearful crimes against liberty, which can be read in Mr. Lewis's communication, and are repeated nearly word for word in all the newspaper articles and speeches which are made against the Bill. I do not know exactly who are the members of this university clique and association for the destruction of British liberties, but I gather from Mr. Lewis's lucubration that among them are to be numbered the members of the first commission, Sir T. E. Colebrooke, Lord Rosebery, Mr. Parkes, M.P., Mr. A. Craig Sellar, and the late Sir W. Stirling Maxwell and Mr. H. H. Lancaster; and the members of the last commission, Lord Moncrieff, Lord Balfour of Burleigh, Sir James Watson, Mr. Campbell, M.P., Prof. Tait, and myself; and Mr. Ramsay, M.P., is a kind of double conspirator, as he was a member of both commissions. In addition to these you have Lord Spencer, Mr. Mundella, the Lord Advocate, Sir Alexander Grant, Sir Francis Sandford, and possibly Mr. Gladstone himself! The reader of history is familiar with this kind of rant from the days of Cleon downwards, and can estimate it at its real value. I do not think it necessary that I should enter into the discussion of all the points which Mr. Lewis has dragged into his diatribe; but I shall venture to assert that there is not a single sentence in it intended to convey the idea that it contains a statement of facts which I could not show to any reasonable and unprejudiced man contained a misstatement of facts. I do not believe that Mr. Lewis deliberately misstated the facts, but the agitator who is always indulging in strong expressions ends in being utterly unable to state anything accurately in which he is personally concerned. I shall adduce several instances, not because they are the most glaring, but because they can be exhibited briefly and by evidence which is open to all.

1. Mr. Lewis says: "The teachers under Dr. Donaldson moderately asked that 1,000*l.* per annum should be given to the High School." The teachers never asked any such sum. The High School is mentioned in the original statutes of the Hospital, and the teachers felt bound to make an appearance before the commission. One of their number was appointed to give evidence, and in the name of the teachers he read a written statement which contained the opinion of the teachers, and in it there was no definite sum mentioned, but simply "a portion of such funds as may be at their [the Commissioners'] disposal." As no sum was mentioned, the Commissioners asked the master who appeared, "Can you mention a sum?" He answered, "Well, I did not think of having to mention a sum, but I should say, if I must mention one, 1,000*l.* would do a great deal of good." In answer to a subsequent question he said, "I mentioned that sum, not as one I had calculated as gettable, for I had never thought about that, but as one that I thought we could make a very good use of." The Chairman: "The question came upon you unexpectedly?" "Yes, and there is no use asking too little and then repenting afterwards." The suggestion was entirely the individual's, and not deliberately made.

2. Mr. Lewis states: "Under the Act of 1868 the governors applied for a provisional order, which was refused because it was too liberal and extensive in its provisions." In reference to this same provisional order Mr. Lewis was questioned by the last commission and replied. The question and reply are as follows: "And that provisional order did not succeed because the Government found it was not within the terms of the Act?" "Yes; that was the reason upon which it was refused."

3. "When Dr. Donaldson wrote," Mr. Lewis says, "that the governors of Heriot's Hospital alone were opposed to the measure, was he aware that the governors of Hutcheson's Hospital in Glasgow occupied the same attitude of hostility to the Bill?" A deputation from Hutcheson's Hospital and Miller's Charity in Glasgow waited on Mr. Mundella last week. Mr. George Anderson, M.P., in introducing the deputation, said the intentions of the deputation, he might state, were entirely friendly to the Bill, otherwise he would not have been present. While they wished certain amendments, they in no way sympathized with the opposition to the Bill which came from Edinburgh. On the contrary, they wished to see the Bill passed.

4. "Again," says Mr. Lewis, "is it not equally true Mr. Ramsay, to his credit, again recorded his dissent from the action of Dr. Donaldson and his fellow Commissioners in regard to the Wallace Hall Academy, Closeburn, Dumfriesshire, because of their arbitrary disregard of the legal rights of the beneficiaries?" It is equally true as his other assertions, because it is altogether untrue. Mr. Ramsay agreed with his fellow Commissioners in thinking that the trustees should have power to charge fees. This is what Mr. Lewis designates as arbitrary disregard of the legal rights of the beneficiaries. Mr. Ramsay did object to the provisional order, but it was for a reason which is by no means agreeable to Mr. Lewis. He thus states his objection: "In the case of Wallace Hall Academy, I am of opinion that as the available income now derived from the endowment is adequate to provide the whole population of Closeburn with the higher education contemplated by the founder, the school board of that parish should obtain a leading position on the governing body, subject to such conditions and restrictions as to prevent the misappropriation of the funds and serve to secure the efficient education of the whole population of Closeburn, and place instruction in the higher branches of knowledge within reach of many in the surrounding districts." The Heriot opposition is not favourable to that form of representation which is to be found in school boards.

5. Mr. Lewis says: "Notwithstanding these most distinct and direct terms in the deed of mortification, Dr. Donaldson and his fellow Commissioners largely appropriated the lands and revenues of the Wallace Hall Trust for boarders and bursaries, and imposed fees upon two-thirds of the children of the parishioners, amounting in some cases to eightpence a week per pupil." Nearly every word of this sentence contains an inaccuracy, but I confine my remarks to "eightpence a week per pupil." In the provisional order approved by the Commissioners occurs this clause: "Except as hereinafter provided, all pupils shall pay such school fees as the governors may fix from time to time, provided that no such fee shall be at any rate of more than twopence a week for pupils taught according to the Third or any lower Standard of the Code of the Scotch Education Department, or more than fourpence a week for pupils taught according to the Fourth, Fifth, or Sixth Standards of the said Code, or more than eightpence a week for pupils receiving

a higher class education, as the same shall be determined by the governors." In this clause power is given to the governors to fix the fees, and the Commissioners do not impose a fee of eightpence on any one, but set down that as the limit for the highest education to be given in the school. In fact, the governors have fixed the fees below the limit. I quote a sentence from a letter which the governor, the Rev. D. Ogilvy-Ramsay, parish minister of Closeburn, who has given most attention to the institution, addressed last Saturday to the *Scotsman:* "The fees charged are one penny, twopence, and sixpence a week, the last mentioned being in no case charged against the working man. Here I am in a position in which I can focus the difference between the Treasurer's statement and the facts of the case. The Treasurer's statement amounts to this, that the Commissioners 'imposed' a fee of eightpence a week per pupil on the children of 'farm servants and labourers.' The facts of the case are these, that the governors of Wallace Hall are, in terms of the order which the Commissioners sanctioned, offering to all sufficiently advanced pupils belonging to the working class instruction in the higher subjects entirely free." Ample provision is made in the provisional order for giving poor boys the higher education gratis, and the charge of a fee on others who can afford it is entirely in the interest of the poor. Mr. Ramsay has dealt in this letter with all the assertions of Mr. Lewis about Wallace Hall, and shows how utterly inaccurate every one of them is.

I think I have adduced a sufficient number of instances to show how much trust is to be put in Mr. Lewis's statements. I should like to say a few words on the reasons which he urges against the passing of the Bill.

The first is that sufficient care is not taken that money left for the poor shall be retained for them. It seems to me that the clause dealing with this matter is as precise as can be; but I am afraid there is a radical difference between Mr. Lewis and the great majority of the Scotch people. Mr. Lewis, if we may judge from his words and actions, has an intense dislike of all culture, of teachers, of indeed all educated men, and of the upper classes. He takes the poor to mean all working men, however high their wages may be, and he would use endowments to pay the fees of all working men's children. He seems to have no sympathy with the movement which would give these children a chance of rising into the middle or upper classes through education; and if there are to be higher schools for the working classes, he would have the schools quite exclusive, so that none of another class might intrude. I do not think it likely that Mr. Lewis will allow this to be his creed, but if his denunciations and deeds mean anything, I have given the essence of it. I do not think that there are many in Scotland who are of this state of mind. The Town Council of Aberdeen gave evidence before the last commission, and nothing was more striking than the entire absence of such a spirit. Both commissions have also come to quite different conclusions. They agreed in thinking that caution should be exercised in paying fees for the earlier stages of instruction, and that while a certain sum should be devoted to this purpose, the endowments should be used mainly for helping the poor boy to obtain an education above the Fourth or Fifth Standard.

Secondly, there is the question of free education. I have already explained how Mr. Lewis is in favour of free education. He wishes the working man, and the working man alone, to obtain education free, as if he were a natural pauper. The evidence brought before both commissions was conclusive that indiscriminate free education in the present state of matters has had bad results. Nothing could be clearer in regard to this point than the testimony given in the case of the Heriot Schools and Closeburn. I myself am inclined to think that a national system, in which education should be free to all in all subjects, would be one of the greatest blessings; but the attempt to introduce it partially, in special subjects and classes of society, seems to me injudicious, and the results in these instances form the strongest argument that can be adduced against such a system.

Thirdly, there is the subject of popular representation. I must quote here from Mr. Lewis: "Moreover, with one exception I know of no newspaper—Whig, Radical, or Conservative—that approves of those provisions by which the principles of direct popular representation are assailed, and which aim at the partial disfranchisement of every burgh constituency in Scotland where educational and charitable foundations are wholly or partly administered by Town Councils." I shall venture to assert that there is not a single newspaper which approves of those provisions, for there are no such provisions. There is nothing in the Bill to prevent the Commissioners from ordaining that all the trustees of all the endowments be popularly elected, except the injunction "to carry out more fully the spirit of the founder's intention." Mr. Lewis fears the commission. I think that his fears are unfounded. I do not believe that any commission that this Government will appoint will not heartily sympathize with popular institutions. But it should not be fettered. It has to inquire into the management of these trusts, and if there should be a case of gross corruption, the commission should have the power of making such arrangements as would prevent the recurrence of it. Mr. Lewis says in regard to the rejection of Heriot's Hospital Provisional Order: "This extraordinary proceeding was not because of any charge of maladministration or mismanagement, but because the Town Council, constituting three-fourths of the governing body, were directly and popularly elected by the citizens." The Commissioners stated their reasons quite differently: "In 1870 the governors of Heriot's Hospital were unanimous in thinking that power should be given 'to charge fees in the elementary schools, to found open bursaries in connexion with the University of Edinburgh, and to reduce the number of resident foundationers and to board them out.' In 1875 the Endowed Schools Commission strongly recommended these changes, and as recently as 1876 the governors of the Hospital appointed a committee to take steps to have them carried out. As the technical difficulty raised in 1870 is now at an end, we could not understand why the governors did not give effect to convictions so repeatedly expressed. The following facts were, however, elicited in the course of the evidence. The governing body of Heriot's Hospital consists of the magistrates of Edinburgh and the members of the Town Council, numbering forty-one, and the ministers of the city charges, in number thirteen. Down to 1876 the burgesses of Edinburgh were a very limited and decreasing class. In that year an Act was passed extending the rights of burgesses to all ratepayers, and in Edinburgh the number was increased from 800 to 30,000. This newly created class of burgesses appear to have thought that, as burgesses, they had acquired a right, or at least a power, to obtain free education for their children at the Heriot Schools, and they resolved to use, and did use, their influence at the municipal elections to impose something like a test on the candidates in regard to perpetuating the system of free education. That this account correctly represents the real element which has led to the change of opinion on this subject on the part of the governors was clearly proclaimed by the two witnesses representing the working men whom we examined; and that such is the truth is put beyond all question by the passages from the evidence of Mr. Lewis, the Treasurer of the Hospital, to which we refer.

"The Secretary of State will hardly be surprised that we came, as we did without any hesitation, to the conclusion that, until the constitution of the governing body was fully inquired into and revised, it was inexpedient to devolve on it new powers or to proceed further with the projected reforms. This opinion did not proceed on the merits of the proposals, whether included or omitted in the order."

The last commission was not opposed to popular representation, and a striking proof of this can be adduced. In Aberdeen there is an institution very like Heriot's called Gordon's Hospital. The Town Council along with some of the ministers and professors were the governors. The Town Council representatives in their evidence before the commission showed great insight, purity of aim, and determination to obtain the best results, and everything was straightforward and open. In reconstituting the managing body for this institution seventeen governors were appointed. Two of them *ex officio* were the Lord Provost and Dean of Guild; the Town Council were empowered to elect nine; and the chairman of the school board was *ex officio* a governor. Twelve out of the seventeen are popularly elected, and eleven of them are directly connected with the Town Council. Could anything more be desired? But the Aberdeen Town Council received this recognition after full inquiry into the affairs of the institution; the Heriot opposition wish it for Edinburgh before inquiry. Mr. Lewis is right in saying that there was no charge of maladministration because, in fact, there was no inquiry. But there is a widespread belief that this opposition is made to the Bill in consequence of maladministration and unwillingness to stand inquiry, and the character of the Town Council of Edinburgh is falling thereby throughout Scotland. I believe that a full inquiry might reveal some practices that might be advantageously changed, as is the case in all human institutions, but nothing to tarnish the honour or purity of the governors; and I am convinced that they are labouring under groundless fears if they are afraid of encroachment on popular institutions. Edinburgh owes it to herself to give up opposition, to court inquiry, and to trust fearlessly to any commission which the Government may deem worthy of being entrusted with the grave and responsible duty assigned to it. Many of the governors of Heriot's Hospital have been men of great intelligence and reforming zeal, such as Adam Black and Sir William Johnston, and if their spirit had pervaded the provisional order of 1879 the Heriot question would have been settled by this time. I know many men still in the Town Council of Edinburgh whom I regard as amongst the most upright and honourable men I have ever met, and if they only were to come to the forefront and guide the counsels of the Heriot governors there would soon be a satisfactory settlement of this question.

JAMES DONALDSON.

*** We cannot insert more letters on this subject.

EMERSON TO CARLYLE.

WE publish this week another letter addressed by Emerson to Carlyle, which is interesting as giving a sketch of the writer's life at the time it was written, and of his active efforts to aid Carlyle. The Loring mentioned is probably James Loring, a printer and bookseller in Boston.

Concord, May 10, 1838.

MY DEAR FRIEND,—Yesterday I had your letter of March. It quickens my purpose (always all but ripe) to write to you. If it had come earlier I should have been confirmed in my original purpose of publishing 'Select Miscellanies of T. C.' As it is we are far on in the printing of the two first volumes (to make 900 pp.) of the papers as they stand in your list. And now I find we shall only get as far as the seventeenth or eighteenth article. I regret it, because this book will not embrace those papers I chiefly desire to provide people with, and it may be some time, in these years of bankruptcy and famine, before we shall think it prudent to publish two volumes more. But Loring is a good man, and thinks that many may desire to see the sources of Nile. I, for

my part, fancy that to meet the taste of the readers we should publish *from the list* backwards, beginning with the paper on Scott, which has had the best reception ever known. Carlyleism is becoming so fashionable that the most austere seniors are glad to qualify their reprobation by applauding this review. I have agreed with the bookseller publishing the Miscellanies that he is to guarantee to you on every copy he sells 1.00 dollar; and you are to have the total profit on every copy subscribed for; the retail price to be 2.50 dollars. The cost of the work is not yet precisely ascertained. The work will probably appear in six or seven weeks. We print 1,000 copies. So whenever it is sold you shall have 1,000 dollars.

The French Revolution continues to find friends and purchasers. It has gone to New Orleans, to Nashville, to Vicksburg. I have not been in Boston lately, but have determined that nearly or quite 800 copies should be gone. On July 1st I shall make up accounts with the booksellers, and I hope to make you the most favourable returns. I shall use the advice of Barnard, Adams & Co. in regard to remittances.

When you publish your next book I think you must send it out to me in sheets, and let us print it here contemporaneously with the English edition. The *éclat* of so new a book would help the sale very much. But a better device would be, that you should embark in the Victoria steamer and come in a fortnight to New York, and in twenty-four hours more to Concord. Your study armchair, fireplace, and bed, long vacant, auguring expect you. Then you shall revise your proofs and dictate wit and learning to the New World. Think of it in good earnest. In aid of your friendliest purpose, I will set down some of the facts. I occupy, or *improve*, as we Yankees say, two acres only of God's earth, on which is my house, my kitchen-garden, my orchard of thirty young trees, my empty barn. My house is now a very good one for comfort and abounding in room. Besides my house, I have, I believe, 22,000 dollars, whose income in ordinary years is six per cent. I have no other tithe or glebe except the income of my winter lectures, which was last winter 800 dollars. Well, with this income, here at home, I am a rich man. I stay at home and go abroad at my own instance. I have food, warmth, leisure, books, friends. Go away from home, I am rich no longer. I never have a dollar to spend on a fancy. As no wise man, I suppose, ever was rich in the sense *of freedom to spend*, because of the inundation of claims, so neither am I, who am not wise. But at home I am rich, rich enough for ten brothers. My wife Lidian is an incarnation of Christianity—I call her Asia—and keeps my philosophy from Antinomianism; my mother, whitest, mildest, most conservative of ladies, whose only exception to her universal preference for old things is her son; my boy, a piece of love and sunshine, well worth my watching from morning to night; these and three domestic women, who cook and sew and run for us, make all my household. Here I sit and read and write, with very little system, and, as far as regards composition, with the most fragmentary result: paragraphs incomprehensible, each sentence an infinitely repellent particle.

In summer, with the aid of a neighbour, I manage my garden; and a week ago I set out on the west side of my house forty young pine trees to protect me or my son from the wind of January. The ornament of the place is the occasional presence of some ten or twelve persons good and wise who visit us in the course of the year. But my story is too long already. God grant that you will come and bring that blessed wife, whose protracted illness we heartily grieve to learn, and whom a voyage and my wife's and my mother's nursing would in less than a twelvemonth restore to blooming health. My wife sends to her this message: "Come, and I will be to you a sister." What have you to do with Italy? Your genius tendeth to the New, to the West. Come and live with me a year, and if you do not like New England well enough to stay, one of these years (when the History has passed its ten editions and been translated into as many languages) I will come and dwell with you.

I gladly hear what you say of Sterling. I am foolish enough to be delighted with being an object of kindness to a man I have never seen and who has not seen me. I have not yet got the *Blackwood* for March, which I long to see, but the other three papers I have read with great satisfaction. They lie here on my table. But he must get well.

As to Miss Martineau, I know not well what to say. Meaning to do me a signal kindness (and a kindness quite out of all measure of justice) she does me a great annoyance—to take away from me my privacy and thrust me before my time (if ever there be a time) into the arena of the gladiators to be stared at. I was ashamed to read, and am ashamed to remember. Yet as you see her, I would not be wanting in gratitude to a gifted and generous lady who so liberally transfigures one's demerits. So you shall tell her, if you please, that I read all her book with pleasure but that part, and if ever I shall travel west or south, I think she has furnished me with the eyes. —Farewell, dear wise man. I think your poverty honourable above the common brightness of that thorn crown of the great. It earns you the love of men and the praise of a thousand years. Yet I hope the angelical Beldame, all-helping, all-hated, has given you her last lessons and, finding you so striding a proficient, will dismiss you to a hundred editions and the adoration of the booksellers.

R. W. EMERSON.

A young engineer in Cambridge, by name McKean, volunteers his services in correcting the proofs of the Miscellanies, and he has your Errata—for the love of the reading. Shall we have anthracite coal or wood in your chamber? My old mother is glad you are coming.

THE 'ANNUAL REGISTER.'

IN your friendly notice of the recently published volume of the *Annual Register* you refer, very justly, to the want of uniformity in the spelling of proper names, and suggest the application of editorial control. I presume that your remarks refer especially to the divergences of spelling to be found in the chapters on Russia, Central Asia, and China. In these cases the several chapters were written by persons respectively resident in each of those countries. And in the absence of an academic test or law it would be presumption on my part to decide what combination of vowels and consonants most closely reproduced the native names. A reference to official despatches and Blue-Books will, I think, show that even the control which the Foreign Office is supposed to exercise over its employés fails to ensure uniformity of spelling.

THE EDITOR OF THE 'ANNUAL REGISTER.'

COUNTY RECORD OFFICES.

Idel, Leeds.

WILL you kindly allow me to suggest through your columns the desirability of establishing County Record Offices? I may mention the materials we have in Yorkshire as illustrative of the utility of such offices: (1) Wills *ante* 1800; (2) Parish Registers from 1538; (3) Bishops' Transcripts from 1538; (4) Sessions Rolls from 1640; (5) Nonconformist Registers to be recalled from Somerset House, where they have been buried for nearly two generations; (6) Institutions, Presentation, and Act Books, now carefully preserved at York, along with other valuable ecclesiastical documents dating from 1200; (7) Churchwardens' and Constables' Books, dating often from 1600; (8) Manor Rolls, as such may be deposited by favour; (9) purely Yorkshire muniments at the Record Office and British Museum, *e.g.*, the Calverley Evidences; (10) bequests of deeds, &c.

A custodian (who could employ his spare hours in transcribing and indexing) and sufficient accommodation would not require more than 300*l.* per annum, exclusive of desks and bookcases. Those who sought information for general historical purposes should be able to obtain access freely, by making application by letter previously; others should be charged ten shillings per day; official certificates to be paid for as usual. The income would probably average 200*l.*

As convener of the meetings in Yorkshire at which resolutions were passed (1) disapproving of Mr. Borlase's Bill unless due provision was made for local requirements, and (2) forming a Yorkshire society for the publication of parish registers, I should like to suggest that similar action should be taken in other counties.

J. HORSFALL TURNER.

'AN HONOUR TO LONDON.'

40, St. George's Square.

IN turning over some old papers I have found the enclosed transcript from my late dear friend John Bruce. I do not recollect under what circumstances he gave it to me, but think it was probably about the year 1842, when I was invited by Messrs. Whittaker to see through the press a reprint of the first edition of Stow's 'London.' I was so interested in my task that I could not help adding to it notices of the variations between that and the second edition, and many illustrative notes, as well as a little 'Life of Stow.' This led to a proposal to me on the part of a literary friend that I should undertake an *édition de luxe*, which was to be printed by Whittingham. But the project never came to any result.

WILLIAM J. THOMS.

AN HONOUR TO LONDON.

London, thowe art of townes *A per se*,
Soueraigne of Cities, most symbliest by sight,
Of high renowne, riches, and royaltie,
Of Lordis, barons, and many goodly knyght,
Of most dilectable, lusty ladyes, bright,
Of famous prelatis, in habitis claricall,
Of marchavntis of substaunce and myght;
London, thowe arte the flowre of cities all!

Gladdeth a man thou lusty Troynomond,
Citie that sometyme cleped was newe Troye,
In all this erth Imperiall as thowe stonde,
Princis of townys, of plesure and of joye,
A richer resteth under no Cristen roye,
For manly powre, with crafty naturall,
Furmeth noon fairer syn the flode of Noe;
London thowe art the flowre of cities all!

Jem of all joye, Jasper of jocunditie,
Most myghtie Carbuncle of virtue and valure,
Stronge Troy, in vigure and trenuytie,
Of roiall cities Rose and Geraflour,
Empres of townys, exalted in honour,
In beautie bering the Crone imperiall,
Swete paradise precelling in plesure;
London, thowe art the flowre of cities all!

Aboue all rivers thy river hath renowne,
Whose boriall stremys, plesaunt and preclare,
Under thy lusty wallys renneth downe,
Where many a swan swymmeth with wynge fare,
Where many a barge doth rowe, and sayle with ayre,
Where many a ship resteth with top royall,
O towne of townys, patron and not compare,
London, thowe art the flowre of cities all!

Upon thy lusty bridge with pillers white,
Been marchauntis full royall to be holde;
Upon thy stretis goth many a semely knyght,
In velvet gownys and chaynys of gold;
By Julius Cesour thy Towre founded of olde
Maye be the bower of Mars victoriall,
Whose artilery with tonge maye not be tolde;
London, thowe art the flowre of cities all!

Stronge be the walls abowte the stondis,
Wise be the people that within the dwelles,
Freshe is thy river with his lusty strands,
Blithe be thy churches, wele sownyng are thy bells,
Riche be thy marchauntes in substaunce that excells,
Faire be thy wives, right lovesom, white, and small,
Clere be thy Virgyns lusty under kellys;
London, thowe arte the flowre of cities all!

Thy famous Maire by sure governaunce,
With sworde of Justize, the ruleth prudently,
No lorde of Parys, Venys, or Floraunce,
In dignitie, or honour, goth hym nygh,
He is example right Lodester and guy
Principall patron, and Rose originall,
Aboue all maires, as maister most worthy;
London, thowe arte the flowre of cities all!

MS. Lansdowne 762, fo. 7b.

SALE.

THE sale of the first portion of the magnificent libraries belonging to Hamilton Palace, comprising that formerly in the possession of W. Beckford, the author of 'Vathek,' commenced on Friday, the 30th ult., at the rooms of Messrs. Sotheby, Wilkinson & Hodge. Amongst the more important articles of the first four days were the following: Accursii Diatribæ, Grolier's copy, and a beautiful specimen of his binding, 73*l.* Actes des Apostres, one of the rarest of works relating to the French Revolution, 35*l.* Acuña, Gran Rio de los Amazonas, rigidly suppressed to prevent the Portuguese deriving any information for their conquest, 37*l.* Adam's Works in Architecture, 50*l.* Æschylus Turnebi, a fine specimen of Grolier binding, 98*l.*; Æschyli Sophoclis et Euripidis Tragœdiæ Selectæ, bound by Boyer, with Count Hoym's arms on sides, 73*l.*, worth in its usual condition five shillings. Æsopus curante S. Brant, 50*l.*; Æsopus cum Versione Italica A. Zuchi, 40*l.*; Æsop's Fables, with engravings by Barlow, 38*l.* 10*s.* Alamanni,

Gyrone il Cortese, bound by De Rome, 68*l.* Alberti Hecatomphile, 35*l.* Alcibiade Fanciullo a Scola, bound by Padeloup, 52*l.* Aldrovandi Opera, 32*l.* Alfonce, Voyages, 42*l.*, having sold in the Libri sale for 4*l.* 9*s.* America da A. Vesputio, 270*l.* Androuet du Cerceau, Fifty-five Architectural Drawings on Vellum, 400*l.*; Petites Arabesques, 46*l.*; his printed work De Architectura, with arms of Thuanus, 260*l.*; Bastiments de France, 165*l.*; Edifices Romains, 63*l.* Angoulevent, Satyres, bound by Desseuil, 52*l.* Margravine of Anspach's Memoirs, with caustic notes by Mr. Beckford, 18*l.* Antiquités du Cabinet de Sir W. Hamilton, 56*l.* Appianus cum Notis Variorum, with arms of H. Petit du Fresnoy, the famous collector, 100*l.* Apollonius Rhodius, Aldi, bound in the Grolier style, 48*l.* Apuleii Asinus Aureus, Grolier's copy, rebacked, 40*l.*; Apuleius, Grolier's copy, with his name and motto, 158*l.*; Apuleius, Les Metamorphoses, bound by Desseuil, and remarkable for the long note describing Bankes's horse Marocco, 41*l.* 10*s.*; Apuleius, Amour de Cupido et de Psiche en Vers, par J. Maugin, 100*l.*, having sold in the De Coislin sale for 75 fr. Aretino, Ragionamento, a beautiful specimen of H. Petit du Fresnoy's taste for ornamentation, 175*l.* Arfeville, Navigation du Roy d'Escosse Jacques V., with arms of Thuanus, 140*l.* Anna Condessa de Argyl, Alma di S. Augustin, in red morocco, with arms of Catherine of Braganza, Queen of Charles II., on sides, 102*l.* Ariosto, Orlando Furioso, with arms of Cardinal de Alteus, 32*l.*; another edition by Ruscelli, bound by De Rome, 135*l.*, purchased in Hunter's sale for 16*l.* Arthur King of Britaine, a romance of chivalry, 35*l.* Atkyns's Gloucestershire, first edition, 52*l.* Aubriette, Plantes peintes en Mignature, 42*l.* Augurellus, the finest specimen of Grolier's library, with his name and motto, 250*l.* Augustin, Lettres, bound by Boyer, with arms of Cardinal de Gondy on sides, 146*l.* Aurelius Victor, cum Notis Variorum, the 1670 edition, with arms of H. Petit du Fresnoy, 70*l.*; Aurelius Victor, cum Notis Variorum, the 1696 edition, 25*l.*; whilst two other copies of the same edition, with autographs of Valckenaer and Burmann, brought only 10*s.* and 11*s.* Aycone de Courcy, Hystoire du Grand Empereur de Tartarie, 56*l.*, having sold in Hibbert's sale for 9*l.* 5*s.* Bacon's Henry VII., presentation copy to Archbishop T. Mathews, with Bacon's autograph inscription, 29*l.* 10*s.* Bandello, Novelle, first edition, 75*l.* Barclaii Argenis et Satyricon, bound by Desseuil, 75*l.* Barrozio da Vignola, Architettura, with autograph of Thuanus, 186*l.* Bartolozzi, Portraits, 31*l.* Basan, Cabinet de Poullain, 65*l.*; another copy (Basan's own), 81*l.*; Cabinet de Choiseul, 80*l.* Bassompierre, Memoires, bound by Desseuil, 31*l.* 10*s.* Beatæ Mariæ Virginis Officium, a fine example of Monnier's bibliopegistic skill, 145*l.* Beaujoyeulx, Ballet Comique, red morocco by Kalthœber, 85*l.*, having sold in Bergeret's sale for 275 francs. Beckford's Vathek, first edition, 24*l.*; Italy, large paper, 28*l.*; Beckfordiana, transcript of the various notes written on the fly-leaves of works in his library, 156*l.* Beham's Forty-nine small Engravings, 200*l.* Belon, Portraits des Oyseaux, 50*l.* Bembo, Prose, Maioli's copy, 111*l.* Berain, Ornemens, 175*l.* and 51*l.* Berkeley, Gaudence de Luques, with Berryer's arms on sides, 35*l.* Bernard, Sa Vie, with arms of the Duchesse de Lesdiguières, 41*l.* Bertaut, Œuvres Poetiques, 47*l.* Beuil, i. e., Le Maistre de Sacy, Traduction de l'Imitation de Jesus Christ, a magnificent specimen of Monnier's binding, 356*l.* (probably the same copy as that which sold in Debure's sale for 500 francs). Bewick's Birds, plates only, 20*l.*; Quadrupeds, plates only, 15*l.* 10*s.* Biard, Relation de Canada, 43*l.* Biblia Latina, printed by Jenson in 1476, on vellum, wanting the last leaf, 330*l.* (probably the same copy as that sold in the Merly sale for 168*l.*). Biblia Vulgatæ Editionis, bound by Le Gascon, 99*l.* Blake's Songs of Innocence and of Experience, 146*l.*; Illustrations of Milton, 230*l.*; Gates of Paradise, in first state, 16*l.*, and in second, 12*l.* 12*s.*; Europe, 12*l.* 5*s.*; Illustrations of Job, 14*l.*; Catalogue of Pictures (published at sixpence), 9*l.* Bloch, Ichthyologie, 67*l.* Boccaccio, Decameron, in French by Le Maçon, bound by Clovis Eve for Marguerite de Valois, 35*l.* 10*s.*; a set of Gravelot and Eisen's beautiful Illustrations, 130*l.* Bossoli's Views in the Highlands of Scotland, 124*l.* Botta, Ninive, 46*l.* Bouchard, Croniques, 50*l.* (the highest price a copy has ever sold for, the Merly selling for 21*l.* and De Martainville's for 335 francs). Bouchet, Les Regnars, 90*l.*, &c. The four days brought 12,033*l.* 16*s.*, and the sale will occupy eight more days. The attendance of bidders coming from France, Italy, Germany, and America, in addition to those from all parts of England and Scotland, caused sharp competition, and prices ruled excessively high, especially for splendid bindings and for the books with Mr. Beckford's manuscript notes, which sold for as many pounds as if unannotated they would have produced shillings.

Literary Gossip.

IN the course of the next few weeks we hope to print a series of hitherto unpublished Byron papers. Beginning with a letter from John Byron, the poet's father, to his daughter Augusta, and letters from the poet's mother to her husband; to Mrs. Leigh, the wife of General Charles Leigh, colonel of the 20th Regiment of Infantry; and to her stepdaughter Augusta, — the writings comprise: (1) a collection of poems by Lady Byron, written during her brief residence with her husband, some of them containing emendations by his pen; (2) correspondence between Lady Byron and Augusta (the Hon. Mrs. Leigh) during the term of Lady Byron's engagement to the poet and the earlier months of their married life; (3) correspondence from the date of Lady Byron's withdrawal from London till the settlement of the terms of her separation from her husband; (4) letters from Lord Byron to his wife, Dr. Drury, Mr. Hoppner, and others, including his *last* letter to Lady Byron, written on the eve of his departure from England; (5) correspondence of Lady Byron and Augusta from the commencement of the quarrel between Lady Byron and her husband till the date of Lord Byron's death; (6) documents touching the destruction of the 'Memoirs,' including Augusta's narrative of the circumstance of the destruction of the famous MS.; (7) correspondence from the date of the poet's death till 1830, exhibiting the circumstances, hitherto undivulged, that caused Lady Byron's animosity against the woman whom she had held for fifteen years in the highest esteem; and (8) a group of letters having reference to Lady Byron's interview with her sister-in-law in 1851 in the presence of Mr. Robertson of Brighton. This large body of correspondence will be found to demonstrate the baselessness of the various statements made by Lady Byron in her later years to her sister-in-law's discredit, and more especially of the hideous imagination to which Mrs. Beecher Stowe gave such wide and lamentable publicity some thirteen years since.

MR. MATTHEW ARNOLD'S Rede Lecture on 'Literature and Science' will be printed in the August number of the *Nineteenth Century*.

MR. WALTER BESANT is, we believe, the author of the clever novel 'The Revolt of Man,' which we reviewed about two months ago.

THE series of 'Asiatic Studies, Religious and Social,' by Sir Alfred C. Lyall, K.C.B., which Mr. Murray announces, will contain essays on 'The Religion of an Indian Province,' 'The Origin of Divine Myths in India,' 'The Influence upon Religion of a Rise in Morality,' 'Witchcraft and Non-Christian Religions,' 'Missionary and Non-Missionary Religions,' 'The Relations between the State and Religion in China,' 'The Formation of some Clans and Castes in India,' 'The Rajput States in India,' 'Islam in India,' 'Our Religious Policy in India,' and 'The Religious Situation in India.'

MR. W. H. COOKE, Q.C., intends to print, under the title of 'Collections towards the History and Antiquities of the County of Hereford,' a continuation of Duncumb's history. Mr. Murray is the publisher.

COL. EDWARD DURNFORD has written a memoir of his brother who fell at Isandhlwana, and whose career, especially during his six or seven years of residence in South Africa, contained much to interest the public.

CANON MAC CLATCHIE, of Shanghai, who has resided some forty years in China, has brought home with him, ready for publication, the MS. of his translation into English of one of the five Chinese classics, the 'Li-ki,' or 'Records of Rites.' The learned Sinologist intends to publish together the Chinese and English texts with the illustrations. This will be the first complete and the first English translation. Callery published in 1853 at Turin an abridgment, now very scarce, of the same work, Chinese text and French translation, but without illustrations or notes.

WE greatly regret to announce the death, after a long illness, of the eminent Orientalist Dr. Haas. Dr. Haas held an important post in the Department of Printed Books in the British Museum, and was Professor of Sanskrit at University College, Gower Street.

WE hear through the Manchester *City News* that Mr. Morgan Brierley, of Denshaw, is occupied in writing a history of Saddleworth and the district around it. Mr. Brierley will be glad of the loan of any documents which may aid him in his labours. Mr. Elliot Stock announces the 'History of the Civil War in Hampshire and the Story of Basing House,' by the Rev. G. Godwin, Chaplain to the Forces, as nearly ready for publication.

PROF. MONIER WILLIAMS has been elected an honorary member of the American Oriental Society.

MESSRS. BRADBURY & AGNEW propose to issue an illustrated edition of 'Happy Thoughts' for a shilling. If one may judge by the specimen pages, it will be a handsomer volume than cheap editions usually are.

A VOLUME of German poems is shortly to appear, written by Lieut.-Col. Rous, who some time ago composed a work in Arabic entitled 'The Autobiography of the Story-teller of Constantinople.'

THE *Leicester Daily Post* has just passed into the hands of Mr. Francis Hewitt, the proprietor of the *Leicester Chronicle* and the *Leicester Daily Mercury*, the latter a flourishing evening paper.

XUM

THE series of discourses by Père Didon on 'Science without God' have been translated into English by Miss Rosa Conder, and the work will be issued almost immediately by Messrs. Kegan Paul, Trench & Co. We understand that the translation has been cordially commended by Père Didon himself.

DR. FORCHHAMMER, the son of the celebrated German Orientalist, has in the press at Rangoon a work on the old Talaing inscriptions. This work will be an important contribution to the history of the writings and spread of civilization in ultra-India.

THE fourth number of the "Benares Sanskrit Series" contains the 'Arthasamgraha,' an elementary treatise on the Pûrvamîmânsâ philosophy, with an excellent translation by Dr. Thibaut, the learned Principal of the Sanskrit College at Benares. In the next numbers are to appear the text and a translation of Kumârila's 'Tantravârttika,' and the text of the 'Baudhâyana Sûtras.' Dr. Thibaut is also preparing an edition and translation of Brahmagupta's 'Sphuṭa-siddhânta,' a most important astronomical work.

MESSRS. TINSLEY BROTHERS have in the press a new novel by Rita, entitled 'Faustine.'

MESSRS. HARPER & BROTHERS have issued a letter condemnatory of a circular in which Messrs. E. Steiger & Co., of New York, offer to sell to customers in England copies of the "Franklin Square Library." They say:—

"The course of Messrs. Steiger & Co. in this matter has been adopted without our knowledge or consent, and it is in direct opposition to our own policy and practice. We are aware of the existence of a demand among many English readers for the 'Franklin Square Library' editions of English copyright books, since for two or three years we have been in receipt of numerous orders for them from the United Kingdom. So far as we know, however, we have never sold to British correspondents any of the numbers of the 'Franklin Square Library' which are copyright in England, nor have we disposed of any copies of such numbers here which we had any reason to believe to be destined for the English market. On the contrary, out of regard for the interests of English authors and publishers, it is our custom to return all money sent us from England for our editions of English copyrighted works, and to decline all such sales."

SCIENCE

The Action of Lightning, and the Means of defending Life and Property from its Effects. By Arthur Parnell, R.E. (Crosby Lockwood & Co.)

ORIGINAL thought, whether displayed in literature or in mechanical invention, is of two kinds. There is the originality of ignorance, and there is the originality of the highest order of education. Between these two grades men for the most part fall into grooves, and cease to trouble themselves as to originality. Even a low display of the faculty, however, is an outcome of genius, more especially with regard to mechanical invention. Many admirable appliances are due to almost wholly self-taught men, who knew little or nothing of what others had done in the field of their studies, and thus struck out paths for themselves, that sometimes go very straight to their object. There is, no doubt, great waste of inventive power thus occasioned; but education in general does not stimulate that power. It probably has the opposite effect. A man finds that what he wants to do is done already—well or ill—and he is for the most part rather disposed to take what is thus ready to his hand than to encounter the heart-break that is the usual reward of the inventor.

But if a man of original genius adds to the gift of inventive fancy that of infinite patience in research—if he will keep his fiery steeds in hand until he has mastered what is known, before he allows them to start in quest of the unknown—the very brightest results may be anticipated. And this has been, at all events, the method followed by Major Parnell. He has written an original work on a scientific subject of unusual interest; and he has prefaced his arguments by a patient and almost exhaustive citation of the best writers on the subject in the English language, which a little more judgment in selection would render a model in the way of study.

"The work is divided," the author tells us, "into three parts. Part I. consists of recorded facts and opinions. The latter have been compiled partly as supplying evidence of the ideas generally entertained on the subject, and partly for the purpose of fortifying the views now advanced." The method of citation and of cross reference employed is new, and is admirably clear. A list of fifty-four authorities is given, together with the abbreviations used in the work for denoting each. The book itself is divided by figures, letters, and again figures, in a triple form of reference, which is printed at the head of each page, and which allows of a very brief but very distinct indication in every case. In the first part of the book the author has obliterated himself. He ventures on no opinion, view, or argument, but cites his authorities, usually in their own language, in a terse and effective manner. The hesitation with which we speak of his success is due to the fact that he sometimes cites opposing assertions, between which he leaves the reader to form his unassisted judgment. Thus on p. 79 we find—"The lightning stroke is certainly more likely to fall where a lightning conductor, of whatever kind, is placed, than it would be if there were no such appliance (Mann, 1875, 333)." "Such vessels as have been struck have been invariably unprotected (Preece, 344)." These two sentences represent two opposite views. But the first is a statement of opinion alone, the second is a statement of fact. And if the authority be (as in this case it no doubt is) good enough to establish the fact, it leaves no room for the opinion, although it is that of a thoughtful student and brilliant writer.

Part II. deals with the theory of the action of lightning. It commences with a chapter of electrical definitions, of which it would be difficult to speak in too high terms. Clear thought, in limpid language, turns what in some hands would be a mere glossary into a definite system of instruction. Major Parnell has here followed the guidance of Euclid himself, and that with no limping foot. The illustration given at the end of this chapter of electric action by "hydraulic simile" is particularly worthy of mention. The "condenser" is the reservoir of energy, as in the case of a body of water retained in a mountain gorge by the construction of a dam. The dam corresponds to the "dielectric"; the bottom and sides of the reservoir correspond to the "collecting and condensing plates." The head of water corresponds to the "potential" of the charge, and the escape of the water to the "discharge of the condenser"; while the bursting of the dam is equivalent to an electric explosion.

Chapter vi., on the constitution of the terrestrial condenser, deserves to be attentively read. The general theory as to the electric relation between the earth and the atmosphere in a thunderstorm is that "the clouds collect or originate the electricity of thunderstorms, while the earth acts as the condensing plate." Major Parnell brings forward arguments not easy to answer to the effect that the earth's surface is really the collecting plate of the terrestrial condenser, and that the clouds form the condensing plate. At the same time he admits that two separate clouds at times (p. 175) form condensers, and that "cloud explosion," or celestial lightning, is in fact the explosion of these nebulous condensers. Thus, while the author has given good reasons for the view that the main, or at all events a main, source of electricity is within or upon the surface of the planet, and that by the inductive action of the plate thus charged the clouds become converted into the condensing plate, he has perhaps hardly given sufficient weight to the delicate reciprocity of the action of the two elements; to the fact that the tension of either of them may at any moment be raised by causes which we only partially understand; and finally to the consideration that between earth surface and cloud, cloud and cloud, and we venture to add one part of earth surface and another, variations not only of the tension, but of the character (anodal or kathodal), of the electric charge may be continuously occurring. It is on this view, it seems to us, that the theory of earthquake is to be approached, as a case of the same general problem as that of the aërial thunderstorm.

The whole of Major Parnell's argument, however, will repay perusal and is worthy of respect. We only dwell upon what seems to us to be an error of memory rather than of conception from the fact that, if the entirely unforeseen distribution which the electric power may at any time assume be duly kept in view, Major Parnell's arguments against the use of the ordinary lightning rod lose their force. This objection is the practical outcome of the work. And it would be nothing short of a disaster for the advice thus given in the book to be followed, unless it be shown to be demonstrably true. We think that the decided balance of evidence (even if we refer to the cases cited by Major Parnell alone) is in favour of the great utility of conductors on the principle introduced by Sir W. Snow Harris. The arguments against their use are drawn from the theory of the terrestrial origin of electric disturbances. But they are not well founded unless the earth be the only source or collecting plate, which it certainly is not. And even if it were, we think that the effect of a lofty rod as an

"electric tap" or "leak" would be far more certain in facilitating the gradual escape towards the clouds of the terrestrial charge than would be that of the sharp iron points projecting only a few inches above the ground which Major Parnell would substitute for the actual conductors.

Should this little book reach, as it well deserves, a second edition, we should like to see the attention of the author given to the question of the relation between the reading of the barometer and the electric tension of the earth. The chapter headed "Notes on Lightning" would be much enriched by the collation of observations of this nature. In the volcanic districts of Italy an unusually high state of the barometer is always regarded as premonitory of earthquake. Still, it is a long step from general belief to observed fact. The earth-sprung lightnings which so constantly form an attendant phenomenon on volcanic eruptions, and the subterranean thunder, which at times resembles the artillery fire of a naval engagement, are at once facts that support the view given in this book of the functions of the terrestrial condenser, and hints that the diligent pursuit of the inquiry may yield much valuable information as to the general theory of electric storms, aërial, super-terrestrial, or sub-terrestrial.

The phenomena of the great earthquake of Lisbon in 1755 are worthy of remark in reference to this view of subterranean storms. Lisbon stands on four distinct geological formations, viz., basalt, limestone, sand, and clay or loam. To the present time the lines which divide the outcrops of these strata may be detected by the most casual observation. The cathedral is yet (or was not long since) in the state of ruin in which it was left by the earthquake. It stands, if we remember aright, on what are called the Almada beds, the clay deposit, on which almost every building was destroyed or more or less injured. The richly sculptured church of San Gioachimo, built on the sand, was shaken and slightly injured. The narrow and lofty aqueduct of Alcantara, standing on the limestone, escaped the fate of more solid buildings on more electric sites. We speak from memory—and not from the most recent memory—as to the exact distribution of the city and of the course of the destructive shock. But that each of the above-named four strata displayed a specific capacity for transmitting or for resisting the shock is indubitable, and the details would with advantage be inserted in the "Notes on Lightning Engineering."

The portion of the theory of the writer which is most in need of further elucidation is that of "return strokes." It is not perfectly clear what is meant by the term. Profs. Jenkin and Tyndall, M. Ganot, and Dr. Mann are cited in support of the statement that return stroke is a violent shock which men and other animals experience, sometimes at a great distance from the place where the lightning explodes, from an induced current. "Induced shock" would probably be a better term. The return shock, M. Ganot says, is always less violent than the direct one. But in countries subject to earthquake it is the replica, or return shock, which is always most dreaded, and usually most destructive. Whether this be a real return of the opposite electric current in explosive form, or be a second shock of nature like the first, is not, so far as we are aware, known. Personal sensation gives no information on the subject excepting such as confirms the general dread of the replica. It is from the co-ordination of the indications given by the barometer, the seismometer, and the various appliances for measuring electric and magnetic force and direction, that we must hope to arrive in due time at the true theory of electric storms, of which we take thunder and lightning to be one form, and earthquake another.

GEOGRAPHICAL NOTES.

MR. MURRAY promises 'Summer Travelling in Iceland,' being the narrative of two journeys across the island by unfrequented routes, with historical introduction and some hints for a tour in Iceland, by Mr. John Coles, of the Royal Geographical Society. A chapter on Askja, by Mr. E. Delmar Morgan, F.R.G.S., will be added.

The forthcoming number of the Bremen *Geographische Blätter* will contain an account of Baron Waldburg-Zeil's voyage to the Yenisei in Baron Knoop's screw steamer Louise, Capt. Barmeister. The Louise left Hammerfest on July 22nd, reached the factory on the Yenisei on August 22nd, and was back at Hammerfest on September 19th, 1881, with a cargo of rye. The passage into the Kara Sea presented some difficulty, but the baron asserts that with patience and judgment it may be effected in every season. Baron Knoop deserves credit, at all events, for the perseverance with which he follows this newly opened ocean highway.

The Argentine papers furnish particulars of Dr. Crevaux's murder by the Tobas Indians. The French explorer, after an exploration of the Tocantins, had arrived at Rio de Janeiro in December last. He thence proceeded to Tarija, in Bolivia, which he reached in March. It was suggested to him to postpone his proposed exploration of the Pilcomayo until July, when a Bolivian government expedition would be able to support him. He was, however, anxious to return to France, trusting to his eighteen companions, all armed with Remington rifles, to protect him against any attacks the Indians might make upon him. He embarked at San Francisco, and was killed with all his men at Teyo. An Argentine steam launch has been despatched up the Pilcomayo to obtain particulars of his fate. Dr. Crevaux was a native of Lorraine. Since 1876 his name has been intimately connected with South American exploration. At the time of his death he had scarcely completed his thirty-fifth year.

The Marquis Antinori is not about to return to Europe after all, as has been reported. He still remains in Shoa, and when last heard of was about to accompany the king to Lake Shauen Dembel or Quvray (Quay), up to the present time not visited by any European.

The Austrian steamer Pola, which was to land the members of the meteorological expedition on Jan Mayen, has been unable to reach that island and is back at Tromsö. Another effort will be made, and that failing the expedition will be conveyed to Iceland.

Signor Cora has published a carefully drawn and beautifully executed 'Carta Speciale della Baia d'Assab ed Adiacenze,' on a scale of 1 : 250,000. The new Italian colony, as delineated on the map, has an area of 632 square kilomètres.

M. Giraud, a sub-lieutenant in the French navy, left France on July 5th for Zanzibar, on a scientific mission entrusted to him by the Minister of Public Instruction.

Messrs. Bacon have sent us a *Map of the Mediterranean*, with *Cyprus* enlarged, which is mainly remarkable for the fact that the colourman has quite forgotten the alteration of the northern frontiers of Greece. The railways are most imperfectly given, and the physical features are poorly delineated.

Gall & Inglis's *British School Atlas* presents no special feature, unless it be the suppression of the names of the compilers and engravers of the maps. Designed for the use of schools, the atlas will answer equally well the purposes of the general public. Indeed, the information given is rather more ample than is called for in schools, and the lettering of several of the maps will try the eyes of the pupils who use them. Upon the whole, the unnamed compiler—who, we venture to guess, is Mr. Bartholomew, of Edinburgh—has done his work well, although a little more attention to physical features would have been desirable. An index of 20,000 names is appended.

Hydrographical Surveying. By Capt. W. J. L. Wharton, R.N. (Murray.)—Amongst that band of hardworking public servants to whom we are indebted for the charts of our coasts, and indeed of the coasts of nearly every quarter of the globe, Capt. W. J. L. Wharton occupies a prominent place. The surveys executed by him along the east coast of Africa, under circumstances well calculated to test the capacity and endurance of the officers engaged, are amongst the finest specimens of that class of work to which we can point. Capt. Wharton's competence as a surveyor is therefore above question, and the handbook just published by him may be approached with confidence. It is, indeed, a very treasury of information, which we hope will be freely drawn upon by the officers engaged in hydrographical surveying, as also by others interested in geographical exploration or the compilation of maps. The author describes the instruments used by surveyors, he gives full details of the progress of a survey, and shows how the results obtained are plotted. The tables appended have been selected with judgment and are sure to save labour and time. The author's explanations are always lucid. The merest tyro will be able to get at his meaning, and even surveyors of experience are sure to profit from many of the hints he gives.

The Atlas-Geography, by Mr. A. H. Macdonell (Lewis), is "put together to fulfil a want which," the author believes, "has long been felt in teaching geography to young children." It consists of a double set of maps, one set with names inserted, the other in blank. The "game" consists in the child committing to memory the names of some thousand places, and picking them out on the maps. Having done this he may read a page of descriptive matter as a reward. The author is mistaken when he assumes that this method of teaching is new.

ASTRONOMICAL NOTES.

WELLS's comet (*a*, 1882) has been observed since its perihelion passage in the southern hemisphere. To-morrow night (July 9th) it will be very near the fourth magnitude star ρ Leonis, and the absence of moonlight next week will probably enable astronomers provided with good telescopes to follow it for some days longer, as it does not set until about two hours after the sun. But it is already too faint to be seen with small instruments.

The number of the *Comptes Rendus* of the French Academy for June 19th contains an account by M. Trépied of his observations in Egypt of the total solar eclipse on May 17th, with some interesting particulars of the comet seen close to the sun on that occasion, which he did not recognize to be a comet until, about an hour after the eclipse, he compared his sketch with one of the photographs obtained by Dr. Schuster. Its brightness appeared to M. Trépied to be "du même ordre que celui des parties extérieures de la couronne." In the week following the eclipse he searched for the comet many times, both before sunrise and after sunset, without success. Doubtless it has also been sought

for by others, and we must now resign all hope of ever knowing anything of its history except that it was in the close neighbourhood of the sun at the time of the eclipse.

The *Sidereal Messenger* is the title of a new astronomical periodical, conducted by Mr. W. W. Payne, Director of the Observatory at Northfield, Minnesota, U.S.

The double star observations of the late Baron Dembowski are to be published in the *Atti della R. Accademia dei Lincei* under the superintendence of Prof. Schiaparelli, and will probably fill about 1,500 pages, occupying three or four volumes.

Dr. H. C. Vogel, of Potsdam, communicates a note to *Astronomische Nachrichten*, No. 2434, on the spectrum of Wells's comet, in which, like Dr. Copeland and Mr. J. G. Lohse in *Dun Echt Circular*, No. 52 (quoted in the *Athenæum* of June 3rd), he calls attention to a remarkable bright line in it corresponding to the sodium line known as D. This was first seen on May 31st, when, examining the spectrum, he was at once struck by perceiving a line of great intensity in the yellow part, which seemed to be nearly coincident with the sodium line. The next night he measured and compared its position in company with Drs. Müller and Kempf, and found the coincidence exact for the dispersive power applied. The continuous spectrum of the nucleus extended from about C to far into the violet part. Besides the bright yellow line there were traces of bright streaks, and perhaps some dark absorption lines. "Since 1864," says Dr. Vogel, "when Huggins first analyzed the light of a comet, about twelve comets have been spectroscopically examined. The spectra of all these showed, in addition to a more or less distinct continuous spectrum, three separate streaks diffused on one side and situated correspondingly to those in the spectra of the compounds of carbon. The completely different constitution of the present comet, the proper light of which appears principally to proceed from incandescent vapour of sodium, places it, in my opinion, amongst the most interesting subjects of observation in the new department of spectrum analysis that have yet been examined." The bright line in question has subsequently been observed by Prof. Bredichin at Moscow and others.

We have received the *Memoirs* of the Italian Spectroscopical Society for April. Prof. Tacchini discusses the disturbances on the sun's surface during 1881, laying down the results, with reference to heliographical latitude, in four curves (for metallic eruptions, spots, faculæ, and protuberances or prominences). Two zones are distinguished for frequency of disturbance, one from 15° to 20° north latitude, the other (which is somewhat less considerable in other phenomena, but almost equal in the item of abundance of spots) between 15° and 20° south latitude. A comparison of the results of all the observations made in 1880 and 1881 shows considerably greater activity in the latter than the former year, the frequency of spots in particular being more than twice as great. Prof. Riccò contributes a note on the distribution of the solar spots during 1881, as observed at Palermo; and Prof. Millosevich sends a series of observations of Wells's comet made at Rome, commencing on the 25th of March.

Dr. M. W. Meyer, of Geneva, has published (*Astronomische Nachrichten*, No. 2430) an elaborate investigation of the orbit of the first comet of 1880 (the great southern comet). He finds that its period is somewhat less than thirty-seven years, and thinks it probable that it really is identical with the first comet of 1843. A new discussion, he remarks, of the observations of the latter is desirable to ascertain whether it is possible to explain the much longer period before calculated for it. Otherwise the cause would seem to be due to the comet's close approach to the sun; Dr. Meyer finds the perihelion distance to be 0·0059 in terms of the earth's mean distance, *i. e.*, only about half a million of miles from the sun's centre.

SOCIETIES.

GEOLOGICAL.—*June* 21.—Mr. J. W. Hulke, President, in the chair.—Mr. R. B. N. Walker was elected a Fellow.—The following communications were read: 'On *Thecospondylus Horneri*, a new Dinosaur from the Hastings Sand, indicated by the Sacrum and the Neural Canal of the Sacral Region,' and 'On the Dorsal Region of the Vertebral Column of a new Dinosaur, indicating a new Genus, Sphenospondylus, from the Wealden of Brook, in the Isle of Wight, preserved in the Woodwardian Museum of the University of Cambridge,' by Prof. H. G. Seeley,—'On Organic Remains from the Upper Permian Strata of Kargalinsk in Eastern Russia,' by Mr. W. H. Twelvetrees,—'On the Rhætics of Nottinghamshire,' by Mr. E. Wilson,—'On the Silurian and Cambrian Strata of the Baltic Provinces of Russia, as compared with those of Scandinavia and the British Islands,' by Dr. F. Schmidt, communicated by Dr. H. Woodward,—'On Chilostomatous Bryozoa from Bairnsdale (Gippsland),' by Mr. A. W. Waters,—'On the Silurian Species of Glauconome, and a suggested Classification of the Palæozoic Polyzoa,' by Mr. G. W. Shrubsole and Mr. G. R. Vine,—and 'On the Cause of the Depression and Re-elevation of the Land during the Glacial Period,' by Mr. T. F. Jamieson.—The Society adjourned until November.

ASIATIC.—*July* 3.—Sir Bartle Frere, President, in the chair.—Sir A. Eden, Mr. F. Mathews, and Mr. F. V. Dickins were elected Resident Members; and Samaldaan Kabi Raj and Mr. W. Rockhill Non-Resident Members.—Papers were read by Mr. W. Simpson 'On Buddhist Caves in Afghanistan,' and 'On the Identification of a Sculptured Tope with Sanchi': also, by Mr. C. Gardner, 'On Written and Unwritten Chinese Laws.' At the close of this paper Sir R. Alcock remarked on its importance and expressed the hope that it would be speedily printed; and Mr. G. Bertin, referring to some of the views advocated by the writer, pointed out how remarkable are the affinities between the Chinese laws and those of the Akkadians, which he has been recently studying on the clay tablets of Babylon. This view, he added, is not really surprising when we remember that Mr. T. de Lacouperie has been able to trace to Western Asia (as its origin) the first idea of much of Chinese culture.

SOCIETY OF ANTIQUARIES.—*June* 29.—Mr. Edwin Freshfield, V.P., in the chair.—The Chairman exhibited certain registers and other parochial books belonging to the parish of St. Christopher-le-Stocks, which at the present time were in his custody. Mr. Freshfield quoted from them some curious particulars relating to the Great Plague.—Mr. H. B. Wheatley exhibited, by permission of Miss Nicholas, an oval snuff-box of boxwood, with the royal arms of England and the initials C.R. carved on the lid; beneath the royal arms was a coat quarterly, which appeared to belong to the family of Wolstenholme.—Dr. C. S. Perceval gave an interesting report of the progress he had made in the arrangement (voluntarily undertaken by him) of the Society's collection of seals. A considerable portion of this report was devoted to discussing the proper classification of seals, both ecclesiastical and lay, and it appeared that Dr. Perceval had found reason to adopt some important modifications of the system drawn out by the late Mr. W. S. Walford in a well-known paper in the *Archæological Journal*.—Mr. J. H. Parker communicated some notes on a series of curious carvings of bench-ends in the church of Trull, Somerset, which presented some remarkable specimens of costume of the date of Queen Elizabeth.—The Society then adjourned till November.

ROYAL SOCIETY OF LITERATURE.—*June* 28.—Mr. J. Haynes in the chair.—Mr. A. Marks read a paper 'On the St. Anne of Leonardo da Vinci.' Taking as his text the well-known account given by Vasari of the cartoon of St. Anne, executed by Leonardo for the Servites of Florence, Mr. Marks showed that the description confused two designs, that of the cartoon now in the possession of the Royal Academy, and another composition represented by the picture in the Louvre. The differences between the two designs were pointed out, and Mr. Marks then endeavoured to answer the questions, Was the Royal Academy's cartoon the great work so celebrated by early writers? and, What was the relationship between the two designs? The conclusion arrived at was that the Royal Academy's cartoon represented an early stage in the development of an idea finally carried out in a work resembling the Louvre picture. That this cartoon was a similar composition to the Louvre picture seems to be proved by the fact that whereas but one copy was known of the Royal Academy's cartoon, Mr. Marks was able to enumerate nineteen copies or adaptations of the whole or of part of the Louvre design. Photographs of some of these works were exhibited. Mr. Marks contended that Leonardo's cartoon could not possibly have been executed under the circumstances mentioned by Vasari, and showed grounds for believing that the work was produced at Milan before the fall of Lodovico Sforza. Proof was given of the existence at Milan in 1618 of a cartoon of the Louvre design, probably a genuine work of Leonardo. In 1631 a cartoon ascribed to Leonardo was in the collection at Turin of Charles Emanuel I. Another cartoon, probably a copy by Marco da Oggione of Leonardo's original, was about 1695 in the possession of Padre Resta. Mr. Marks then traced the history of the Royal Academy's cartoon, showing that it was probably that mentioned by Lomazzo as Aurelio Luini's. It afterwards passed into the hands of the families of Arconati and Casnedi, both of Milan (remaining with the former for about a century), and of Sagredo, of Venice. It left Italy about 1760, and is first noticed at the Royal Academy in 1791. How it got there is not known. In conclusion Mr. Marks urged that inquiry should be made about a cartoon mentioned by Dr. Waagen as being, in 1839, in the possession of the Plattemberg family of Westphalia, but a few years ago in the collection of Count N. Esterhazy at Vienna. This cartoon is stated to be Leonardo's work.

ANTHROPOLOGICAL INSTITUTE.—*June* 27.—General Pitt-Rivers, President, in the chair.—Mr. V. Stuart exhibited and described a drawing of the funeral canopy or tent of an Egyptian queen, and some casts of bas-reliefs discovered by him within a short distance of the tent.—Mr. E. H. Man read a further account of the natives of the Andaman Islands, in which he treated more particularly of their home life. The food and methods of cooking were fully described, also the games, amusements, and dances.—A communication was received from Mr. H. C. Becher on some Mexican terra-cotta figures. From a comparison of these figures with those in the museum at Palermo the author argued that they were produced by people of the same race, and that the builders of the ancient monuments were Phœnicians.

ARISTOTELIAN.—*July* 3.—Mr. S. H. Hodgson, President, in the chair.—The following gentlemen were re-elected officers of the Society: Mr. S. H. Hodgson, *President;* Mr. W. R. Dunstan, Dr. J. Burns-Gibson, and Rev. W. C. Barlow, *Vice-Presidents;* and Dr. A. Senier, *Honorary Secretary*.—A discussion then took place on 'Subject and Object, and their Dependent Ideas—Ego, Self, Soul, and Mind.'

MEETINGS FOR THE ENSUING WEEK.

TUES. — Horticultural, 11.—Scientific and Fruit and Floral Committees. Anthropological, 8.—'Note on the Egyptian Boomerang,' General Pitt-Rivers; 'Longevity of the Romans in North Africa,' Right Hon. Lord Talbot de Malahide; 'Neolithic Stone Implements, &c., from Wâdi on the Gold Coast,' Capt. R. F. Burton and Commander V. L. Cameron; 'Exhibition of Bushman Drawings,' Mr. M. Hutchinson, with Note by Mr. W. L. Distant.

Science Gossip.

THE Darwin Memorial Fund amounts to 2,487*l.* 13*s.*, and, as we have before stated, the memorial will take the form of a marble statue. The Trustees of the British Museum will be asked to place the statue in the large hall of the British Museum (Natural History), South Kensington. A sub-committee has been appointed to arrange details, consisting of Mr. W. Bowman, Sir J. D. Hooker, Prof. Huxley, Mr. C. T. Newton, and Sir F. Pollock, with the Chairman, Mr. W. Spottiswoode, Pres. R.S., the Treasurer, Mr. John Evans, Treas. R.S., and the Hon. Secretaries, Prof. Bonney and Mr. P. E. Dove.

AT the annual general meeting of the Société Nationale d'Acclimatation, recently held in Paris, a medal of the first class was awarded to Mr. J. E. Harting for his works on ostriches and on extinct British animals.

ON the evening of Tuesday next Mr. Cope Whitehouse will state, in the rooms of the Ascham Society, the results of his recent explorations in and near the Fayoum, and his examination of the ancient basin of Lake Moeris. The chair will be taken by Dr. Birch.

A VALUABLE bibliography of fossil insects, by Mr. S. H. Scudder, has been republished from the *Bulletin* of Harvard University.

MM. PELLET AND DE GROBERT, in the *Revue des Industries et des Sciences Chimiques et Agricoles*, give a voluminous memoir describing the

determination of salicylic acid in butter, milk, and other bodies. This has become a question of the utmost importance to all, and we therefore direct attention to this important and excellent paper.

M. FERRY announced to the Académie des Sciences on the 19th of June that the French Government had continued for the second time the prize, open to all the world, of 2,000*l.* for the invention of the most useful application of the voltaic pile. Within any time during the five years from July 1st this remains open to competitors.

HERREN WOLFFHÜGEL AND VON KNORRE publish a confirmation of the observations of Koch that carbolic acid dissolved in oil is far less effective than its aqueous solution. This is very important where carbolic acid is to be employed for the destruction of spores or bacilli.

PROF. KLINKERFUES, of Göttingen, has invented a very useful weather compass. The apparatus consists of an aneroid barometer, the index of which is influenced by a horsehair hygrometer. The aneroid indication of atmospheric pressure is observed, then the hygrometric arrangement is attached, and according as its controlling power is either concurrent or counter, so we are forewarned of the probable weather for the next twelve or twenty-four hours.

MR. R. S. NEWALL, of Gateshead, publishes 'Facts and Observations relating to the Invention of the Submarine Cable.' Mr. Newall addresses his pamphlet to M. Dumas, as president of one of the juries in the Paris Electrical Exhibition. He claims to have been the first to suggest laying telegraph wires under water, and also to have laid the first ocean telegraph.

DR. D. VITALI gives in *Zeitschrift für Analytische Chemie*, Part IV., a simple and beautiful method for detecting atropine and daturine. If either of these alkaloids or their salts covered with a little fuming nitric acid is allowed to dry up on the water-bath, and then, when cold, moistened with a drop of absolute alcohol in which potassa has been dissolved, a violet colour is instantly produced which passes into a very rich red.

FINE ARTS

The GROSVENOR GALLERY.—SUMMER EXHIBITION.—NOW OPEN, from Nine till Seven.—Admission, 1*s.*; Season Tickets, 5*s.*

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The NINETY-SEVENTH EXHIBITION is NOW OPEN, 5*a*, Pall Mall East, from Ten to Six.—Admission, 1*s.* Catalogue, 6*d.*; Illustrated ditto, 1*s.*
ALFRED D. FRIPP, Secretary.

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1*s.*

The LION AT HOME, by ROSA BONHEUR.—This splendid Chef-d'œuvre, the latest production of this celebrated Artist, also the complete Engraved Works of Rosa Bonheur, NOW ON EXHIBITION at L. H. LEFÈVRE'S Gallery, 14, King-street, St. James's, S.W.—Admission, 1*s.* Ten to Six.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1*s.*

College and Corporation Plate. By W. J. Cripps. Illustrated. (Chapman & Hall.)

SOME time ago the Science and Art Department caused a considerable number of electrotype fac-similes of goldsmiths' works to be made, to illustrate the history and character of one of those forms of design in which Englishmen were exceptionally fortunate, and of which innumerable examples are heirlooms of colleges and civic corporations. The Department issued in 1878 Mr. Pollen's large 'Catalogue of Gold and Silver Work,' and an abridgment followed. Now Mr. Cripps, the best authority on the subject, has been employed to write a bright and compact handbook to the reproductions of examples in the national collection as well as of those which were borrowed from corporations. For artistic purposes these reproductions are as valuable as the originals, and in the hands of the author of 'Old English Plate' and 'Old French Plate' they have formed the basis of a work which, although officially called a handbook and sold for a shilling or two, is really important and comprehensive. In effect it is a digest of most of what is known about English art in silver, with abundance of historical illustrations, from the downfall of the monasteries and the establishment of those civic bodies which in some respects took their places. The letter-press ends with some, all too few, notes on the elegant if somewhat finicking style of the Adams, and that weaker, more formal mode which followed it, and which is represented by the lean and stiff outlines of a cup made in 1795 for the Merchant Taylors' Company of London—a cup that bears exactly the same relationship to fine Greek design as the sculptures on Baron Triquetti's gates of the Madeleine bear to the art of the boldest staters in gold.

Our author gives a terse sketch of early Saxon and Celtic art in the precious metals as a sort of preface to the history of the English school. He points out that in England there is little or nothing of what he calls "barbarian" work, that is, such goldsmithery as is represented by the Scythian head ornaments from Kertch; still less is there anything English like the Treasure of Petrossa, or the Visigothic votive crowns of Guarazzar, in all of which there are, we hold, distinct traces of Byzantine design, while, let us add, there are emphatic signs of Roman influences in the sculptures rightly called Gallo-Roman, for instance, in the silver masks now in the Louvre, which are quite different from the Byzantine examples, to whatever period the latter may be due. About Gallo-Roman or its cognate British development in the goldsmith's art Mr. Cripps has, of course, little or nothing to say; but we are bound to notice that there is some confusion in his use of the adjectives Byzantine, Romanesque, and Norman (? round-arched Gothic architecture, in the analogies of which we have to look for the types of the *aurifex*). He speaks of the "Byzantine tone of decoration that is to be observed in Norman architecture," p. 10; surely it would have been safer to refer this type to Rome rather than to Byzantium, although it would not have been needful to discriminate between the "Ère Romane primitive" and the "Ère Romane secondaire." Nor does it seem to us quite fair to assume the backwardness of the British goldsmiths on the ground that while the French patron of the craft was St. Eloi, the English had to "wait till the end of the tenth century for the appearance of their patron" in the person of St. Dunstan, a circumstance which Mr. Cripps thinks "indicates not unfairly the distance at which they [the English] follow their French brethren." The fact is that there must have been a vast mass of goldsmiths' work made in this country in Anglo-Saxon and somewhat earlier times which has perished. No doubt it resembled contemporary French work, as the architecture did, but to assume that our aurifices were ignoramuses because they took Dunstan for their patron is a little too bold. As well might a modern Briton say that there were no strong men here before Hercules was accepted as the type of physical strength.

While Mr. Cripps is undoubtedly within his rights in citing the beautiful Gloucester candlestick as a noble specimen of the transitional style of the twelfth century, he must, before he assumes this example to be English, prove that an English artist made it. That Abbot Peter gave it to the church of St. Peter at Gloucester is not proof of its nationality. Wherever it came from—and we are sure that English artists were equal to its production—it is obviously an admirable example of "gold and silver work." From this point onwards our author proceeds on safer ground. Salt-cellars (the odd repetition of the same term in the name of which he does not notice), hanaps, mazers, chalices, beakers, ewers, salvers, spoons, cocoanut-cups, basins, and candlesticks follow each other in appropriate order, till the long and dazzling array ends in the tea-kettles and coffee-pots, the chocolate-pots and the goblets of our grandfathers' times.

Mr. Cripps is at home among the civic and corporation plate of the Renaissance in which the South Kensington Museum happily abounds; he knows all about the stamps and marks, signatures and dates; while for "Queen Anne" examples he has a "sneaking kindness," because it is safest as to marks. Georgian monstrosities and pseudo-classicisms come not amiss to him. The world is indebted to him for the greater part of its lore about date letters and other signatures on plate, but it may be neither presumptuous nor ungrateful to conclude our notice of this capital "handbook" by saying that he is, apart from archæological uses, a little weak in art matters. A larger, if not a more exact, range of studies would not have allowed him to overlook, as he has done while writing about goldsmiths' work of the pre-Gothic times, every reference to that splendid field of illustrations of his subject which is supplied by the bookbindings of every period from Charlemagne till the eleventh century, if not till the invention of printing, when volumes were overlaid with plates of chased and engraved gold and silver, set with enamels and precious stones, and hammered, sculptured, stamped, and punctured.

NEW PRINTS.

MRS. BUTLER'S picture 'Inkerman' is one of the few of her works which approach a first-rate French military painting. We are disposed to think she has not surpassed it. It proves capacity to deal with the subject as a whole and embody the troops *en masse*. A lack of this power ruins nearly all pictures of this kind, while success implies the right artistic treatment of light, shade, colour, and comprehensive disposition of the groups, without depriving any one of those subordinate elements of its independent expressiveness. The Fine-Art Society has sent us an artist's proof from a plate engraved in mixed line and mezzotint by Mr. W. T. Davey, which lacks variety in the representation of local colours, but in all other respects it is a true reproduction of this picture. Whatever the artist produced and an engraver can grasp is here, and could hardly be better given. The peculiar conception of human expression after

the fury of battle is spent which characterizes the artist, and that haughty languor which, as its natural sequence, she associates with martial ardour, are conveyed with such rare felicity that Mrs. Butler ought to be very grateful to her engraver.

For the benefit of its first subscribers, the Arundel Society has published a chromo-lithograph from Pinturicchio's fresco in the Piccolomini Library at Siena representing 'Æ. S. Piccolomini receiving a Cardinal's Hat.' It is one of a series of which we have already told the history. This painter's technique lends itself singularly well to chromo-lithography, and this plate has received an uncommon amount of care from the operators. It is, therefore, on the whole, a very acceptable version of the original. The radical defect of the process excludes from these copies the peculiar brilliancy of lighting, and the richness as well as the clearness of the colours, in which the paintings of the chapel excel. Light pervades the finer Italian frescoes and gives pure vividness to them, which the Arundel Society has not yet reproduced.

'Oxford and Cambridge,' a series of etchings by A. Slocombe, Part I., has been issued by Mr. Dunthorne in a portfolio of twelve prints, the subjects of which are from the scenery of the elder university and its neighbourhood. Brief descriptive and historical notes accompany them. The sketches are all very pretty, delicately drawn, and neatly handled, and wherever the richly tinted surface of weathered stone had to be delineated Mr. Slocombe has given its characteristics happily. There is a lack of grandeur in the expression of the tower of the cathedral, but the trees in front are beautifully rendered. Mr. Slocombe's manner of draughtsmanship suited 'The Porch of St. Mary's,' and its rococo features lose nothing in the delicate etching. Charming is 'Iffley Mill' with its poplars. 'Oxford from the Parks' and 'Oxford in Flood-time' are equally delicate, soft, and brilliant; it is hard to say which is the better. The 'West Entrance to Magdalen Chapel' is one of the best pieces of architectural drawing we have seen for a long time, being at once soft, solid, and rich in tint. We have named the best examples of the Oxford series, and hope to find the illustrations of Cambridge are equally happy.

Proof impressions of 'A Round of Melodies,' drawn and etched by R. M. Farren, being a series of tastefully executed vignettes, with music and verses, come to us from Messrs. Macmillan & Bowes, of Cambridge. The author and draughtsman has endeavoured to illustrate the harmony of melody, as represented by airs and songs, and such landscapes as he has very happily adapted, with extremely fine taste and perfect sympathy for the manifestation of pathos. It would, in respect to sentiment, aptitude, and a just sense of the pathos of landscape, be difficult to praise Mr. Farren's work more highly. He has chosen a very fit motto from Burns's "My Nannie's awa'" to express his meaning; his own works render even Burns's interpretation superfluous; but had a motto been needed a hundred better ones might have been chosen, from Chaucer, from Spenser, whose landscape backgrounds have the aptness of Titian's, or from Shakspeare, who was only less fortunate than his elder brethren. Burns evolved the pathos of his subject by mere force of contrast, and would compel us to "hold a fire in our hands by thinking on the frosty Caucasus"; this is, after all, but an indirect and insufficient method, while Spenser's phantasmagoria abound in colour, and are, to use an artistic term, so "solid" that each picture is accompanied by its natural expression, and with one epithet, as in the

— sayling pine,

he stamps an image on our minds. Spenser's poetic art is, in fact, deficient in self-restraint, and he sometimes overpaints nature's varied aspects when he desires them to blend or contrast in our minds with the emotions it was his purpose to evoke. Burns was nowhere in comparison with the Laureate and his great master Spenser in essaying to make the sound of his verses echo the sense, and use both to convey pathos. A lovely little pastoral is before us in the spring landscape which accompanies "When daisies pied," and depicts a brimming, flower-shrouded stream on its way through a meadow where lambs recline in the sunlight. 'May Day,' with sunny radiance pouring behind an oak, upon water, and a meadow "all enamelled with blossoms," is very pretty, highly delicate, and suitable to the verses. "Hark, hark! the lark!" has suggested a design of dawn over a rocky landscape with the vista of a road, which is faithful in giving the shadowless effect of light reflected from the sky, and for the while strong enough to suffuse the whole before direct light projects shadows from every solid thing. Equally fortunate are the vignettes accompanying "The young May moon," and

While the moon her watch is keeping,

and

Where wild woods grow, and rivers flow,

or,

And murmur as the ocean murmurs there.

The poppies which accompany 'The Land o' the Leal' are beautiful in art. The sentiment of 'Wearin' awa" is agreeable, but a little sentimental.

SALES.

MESSRS. CHRISTIE, MANSON & WOODS sold on the 1st inst. the following pictures, being a further instalment of the works from Hamilton Palace:—Unknown: Portrait of William Herbert, Earl of Pembroke, small whole length, 367*l.*; Portrait of the Cardinal York, 220*l.* Correggio, Ecce Homo, 273*l.*; The Dying Magdalen, attended by angels, 325*l.* Baccio della Porta, The Madonna, with St. Joseph and the Infant Saviour, who is in the act of blessing St. John, 210*l.* Bernardino Luini, The Duchess of Ferrara, in a green dress embroidered with vines, 336*l.* Parmegiano, The Madonna, with the Infant Saviour, on a shield-shaped panel, 241*l.* Titian, The Holy Family, with St. John and another saint, 1,207*l.*; Portrait of Ludovico Cornaro, Doge of Venice, in crimson robe and white sleeves, 336*l.*; A Venetian Admiral, in armour, with his arms on his breastplate, 619*l.* Bonifazio Bimbo, The Madonna, seated in a landscape, with the Infant Christ in her lap, St. James leaning in adoration, and St. Lucy behind, 483*l.*; The Resurrection, 231*l.* Antonello da Messina, Portrait of a Youth, in a crimson dress and white shirt, 514*l.* A. Bronzino, Don Garcia de' Medici, in richly embroidered slashed dress, 1,785*l.*; Leonora di Toledo, wife of Cosmo de' Medici, in crimson dress, 430*l.* S. del Piombo, Portrait of Pope Clement VII., seated, and taken in profile, 236*l.* Tintoret, The Visit of the Queen of Sheba to Solomon, 346*l.* Masaccio, The Last Supper, a cabinet work, 630*l.* L. da Vinci, A Laughing Boy, 2,205*l.*; Portrait of a Gentleman, inscribed "Alessander Oliverius V.," 215*l.* Andrea del Sarto, Portrait of the Artist's Wife as the Magdalen, in a crimson dress with lilac sleeves and white bodice, 357*l.* Ludovico Carracci, Sibylla Libyca, 283*l.* G. Bassano, Jacob's Vision, 210*l.* Giacomo da Pontormo, An Allegory, 315*l.* Luca Signorelli, The Circumcision, a large altar-piece, with ten figures, 3,150*l.*

The most important of the pictures mentioned above is the last, Luca Signorelli's signed picture on panel, which has been added to the National Gallery. It is remarkable for massive style and manner of composition, fine and nobly realistic drawing, grand naturalistic types of form and face, energy of conception, yet restrained movements, broad, golden illumination, extreme finish of the flesh, and a chromatic ordonnance which is at once fine and simple. The pupil of Pietro della Francesca is to be seen here working in a noble Florentine manner, and, so far as a portable specimen of his powers permits, at his best, after we have allowed for the clumsy repainting of the figure of Christ and the hands of the High Priest. Vasari mentions a picture of the Circumcision as having been produced in fresco by Luca for the church of San Francesco in Volterra, where, indeed, now exists a 'Virgin and Child' bearing the name of Signorelli. It is probable that Vasari made a mistake about the mode employed; this notion is strengthened by the fact that he goes on to say that the Child, having been injured by damp, was repaired by Sodoma, to the detriment of the altar-piece. It is difficult to believe that we see the hands of Bozzi, even at their worst, in the bungling repainting before us. It is fortunate that Mr. Burton has secured this fine picture, the much-talked-of 'Pan' by Signorelli being inadmissible to Trafalgar Square.

Another important national acquisition is the small 'Last Supper,' which was absurdly attributed to Masaccio, as if that comparatively primitive and severe painter could have indulged in the "miniature" manner, vivid and rich tones of reflected and direct light, general ornateness of treatment, and lack of severity which this very fine, expressive, and luminous example displays. A resemblance to the Sienese school of art at a somewhat developed period is obvious in the expression, characters, draperies, and isolated and splendid tints. A capital judge recognizes qualities in this work which have strong affinities to similar works among the illuminations in the public and Piccolomini libraries at Siena. 'An Allegory,' lot 766, by Pontormo, a most interesting example, and the so-called Titian's 'Portrait of Ludovico Cornaro, Doge of Venice,' an old man with a long white beard, doubtless by "El Greco," one of Vecellio's best pupils, are the other acquisitions of the National Gallery. Messrs. Crowe and Cavalcaselle, 'Titian,' ii. 469, attribute the portrait to "an imitator of Tintoretto and Bassano."

Another so-called Titian is the 'Holy Family, with St. John and another Saint,' lot 744. The indifferent drawing of the Virgin's upraised face, the bad foreshortening of parts of the other figures, the thin and clear handling, and general brightness without depth are signs of a much weaker hand than Titian's, yet of one trained in his Bellinesque mode. The work may be by, or after, Schiavone, and has not a few attractions, although it does not to us present the signs of an original picture—rather those of an excellent, somewhat mechanical, and weak copy. Compare its thinness with the heavy, rough impasto of the "El Greco," which is likewise attributed to Titian. Mr. Webster bought it. Although the portrait of the 'Duchess of Ferrara' (718), plump, rosy, small-eyed, and smiling, wearing a green dress embroidered with vine foliage, a very fine example, is attributed to Luini, we do not believe it is even a Milanese picture. It is rather a Venetian one; the upper part of the forehead and the hair have been heavily repainted, otherwise it is in admirable condition. The 'Portrait of a Gentleman,' in a crimson dress (745), can hardly be by Da Vinci. It was sold to the National Gallery of Ireland. 'The Madonna and Child' (711), which Messrs. Colnaghi bought, is very pretty and quite in the sweeter manner of B. della Porta. The Moroni, 'Portrait of a Gentleman' in a black dress (733), is, though rather dirty, genuine; it is very fine, grave, and solid. Mr. Vokins bought it for 178*l.* Mr. Webster bought the pretty Garofalo (735), 'The Madonna in a Blue Dress, with the Saviour holding a Pink,' for 189*l.* The well-known 'Portrait of a Youth' by A. da Messina, but repainted to a considerable extent, was sold to M. Sedelmeyer, of Paris, for a little over 500*l.*, at which price it was a bargain. In spite of its original shortcomings and subsequent repaintings, it would have been welcome in the

National Gallery, which must wait some time before another Antonello is offered. It retains much of the painter's sculptor-like modelling, uniformity of texture, and equable flesh tints; the last are now rather opaque, and not very different from, but browner than, those of the Duchatel Antonello (or Solario). The stupendous price given by the Louvre at the Pourtalés sale in 1865 for the 'Portrait d'Homme,' which is now No. 37 in the Salon Carré, has been assumed as a standard of value for all the works of Antonello, much as the sum given at the Suermondt sale in 1874 by the Berlin Gallery for the famous 'Homme à l'Œillet' has furnished an imaginary standard for John Van Eyck's cabinet paintings. Of yore no such prices were known, *e.g.*, at Lord Bessborough's sale in 1801 Beckford bought as a Van Eyck, for 89*l.*, the 'Entombment of a Cardinal,' which, as a D. Bouts, is now No. 783 in the National Gallery. M. Sedelmeyer's Antonello was painted in 1474, a year earlier than the example in the Louvre, and it is more like a Van Eyck than the latter. The 'Portrait of Don Garcia de' Medici' (Cosmo I.'s most unhappy son), by Bronzino, is unusually frank in handling, animated in motive, and more like a bold large study than one of the artist's usually highly finished if not laboured pictures. This artist painted nearly all the family of Cosmo. Here are the Grand Duke himself (755) and his first wife Leonora di Toledo (756), the latter betraying in her long lean features and depressed expression signs of the miserable life which ended woefully shortly after the deaths of Garcia and Lorenzo, her sons. Her face is delicately modelled and has clear, hard, ivory-like, and yellow carnations; a glove is in the left hand, her right hand being bare and placed on the left wrist. This portrait belonged to Samuel Rogers, and, as lot 683, was sold May 3rd, 1856, for 46*l.* The 'Portrait of Cosmo de' Medici,' with reddish flesh, is not equal to the above, and is not very like the Florentine picture by Bronzino. The so-called Titian's 'Portrait of Philip II.,' with the figure of Fame kneeling before him, retains in the latter some traces of the Venetian school, and looks much more like a Pantoja de la Cruz than a Titian; the latter name is out of the question. A most interesting Pantoja de la Cruz, containing life-size portraits of English and Spanish statesmen, is to be sold to-day (Saturday). Bassano's 'Jacob's Vision' (763), comprising small figures, is fine of its kind and highly finished. Del Sarto's 'Portrait of his Wife as the Magdalen' (761) is genuine, but has, like many of his works, been blanched and repainted. The famous 'Laughing Boy,' 'Boy with a Toy,' 'Boy with a Hornbook,' bears, on the strength of long repute and considerable resemblances, the name of Da Vinci. It was in the Arundel collection, and in that of Lady Betty Germain, who bequeathed it to Sir W. Hamilton, at whose sale, under the auspices of Mr. Christie, March 27th, 1801, it realized 1,300 guineas from Mr. Beckford, who kept it at Fonthill till it was sold, lot 107, on September 24th, 1822, or rather it was bought in by Mr. Beckford, from whom it passed to the Hamilton Palace collection. It is well known by a line engraving, and, as 'Boy showing a Trick,' No. 6, was at the British Institution in 1856. It is probably by Luini.

NOTES FROM ATHENS.

IN Athens there is no excavation going on except a clearing of the soil of the Acropolis, which is likely to yield some good results as regards inscriptions. Fortune has, however, willed that in the course of digging in several streets for the construction of sewers various old graves should come to light, in which only a very few objects of art have been found bearing reliefs. Most had merely funereal inscriptions.

Since Thessaly was incorporated with the Greek kingdom archæology is beginning to show signs of life there. Inscriptions have been published in the local papers and those of Athens, and frequently it is announced that such and such a find has been made. For instance, Dr. Lolling has printed in the last number of the *Mittheilungen* of the German Archæological Institute several inscriptions from Thessaly, among them one of great value from Larissa, which belongs to the reign of Philip V. of Macedon, and in which the Thessalians are named Πεταθαλοί. These finds have led the Minister of Education to propose to the Chamber the appointment of two new inspectors of antiquities, and there is no doubt that the Chamber will agree. Hitherto there have been three — one, M. Demetriades, has charge of Olympia; a second, the often-mentioned M. P. Stamatakis, of the rest of the Peloponnesus and northern continental Greece; the third, M. Pan. Kavvadias, the islands of the Ægean Sea. These gentleman are, however, occasionally employed out of their proper districts, owing to the needs of the state and the constant excavations. Of the new inspectors, one is intended to take charge of Thessaly, the other of the Greek portion of Epirus and the Ionian Islands. The Chamber approved some days ago the treaty with the German Government regarding the duplicates found at Olympia, which was laid before it by the Minister. About the debate to which this convention gave rise and the catalogue of the objects ceded I hope to write something in another letter.

Of late the excavations at Epidaurus have been recommenced. The readers of the *Athenæum* will remember that last year the *cavea* of the theatre was dug out, and that, under the direction of M. Kavvadias, the rows of seats came to light, and three statues, the most important of which was declared by the explorer to be a statue of Hygieia, and to be the work of the great Polycletus. A drawing of these statues appeared in the *Hesperos*, the excellent illustrated Greek journal which is published at Leipzig, and was accompanied by explanatory letter-press from the pen of M. Kavvadias. In the lately published report of the Archæological Society of Athens a detailed account of the excavations of last year has been printed along with various plans. The explorations of the current year have been carried on by Dr. Kavvadias at the cost of the Archæological Society. First of all the stage was laid bare, which last year remained still buried. In doing this it was clearly ascertained that this had been partly rebuilt in the Middle Ages; the old materials had been employed in part. Still more interesting was the discovery in the *débris* of various important architectural fragments, and of two statues of the Roman period: of these one represents Æsculapius, and the other Hygieia. Æsculapius wears a *himation*, which leaves the right side of his bosom bare. According to M. Kavvadias this statue resembles the one in the museum at Florence and that found at Epidaurus last year, with the difference that the one discovered this year held in his right hand, which is now wanting, his sacred serpent, and did not lean on the staff round which the serpent is coiled. It is characteristic that in this statue the god wears the well-known hunter's shoes, the so-called *endromides*. The statue of Hygieia was found not far from the Æsculapius. It is of the same height, both being rather under life size, and appears to be the work of the same artist. Both are headless, but are very well preserved otherwise, especially the Æsculapius.

After the completion of the excavations of the theatre at Epidaurus a beginning was made, about the end of April, with the exploration of the sacred precinct of Æsculapius. A start was made with a large trench, thirty-five mètres long, which starts from the northern side of the *Stadium*. Four circular buildings were discovered, which M. Kavvadias thinks belong to the *Tholus* of which Pausanias gives an account. It was, like the theatre, a work of Polycletus, and was decorated with the paintings of Pausias of Sicyon, who was a contemporary of Apelles. He depicted here Eros having laid aside his weapons and grasped a lyre instead, and Methe, Drunkenness, as she drank out of a glass phial. The glass was admirably imitated by the painter and was transparent, so that the face of Drunkenness was visible through it. M. Kavvadias does not tell us whether the structures he has discovered are really made of white marble, in which case they might be identical with the *Tholus* of Pausanias, and whether there is any hope of finding traces of the paintings of the Sicyonian artist. Instead of this he announces the discovery of interesting fragments of architecture of the best period, of Corinthian capitals which are said to be older than those of the monument of Lysicrates at Athens, of various votive inscriptions, and of the following pieces of sculpture: (1) a winged Victory, headless and wanting the lower part of the body, a Greek work of the third century which reminds the discoverer of the Nereids of the monument at Xanthus; (2) the head of a female statue; (3) the torso of a small statue of a female; (4) a nude torso of a small man, or rather a boy, who leans on his right elbow; (5) a nude torso of a man of the same height as No. 4; (6) a small torso of a man in armour, probably a Roman emperor; (7) a very large head of a dolphin; (8) a torso of a man dressed in a toga, of the Roman period and life size; (9) a similar torso larger than life; (10) a statue of an emperor in armour, headless and larger than life; (11) a statue of Minerva, headless and larger than life.

I hope that further search will bring much more to light. It was a correct instinct that led me last year to hail with joy the commencement of the excavations at Epidaurus.

SP. P. LAMBROS.

Fine-Art Gossip.

SMYTHE'S 'Lives of the Berkeleys,' now passing through the press under the editorship of Sir John Maclean, F.S.A., contains information which will prove corrective of the published statements as to the erection of some of the monastic offices of the canons of St. Augustine, whose church is now the Cathedral, Bristol. The abbey gatehouse is always said to have been built by Abbot Elyot, who died in 1526, but the Smythe MSS. assert that Newland (*ob.* 1515), the previous abbot, was the actual builder. The same work also supplies for the first time the date of the erection of the prior's lodgings, or, as now called, the Minster House, which, as we have lately said, it is now intended to pull down. Among other buildings, Abbot Newland, we are told, erected "the Dortor, and frater, and the Pryor's lodgings, and the Gatehouse, and the Amery with the Lodgings adjoining," &c.

THE picture by M. Jules Girardet, entitled 'Le Général de Lescure, blessé, passe la Loire, à St. Florent (1793),' praised in our notice of this year's *Salon*, will be exhibited at the International Exhibition in London.

WE are in a position to say, on the best authority, that the statement we quoted from a French journal (see *Athen.*, No. 2846) to the effect that the Museum at Berlin had bought in Florence a portrait by Honthorst under the idea that it was by Velasquez, is entirely devoid of foundation.

As they are pulling down Hammersmith Church in order to erect a modern Gothic structure, with a chancel appropriate to an ornate cultus, it may be as well to record some facts concerning the structure. Not only will the landmarks of two and a half centuries be removed, but a very interesting proof of the survival, not without sense of their dignity, of Gothic forms of architecture, and all that this implies as an illustration of the feeling which, quite late in the seventeenth century, existed in a suburban hamlet will be destroyed.

Laud, as Bishop of London, granted the site out of the manorial lands which, even before the Conquest, pertained to his see. Sheffield, Lord Mulgrave, Sir Nicholas Crispe, and others contributed to the building fund, and the inhabitants generally promised an annual subscription of 28*l.* 13*s.* for the maintenance of the parson, to whom Lord Mulgrave undertook to afford lodging and diet so long as his lordship lived in the parish. Laud consecrated the work, then and long afterwards called the chapel, on June 7th, 1631, and wrote a prayer for the occasion, which is printed in his 'Summarie of Devotions.' Peter Heylin, the notorious "lying Peter," and Dr. Bray assisted at the ceremony. The building is said to have been knocked about during the Civil Wars, when armorials and emblems in painted glass and carved wood and stone were defaced. Gibbons is said (*l*) to have executed some of the carved work. Long after this Cipriani painted figures of Moses and St. Paul (the tutelary saint) for the interior. The monuments include those of the above-named Lord Mulgrave, one of Elizabeth's captains against the Spaniards and the Irish rebels, commander of the "Bear," and President of the North under James I., who died 1646; Anthony Askew the bibliophile, died 1774; Sir Edward Nevill, of the Common Pleas; Francis, youngest son of Sir T. Lucy, of Charlecote, died, aged ninety, 1697, and must have known something of Shakspeare; Sir N. Crispe, the royalist merchant, who was buried in St. Mildred's, Bread Street, ordered a bronze bust of Charles I. to be erected in the church at Hammersmith, and his own heart placed in an urn before it: it was the custom annually to take this relic from the urn and, as Faulkner said, "refresh it with a glass of wine"; Sir Elijah Impey, buried 1809; Arthur Murphy and his wife; and Thomas Worlidge, the engraver. The curfew was rung from Michaelmas to Lady Day. George Morland and pretty but luckless Miss Nancy Ward, whose sweet face supplied the type for his rustic beauties, and William Ward the engraver, A.E.R.A., her brother, and the painter's sister Maria were wedded in Hammersmith Church.

THE forthcoming historical exhibition at Worcester, of which we have already spoken, will contain a collection of ancient and mediæval needlework, both ecclesiastical and secular, arranged by Lady Alwyne Compton; and a collection of ancient documents relating to the cathedral and county of Worcester, in the possession of the Dean and Chapter, the Corporation, and the boroughs of Droitwich, Bewdley, Evesham, and Kidderminster, arranged by Mr. W. de Gray Birch, F.S.A.

FRANÇOIS JOUFFROY, the sculptor, is dead. He was a native of Dijon. He gained a Prix de Rome in 1832; a Second Class medal in 1838; a First Class one in the following year for his 'L'Ingénuité,' which is at the Luxembourg; and a Second Class again in 1848. He was elected a Member of the Institute in 1857. He was made a Chevalier of the Legion of Honour in 1843, and an Officer in 1861. He executed a large number of busts of distinguished people.

HERR CARL HUMANN, who was engaged on the excavations at Pergamus last year, has arrived at Smyrna. He is commissioned by the German Government, and is on his way to the interior to Angora (Ancyra), where he will take a cast of the well-known inscription vulgarly called the Will of Augustus. Thence he will make an expedition to Bazar Keue (Pterium), Euyuk, and the Alajah Dagh, to mould the Khita sculptures and inscriptions, and for general exploration. Four months will be devoted to the exploration.

M. A. VENTURI is preparing a work on 'La R. Galleria Estense in Modena.' He starts with the year 1598, in which Cesare d'Este transported to Modena the remains of the collections which the sovereigns of Ferrara had brought together.

MR. WARD, the Newcastle printer, writes to us about the proposed "memorial edition" of the works of Thomas Bewick: "The edition, as you correctly state, is to be the 'work of a Newcastle press,' but as Miss Bewick lives at Gateshead, in the house in which her distinguished father died, which is on the opposite side of the river Tyne, it cannot be at the same time 'produced in Bewick's own house.' The work of printing has, in fact, been entrusted to me with the express sanction of the late much respected Miss Bewick, under whose editorship the 'Memoir of Bewick' was issued twenty years ago, and also with the approval of the only surviving daughter of Bewick, who, as you stated at the time, lately presented the magnificent collection of water-colour drawings and proof impressions of her father's wood engravings to the British Museum."

THE French journals record the death, at his house near Fontainebleau, of M. Auguste François Biard, better known as François Biard, a painter whose reputation has been extended to England by the appearance of his humorous and dramatic pictures at various metropolitan exhibitions and by the prints of M. Jazet. Biard was born at Lyons October 8, 1798, and during several years acted as a choir boy in various churches in his native district. An inclination for art was developed before he was sixteen years of age, when he joined the École des Beaux-Arts in Lyons under M. Révoil; later he was employed in a paper-staining factory; still later he rejoined the École, then under M. Richard, from whom he seems to have obtained some instruction in painting. In 1827 he made a voyage as drawing-master in a training-ship, and as such visited many countries bordering on the Mediterranean. Having resigned his post, Biard visited nearly every country in Europe, and amassed many sketches of landscapes, portraits, and figures. These studies could not have been of long duration, for we find his picture 'Les Enfans Perdus' in the *Salon* of 1828, whence it was bought by subscription and placed in a public gallery at Lyons. This was followed by 'La Diseuse de Bonne Aventure,' 'Concert de Fellahs,' 'Attaque de Brigands,' 'Les Comédiens Ambulants,' 'Le Vent du Désert' (which is now at Nismes), 'Le Baptême sous la Ligne,' 'Le Branle-bas de Combat,' 'Le Désert,' 'Duquesne délivrant les Captifs d'Alger' (1837), 'La Pêche aux Morses' (1841, which was bought by Louis Philippe), 'Une Aurore Boréale,' 'Gulliver' (1853), 'Le Mal de Mer,' 'La Bourse à Paris,' 'Le Salon du Comte de Nieuwerkerke.' Three of his pictures are at Leipzig; one belongs to the Emperor of Russia. His 'Jane Shore' was in the *Salon* of 1842; 'Du Couédic recevant les Adieux de son Équipage (Combat de la Surveillante, 1779),' was in the *Salon* of 1841; and 'Voyageurs Français dans une Posade Espagnole.' M. Biard received Second Class Medals (Genre) in 1827 and 1848; a First Class Medal in 1836, and the Legion of Honour in 1838. He wrote an account of a voyage to Brazil, which was published in 'Le Tour du Monde,' and independently. His last works were in the *Salon* of this year, entitled 'Un Peintre Fantaisiste devant la Justice' and 'Un Peintre Classique devant son Modèle.

M. LOUIS GODEFROY JADIN died last week, aged seventy-seven years. He was born in Paris, and began as a painter of hunting subjects and still life; his first instructor was Abel de Pujol, who taught him to study the figure, which he combined with landscapes. He travelled with M. Alexandre Dumas in the Mediterranean, and, with his dog My Lord, figures in 'Capitaine Pamphile.' He obtained a medal of the Third Class in 1834, a *rappel* in 1855 (Expos. Univ.), a medal of the Second Class in 1840, and a medal of the First Class in 1848; the Legion of Honour in 1854. His more important works are 'L'Hallali,' 'Le Débuche,' 'Le Relancé,' 'L'Assemblée de la Vénerie,' 'L'Ébat des Chiens,' 'Relais de Chiens à la Coulée du Rocher de Mailly,' 'La Retraite Prise,' 'Rigolette,' 'Chiens travaillant au Terrier de Blaireau.' His son, Emmanuel Charles Jadin, has achieved distinction, and sent 'Compagnie de Sangliers en Eté' to the *Salon* of this year.

A RESOLUTION of the Government of Bengal lately issued summarizes the results of the recent Exhibition of Indian Art Manufactures at Calcutta. The number of articles exhibited was 4,873 (amounting in value to 127,807 rupees), and of these Bengal sent 2,560 and Madras 1,135. The lessons taught by the exhibition are that the silk manufacturing industry is languishing in Bengal; that Dacca maintains its pre-eminence in muslins; that the carpets made in Northern India show in many cases signs of careless work, though their general excellence is admitted; and that the pottery produced by the Madras School of Art is excellent both in design and manufacture.

MUSIC

THE WEEK.

ROYAL ITALIAN OPERA.—'Velleda.'
ST. JAMES'S HALL.—London Musical Society.
GUILDHALL.—Concert of the Royal Normal College for the Blind.

IT may safely be assumed that until Mr. Gye announced the production of 'Velleda' at Covent Garden the name of the composer, M. Charles Ferdinand Lenepveu, was quite unknown to English musicians. From Pougin's dictionary we learn that he was born at Rouen in 1840; that he studied composition under M. Ambroise Thomas at the Paris Conservatoire, and won the Prix de Rome in 1865; and that a comic opera from his pen, entitled 'Le Florentin,' was produced in 1874 at the Salle Favart with moderate success. It is understood that 'Velleda' was intended for the Grand Opéra, but that it failed to win acceptance, and it is entirely owing to the initiative of Madame Patti that it has now seen the light at Covent Garden. But even a *prima donna* of the foremost rank is not invariably a trustworthy authority on the question of public taste, as the instances of 'Gelmina' and 'Estella' amply prove; and there is too much reason to fear that Madame Patti's judgment has erred in the present case. The primary defect in 'Velleda' is the complete lack of freshness and interest in the libretto, which might be termed a revised edition of 'Norma,' more elaborate in construction, but less sympathetic and consistent. Cœlius, a Roman general, loves and is beloved by Velleda, a Druidic priestess of Gaul; but his attendant Even, a woman disguised in male attire, is also enamoured of him, while he in turn has for a rival Teuter, a Gallic chieftain. This is the complication which is presented at the outset of the opera, and no material progress is made with the story until the last act, when Even confesses her love, and, being scorned, vows vengeance against her master. By her aid Cœlius is betrayed into the hands of the Gauls, and Velleda, finding union with him is impossible, stabs herself, her example being quickly followed by her lover. The librettist, M. Challamel, has taken his materials from Chateaubriand's 'Les Martyrs,' but his book is utterly wanting in nobility

of style, dramatic force, or characterization. This baldness is not redeemed by the music, which is destitute of anything like freshness of style. M. Lenepveu is evidently well acquainted with Meyerbeer, Verdi, and Gounod, and possibly with the early works of Wagner; but he seems quite incapable of divesting himself of extraneous influences, and hence his score may be said to consist of a feeble *réchauffé* of other operas, the ideas and even the mannerisms of composers widely divergent from one another recurring with provoking frequency. No attempt whatever is made to give individuality to any of the characters, and the music of the Gauls differs in no respect from that allotted to the Romans. There are occasional glimpses of skill in orchestration, but more frequently the scoring is bald and even vulgar; and the treatment of the voice parts shows, in general, a singular ignorance of the effects to be derived from masses of sound in harmony. At the conclusion of the third act, it is true, M. Lenepveu indulges in an irregular fugue ending with a churchlike cadence; but the explanation of this sudden intrusion into the domain of scientific composition is hard to discover, and the episode, therefore, forms but one of the many incongruities and inconsistencies of the opera.

It would serve no useful purpose to describe M. Lenepveu's work in detail, as it is out of the question to suppose that it will take a permanent position in the *répertoire*. Nor can it be said that the composer evinces the possession of any special faculty for operatic writing, the weakest parts of his score being those where dramatic feeling seems most required. 'Velleda' is, on the whole, better than the other works that have been produced at Covent Garden especially for Madame Patti, and that is, perhaps, the most that can be said in its favour. The *prima donna*, of course, invests the principal character with all the significance of which it is capable; but it does not afford any striking opportunities for either vocal or dramatic display, and therefore can add nothing to her reputation. Her skill as a *cantatrice*, at present unrivalled on the lyric stage, is exhibited to greater advantage in many other parts. As time advances the *vibrato* to which Signor Nicolini is a victim becomes more and more distressing, and the music allotted to Cœlius, including one melodious air, is not heard to the best advantage as interpreted by him. The other parts are neither very important nor very grateful to the performers, and it is only necessary to state that they are efficiently interpreted by Madame Valleria, Mdlle. Stahl, Signor Cotogni, Signor De Reszke, and M. Dauphin. The *mise en scène* is in every respect worthy of the Covent Garden stage, the second and third acts being pictorially beautiful if musically and dramatically weak. A more interesting performance will be that of 'Mefistofele' next Tuesday, in which Madame Albani will sustain the *rôles* of Margherita and Helen of Troy.

The concerts of the London Musical Society are generally interesting, and the performance on Thursday week formed no exception to this rule. The works of Heinrich Hofmann are not yet so fully known in this country as they deserve to be, probably because they are at present overshadowed by the productions of composers possessed of more commanding genius. Hofmann may be said to occupy a position with regard to the most gifted of living musicians analogous to that of Dussek to Beethoven, or Sterndale Bennett to Mendelssohn. His music charms by its delicate fancy if it does not impress by its greatness; it is more feminine than masculine, and its interpretation is possible to those who would be ill advised to attempt Brahms or Wagner. Still such a work as the cantata 'Cinderella' requires extreme care and refinement in performance, or its delicate texture must inevitably suffer. An earlier work of the same order, 'The Legend of the Fair Melusina,' was performed a year and a half since by the Borough of Hackney Choral Association, and 'Cinderella' was given last season by the Tufnell Park Choral Society, but without orchestra; the performance in St. James's Hall was, therefore, the first on an adequate scale. The familiar nursery story is in this instance presented in a romantic and fanciful form in order to fit it for high-class musical treatment. The supernatural element strongly prevails, and it is in illustration of this that Hofmann's skill is displayed in its most felicitous guise. He has a fondness for compound common and triple measures, which composers generally seem to consider most appropriate for fairy music. The opening choruses of immortals are extremely charming, though the introduction of a *fugato* may at first appear a little odd in such a connexion. The influence of Mendelssohn may be traced, and also, to a less extent, that of Wagner, in this part of the cantata. But the impress of the former composer is most apparent in the third part, where the king is tempted, first by visions of loveliness and next by those of terror, to desist from his pursuit of Cinderella. A chorus of will-o'-the-wisps, "Over mountain and moor," reminds the hearer of the 'First Walpurgis Night,' though far lighter in style and orchestration. The music allotted to the human characters is more solid and straightforward, but still graceful and melodious. Hofmann writes charmingly for the orchestra, and, though his score is elaborate, he does not overload the voices by thick or noisy accompaniments. It would be incorrect to assert that 'Cinderella' affords evidence of his possession of the highest order of genuis; but it is a work alike satisfying to the musician and attractive to the public, and with the companion cantata 'Melusina' is likely to gain for its composer a certain reputation in this country. We regret to be unable to speak in terms of unqualified praise concerning the performance on Thursday week. Regarding the principal vocalists, Miss Amy Aylward, Miss Minna Vivian, and Mr. J. Spooner Hardy, little need be said, as the two last-named being amateurs their efforts were scarcely amenable to criticism, and two of the three were fairly equal to the work they had undertaken. The chorus sang with a tolerable amount of precision, the actual errors being fewer than in the orchestra, which was frequently at fault, perhaps owing to insufficient rehearsal. Again, the general performance was characterized by a want of expression and a tameness of manner which materially injured the effect of the music. These shortcomings were the more noticeable as occurring under so skilled and experienced a conductor as Mr. Joseph Barnby. Previous to the cantata a highly favourable *début* was made by a young violinist, Miss Emily Shinner, a pupil of Herr Joachim. Having studied for nearly seven years under so admirable a master, it is not surprising that Miss Shinner should manifest executive capacity of no ordinary kind. As a matter of fact her breadth and freedom of style, and the careful observance of accent and phrasing, tended to remind the audience of Herr Joachim himself. Ferdinand David's Concerto in E minor, Op. 18, gave ample opportunity for the display of Miss Shinner's talent, though as music it is extremely dry and uninteresting. Spontini's Overture to 'Olympe' headed the programme, which was of reasonable length.

The concert given last Saturday afternoon at the Guildhall by the pupils of the Royal Normal College and Academy of Music for the Blind at Upper Norwood, was good enough to deserve special notice on its own merits, apart altogether from the institution by which it was given. It is now more than ten years since the college was first opened, and during that time, under the direction of Mr. F. J. Campbell, it has accomplished results which it is hardly too much to describe as marvellous. Though its principal object is to educate the blind of both sexes for the musical profession, it aims also at such a general development of their powers, both physical and mental, as will enable them to support themselves in any walk of life to which they may devote their energies. On Saturday the results of the musical training given at the college were shown; and they were such as to reflect the greatest credit on the professors. The college is fortunate in having such a staff of teachers as Messrs. W. H. Cummings, Frits Hartvigson, E. J. Hopkins, and H. C. Banister; and the excellence of the instruction given was amply proved by the concert of Saturday.

From a technical point of view the pianoforte playing was most remarkable. Master Alfred Hollins performed Schumann's Concerto in A minor with an accuracy and neatness which would have deserved great praise had he been able to see the keys, but which without such assistance to his fingers was truly astonishing. The same may be said of Mr. W. F. Schwier's rendering of Weber's Concertstück. In both cases, however, there is more than mere accuracy to commend. Each player showed true musical feeling, and a thorough understanding of the spirit of the composition. We cannot help, however, expressing our regret that Mr. Schwier should have been taught an "improved" (?) version of Weber's work. Of course he is in no degree to blame for this; but we object altogether to tampering with the works of the great masters; and if Mr. Schwier's master did not think Weber's music good enough in its original form, he had better have taught his pupil something else. The orchestral accompaniments to the two pieces we have named were played by a small but efficient band under the direction of Mr. Manns. Chopin's Rondo in C for two pianos, played by Misses Gilbert and Inskip, was another admirable performance; the perfection of

the *ensemble* being as noteworthy as the unity of style shown by the two players. The remainder of the programme consisted of vocal music, and included a short cantata, 'Toggenburg,' by Rheinberger, for solos, chorus, and orchestra, Mendelssohn's "Hear my prayer," and madrigals by Benet and Gibbons. In all these works the chorus singing was excellent, whether as regards purity of intonation or attention to light and shade. The solo parts were well given by pupils of the school, and especial notice must be made of the very sympathetic rendering of the solo part of Mendelssohn's psalm by Miss Campbell. Rheinberger's cantata, which was new to us, is a very pleasing rather than a great work; this piece and "Hear my prayer" were conducted by Mr. W. H. Cummings. At the conclusion of the concert the prizes were presented by the Lady Mayoress and the diplomas by Dr. Armitage.

Musical Gossip.

THE musical public must have heard with surprise, yet not without a certain degree of pleasure, that the Henry Leslie Choir was once more in existence, though under another conductor. According to the printed statement, the resuscitation was brought about as follows:—A general desire being expressed that the work carried on so successfully should not be wholly abandoned, Mr. Randegger, at the solicitation of Mr. Leslie, consented to conduct a new choir bearing the old name and title. The reorganized body commenced rehearsals two months ago, and last Tuesday a concert, having something of the nature of an experiment, was given in St. James's Hall, it being understood that next season a regular series shall be arranged. The programme contained a large number of choral pieces, among the most prominent being Wesley's motet, "In exitu Israel," and a new part-song, composed expressly for the occasion by Mr. Leslie, "Who is the angel that cometh?" and conducted by the composer. The part music was interspersed by songs contributed by Miss Orridge and Mr. Maas. The singing of the choir testified to the care exercised in the selection of the voices and also to the skilful training of Mr. Randegger, and the only fault that could be found with the programme was the predominance of modern part-songs, the English madrigalian writers being represented solely by Morley's "My bonny lass."

SIR JULIUS BENEDICT gave his annual morning concert on Wednesday at St. James's Hall, the programme being of the customary length and variety, and consisting in all of thirty-eight items. Criticism of the entertainment is, however, not required, as it was entirely of a miscellaneous character, the concert-giver being represented solely by a few songs and unimportant pieces.

A CONCERT was given in St. James's Hall on Monday afternoon by Madame Campana, widow of the Italian composer of that name. The very lengthy programme consisted almost entirely of Campana's compositions, including songs, concerted vocal pieces, piano and violin solos, and operatic selections. A large number of executants took part in the concert, which, however, is not likely to enhance the reputation of the deceased musician, whose talent was evidently limited to the composition of melodies of a facile and flimsy type.

MISS HELEN HOPEKIRK gave a pianoforte recital at the Marlborough Rooms last Tuesday. The most important items of an admirably selected programme were Schumann's 'Faschingsschwank aus Wien' and Beethoven's Sonata in A flat, Op. 26. The able artist also performed smaller pieces by Mendelssohn, Schubert, Bargiel, Chopin, Rubinstein, and Liszt.

AN entertainment is to be given on Wednesday at the Court Theatre, under royal patronage, in aid of the funds of the Popular Ballad Concert Committee. The first part of the entertainment will consist of a concert, in which the Russian soprano Mdlle. De Adler will take part, as well as the following artists and amateurs: Lady Colin Campbell, Lady Benedict, Miss Damian, Miss Adela Vernon, Miss Ellicott; Mr. Herbert Thorndike, Signor Luigi Parisotti, and M. Marcel Herwegh. Subsequently Madame Modjeska will appear in the last act of 'Adrienne Lecouvreur.'

IT is announced that Mr. Angelo Neumann will give two performances of the 'Ring des Nibelungen' in October next at the Théâtre de l'Alhambra in Brussels.

DRAMA

THE WEEK.

DRURY LANE.—Appearance of Signora Ristori: 'Macbeth.' GAIETY.—Performances of the Comédie Française: 'Les Rantzau,' Comédie en Quatre Actes, par MM. Erckmann-Chatrian; 'Le Mari à la Campagne,' Comédie en Trois Actes, par Bayard et Jules de Wailly.—Appearance of Madame Chaumont: 'Divorçons,' Comédie en Trois Actes, par MM. Sardou et de Najac.

IT is difficult to be other than grateful to an actress like Signora Ristori, who, at an age at which it is pardonable to dream of repose, undertakes a task so difficult and so onerous as that of playing Lady Macbeth in English. That the time that must of necessity have been spent in acquiring such mastery of our language as is evinced has not wholly been wasted is shown in the cordial and enthusiastic reception awarded the actress in the stronger scenes. Of a dozen artists, more or less eminent, who have attempted a similar feat, none has spoken English so clear, correct, and intelligible as is now heard. At times a word slurred over or unduly emphasized falls on the ear and arrests the attention, but during portions of the performance it is easy to forget the speaker is a foreigner. The entire representation has moreover the largeness of gesture, the picturesqueness, and the variety of expression which are known attributes of Signora Ristori's style. Against these things it may be urged that the actress does not look the part, that there is too much dignity, and that not even the splendid presentation of suffering in the sleep-walking scene, in which the art of Signora Ristori is seen at its best, reconciles us wholly to a physiognomy which we cannot associate with the character. Something concerning the manner in which Lady Macbeth should be played may be learnt by the intelligent observer. To such, however, the performance in Italian was equally valuable. When it is taken into account that the support afforded Signora Ristori is generally weak, and in one or two cases intolerable, a serious drawback from the value of the experiment is seen to exist. One innovation, as we believe it to be, introduced by Mr. Rignold is intelligent. When, after the first disappearance of the ghost of Banquo, Macbeth asks for wine, the attendant is the same who has brought in the murderers, and who is obviously in a position of trust. After referring to his "strange infirmity," Macbeth says:—

> Come, love and health to all;
> Then I 'll sit down. Give me some wine; fill full.

The last two words are uttered in an impatient and nervous aside to the attendant in question. Quite unimportant is the reading, seeing that the customary indication, which implies that the toast is a bumper, answers all purposes. Still it is ingenious and defensible. Against this it may be advanced that, besides omitting portions of the text, Mr. Rignold, whose general performance is deficient in significance, makes mistakes such as omitting to pronounce the *ed* in "accursed" when he speaks the lines,

> Let this pernicious hour
> Stand aye accursèd in the calendar,

and inserting a superfluous *e* in the word "anticipat'st" which immediately follows:

> Time, thou anticipat'st my dread exploits.

The latest productions of the contingent of the Comédie Française brought over by M. Coquelin consisted of 'Les Rantzau' and 'Le Mari à la Campagne.' On the whole, the representation of 'Les Rantzau' must be regarded as the most interesting performance that has been given during the present season. M. Got's great *rôle* of Jean Rantzau was indifferently filled by M. Coquelin *cadet*; and M. Maubant, the creator of Jacques Rantzau, was replaced by M. Febvre. M. Coquelin gave, however, in admirable style the character of Florence, the schoolmaster, and Mdlle. Bartet was agreeable in the small part of the heroine. In the original novel, 'Les Deux Frères,' Florence is the narrator of the story, and the events described are seen through the medium of his personal feelings. His importance is diminished in the play, and the most delightful touches, such as the purchase of the 'Dictionnaire des Sciences Naturelles' of Jussieu, disappear, together with the sketches of communal troubles and the pictures of agricultural labour and suffering. Something of the influence of the kind-hearted old schoolmaster, with his caution, his vanity, and his simplicity, remains. Full justice to these qualities was done by M. Coquelin, whose performance had a gentle, ripe humour that actor does not often exhibit. The treatment of the story is curious. An English dramatist would have presented delightful pictures of rustic wooing. Not so MM. Erckmann-Chatrian. Their lovers do not meet in sight of the audience until the closing situation, when they fall into each other's arms; and the character of the heroine, though one of the most sympathetic in the play, can scarcely be regarded as prominent. M. Worms made as Georges his first appearance, and acted with a good deal of passion.

The performance of 'Le Mari à la Campagne' was only noteworthy for the assumption by M. Coquelin of the character of Ferdinand Colombet, one of those *rôles* of M. Regnier which have lapsed into the hands of the younger actor. It was a good piece of acting, but scarcely remarkable. Mdlle. Bartet made once more a success as Ursule, and M. Coquelin *cadet* as Mathieu, the modern Tartuffe, the most conspicuous among his many failures.

So far as regards the assumption of the characters in the various plays by members of the Comédie Française the promise of the management has been kept. By the advancement, however, of M. Coquelin *cadet* to serious *rôles*, such as Louis XI., Le Marquis de la Seiglière, and Jean Rantzau, the very spirit of the Théâtre Français is violated. The performances cannot accordingly be regarded as representative of that famous institution. It is

difficult to resist the conviction that M. Coquelin, taking advantage of his position, has given his brother a chance he could not and dared not have offered him in Paris. In female representatives, too, the company has been weak. Especially feeble was it before the arrival of Mdlle. Bartet. It may be urged, however, that the Comédie Française itself is now weak, and that the retirement of MM. Regnier, Bressant, and Delaunay, and Mesdames Favart, Madeleine Brohan, Croizette, and Sarah Bernhardt, has left it under a necessity to recruit its ranks. Among the younger members of the company present in London M. Sylvain and Mdlle. Bartet alone can be held of high promise.

'Divorçons' may claim to be the most indelicate comedy that has been brought out within recent years upon the English stage. Immoral it is not. The presentation of a husband triumphing over the lover of his wife is edifying, and has already been exhibited in 'Still Waters Run Deep.' The means by which the conquest is won are ingenious, defensible, and comic, and the conduct of the intrigue is masterly. While, however, all that is done is rigidly virtuous, it has the air of being profoundly vicious. A middle-aged bourgeois takes a female companion to a restaurant, engages a private room, and pays for and eats an admirable dinner. The lady drinks wine enough to make her slightly tipsy, and indulges in such familiarities as cause the waiter to flee from the room, and induce the authorities who enter to draw the most damaging conclusions. The pair are, however, married, and the only charge that can be made is that the pictures of domestic life are too free. Shouts of laughter are aroused, and the piece is a complete success. Whether it is expedient, however, to place scenes of this kind on the stage remains to be determined. One thing at least seems reasonable. If we are to have pieces like 'Divorçons,' exhibiting situations so risky that men when they witness them in the presence of women hold their breath, and that the laughter which is heard is itself an insult to feminine ears, we should do as is done in France—keep young girls from the theatre. Altogether too impalpable is the indelicacy to be seized upon by the censure. Supposing, moreover, as is urged, it is too subtle, when spoken in a foreign language, to find its way to the intellect of girls, when pointed and urged by such laughter as is heard, the fact that propriety is in some way violated is open to the dullest comprehension. Yet our maidens are brought to the performance of 'Divorçons' as though it were an amiable idyl like 'Les Rantzau,' instead of being the most daring picture yet presented of proceedings innocent enough, perhaps, in themselves, but not ordinarily witnessed except by the participators themselves and in the most carefully guarded of interiors. These may appear questions of morality rather than of criticism. The two are, however, more closely blended than is ordinarily believed, and when the task of guarding public morality is left to the public, those who speak for the public will not be mealy-mouthed.

F. V. WHITE & CO.'S *NEW BOOKS.*

THE NEW NOVELS AT ALL LIBRARIES.

WAS HERS THE FAULT?
By the Author of 'Wooing a Sweetbriar,' &c.
3 vols.

HOW THEY LOVED HIM.
By FLORENCE MARRYAT,
Author of 'My Sister the Actress,' 'Love's Conflict,' &c.
3 vols.

THREE FAIR DAUGHTERS.
By LAURENCE BROOKE,
Author of 'The Queen of Two Worlds,' &c.
3 vols.

"Mr. Brooke has told well what he had to tell, and has produced three readable volumes, natural, entertaining, and fairly artistic.... 'Three Fair Daughters' is a pretty and a prettily written tale."
Athenæum.

"Much as we liked Mr. Brooke's former work, his last book infinitely surpasses it in every way. From the first chapter to the last the attention of the reader is enchained."—*Court Circular.*

"'Three Fair Daughters' is just the pretty taking story its title suggests....Indeed, the whole story is fresh and amusing in no common degree, and will hardly fail to give pleasure wherever it may be read."
John Bull.

SWEETHEART AND WIFE.
By LADY CONSTANCE HOWARD.
3 vols. SECOND EDITION.

"The story from first to last is attractive, and cannot fail to command wide favour....There is, indeed, throughout the whole of the story a most unusual power, not only of language, but of imagination, and the tender pathos, which is introduced in no laboured fashion, adds a charm which it is difficult to describe, but impossible for the reader not to appreciate."—*Whitehall Review.*

"'Sweetheart and Wife' is a love idyll, skilfully painted in the midst of many people and many scenes, described by one who writes with that very rare attribute of the modern novelist—knowledge of, and familiarity with, the society she pictures."—*Life.*

"There is a genuine flavour of the old-fashioned romance in it which is too frequently lacking in what may be termed the latter-day novel."
Court Circular.

MY LADY CLARE.
By Mrs. EILOART,
Author of 'How He Won Her,' &c. 3 vols.

"'My Lady Clare' is a pleasant, readable novel."—*John Bull.*
"The interest is maintained with undeniable force and skill."
Daily Telegraph.

A LOVELESS SACRIFICE.
By INA CASSILIS,
Author of 'Guilty without Crime,' &c. 3 vols.

John Bull says:—"The story is a pleasant one—healthy in tone, lofty in teaching, and very sympathetic in manner and style."

SELECT NOVELS
AT ALL BOOKSELLERS'.

"Mr. Foster's 'Collectanea Genealogica' will bring joy to the heart of pedigree hunters both in England and America. .....To the historian and the biographer such facts as Mr. Foster diligently gathers are of the utmost importance."
Daily News.

"If continued on the lines laid down in the first number, Mr. Foster's 'Collectanea' cannot fail to be a welcome addition to the genealogical student's list of working tools."—*Notes and Queries.*

"If Mr. Foster's enterprise is properly supported, the students of history and biography will find on their shelves a series of volumes of reference which will save them a vast amount of time and labour, and will also find, to a great extent, their work done to their hands. It would be impossible for any genuine student to see the volume just issued without recognizing the enormous benefit which Mr. Foster proposes to bestow upon literary men, but which it is evident he cannot accomplish without the generous support of those interested in such matters."—*Academy.*

"Mr. Joseph Foster has commenced an enormous work, which must involve an incalculable amount of painstaking research, and which bids fair to be distinguished by that scrupulous exactness and that rejection of all doubtful detail which have characterized his previous publications. The new work is to be published by subscription in monthly parts; it deals with different subjects, each separately paged, so that on the completion of the huge work each subject may be bound alone, and form a complete volume in itself. It will be seen from his programme that the completed work will be an enormous mass of tabulated information on matters genealogical and personal such as the world has not yet seen."
Manchester Examiner and Times.

LITERATURE

The Russian Advance towards India. By Charles Marvin. (Sampson Low & Co.)

A BOOK in which is recorded a series of recent conversations with several of the most distinguished Russian generals and statesmen on the Central Asian question cannot fail to arrest more than passing notice, even though the conversations may have been previously printed in the pages of the *Newcastle Daily Chronicle*. It is an obvious advantage for them to be brought together into one volume, and the author's comments thereon are pertinent and occasionally suggestive. Yet, viewing the book as a whole, we cannot say that it throws much new light on the subject. The only point on which the various authorities "interviewed" by the author are completely unanimous is that Russia should be absolutely acquitted of the slightest designs upon India. This is the language that Russian diplomacy has held for years past, and as a general expression of policy may be accepted in all good faith. But it is, after all, nothing more than diplomatic language, and the fact that Russia's frontier in Asia has, for a long period, been steadily advancing, first to Orenburg, then to the Jaxartes, next to the Oxus, and lastly to Khorassan, says more than any official utterances.

This book will interest readers particularly at the present moment, which has witnessed the death of one of the most conspicuous characters portrayed in the whole work. Mr. Marvin was fortunate enough to secure an interview with the late General Skobeleff, and the undisguised admiration he expresses for this personage lends interest to the picture. The general's whiskers are described as imparting a fierce and even "barbarous" expression to his face, which was, however, softened by kindly eyes and a winning smile. He charmed Mr. Marvin, who declares that Skobeleff was the only great person he ever met who rose in his estimation upon personal acquaintance. The general appears to have exhibited much candour in his remarks, for he readily admitted that at the siege of Geok Tepe many women were killed. And horrible though such an incident may sound in English ears, the quasi-justification thereof has more in it than might appear at first sight:—

"Those executions of General Roberts at Cabul were a mistake. I would never execute an Asiatic to strike terror into his countrymen, because you are sure to fail. Whatever punishments you resort to, they can never be so terrible as those inflicted by a Nasrullah or any other despotic native ruler, and to these crueller punishments the natives are so accustomed that your milder ones produce no effect. Then, worse than this, the execution of a Mussulman by an infidel provokes hatred. I would sooner the whole country revolted than execute a man. If you take a place by storm and strike a terrible blow, it is the will of God, they say, and they submit without that hatred which executions provoke. My system is this—to strike hard and keep on hitting till resistance is completely over, then at once to form ranks, cease slaughter, and be kind and humane to the prostrate enemy. Immediately submission is made the troops must be subjected to the strictest discipline, not one of the enemy must be touched."

General Skobeleff's opinions regarding the possibility of a Russian invasion of India seem to be by far the weightiest of those cited in the work. He rightly laid his finger on the transport question as constituting the crux of the whole matter, in addition to which he remarked that an army of 150,000 men would be required (90,000 to guard the communications and 60,000 to enter India), as well as supplies on the vastest scale, considering the poverty of Afghanistan. The idea that the Afghans might be relied upon to side with the invaders he rejected, for he shrewdly observed that the English could always overbid the Russians in bribing Afghans, and that, bribing apart, the Afghans would be quite as ready to fight one side as the other.

Mr. Marvin's deductions and generalizations do not appear to be always very just. A parallel which he endeavours to establish between English advances in South Africa and Russian advances in Central Asia is good so far as it goes, but he declares it to be wanting in one point—*i.e.*, that the latter mostly take place with the consent of the home authorities, while the former are carried on in defiance of the Colonial Office. Now, this seems to be just the opposite of fact. It has long been known that Russian officers eager for distinction have set at nought the restricting orders sent from St. Petersburg; and the extension of Russian dominion south of the *rayon* of Tashkent, after Prince Gortchakoff's positive assurance that no further annexations would be made, is a very signal instance of this. On the other hand, every one knows that the important annexation of the Transvaal was made with the full consent of Lord Carnarvon. In fact, the more one reads on, the more is the conviction insensibly forced on one that Mr. Marvin's acquaintance with the Central Asian question is recent if not superficial. At p. 250 he assures his readers that "there is no Sir Henry Rawlinson in Russia." Most readers would take this to mean that there is no one in Russia whose knowledge of the question in its historical, ethnical, linguistic, geographical, and political aspects could rival Sir Henry's. But this is not all the meaning. What Mr. Marvin intends to convey, judging from the context, is that there is no Anglophobia there to match the Russophobia of which Sir Henry is supposed by him to be the type. Mr. Marvin certainly misapprehends the views of that distinguished officer; but, apart from that, has Mr. Marvin never heard of Terentieff, whose violently expressed fear and dislike of England certainly surpass anything ever produced over here? Again, such expressions in Mr. Marvin's book as "the Russophil rant of Gladstone, McColl, the Duke of Argyll, and others of the atrocity school," "We are considered of no account in European politics," "the hateful odour of the atrocity agitation," "Gladstone the deceiver," would lead the reader, even if he were sure of the author's meaning, to doubt his capacity for calm judgment; while in some passages where he takes pains to elaborate his arguments and formulate his opinions he is distinctly unjust. For instance, he is ever and anon extolling the Russian military maps, to the prejudice of the British productions, which he styles "War Office rubbish" and the like. Now we have seen and examined on more than one occasion the Russian Topographical Department map of Central Asia, and have no hesitation in saying that it is decidedly inferior to General Walker's map of Turkistan, which all those conversant with the subject know is the standard one of Central Asia. Indeed, it would be strange if it were otherwise, as General Walker has been supplied from time to time with the Russian work direct from St. Petersburg, and he has thus been enabled to embody it in the successive editions of his excellent map. It is quite a mistake, too, to assert that the British topographical productions are hoarded up and inaccessible to the public, for the Indian Survey have for many years done everything in their power to place their varied stock of maps of the regions between Russia and India at the free disposal of the public. Various libraries and institutions have been liberally supplied, and the lowest possible prices have been placed on the maps. In fact, Mr. Marvin's remarks whenever they touch on geography seem particularly unfortunate. He brings a charge against the Royal Geographical Society of making no attempt to publish the accounts of explorations along the Russian frontier in Asia, and in no way encouraging the dissemination of information dealing with the Central Asian region, but spending the whole of its time upon Africa and the North Pole. This is exceedingly unfair. Africa and the Arctic regions have their share of attention, of course; but can any one say, looking back on the vast stores of information derived from the papers of Sir Henry Rawlinson, Col. Henry Yule, the brothers Michell, the late Mr. Shaw, and the recent lectures of Mr. O'Donovan, Col. Stewart, Major Holdich, and others too numerous to mention, that the geography of Central Asia is neglected? The charge indeed is too absurd almost to refute, and it culminates in an amusing panegyric on the Russian Imperial Geographical Society for its "readiness to assist young explorers, which one looks for in vain in our own society; and when a traveller distinguishes himself like Prejevalsky has done in Thibet, it gives him a greeting on his return such as puts to shame the chilliness and cliquishness of the English association." Few people ignorant of the subject would suppose from this that

the Royal Geographical Society spends considerable sums every year in the purchase of instruments and in grants to travellers, that it is the only society which imparts systematic instruction to intending explorers, that Prejevalsky was actually awarded the Gold Medal of our own society for his travels, and that the Russian society, on the other hand, *never* rewards foreigners at all!

In spite of all this, however, Mr. Marvin's book may do good. Its contents will help to remind the public that the arena of the Central Asian game has shifted from Turkistan to the trans-Caspian region, and that the great scheme of a railway to India may soon come "within the range of practical politics." We have already indicated that the idea of a deliberate invasion of India in the event of hostilities between the countries does not appear to be favoured by the Russian strategists, but that the great aim of their policy is to take up such a dominant position on the confines of India as shall render England incapable of being hostile to Russia in Europe. This may be accepted as the chief lesson to be derived from Mr. Marvin's book. It is of course not new, for the danger has been indicated at various times by Anglo-Indian politicians with more or less emphasis; but it gains point and reality from the fact that an advance is gradually being made along a line of country which nature shows to be the only really feasible route. Whether the railway is prolonged in this obvious direction now or a year hence, or whether it is at present adapted for the conveyance of troops, is a question of minor moment. Such increased facility of communication cannot but have an important bearing on the relation of the two countries. However, this is too purely a political question to be discussed in these columns.

In the Harbor: Ultima Thule. Part II. By Henry Wadsworth Longfellow. (Routledge & Sons.)

THIS volume comprises eighteen short compositions classed as "Poems," five "Translations," five "Personal Poems," and an Envoi named 'Possibilities.' The first poem, 'Becalmed,' represents the poet awaiting his moment of inspiration, and is a suggestive little snatch of song. In 'The Poet's Calendar' the various months of the year say their say in succession. So far it might be compared with Miss Rossetti's 'Pageant,' but it has not either the dramatic-idyllic form of that work or its constant touches of sweet and homely quaintness. Mr. Longfellow's month-song is cleverly executed, but without intuition or imaginative vision. This fact appears saliently in the speech of March, who sets forth that he is boisterous and stormy *because* at a certain date he was degraded from the rank of first to that of third month in the year; he must, in fact, have been just as boisterous and stormy before. In the poem 'Auf Wiedersehen' we encounter another instance of unpoetic illogicality. The thought underlying this composition is confidence in the reunion of friends after death; but the last stanza consigns this confidence to an "if," and one which Longfellow himself seems to regard as rather legendary than actual:—

> Faith overleaps the confines of our reason:
> *And, if* by faith, as in old times was said,
> Women received their dead
> Raised up to life, *then* only for a season
> Our partings are, nor shall we wait in vain
> Until we meet again.

'The Children's Crusade' is a fragment relating to the marvellous and disastrous expedition of 20,000 children who started from Cologne for Palestine, which few or none of them ever reached. Treated as a matter of simple fact, in a narrative consisting of a few glowing, strange, and touching tableaux, this theme would have been excellent; here it is spoiled by an expository strain adulterating the narration. Comment on the rights and wrongs of the matter was not needed in a poem, though it might have been apposite enough in a school history of the Crusades. 'Sundown' is a fine little poem, dated in 1879. We quote it with pleasure:—

> The summer sun is sinking low;
> Only the tree-tops redden and glow;
> Only the weathercock on the spire
> Of the neighbouring church is a flame of fire:
> All is in shadow below.
>
> Oh beautiful awful summer day,
> What hast thou given, what taken away?
> Life and death, and love and hate,
> Homes made happy or desolate,
> Hearts made sad or gay.
>
> On the road of life one milestone more—
> In the book of life one leaf turned o'er.
> Like a red seal is the setting sun
> On the good and the evil men have done:—
> Naught can to-day restore.

Next appears a sonnet on President Garfield, which opens as if something were coming, but nothing important does come. 'Decoration Day,' on soldiers now resting for ever in death, is dated February 3rd, 1882, and must be almost the last written of these poems: it ranks well among Longfellow's short lyrics, and is appropriate as a very late utterance of the poetic veteran. The sonnet 'Chimes,' dated in 1879, is a stately expression of an exalted emotion, and will, no doubt, be quoted again and again in anthologies:—

> Sweet chimes that in the loneliness of night
> Salute the passing hour, and in the dark
> And silent chambers of the household mark
> The movements of the myriad orbs of light!
> Through my closed eyelids, by the inner sight,
> I see the constellations in the arc
> Of their great circles moving on, and hark!
> I almost hear them singing in their flight.
> Better than sleep it is to lie awake
> O'ercanopied by the vast starry dome
> Of the immeasurable sky; and feel
> The slumbering world sink under us, and make
> Hardly an eddy—a mere rush of foam
> On the great sea beneath a sinking keel.

'Four by the Clock,' two quatrains, is in somewhat the same mood, and hardly less impressive. 'Moonlight' presents a sufficiently striking image of the transfiguring power of the lamp of night upon ordinary objects; but here, again, the moralizing bent of the author comes in with fatal effect: his two concluding stanzas of "application" are not in the least wanted—they only serve to turn into a criticism on a picture that which would properly be a picture conveying its obvious message. We may cite against him his own distich on p. 58:—

> Great is the art of beginning, but greater the art is of ending:
> Many a poem is marred by a superfluous verse.

This distich belongs to a short series of "Elegiac Verse." Most of them are pointed in thought and phrase, *e.g.*:—

> Like a French poem is Life; being only perfect in structure
> When with the masculine rhymes mingled the feminine are.

Or, again:—

> Wisely the Hebrews admit no present tense in their language:
> While we are speaking the word, it is already the past.

'The Bells of San Blas' is noted as being "the last poem written by Mr. Longfellow," March 15th, 1882. It is slightly too long for us to quote. This effusion is interesting as expressing a general adherence to modern progress and enlightenment as against the picturesque or pathetic *débris* of the ages of faith; it is, however, rather stiff in wording and versification, and would probably have been improved had the author lived to give it his finishing touches.

We now pass to the "Personal Poems." 'Loss and Gain' is a retrospect partly self-depreciatory: terse in form, fine in grain. 'Victor and Vanquished,' dated 1876, is a sonnet of considerable ingenuity and also elevation of thought; it shall constitute our last citation:—

> As one who long hath fled with panting breath
> Before his foe, bleeding and near to fall,
> I turn and set my back against the wall,
> And look thee in the face, triumphant Death.
> I call for aid, and no one answereth;
> I am alone with thee who conquerest all:
> Yet me thy threatening form doth not appal,
> For thou art but a phantom and a wraith.
> Wounded and weak, sword broken at the hilt,
> With armour shattered and without a shield,
> I stand unmoved: do with me what thou wilt:
> I can resist no more, but will not yield.
> This is no tournament where cowards tilt:
> The vanquished here is victor of the field.

Two other sonnets follow—'Memories' and 'My Books.' The second is touching; the first closes with three damaging lines, which over-define that which is only imaginative so long as it remains indefinite: another but somewhat variant instance of Longfellow's "besetting sin." The Envoi, dated in January last, intimates some dissatisfaction with living poets and their modes of thought and work, and forecasts the possible advent of some greater inventor, a "graduate of the field or street."

On the whole, this little volume well sustains the reputation of its honoured author, and adds one spice to a fragrant memory. It contains, as a prefatory note sets forth,

"all of Mr. Longfellow's unprinted poems which will be given to the public, with the exception of two sonnets reserved for his biography, and 'Michelangelo,' a dramatic poem, which will be published later."

Vice Versâ; or, a Lesson to Fathers. By F. Anstey. (Smith, Elder & Co.)

MR. ANSTEY'S book, though it is not a novel, is a work of fiction of an original kind. The author apologizes for "a tale which has the unambitious and frivolous aim of mere amusement." No such apology is necessary; the reader only fears that the announcement must be too good to be true. That is not so, however, and the book proves to be a most amusing piece of fooling. A father and a son are made to change places—to change bodies, in fact, by the action of a talisman which the father is holding in his hand when he utters the unfortunate wish

that he could only be a boy again and be going back to school like his son. Thereupon he at once changes into the likeness of the son. Giving the talisman, which only works once for one person, to the son, that he may wish his poor father back again as he was, the son prefers to wish to be like his father before the change. The father is sent off to school, unable to persuade the cabman to take him back. His first thought is to bribe him with a sovereign, but unfortunately everything about him has changed —even the contents of his pockets:—

"There was no gold in any of them. He found, however, a variety of minor and less negotiable articles, which he fished out one by one from unknown depths—a curious collection. There was a stumpy German silver pencil-case, a broken prism from a crystal chandelier, a gilded jew's harp, a little book in which the leaves on being turned briskly gave a semblance of motion to the sails of a black windmill drawn therein, a broken tin soldier, some Hong-Kong coppers with holes in them, and a quantity of little cogged wheels from the inside of a watch; while a further search was rewarded by an irregular lump of toffee imperfectly enfolded in sticky brown paper."

At last he finds a purse, but it contains only the five shillings which he has just given his son for pocket money. Then he is met by the schoolmaster and some of the boys, and it seems to him that the place is no fit one for the painful revelations he will have to make. His pompous language when he tries to explain that there is a mistake only exasperates the schoolmaster, who rates the boy for his impertinence in mimicking his father's manner. The other boys, finding that he has suddenly become a sneak and a prig, make his life miserable. He is still in mind the heavy, prosperous citizen, with a great taste for good living, and a liver which is a little troublesome. Imagine his being kicked by his schoolfellows, forced to swallow the plain schoolboy fare (especially the treacle pudding), his trouble over his Latin exercise, and, last indignity of all, his being called upon by the dancing-master to perform the sailor's hornpipe alone! All these situations are described with the liveliest humour and the keenest sense of the ludicrous. In small things, too, the author shows how completely he has imagined his wretched hero's position, as, for instance, when he puts up his hand to his head, expecting to feel the familiar polished surface, and finds a thick crop of hair instead, or when in doing his arithmetic he cannot help being struck by the absurdity of some of the problems from a commercial point of view.

The Sunday at school is not the least happy passage of description. On the way to church, to which the boys walk two and two, the hero's companion talks about a certain Connie Davenant, who seems to have been a great friend of the son's, and from his pew the luckless hero observes a girl of about fifteen making furtive signals to him:—

"To be signalled to in a marked manner by a strange young lady of great personal attractions might be a coveted distinction to other schoolboys, but it simply gave Mr. Bultitude cold thrills. 'I suppose that's "Connie Davenant,"' he thought, shocked beyond measure as she caught his eye and coughed demurely for about the fourth time. 'A very forward young person! I think somebody ought to speak seriously to her father.' 'Good gracious! she's writing something on the fly-leaf of her Prayer Book,' he said to himself presently. 'I hope she's not going to send it to *me*. I won't take it. She ought to be ashamed of herself!'"

The note is thrown to him and discovered by the master, and this very nearly leads to serious consequences. It is, indeed, a terrible position for a respectable City merchant. But there is more than his own personal inconvenience at school. There is, of course, the other side of the picture too—the son playing his father's part at home and in the City. For the first day or two the unfortunate man or boy is wholly absorbed by the consideration of the miseries which surround him, but is reminded of the havoc which is being made of his home and his business by a letter from his daughter, who of course writes, as if to her brother, about the extraordinary and delightful change which has come over papa:—

"Generally he stays at home all the morning and plays at soldiers with baby in the dining-room. You would laugh to see him loading the cannons with real powder and shot, and he didn't care a bit when some of it made holes in the sideboard and smashed the looking-glass..... We have been out nearly every evening—once to Hengler's and once to the Christy Minstrels, and last night to the Pantomime, where papa was so pleased with the clown that he sent round afterwards and asked him to dine here on Sunday, when Sir Benjamin and Lady Bangle and Alderman Fishwick are coming. Won't it be jolly to see a clown close to? Should you think he'd come in *his* evening dress? Miss Mangnall has been given a month's holiday, because papa didn't like to see us always at lessons. Think of that!"

Later on it appears that at the office in the City the respected colonial produce merchant has been discovered in his shirt-sleeves making toffee with the office boy, and that his valued Canton correspondent has been greeted with a highly successful booby-trap. In fact the whole story is told with delightful drollery and spirit, and there is not a dull page in the volume. It should be added that Mr. Anstey writes well, and in a style admirably suited to his amusing subject.

Essays at Home and Elsewhere. By E. S. Nadal. (Macmillan & Co.)

THIS little volume is undeniably pleasant reading. Mr. Nadal regards things with a friendly eye and reports upon them without malice and without reserve. He tells his readers just what he thinks, and seems to feel sure that they think the same and will be happier for knowing that he is of their mind. And at first sight, besides this friendliness (which is a very genuine quality of his work), he appears to have the gift of simplicity. But on looking a little closer we are obliged to recognize that his simplicity is not genuine. It is a trick. Mr. Nadal has made the discovery, which others have made before, that many of the effects of profundity may be produced by the easy expedient of taking no trouble at all about your thinking and writing, but just jotting down the phrases that rise to the lips. Instead of labouring to impress by saying something so subtle that it cannot possibly have been thought by any one else, say something absolutely trivial, and you may count, at any rate, upon nobody's having had the impertinence to print it before. Instead of taking pains to express difficult ideas, dash in a few passages that mean nothing at all, and you will give your readers the more occasion for speculation at the less cost to yourself. These principles are more or less faithfully carried out in all the papers of a literary and political bearing, and the results are bewildering. Perhaps the essay on Mr. Matthew Arnold is that which most effectually baffles the reader. It is in two parts, written at different periods of Mr. Nadal's life, and gives first his boyish impressions and afterwards his mature convictions. As a boy he came to the conclusion that Mr. Arnold possessed "the essential quality of poetry, music," and "that the feeling of nature was profound in him." But then he was troubled by a certain difficulty of articulation:—

"His eyes perceive, his lips are fixed to speak, but utterance fails him. We see it in such expressions as 'the rustling night air,' 'the intense, clear star-sown vault of heaven,' and in the frequent use of such adjectives as 'cool' and 'clear' in description of water. The true, the definite expression may be said to be somewhere inside of these; and even when Mr. Arnold is most successful—and he is often nobly successful in his interpretations of nature—the effect is due quite as much to the music as to the words."

Now, if Mr. Nadal had not just said that music is the essential quality of poetry, we could have understood what he meant by thus complaining that Mr. Arnold's success is due quite as much to his music as to his words, though we might still have thought that "the true, the definite" criticism would lie somewhere within remarks such as Mr. Nadal has vouchsafed. As it is, it is impossible to say at what the writer is aiming. Again, as a youth, Mr. Nadal thought that at times Mr. Arnold seemed to have a creed to advance, but he doubted his possession of sufficient faith to make a teacher. However, on returning to the subject after many years he declares himself satisfied on this point. Mr. Arnold is a teacher, and his business is to show the relation between morality and nature. This the reader understands well enough. But he is again puzzled when he is told, after much testimony to the seriousness and veracity of Mr. Arnold, that that writer has a habit of saying what is not true under cover of happy artistic expression; and when in illustration of this Mr. Nadal gives the following extract from the essay on Heine, the reader begins to have an uncomfortable suspicion that he really has been imposed upon:—"That is what I say, there is so much power, so many seem able to run so well, so many give promise of running well; so few reach the goal, so few are chosen. Many are called, few are chosen." While Mr. Nadal remarks upon this passage that what is new and taking in it is hardly true, his readers will be inclined to ask, What *is* new and taking in it? Mr. Nadal undertakes to explain: "It is this, that the man who is to 'run' shall have, to begin with, a great original genius, that he shall have also learning and high culture, that he shall be virtuous, and, having done all this, he shall proceed to 'run.'" But he continues, with happy unconsciousness that what he has just said is to be found nowhere in the essay under criticism, "surely this will not do as a suggestion of a possible plan upon which to make a writer"; and he assures us that

nature knows better than Mr. Arnold how to make poets, and that had Byron been virtuous and possessed culture, he would never even have begun to "run." This last may be true or it may not. But it certainly cannot alter the facts that Byron made shipwreck of his life and genius, and that out of Heine the world has got only "a half-result for want of moral balance and of nobleness of soul and character." Which is what Mr. Arnold really did say in the sentence immediately preceding those quoted and expounded by his critic, the sentences that seem so pointless when separated from the context. In an essay on 'Newspaper Literary Criticism,' Mr. Nadal says very justly that the reviewer should set the interests of his readers even above the feelings of his author, for he is the only professor of literature who always has an attentive class, and his first duty is towards this class. Surely Mr. Nadal owes it to his own class to give it more just impressions than this of what Mr. Arnold does for his. But it is to be hoped that no one will take Mr. Nadal seriously in the professorial character. His true part is that of the intelligent acquaintance we meet in the street as we come out of the lecture-room, and like to walk home with. A good instance of Mr. Nadal's tact in flattering the knowing and the simple in one breath occurs in the essay—in some respects the best in the book—called 'A Trip to a Political Convention.' On his return home he moralizes on democratic institutions, and as he has just had a good look at them in action the reader expects something weighty from him. He says:—

"It is very interesting to consider what are the sources and processes of public action in a democracy. Of course the people at large are the supposed authors of nearly everything that is done by the state. Yet of by far the greater part of what is done the people are undoubtedly not the authors—are indeed almost ignorant. Who does it then? And how is it done? And are there discoverable laws according to which the action of democracies must proceed?"

But when at last the reader gets the answer to this elaborately stated question, it is nothing more than the truism, three times repeated, that the common people have a sure instinct as to whom they shall trust.

But we must not only carp. Mr. Nadal may not be particularly helpful as a critic of politics or of literature, but he is delightful as a painter of landscape and figures. This very essay about the political convention is full of admirable sketches of scenery and of the life of the people in town and country, on work-days and in Sabbath rest. And here the genial friendliness of the writer tells to best advantage. He is on thoroughly happy terms with everything he sees. The sunlit meadows of New Jersey, the big barns sleeping in the moonlit pastures of Lancaster county, the black bridges of the Susquehanna, the apple orchards and red cottages bordering the wide mouth of the Chesapeake, the deep glades of the Ohio forests, where no underbrush hides the tall timber and where the smooth glades recall to his mind the scenes of the old mythology—all come before us as we read with the bright and tender clearness of scenes affectionately remembered. And he has such a kindly as well as vivid word for every human figure that crosses the scene, from the "boys who sell popcorn" to the shadowy images of the gods and goddesses his fancy evokes, that it is quite impossible not to enjoy oneself in his company. We should like to quote some of his descriptive passages, but want of space forbids us to give them at fair length, and we prefer not to do by Mr. Nadal as he has done by Mr. Arnold in the matter of Heine and Byron.

Henry Erskine: his Kinsfolk and Times. By Lieut.-Col. Fergusson. (Blackwood & Sons.)

COL. FERGUSSON has exercised a wise discretion in adopting for his monograph on Henry Erskine the form of chatty memoirs rather than of a connected biography. As he remarks in his preface, the materials do not exist for an elaborate treatise on the opinions and public acts of the Lord Advocate. He had not, like his more celebrated brother, the opportunity of filling a large place in the public history of his country, and his great influence in the North arose from graces of character and personal charm as much as from his political consistency and the actual services he performed. Yet enough remains on record to show that while his love of liberty was in no degree less real than that of the Chancellor, and his steadiness to his party unflinching in circumstances of considerable disappointment, he was much more cautious than either of his brothers. His letter to Sir Gilbert Elliot in 1792, when the Earl and the future Chancellor were hot "Friends of the People," is an instance of his moderation; while the determined assertion of his independence when the leading members of the Scottish bar, including some of his own personal friends, successfully opposed his re-election to the Deanship of Faculty, on the ground of his having taken the chair at a meeting of reformers, does credit to the staunchness of his Liberalism and his "inflexible adherence to principle." But it is Erskine as a man, the warm-hearted, bright-spirited friend, whom his political opponents honoured as much as his most ardent supporters, who is revealed in this volume; the man of whom it was said that the poor would never want a friend while "Hairy" Erskine lived; the tender brother, son, and parent,—in short, as he was called not undeservedly by a speaker in the House of Lords, "the best-beloved man in Scotland." In this book many happy instances of Erskine's wit and wisdom are recorded, and the form of it admits of a good deal of discursive reference to anecdotes of the time which have a connexion more or less distant with the central subject.

No memoirs of the Erskines would be complete without a reference to their pedigree, their family tree being not only remarkable in a land where such heraldic growths are common, but their talents for public life as well as their private virtues being signal instances of "heredity." The genealogical part of the book will be lightly skimmed by most people, but the most careless of antiquity may be interested in the more immediate ancestors of this branch of the Erskine family. The author points out that by a slight typographical error an arrow, indicating descent, has been placed under the name of Ludovic, second Duke of Lenox, whereas it is well known that this line was continued by his brother Esme, third duke. A descent through Catherine, first Duchess of Lenox, from "the lines of Visconti Dukes of Milan, Della Scala of Verona, Doria of Genoa, as well as the Bourbons and De Rohans of France," will, at any rate, interest the antiquary; and a "table" in the appendix duly sets forth the foreign descent of the Erskines from Louis IX.; while to those but slightly penetrated with the genealogical passion it will be a matter of interest to learn that in the female line Henry Erskine's father, the tenth Earl of Buchan, was descended from the royal Stewarts, the family of Fairfax, and through this stock from Sir Thomas Browne, author of the 'Religio Medici,' while his admirable mother, Agnes Steuart, was the daughter of Steuart of Coltness, Solicitor-General for Scotland, by a wife of the Dalrymple family. Coltness's father was that "great man and extraordinary Christian," otherwise the "thorough-paced traitor" and "Cheat the Woodie," James Steuart the Lord Advocate. Plenty of law, at any rate, was hereditary in the family, as well as Whiggery, though Lord Buchan seems to have combined a speculative leaning to Jacobitism with his Presbyterian tenets, in spite of the heavy affliction his grandfather Lord Cardross had undergone at the hands of the Cavaliers. The sister of the same tenth Lord Buchan, Lady Frances Erskine, was married to the pious and ill-fated Col. Gardiner, and probably shared the deeply religious turn of mind which is as conspicuous in the family as genius and eccentricity. Nothing in this domestic history is more pleasing than the family affection, which seems to have been as conspicuously exemplified in the earlier generations as between the illustrious brothers in the heyday of their busy lives. Lady Mar's account book in 1640, with its entries for behoof of "John ye bairne," shows that strong-minded dame to have been a tender mother and grandmother; while the letters of Frances Fairfax, the wife of the ninth earl, to her husband are as instinct with domestic tenderness as the letter in which Thomas the Chancellor in a leisure hour writes a description of his children for their uncle's benefit, or the kindly if rather insane extension of the parental relation by the eccentric David Stewart, Lord Buchan, the recipient of the letter, to all and sundry of the name and lineage (by adoption) of David! It may be mentioned before leaving the subject of genealogy that the noted author of the 'Institutes,' and his grandson, the celebrated minister of Greyfriars, who figures in 'Guy Mannering,' were cadets of the Cardross or Buchan branch of the Erskines.

From the early history of the family the author turns to the circumstances surrounding the youth and education of his hero. And here—not for the only time in the course of the book—a correction is afforded to the rather loose treatment of such points in Lord Campbell's 'Life of Lord Erskine': "Is it necessary to assert that oatmeal porridge is no sign of poverty in Scotland?" The poverty of the Buchans seems to have been exaggerated. It is certain they kept a good house in Edinburgh, where, in a simple

style, Lady Buchan, the pupil of Maclaurin, Sir Isaac Newton's friend, entertained a small circle consisting of all that was then brilliant in Edinburgh society, including the leaders of the Parliament House and General Assembly. At St. Andrews, where Lady Buchan's name is still remembered, the younger Erskines went to school, and Tom learned "shantrews" and the double hornpipe. On his brother going to sea, and his parents settling at Bath, Henry Erskine matriculated at Glasgow, where he seems to have formed the classical taste which soon stood him in stead at the bar. His law classes in Edinburgh succeeded the Glasgow course, and he was admitted advocate in 1768, a year after his father's death. His rise to the front rank of the profession was the quickest ever known, and he retained his position with little trouble, it is said, throughout his life. Something no doubt was due to his status and connexions—he was not, like the Cromwellian judges, a "kinless loon"—and the interest which his parents must have possessed among the courtiers of Lady Buchan's circle in the High Street; but after every allowance it is clear that his forensic ability was of the first class. Lord Brougham, a good authority, considered him not inferior to Lord Erskine himself. One mark of his confidence as an advocate was his bold disregard of the conventional style of pleading, as the argument is called in Scotland. He headed, in fact, a renaissance movement in the department of oratory, substituting a free, ornate style of speech for the whining tone and common form of debate. The well-known "Hoots, Maister Hairry, dinna be brief, dinna be brief," shows how the bench enjoyed the change. Like Wedderburn, the young lawyer exercised his eloquence at the outset of his career as a ruling elder in the General Assembly, where he said he enjoyed "running down Hill"; but he seems, contrary to what is recorded of his predecessor, to have held the venerable body in all due respect.

Not the least interesting among the many subjects for reflection set before us in this work is the great change which began to come over the physical and social condition of Edinburgh about the time that Henry Erskine was beginning his career. The Nor'loch was not bridged and the New Town was not built when Erskine was a young man, and attended "assemblies"—of a lighter cast than that mentioned above—at the West Bow or in Bell's Wynd. In the old fortified city there was not much room for an influx of population, and the crowded state of the streets brought the highborn dames and gentlemen who inhabited their ancestral homes within the walls into daily and hourly juxtaposition with "cadies" and fishwives, the "proletariat" of the Auld Town. Yet in those simple times the thorough knowledge every one had of his neighbour made pretension useless, and there were few heartburnings between classes so closely acquainted and yet so definitely distinct. It may well be doubted whether the distance of modern times has led to better feelings, though there is no doubt of the physical improvement wrought since the days when the Long Gait straggled where Princes Street now stands, and when a murder could be committed on the north of the loch within sight of the citizens on the south. The musical attainments of the bands are also improved since Donald Munro played a bass at the assemblies which was "like the wind i' the lum, or a toom cart gaun doun the Blackfriars Wynd." Amateur music, however, seems at this time to have been zealously cultivated under the auspices of Lord Kellie and others.

Of the conviviality of the times much has been written, though the rougher debauchery which characterized the days of Braxfield and Hermand was already on the wane, together with the rough diction of which Polkemmet was so amusing an example. The names of Braxfield and Polkemmet are connected with many tales. Here is one we do not remember:—

"At a whist party Sir James Colquhoun [Laird of Luss and Principal Clerk of Session] had the misfortune to cut in with the judge. The baronet, more confident in Lord Braxfield's power of language than in his own whist, refused to sit down till he had made his stipulation. 'Noo, my Lord, afore oo begin, ye maun promise *no to misca' me.*' 'Na, na, Jemmie, sit ye doon; I 'll promise I 'll no do that.' Many hands had not been played, when Braxfield, in utmost wrath, exclaimed, 'Ye —— blockhead and eedit! what garred ye play that caird o' a' the cairds in the pack?' 'Noo, my Lord, did ye no promise that ye wad na misca' me?' pleaded the erring partner. 'Naither I did, Jemmie, naither I did: I appeal to this company if I *misca'd* ye.'"

To the present writer we are indebted for an account of the mysterious body called the Beggar's Benison, which had its headquarters at Anstruther, near Erskine's retreat in Fife, and for a more accurate description of the patriotic Poker Club than is given by Lord Campbell. Among the literary amateurs of that active-minded generation Erskine was deservedly a leader; the specimens of his verse here given, especially the translations from the classics, proving him to have stood above "the mob of gentlemen" who merely "write with ease." It is noteworthy that he shared the feelings of his friend the Duchess of Gordon on the question of clearances in the Highlands, on which subject a characteristic and energetic letter from her grace is preserved, while Erskine's 'Emigrant' was called forth by a similar burst of generous indignation.

Erskine's good-natured raillery was sometimes rather personal. When he was the chosen advocate of all incorporations and societies he dined with an incorporated body of tailors.

"In the course of the evening they had drunk the health of their guest and counsellor, to which he felt called upon to reply before leaving the room. He rose to do so, and chancing to notice that there were exactly *eighteen* of his entertainers, the tailors, at the table, he concluded his speech by wishing 'Health, long life, and prosperity to *both of you!*' But before the meaning of the allusion had dawned upon them Mr. Erskine had vanished from the room."

Another instance, certainly, is his condolence with Mr. Kettle, Lady Glencairn's agent, upon the downcome of ancient families:—

"'Your great ancestor, Pan, was looked on as a *god* in the time of the Romans: and now here you are, Kettle, only an *Edinburgh writer.*'"

In a more complimentary strain was his answer to the Duchess of Gordon, who said she was leaving Edinburgh because it was so dull:—

"'Madam, that is as if the sun should say, "It seems vastly dull weather—I think I shall not rise this morning!"' This [says the author] is narrated of Fox and the Duchess of Devonshire. It is left to the curious in such matters to establish the correct version of the tale."

Many incidents in the life of Lord Chancellor Erskine—as the details of his duel at Brighton, his notable defence of mine host of the Cock Tavern, the text of his celebrated sermon to the men of the 1st Royals, his elaborate views upon marriage submitted by the philosophic ensign in a letter to his commanding officer—are graphically related. Lord Buchan's character, too, is amusingly displayed in a correspondence which, on the whole, places him in a far higher light than that in which Scott and others represent him. The work and life also of Lady Ann Erskine, the pious follower of Lady Huntingdon, show her to have been not the least capable member of this remarkable family; while the letters of "Aunt Betty," Mrs. Elizabeth Steuart of Coltness, of Mrs. Mure, and of Mrs. Calderwood of Polton, the correspondent of Lady Mary Wortley Montagu, in all their graphic quaintness, set forth inimitably the strong sense and humour (in Aunt Betty's case mingled with a strange superstition) which characterized the nearly extinct class of thoroughly Scotch old ladies.

On the whole, perhaps, the best criticism we can offer on Col. Fergusson's work is that it is an excellent contribution to the literature of Scottish life and humour. Some of the stories are as redolent of the soil as any of "the Dean's"; while of the excellent man round whom the interest of the narrative is centred we are never either weary or ashamed. Few who have trodden the thorny and sometimes miry path of politics have contracted so few of the stains of the conflict. Though he did not reap all the honours which it would have been creditable to authority to bestow upon him, he gained the unbought honours which merit alone can permanently win in the affections of his countrymen; and though in his enforced retirement, so pathetically described, he looked back upon some disappointments, he was rich in what he valued most, the honour and love of his friends, and left a name never to be forgotten in connexion with what he valued only less, "the independence of the Scottish bar." The value of the work which so sympathetically recalls his memory is enhanced by the quaint but telling addition of lively sketches by the author and his nephew, Mr. Hole, A.R.S.A., which serve to illustrate a book which is picturesque as well as graphic.

NOVELS OF THE WEEK.

Fortune's Marriage. By Georgiana M. Craik. 3 vols. (Hurst & Blackett.)

Marchcroft Manor. By C. A. Roberts. 2 vols. (Remington & Co.)

Greystone Abbey. By Emily Foster. (Wyman & Sons.)

Ruthieston. By the Author of 'The Chorister Brothers.' (Walter Smith.)

'FORTUNE'S MARRIAGE' is "only the story of a weak, impulsive, undisciplined, loving woman, whose husband was a man who had no pity for weakness." These are Miss Craik's own words, and they sufficiently describe the character of her book, which is simply a painstaking account of the matri-

monial troubles of an ill-assorted couple. The incidents, meagre in themselves, are commonplace, and for the most part painful; but they are carefully and dispassionately told. A well-intentioned lady, Ursula Glyn, brings about a marriage between her brother Ronald and her friend Fortune Denbigh; but as Ronald is an exacting prig, whilst Fortune is weak and trivial, they soon begin to misunderstand each other. For a very inadequate reason the husband refuses to live with his wife; and then we have another version of the romance which Mr. Tennyson long ago compressed into a couple of stanzas. "We fell out, my wife and I," Ronald Glyn may have said to himself; "we fell out, I know not why"; but after two years of separation and bitterness they "kissed again with tears." Miss Craik has devoted much thought to the elaboration of her plan, which deals almost exclusively with the characters of her hero and heroine; and the account of their gradual reconciliation is particularly able. The sketch is none the less powerful because it is lacking in warmth and relief, and seems at times to be too long drawn out.

'Marchcroft Manor' is a pretty love story, in which a double thread of interest is well sustained from beginning to end, and the heart's history of four exceptionally nice and fortunate young people is told with freshness and simplicity. Olive and Ella Malloney are the daughters of an eminent physician, who allows them to spend a good deal of their time with their aunt, the wife of a country rector. Here they are seen by the young squire (with a terribly Norman name) and his bosom friend Osborne. The girls are a delightful pair, fine in nature and character; and whilst their lovers are in every way worthy of them, the course of their love is interrupted by more than one misunderstanding, caused by somewhat exaggerated scruples and points of honour. In the end, however, all comes right, and the reader is allowed to put down the book in good humour with everybody. The author is a decided optimist, inclined to make too light of certain difficulties in plot, construction, etiquette, and even English grammar; but in spite of all this 'Marchcroft Manor' leaves a good impression.

'Greystone Abbey' is a very conventional story of incident. There are strange doings on the part of different members of an aristocratic family. A haughty baronet turns his son out of doors for a supposed intrigue with a cottager's daughter; a wicked attorney marries the sister of the disinherited youth, forges a will, and keeps the widow and the infant out of their rights. The real seducer of Lydia Stephens turns out to be a wealthy City merchant, whose supposed daughter marries the son of the lad who has suffered for the crime. This son's virtue is rewarded by his becoming in the fulness of time both a baronet and an earl, and reigning at Greystone Abbey. There is no great amount of literary adornment of the tale. Indeed, the narrative is for the most part business-like and direct. When the author makes reflections they are not profound; as thus:—

"When there is a consumptive tendency, it is astonishing what a little will develope it; and perhaps Lord Thornberry, consequent [*sic*] on the disturbance of his mind after Bertha's refusal of his offer, had not been so careful of his health as he ought to have been, and he had no kind mother or sister to look after him; consequently the seeds of disease were already springing up," &c.

This kind of "running on," however, is an exception to the simplicity which is the principal characteristic of the author's style.

There is an air of actuality and genuineness in "Some Notes by a Brother and Sister," as the story of 'Ruthieston' is further described on its title-page. It is the tale of a young Episcopalian minister, who undertakes the charge of a Scottish parish, and makes a gallant attempt to convert all who need conversion by what are known as High Church methods. He and his sister compile between them the annals of the parish during four years, and it must be admitted that the scenes from clerical life which make up the faithful and devout story of 'Ruthieston' are, on the whole, amazingly trivial. But they who are attracted by a subject of this kind will find here a simple and entertaining story.

SCHOOL-BOOKS.

Elementary Classics.—Quinti Horatii Flacci Carminum, Liber III. Edited for the Use of Schools by T. E. Page, M.A. (Macmillan & Co.)—This little book is one of the few which rise by their intrinsic merits above the mass of annotated editions which have for some years past embarrassed and pauperized the teaching profession. The notes are scholarly, indeed at times almost too scholarly, considering the modest aim which the book is supposed to fulfil; but they are helpful in the best sense, and the author's own translations are to be praised for a delicate perception, which will, we fear, be often lost upon those for whom he professes to write. We hope that the knowledge and power of refined treatment which are shown here may at a future time be employed upon a more important work.

The Great Giant Arithmos. By Mary Steadman Aldis. (Macmillan & Co.)—This clever little volume, "a most elementary arithmetic," as the author calls it, is a delightful introduction to "one of the most important branches of instruction," to that one which bungling teachers have succeeded in making the driest and most disliked of all, but which is here shown to offer considerable interest to youngsters of average brightness. The preface tells us "that the book is intended to be read to the child." It presupposes no acquaintance with arithmetic on the part of the pupil, who, judging from the lessons themselves, is about six years old, and has been so far instructed that he can write and spell little words. The lessons are graduated with singular skill and exhibit teaching ability of no mean order. Arithmetical signs, notation, numeration, and the first four rules are taken and completely explained, and before the end of the book the great giant Arithmos seems to surrender at discretion to his young assailants and to become their helpful and interesting friend. The very telling diagrams freely scattered throughout the work are a capital feature, and are well calculated to fix the learner's ideas. The three blind mice whose tails suffered so severely at the hands of the irate farmer's wife, and several other acquaintances of childhood, are in quaint illustrations pressed into the service against the giant. Mrs. Aldis does not take her young followers very far into the giant's domains, but she makes them look well around them on their way and leaves no recesses unexplored where difficulties might lurk. From this comprehensive treatment of the elements of arithmetic it follows that the scholars who carefully peruse these lessons and do what Mrs. Aldis tells them to do will acquire much valuable knowledge about numbers which readers of more ambitious manuals often miss entirely. We most cordially recommend this little treatise to those "mothers who wish to retain some portion of that influence which nature intended them to have in the training of their children, and who refuse to abandon it wholly either to the schoolmaster or the State."

An Aid to Arithmetic. By E. Diver, M.D. (Griffith & Farran.)—This is an attempt, and a not unsuccessful attempt, to remove to the first stage of education the processes of thought which are usually reserved for a later one, and which, indeed, are often not consciously performed at all. Whether the teaching of elementary arithmetic is thereby made easier may be questioned, but it is certainly made more bracing.

Worked Examination Questions in Plane Geometrical Drawing. By F. E. Hulme. (Longmans & Co.)—This book is intended for the use of candidates for the Government military and civil engineering schools, and for those who desire to pass in the university local examinations. The author, the art master at Marlborough College, has produced a few books expounding his notions of decorative design and draughtsmanship of ornament. This volume is the first among his productions of which we are able to write in unqualified terms of praise. Mr. Hulme understands his subject, and he has put his knowledge before the reader in a clear and concise manner, so that his work will be found useful not by beginners alone, but by those teachers who must needs have recourse to the use of worked figures in plane geometrical drawing, and who like to have them in a duly graduated order, so that the practice of one shall lead to the achievement of the next. In several cases the author has been at the pains to work out problems in duplicate and even triplicate methods. This mode of proceeding is no doubt well adapted to drive the subject into the heads of students, who may often get hold of the radical principles of their work by such a method after other means of grasping it with intelligence have been but mechanically fortunate. Different modes of approaching the solution of a single problem enable a pupil to take all-round views of his difficulties. Mr. Hulme has avoided the use of arithmetical methods of working out problems which deal with proportionals and areas. Geometricians will understand why he has done so. Having tried several of the exercises which were, to a certain extent, crucial in determining the value of the methods and practice of the author, we may recommend his book to any one who desires to master in an intelligent fashion the simpler parts of plane geometrical daughtsmanship, and some that are more advanced. None is very complex; the best are at least up to the level of examinations, many of which are quite difficult enough. The plates being folded, their numbers ought to have been given on the backs for purposes of reference.

The Granville Series.—Standard Reading Books. Nos. I., II., and III. (Burns & Oates.)—Intended for the first three standards, these reading books are of more than average merit. The reading lessons are excellently adapted for the several standards, consisting of some of the old familiar legendary tales well told, biographical and other anecdotes full of interest and instruction, short chapters of natural history, and pieces of poetry, all printed in remarkably distinct type, plentifully and well illustrated, and strongly and neatly bound. Such a sentence, however, as "It can't be him" is ungrammatical, and consequently unfit for a reading book.

Granville History Readers.—No. I. *Stories from English History.* No. II. *History of England from the Norman Period to the Wars of the Roses.* No. III. *History of England from the Wars of the Roses to the Present Time.* By T. J. Livesey. (Burns & Oates.)—The 'Stories from English History' in No. I. are well calculated to excite an appetite for the

'History of England' contained in the last two numbers. They are short and simple narrations of incidents likely to arrest the attention and live in the recollection of children. The 'History of England' gives, in a series of consecutive chapters of convenient length, just that kind of historical information that can be grasped and retained by young beginners. All the well-known anecdotes and sayings are recorded, often accompanied by a word or phrase reminding the reader that they rest rather on popular report than historical evidence. But there is occasional inaccuracy in statements which purport to be historical. Thus, after the death of Edward II. Mortimer is said to have been surprised and slain at Northampton, instead of Nottingham. The dates, too, are occasionally incorrect. It is a monstrous exaggeration to say, "In many villages Elizabeth had several hundreds of people hanged at once." Here and in not a few other places the "Catholic" animus is too prominent. A very insufficient and inaccurate account of Bacon is given in this sole sentence about him: "The king disgraced Lord Bacon, too, who was a corrupt minister, though so learned a man, because he had not courage to oppose his bad and foolish favourite." The style is simple and familiar to a fault, partaking too much of the character of small talk and too little of the tone of literature. There might have been just as much clearness and force with more neatness and finish. Throughout the third volume are inserted here and there pieces of poetry, which interrupt the narrative without much compensating advantage, as they are rarely remarkable for excellence. All the volumes are well printed and bound, and furnished with appropriate illustrations.

London University Matriculation Papers in English for Twelve Years, worked out in full as Models. By the Rev. G. B. Cox. (Stewart & Co.)—Mr. Cox intends his book not to supersede but accompany standard works on English grammar, from which alone a thorough and systematic knowledge of the subject can be obtained. His idea is that the questions set at the University of London Matriculation Examinations are so vague and wide in scope that even candidates who have acquired considerable information in this department of study find a difficulty in answering them, and it is for the special behoof of such persons that he has here supplied answers to former examination papers. It is scarcely conceivable that they form a class at all numerous, but if there are any intending candidates who, after having got up the subject from standard works, wish to make assurance of passing doubly sure, this crib may serve their turn. The danger is that not a few will be tempted to make use of it instead of a systematic treatise, and for the purpose of mere cram, as a means of enabling them to scrape through the examination with a very fragmentary and superficial knowledge of the subject. Mr. Cox has consulted and refers to the recognized authorities. His answers are certainly not wanting in completeness; they are also distinct, and for the most part correct, though, as he himself says, sometimes open to question. There is necessarily a good deal of repetition, which may be not an unmixed evil. The index is an unmixed good.

Chambers's Graduated Readers. Parts I. and II. (Chambers.)—The reading lessons in these first books are easy both to read and understand, clearly printed, and nicely illustrated. Exercises in spelling, grammar, and writing, with arithmetic tables, are also included in the well-bound volumes.

Systematic Course of Exercises in Elementary Arithmetic. By A. Leedham. Part I. (Philip & Son.)—As a text-book in conjunction with oral instruction, this systematic commencement of arithmetic is worth the notice of those teachers who treat arithmetic as a means of mental discipline rather than of acquiring mechanical expertness in calculation. The author has turned his twenty-five years' experience to good account in the construction and arrangement of examples and questions which necessitate thought and are yet not beyond the capacity of ordinary beginners.

LAW BOOKS.

A Dictionary of English Law, containing Definitions of the Technical Terms in Modern Use, and a Concise Statement of the Rules of Law affecting the Principal Subjects, with Historical and Etymological Notes. By Charles Sweet, LL.B. (Sweet.)—No one can deny that Mr. Sweet's law dictionary is a work of considerable utility, or that it is most elegantly produced as to type, arrangement, and binding. Nevertheless it must strike the legal reader that, as several very good law dictionaries exist already—notably Wharton's and Mozley and Whiteley's—the author might perhaps have used his time better if he had moulded the learning he has accumulated in the last ten years into some other shape instead of adding another book to a shelf which is already fairly well filled. An examination of Mr. Sweet's book does not disclose any grounds for supposing that he will supersede either of his predecessors. No doubt his book contains more matter than that of Messrs. Mozley and Whiteley; but the latter only professes to be a "concise" dictionary, and we may take this opportunity of mentioning that experience shows it to be wonderfully comprehensive in its conciseness. We are glad to do the authors this justice, for we had not, of course, been able to apply the grand test of continued practical use when we reviewed the work on its first appearance. To return to Mr. Sweet: a comparison of his work with that of Wharton will be rather to his disadvantage. The books are apparently of about equal volume, and might therefore be expected to contain about the same amount of matter. But, on comparing corresponding portions of the two works, we cannot resist the impression that Wharton's dictionary is wider in scope, both as to its manner of dealing with particular titles and as to the range of subjects with which it deals. Any legal reader who will be at the pains to examine in the two books the words most familiar to him in his practice or study will, we think, agree with us on the former point; and the presence in the older work of the ordinary terms of Roman law, and even of some few titles relating to Indian law, seems fairly to lead to the latter conclusion. It must, of course, be understood that we do not blame Mr. Sweet for excluding such words as *agnate*, *stillicidium*, or *by-bil-wufa* from an English law dictionary; but the dictionary which contains such words must be considered, apart from its more comprehensive treatment of purely English topics, more acceptable than that which omits them. Looked upon as a work *per se*, Mr. Sweet's book is no doubt valuable, but, like most law books, especially first editions, it will bear a good deal of revision, having within its compass a good many errors of omission and some actual misstatements on important points. Under "Curtesy" Mr. Sweet forgets to mention that the wife must have been solely seised and seised in deed, and that in gavelkind the husband only takes a half. These omissions are the more remarkable from the circumstance that the corresponding doctrines in the case of dower are carefully noted under that head. Searching for "natural-born subject," the reader finds himself referred to "allegiance," "nationality," and "naturalization." Under the first two heads there is nothing suggesting in the remotest degree the wide artificial meaning given to the expression "natural-born subject" by various statutes; under the last there is only a very superficial and somewhat incorrect allusion to that meaning. Under "Consanguinity" he is referred to the table of prohibited degrees in the Book of Common Prayer, as if that table had been put forth by the secular legal authority; the author seems not to be aware that the table in question is held to be "not binding on the laity," having never been confirmed by Act of Parliament. Some of the author's errors may perhaps be put down to carelessness of diction, as, for instance, where he says that an annuity to a man and his heirs is not a tenement—a proposition which is correct as to a purely personal annuity, but not as to a rent charge or annuity charged on land. So, in another part, there is a blunder in the opposite direction, the author stating that every rent except a rent service incident to a reversion is an incorporeal hereditament, and forgetting to except from this statement a rent for a term of years, which is only a chattel. The statement that legal jointure has long been disused in practice is extraordinary, for almost every settlement of real estate contains provisions for one or more jointures by way of legal rent charge, and every precedent book now in use, as far as we are aware, contains forms for making provisions of this nature. Apparently Mr. Sweet's forte is not real property law, and he forgets at this point that a rent charge for life is a "tenement," and confuses trustees of a term of years subject to a legal rent charge for a widow with trustees holding the legal freehold in trust to pay her an equitable rent charge. This, at least, appears to be the only way to account for his describing the latter as the usual mode of jointuring at the present day, while he pronounces the former, which is the familiar and ordinary method, to be "practically obsolete."

Common Precedents in Conveyancing, together with the Conveyancing and Law of Property Act, 1881, and the Solicitors' Remuneration Act, 1881. By Hugh M. Humphry. (Stevens & Sons.)—In the first part of this work is contained a collection of the precedents in conveyancing which are most frequently required in practice. The second part of the work contains the very important Conveyancing and Law of Property Act, 1881, and the Solicitors' Remuneration Act passed in the same year. The first-mentioned Act contains a large number of useful provisions, the general effect of which is to shorten and simplify the more usual legal assurances, and to render the law of real property as to several points less technical than it was before. The operation of the Act will be most apparent in the shortening of some of the commonest of legal documents, such as purchase deeds, mortgages, &c. Every one familiar with the form of an ordinary mortgage will remember that the greater part of it frequently consisted of the power of sale and the covenants for title. Under the Act both the power of sale and the covenants for title are implied, and the document is at once cut down to less than half the length it would otherwise have been. The "general words" clause and another subordinate clause are also supplied by implication, and the document is thus still further shortened. Among the many useful provisions contained in the Act none, perhaps, will prove of more value than that which gives power to the High Court of Justice, in certain cases and on certain conditions, to grant relief to lessees where a forfeiture of the lease has been occasioned by a breach of one or more of the lessee's covenants. The Act is very carefully drawn, and, though in the preparation of legal documents reliance upon it is optional, both conveyancers and solicitors are, we understand, disposed to use it freely. The other Act above mentioned contains provisions as to the remuneration of solicitors in conveyancing business.

Outlines of Jurisprudence for the Use of Students. By B. R. Wise, B.A. (Oxford, Thornton.)—This little work purports to be a "critical and explanatory commentary upon the jurisprudence text-books in common use," and to give a "precise and coherent view of all the topics upon which these touch." The author freely examines

XUM

the views of Austin, Maine, Holland, and others, and his criticisms thereon are often valuable. The student of jurisprudence will certainly find the work suggestive and helpful.

THE compiler of the *Students' Law Lexicon* (Stevens & Sons) has wisely abstained from putting his name to it. The book has been fortunate enough to win some praises from the press. It has been called "a very handy, complete, and useful little work," and "a wonderful little legal dictionary." Certainly it is a nice-looking volume, small, neat, and clearly printed, and it is just possible that a busy critic might look at the inside for a minute without seeing any decided mistakes, but a very brief perusal discovers plenty. For instance: "Equity. There is some confusion as to the meaning of Equity, as a scheme of jurisprudence, distinct from Law. Taken broadly and philosophically, Equity means to do to all men as we would they should do unto us. Taken in a less universal sense, Equity is used in contradistinction to strict law." "Hotch-pot, a blending or mixing of lands and chattels, answering in some respects to the *collatio bonorum* of the civil law." "Hundred, a subdivision of the country, the nature of which is not known with certainty." "Running with the land, said of a covenant-real, which affects real property." Such utter nonsense as this condemns the book at once. It has become the fashion for writers of law books to devote inferior compilations to "the student," as if anything was good enough for him. The student who uses this dictionary will receive a warning which he will not forget. As a rule, where it is not incorrect it is inadequate, and it is stuffed full of words which the student will probably never see.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Collects Exemplified, by Author of 'A Commentary on the Epistles and Gospels,' edited by Rev. J. Jackson, 5/ cl.
Cook's (F. C.) Revised Version of the First Three Gospels considered in its Bearings upon the Records of our Lord's Words, &c., 8vo. 9/ cl.
Didon's (H.) Science without God, trans. by R. Corder, 5/ cl.
Ewald's (Dr. G. H. A. von) Commentary on the Book of Job, translated by J. F. Smith, 8vo. 10/6 cl.

Law.

Pulbrook's (A.) Handy Book on the Law and Practice of Joint-Stock Companies, cr. 8vo. 2/6 cl. swd.
Tremenheere's (H. S.) Manual of the Principles of Government, cr. 8vo. 5/ cl.

Poetry and the Drama.

Schiller's Mary Stuart, a Tragedy, trans. by L. White, 6/ cl.

History and Biography.

Arnold's (T.) History of the Later Roman Commonwealth, 2 vols. 8vo. 24/ cl.
Elphinstone (Hon. G. K.), Memoir of, by A. Allardyce, 21/ cl.

Geography and Travel.

Coles's (J.) Summer Travelling in Iceland, roy. 8vo. 18/ cl.

General Literature.

Bonnes Bouches, a Collection of Recipes of Choice Dishes of Various Nationalities, by One who has Tasted Them, 3/6
Braddon's (Miss) Asphodel, 12mo. 2/ bds.
Carr's (Mrs. C.) Lucrezia, and other Tales, cr. 8vo. 10/6 cl.
Colquhoun's (Sir J.) The Family Year Book, 18mo. 3/6 cl.
Franzos's (K. E.) The Jews of Barnow, trans. by M. W. Macdowall, cr. 8vo. 6/ cl.
Hill's (J.) Wild Rose, a Romance, 3 vols. cr. 8vo. 31/6 cl.
Hobday's (E.) Cottage Gardening, 12mo. 1/6 cl. limp. (Weale's Series.)
Jumbo's Picture Book of Natural History, folio, 5/ cl.
Leland's (C. G.) Gipsies, cr. 8vo. 7/6 cl.
Oliphant's (M. O. W.) In Trust, the Story of a Lady and her Lover, cheaper edition, cr. 8vo. 6/ cl.
Quin's (C. W.) Garden Receipts, 1/6 cl. limp. (Weale's Series.)
Story of a Sin, by Author of 'Comin' thro' the Rye,' cr. 8vo. 2/ bds. (Railway Library.)
Three-Cornered Essays, by a Middle-Aged Englishman, 6/ cl.

DR. HAAS.

THE life and literary work of such an eminent Oriental scholar as the British Museum has lost by the death of Dr. Ernst Haas demand more than the brief notice in last Saturday's *Athenæum*.

He was born at Coburg on the 18th of April, 1835, and received his early education at the grammar school of his native place. In due course he went first to the University of Berlin, and after a year to that of Bonn, to devote himself to the study of mediæval history and literature as well as of Teutonic and Romance philology. Later on he began to learn Sanskrit as a basis for his other linguistic studies. Gradually, however, as he gained a deeper insight into its structure, and became better acquainted with its literature, this new study exercised such an attraction on him that he thenceforth gave his time exclusively to it, and exchanged Bonn for Tübingen for the purpose of enjoying the benefit of Prof. Roth's teaching. He finally returned for another year to Berlin, to attend the lectures of Prof. A. Weber and work at the Sanskrit MSS. in the Royal Library. It was from these MSS. that he gathered the first fruits of his Sanskrit studies, consisting in an elaborate treatise on the marriage rites of the ancient Hindus according to the Grihyasûtras. On the ground of this treatise he took his degree at Tübingen in 1859. It appeared subsequently, with valuable notes by the editor, in the fifth volume of Weber's 'Indische Studien,' pp. 267–412, and is still the standard authority on the subject. During his holiday visits to Coburg, Dr. Haas was a frequent and ever welcome visitor at Neusess, a village two miles from that city, where Friedrich Rückert resided, and he received from the veteran poet and scholar every advice and encouragement. Of the influence which that friendly intercourse with Rückert exerted upon the disciple he often spoke with fervent gratitude. After spending two years of further study in Paris, Haas went to Scotland, where he resided for three years as private tutor in the family of Lord Minto. His appointment in the British Museum dates from 1866, his tenure of the Professorship of Sanskrit in University College from 1875. He was engaged from 1870 to 1876, conjointly with Prof. J. Eggeling, on the cataloguing of the Sanskrit MSS. of the India Office Library. The patient and accurate scholarship which he brought to bear on this laborious task will not be fully appreciated by Sanskrit students until the work shall have passed through the press. His two papers, 'On the Origin of Hindu Medicine, with special reference to Suçruta,' in *Zeitschrift der Deutschen Morgenländischen Gesellschaft*, vol. xxx. pp. 617–670, and 'Hippokrates and Hindu Medical Science in the Middle Ages,' *ib.*, vol. xxxi. pp. 647–66, are based on his examination of the Sanskrit medical manuscripts in that library. Though intended to disprove the antiquity and independent origin of Hindu medicine, which are nevertheless still held to be a moot question, they contain so much new matter, so many ingenious deductions, that they will always be important and indispensable factors in any fresh discussion of the subject. His 'Catalogue of Sanskrit and Pali Books in the British Museum,' published in 1876, is a pattern of accuracy, and shows how well acquainted he also was with the modern literary languages of India. Indeed, had he lived he would have brought out, on the same plan, the far more extensive catalogue of books on and in the Indian vernaculars as represented in the British Museum, on the compilation of which he had for years been working when his fatal illness overtook him. Whoever may be selected to succeed him will find his work clearly traced out for him, and will have no difficulty, after clearing off the arrears which must necessarily have accumulated during Dr. Haas's long illness, in continuing the cataloguing and arrangement of the Oriental, more especially the Indian, books on the lines laid down by his predecessor. For as he was deliberate and fastidious in his speech and in whatever he wrote, so he was deliberate and methodical in everything he undertook. He was an *anima candida* in every respect, independent in his judgment, of quiet, studious, unobtrusive habits. Himself an accomplished pianist, he took a warm interest in music, as he did in literature and art. The wide range of his acquaintance with the literature of the East stood him in good stead in the course of his official duties in the British Museum, and was ever readily placed by him at the service of those who came to consult him. He has made his mark on Oriental scholarship, and leaves a fair name behind him for solidity of learning, for helpfulness and kindliness of disposition, and for the accuracy and trustworthiness of all his literary work.

R. ROST.

TALKS WITH TRELAWNY.

EDWARD JOHN TRELAWNY, who died on the 13th of last August, aged eighty-eight, was a very singular and interesting old man to meet, and had a great deal to tell about persons more interesting still, especially Shelley and Byron. I first had sight and speech of Trelawny towards 1842, when I was a mere boy and he a man of fifty, of massive, athletic person, and very handsome and striking presence: a commanding figure to remember. After this I saw no more of him until 1869. To me he was open and communicative, and in all essentials extremely kind; often, no doubt, abrupt and overbearing, and only to be approached on his own terms—terms with which I never felt any reluctance to comply. Keeping a diary, I noted down a number of things that he told me. I have now extracted from my diary the passages relating to Trelawny, and present them to the readers of the *Athenæum*. It may be said—nor should I deny the statement—that the details are drily and baldly recorded, without any tact or brilliancy of narration, and that the actual words of a conversation are hardly ever given. Such as my jottings are, however, such I reproduce them, with very little variation, but some needful excisions, from the actual words of my diary. I may add that the diary, although as a rule kept up with much regularity, was every now and then—and especially whenever I was out of town—interrupted; and it is clear to me, on looking through its pages, that the interruptions must often have occurred at times when I was in the way of seeing Trelawny, so that several of his conversations with me remain unrecorded.

W. M. ROSSETTI.

1869, *May* 5.—I wrote to Trelawny (to whom the Barone Kirkup of Florence had already sent some intimation on the subject) asking permission to consult him on points that may require elucidation when I shall be doing the memoir of Shelley for the edition of his poems which I am bringing out for Moxon & Son.

May 13.—Trelawny has replied to my letter. He is out of town now, but says he will write again on his return.

June 22.—Trelawny writes me that he is back in town, and willing to see me; and I think I shall offer him the dedication of the forthcoming edition of Shelley.

June 23.—Wrote to Trelawny, offering him the dedication, and proposing to call next Monday.

June 28.—I called on Trelawny. He is still a very fine, vigorous old man, most energetic in tone and manner at moments. I stayed with him full four hours, and had a highly interesting conversation on Shelley, whom he regards with the same undimmed enthusiasm as ever—branching off somewhat too frequently to other subjects, such as America, medical systems, &c. He retains his ancient habit of going stockingless. He gave me a number of valuable details about Shelley, and confided to me the original MSS. of the poems which Shelley addressed to Mrs. Williams, with the scraps of message which accompanied them—most interesting. The bulk of what he said will be incorporated in my memoir. He did not greatly like Mrs. Shelley, thinking her too eager to stand well with society, and, as regards her husband, too fractious and plaguy; also she had none of the habits of a housewife, and dinner &c. had very much to take care of themselves. Trelawny possesses and showed me a pen-and-ink sketch of Shelley, head and shoulders, which he considers gives a goodish idea of him; he cannot now recollect whether or not it was done by Lieut. Williams, or by whom else. It looks in a general way like a copy from Miss Curran's celebrated portrait, or from some engraving after that; but a strict comparison of the two does not by any means *satisfy* me that it is such. He has also oil portraits of Mrs. Shelley and Miss Clairmont by Miss Curran—fairly good. He says Miss Clairmont became a somewhat bigoted Roman Catholic. Shelley's heart, recovered from the funeral pyre, was delivered to Mrs. Shelley; but she used to say it was too painful, &c., &c., and the heart was then transferred to Leigh Hunt. The renowned surgeon Vaccà expressed to Trelawny after Shelley's death an opinion that the disease from which the poet had suffered was not nephritic. Trelawny accepts the dedication of my edition of Shelley: he is against a large size of book for poetry, advocating such volumes only as can go into the pocket. He likes Shelley's married sister, Mrs. Haynes. His house, where our interview took place, is No. 7, Pelham Crescent, Fulham Road.

July 3.—Trelawny came in at my house, and spent the whole evening talking with me. I introduced Garnett, then dining with me, to him; also my brother, who looked in late. Trelawny had not an unpleasant impression of Shelley's voice, save when he was excited, and then it turned shrieky; as on one occasion when Shelley came in much perturbed, from an interview with Byron, and screeched, "By God, he's no better than a Christian!" Trelawny saw something of Japan in his youth, and was much taken with the series of Japanese coloured prints hung round my dining-room. He must be some seventy-six years of age, but thinks nothing of sitting up till midnight, and walking home, perhaps 4½ miles, from my neighbourhood. When he left me, about eleven, he was going round to Sir Digby Wyatt's, in Tavistock Place. I returned him the Shelley MSS. which he had lent me, and the copy which he had also lent of the original edition of 'Swellfoot the Tyrant.' He says he will write down all his residual reminiscences of Shelley, Byron, &c., to be published after his death. He told me the other day that a daughter of Lieut. Williams married one of Leigh Hunt's sons. He disliked the whole Hunt family—thought Hunt exceedingly selfish.

1870, *March* 11.—I called on Trelawny: think he looks a little older than he did last summer. He has been writing down some further reminiscences of Shelley, which I pressed him to publish. This he seems tolerably well inclined to do, but objects to the trouble of recopying. I offered to do it for him. Miss Clairmont has lately been writing to him at great length, also in the way of Shelley reminiscences; and it seems that Elise, the Swiss maid who attended to Miss Clairmont's and Byron's daughter Allegra, is likewise still alive and inclined to be reminiscent. Trelawny says he feels hurt at the imputation upon the moral character of Harriet Shelley in her latter days, as contained (*i.e.*, repeated from other printed statements) in my memoir of Shelley; it seems to be new to him, but I can't doubt its truth. He says that Mary Shelley was excessively jealous of Shelley—jealous in the ordinary sense, and also as regards the influence of other women over his mind. But he seems to think (as far as I can make out) that the conjugal jealousy was baseless. Shelley, he says, attempted suicide in Naples—had also previously done so in London; but the effects of the poison were worked off by walking him about for some hours. Trelawny is now reading with extreme delight Hogg's 'Life of Shelley' (hitherto unread by him): he considers Hogg's view of the poet to be thoroughly consistent with his own later experience. "Shelley," he said, "was more self-willed than myself"; with exquisite gentleness of manner he would always do, and do on the instant, what he resolved on. I am to dine with Trelawny next Tuesday, and may perhaps meet Mrs. Hogg—previously married to Lieut. Williams, with whom she was passionately in love. Williams was decidedly good-looking. A sofa-bedstead which is in the sitting-room of Barone Kirkup in Florence (I have seen it there) was bought by Shelley at Leghorn, and afterwards used by Leigh Hunt.

March 15.—Dined with Trelawny; his house is at present kept by a young lady, Miss T——r, to whom I was introduced. He is, and always has been, a total disbeliever in every form of theological religion, and contemplates annihilation without any repugnance. Once, when living in Italy, he saw a little man come up to his house, and called through the wicket, "No admittance except for atheists and republicans." It was Roebuck. He seems to be confident that there was nothing beyond an abstract or "Platonic" attachment between Shelley and Emilia Viviani. He says Shelley was quite incapable of gross amours with loose women, &c.; with him love as a passion was never dissociated from sentiment; nor would even the sight of a beautiful woman have been likely to produce much impression upon him without the interest excited by conversation. Trelawny read me, from the memoranda recently made by him, an amusing anecdote of Shelley's entering the saloon at Casa Magni naked from the sea-beach, when Mary and Mrs. Williams, with a lady visitor from Genoa, were at dinner there. The horror which his apparition excited was calmly met by the matter-of-fact question, "What else do you expect me to do, when my clothes are left in the bed-room, and there is no way to the bed-room except through here?" Trelawny describes him as "stag-eyed"—as indicating the fixed, full, unblinking gaze which characterized him. His body, especially legs and thighs, was finely formed; and his powers of active exertion, as in climbing hills, distanced all the party. Trelawny showed me a letter which he has just lately received from Miss Clairmont, now in Florence. There is not the least sign of age in its composition: it speaks with considerable animus against Byron as contrasted with Shelley.

1871. *August* 28.—Trelawny wrote me some days ago, while I was abroad, saying that he is in town and would like to see me. I replied on the 26th, and called this morning; but find he is now back at his country residence at Sompting, and may remain there an indefinite while.

1872, *January* 7.—Spent the day with Trelawny, at his invitation; arrived at 2, and remained till 11, Trelawny keeping up, without ever flagging, a conversation about Shelley, Byron, and several other matters. He told me a number of interesting details. He showed me a bit of Shelley's jaw-bone which he snatched from the funeral pyre, charred white, with the teeth sockets showing; his features were almost gone when the burning took place. I described to Trelawny the spot which was shown to me last summer at Viareggio as being the site of the cremation; he thinks the information given to me must have been inaccurate, the true spot being further away from the town, and only "seven yards" from the sea. Miss Clairmont continues corresponding with him; there is an idea of her forwarding her reminiscences for publication. He has himself also written down some anecdotes and reminiscences, which I read; valuable and interesting, but possibly (I fancy) a little dressed up in some details—mostly what he had before told me. Trelawny's spelling is singularly faulty for a man of so many literary associations. He wrote down in Byron's death-chamber a number of details of the poet's last hours, given him by the valet Fletcher; these have never been published, nor did Fletcher so freely relate the real facts to members of the Byron family. Byron had a habit of keeping by his bedside a Bible and two pistols. Near his end he made some remark in a spirit of resignation to Fletcher, who, being of a "canting" turn (according to Trelawny), availed himself of the opportunity to open the Bible, and began reading from it to Byron; but the latter stopped him, saying, "Shut it up; that is all weakness, weakness, weakness!" striking his hand on his forehead. Byron had no palate. Trelawny could mix his gin-and-water as weak as he chose without Byron's taking any notice of it whatever; once he purposely missed out the gin altogether, and Byron seemed struck by it only after several sips. Byron's left leg and foot were much worse than the right. The toes of both feet were perfectly well formed, and Byron used to wear linen pantaloons with straps in bathing. (Trelawny says this is quite common, especially with seafaring people.) Hence it is that, although Trelawny had often seen Byron bathing, he did not accurately understand the condition of his legs and feet till he viewed the corpse. This is a point that has struck several people (myself included) as not accounted for in Trelawny's book of 'Reminiscences.' Trelawny considers that Shelley, had he survived, would have joined him and Byron in the Grecian expedition, but would not have made a good soldier. Neither did Byron show the least faculty that way or as a political leader. (Moore, I may observe, gives a contrary idea.) Had Byron lived on, a movement would have been started to make him King of Greece, and Trelawny thinks the thing would have been achieved. The notes which Trelawny made at the time of his conversations with Byron in the Grecian expedition disappeared; he named to me the Englishman whom he suspects of having filched them. Shelley, he says, was utterly fearless in every way, standing on the edge of precipices, &c. Trelawny thinks also he had no sensation of horror as connected with the conception of death—only ideal feelings in relation to death, and mostly even aspirations towards it. I did not care to discuss this point minutely, but myself consider there is ample evidence in Shelley's poems of a marked horror and shrinking from whatsoever has a disgustful physical aspect in death.

January 15.—I called again by appointment on Trelawny, who treats me most kindly, and I might almost say with affection. He is about the most remarkable instance I know of force of body, character, and mind in one and the same person. He says he has never once had a regular illness; has been shot through the lungs (the incident in Greece narrated in his published 'Reminiscences'), and had lockjaw for some while, but his iron constitution and temperate habits carried him through. He gave me a copy of the original printed but unpublished 'Queen Mab.' He is, I am convinced, under some misapprehension in saying, in an inscription to the volume, that the edition consisted of only thirty copies. He also showed me two letters from Shelley to Godwin (copies), written just before he left England in 1816. They show that Shelley was then raising 300*l.* to give to Godwin, although not on good terms with him. He considered Godwin to have wrongfully objected, contrary to his own avowed principles, to the connexion subsisting between Shelley and Mary Godwin; while Godwin, it might appear, supposed Shelley to be alienated from him by the influences of aristocratic birth, &c. Trelawny has also lent me three or four more letters of Shelley, copied out for Miss Clairmont by her niece, relating, as I observe on a cursory inspection, to the marriage with Mary. These I shall read at home at my leisure. Shelley, says Trelawny, never smoked, but tolerated any amount of smoking in Trelawny himself or others; Byron also could not smoke. Shelley may (as Hogg and Peacock intimate) have cared about babies at one time, but he took no interest in children. He was as dexterous with his legs as other people with their arms; in the arms he was comparatively weak.

January 16.—I looked up the Shelley letters lent me by Trelawny. One of them—not Shelley's own writing—is of much importance, relating incidents in immediate connexion with his marriage to Mary Godwin.

January 23.—I went round to Trelawny's, to return him the Shelley letters he had lent me. He was not in, but I had some conversation with Miss T——r. Trelawny, she says, bathes every morning without exception in cold water, and at the seaside he bathes in the sea in addition at all seasons. This past November, however, being unusually cold, he did not go through the sea-bathing. He often takes Turkish baths also. His long-standing habit of wearing no stockings was adopted principally with a view to keeping a healthy heat in the feet; this used to be deficient while he wore stockings, and he set the matter right by leaving them off.

January 30.—I called again on Trelawny, and as usual had much interesting chat about Shelley, &c. He says that both Shelley and Byron spoke good Italian; Trelawny himself, as far as a very restricted experience guides me, speaks it very indifferently. When they spoke English, they heedfully avoided interlarding it with foreign words or phrases, and Lady Blessington's book about Byron is unfaithful in giving the contrary idea. Shelley never got angry, though sometimes in discussion he was vehement. Trelawny disbelieves Mrs. Stowe's story about the causes of Lady Byron's separation from her husband; he considers that he knows the real cause. He has some thought of publishing it before his death, or at any rate leaving it on record: it would vindicate Byron against that grave imputation, but would show him to have fallen into "other weaknesses." I, of course, left the question where Trelawny dropped it, without fishing for any details.

January 31.—I read with great interest some further letters about Shelley handed to me by Trelawny yesterday; explanation of the 'Stanzas, April, 1814,' &c.

February 8.—I called again to see Trelawny, but he was out. Miss T——r tells me that his mother died at the age of ninety; this seems to have been the only conspicuous past instance of longevity in the family.

WYCLIF'S WORKS.

THE Wyclif Society is greatly in need of additional members, and the existing members are urged to do all they can in the way of personal application to their friends to induce others to join. For my part there is no cause which I would so willingly help by such a method; but instead of writing little notes to individual friends, I prefer, with your permission, to point out the special claims of the Society in the columns of the *Athenæum*.

It is probably thought by many that the substance of Wyclif's writings is pretty well known by this time, and that even if several remain unprinted, there can be no doubt about their general tendency. The truth is precisely the reverse; the great bulk of Wyclif's writings remains in MS. to this day, some of them at Cambridge, some at Oxford, and some at Dublin, but most part as far away as Vienna. The handwritings cannot be read without special training, and the best palæographer of the present day could hardly follow the argument until a whole treatise had been carefully transcribed.

It may be thought, however, that this is a matter for the learned; that there are sure to be enough of special scholars interested in the work; and that it has no interest, after all, outside the region of antiquarian theology. The truth, again, is precisely the reverse. The work is one that ought to interest everybody; but it is very hard, from various causes, to get even a handful of men to subscribe their guinea apiece. For, in the first place, we lose in relation to this particular object the co-operation of a large body of men who in other cases are among the most ready to assist in the diffusion of a taste for early literature. You might just as well ask a Jew to a dinner on pork as invite a Roman Catholic to join with you in helping to propagate writings distinctly labelled as poisonous by the authorities of his own Church. But then this is just one of the points that give them a peculiar interest. The Church of Rome condemned the doctrines of Wyclif, but then the Church of Rome never put him on his trial for them; for however willing it, no doubt, was to do so, as a matter of fact he never was really called on to defend them while he lived, and he got leave to die unmolested. Moreover, although the Church of Rome did not encourage men to read his writings, it did encourage men to read the answers to them; and unless we are satisfied, as every Romanist is bound to be, that the answers were perfectly fair and conclusive, so that we can read Wyclif's mind quite sufficiently through the statement of his opinions by his antagonists, it is really incumbent on those who think Wyclif a great figure in history to inquire what it was that he actually did say. Wyclif's great opponent was Thomas Netter of Walden, who wrote thirty or forty years after his death, and his 'Doctrinale' has been printed over and over again, while the works of Wyclif have been suffered mostly to remain in MS. Now, without in the least insinuating that Thomas Netter of Walden was an unfair controversialist, it is surely not unreasonable to suspect that we cannot get the whole of Wyclif's mind through such a channel as this. The object of Netter was simply to seize upon certain propositions, believed to be of a dangerous tendency, which were found in Wyclif's writings, and to confute them. Wyclif, if he had been then alive, might possibly, for aught we know, have explained his words otherwise, or even have pointed to other passages in his writings diametrically opposed to the interpretation put upon them by Thomas of Walden. Moreover there is no doubt that in some points the doctrines of Wyclif's immediate followers differed materially from his own, and how far this confusion has extended is a matter that requires investigation. It may quite possibly have coloured the interpretation put upon Wyclif's own words.

But again it may be thought that the causes which prevent Roman Catholics aiding in this publication must stimulate the energies of Protestants all the more, so that religious zeal may be trusted to get the work accomplished. Nothing, I fear, could be a greater mistake. Protestants as well as Roman Catholics have their own delusions about Wyclif; indeed I strongly suspect they have some delusions in common; and neither side, possibly, is very anxious to have those delusions removed. We must, therefore, look mainly to those fearless lovers of truth who are not particularly wedded to any system whatever, or believe firmly in their hearts that the principles which they profess will stand the most rigid inquiry. It is to such men that the Society should look for its principal support—to men not of any particular school of theology, but to men of all views, whether High or Low, dissenting or rationalistic, who are not afraid of the ground they stand on crumbling beneath their feet, and are only anxious to help in the elucidation of a very interesting chapter in the history of opinion. JAMES GAIRDNER.

CANON ROBERTSON.

THE Rev. James Craigie Robertson, Canon and Sub-Dean of Canterbury Cathedral, died on Sunday last, after a short illness, at his residence in the precincts. Mr. Robertson was educated at Trinity College, Cambridge, where he took his Bachelor's degree in 1834, and his M.A. in 1838. He was ordained at Bristol by the Bishop of Gloucester in 1836, and was for thirteen years Vicar of Bekesbourne, near Canterbury, and became a canon of Canterbury in 1859. Mr. Robertson was the author of many highly esteemed theological works, among which may be mentioned 'How shall we Conform to the Liturgy?' of which Pickering published two editions, in 1843 and 1844. He edited for the Ecclesiastical History Society Heylin's 'History of the Reformation,' and wrote 'A History of the Christian Church' in 1854, which, after passing through several editions, was eventually revised and enlarged, and now occupies eight volumes. Mr. Robertson was the biographer of Thomas à Becket, and contributed several volumes of 'Materials for the History of Thomas Becket, Archbishop,' to the "Chronicles and Memorials of Great Britain."

KARAITE MANUSCRIPTS.

Cannon Street Hotel, July 11, 1882.

YOUR readers who may happen to have seen in the *Athenæum* for July 1st a notice of my arrival with MSS. for the British Museum may also have read in the *Times* of yesterday an article headed "Hebrew MSS. from Yemen and Persia," and think that my Yemenite manuscripts mentioned in that article are those which I have now brought over from the East. To avoid this mistake allow me some space in your valuable columns. As the sellers of the MSS. wished their names not to be mentioned, and as there are in general only one or two in each place I visited who possess MSS., I think the reader will excuse my not mentioning names and places.

Whilst my former collections of manuscripts, now in the British Museum, consist, with few exceptions, of authors who were Rabbinical Jews, those I brought over and sold a few days ago to the British Museum are by Karaite Jews. Anan, the founder of the sect, who lived in the eighth century, protested against the doctrine of the Rabbis, and insisted on two chief points: first, that the whole of the twenty-four books (the Old Testament) are given by God, and we must obey them, whether Pentateuch or prophets, thus rejecting the Talmudical doctrine that the laws of God (Dehoneitha) are only in the Thora, the other prophetical books being only as binding as the traditions or sayings of the Rabbis (Derabanan); secondly, that only the written word of God ought to be obeyed, not the traditions, which we are bidden to disobey, &c.; and in order that we may know, he said, what we should do we must compare text with text, and learn the simple meaning of every word in the Bible. So he and his followers began to study, to write lexicons and grammatical works, commentaries and treatises. Some of these writers, as Sheikh Abu Jacob Joseph and the great Jepht, wrote more than the whole bulk of the Talmud. They were for a long time the sole masters of Hebrew prose and poetical composition, and only as late as the tenth and eleventh centuries did some of the Rabbis follow them in the same study and even begin to surpass them; still they could not deal as freely as the Karaites with the simple meaning of the text where tradition opposed them. Many Karaite books are in the Imperial Library of St. Petersburg; but many are wanting and supposed to be lost, and many are only known from quotations, and until lately the originals were altogether missing. I searched for them, and am happy to say that I found a good many interesting ones. I brought over to the British Museum in all 138 volumes. I will try to give only the shortest description of them, and will soon return, if permitted, to that interesting subject.

My first division, called K a, consists of sixty-one volumes, nearly all Arabic commentaries on the Bible in Hebrew (a few are Talmudical comments, and two are Persian). Most of them are unique. Very interesting are Anan's own words in Aramaic; his strong arguments for not allowing marriage with a deceased wife's sister (contrary to the Talmud) seem to be conclusive. Again, highly interesting are the comments of Sita, one of the greatest Hebrew scholars of the ninth century (much abused by our good Ebn Ezra, who, however, learned much from him where he speaks against the Talmud).

The second division, K b, consists of thirty volumes, all in Arabic letters, even when the text is in Hebrew, all Biblical. Their early date—some are of the tenth century; the pronunciation of the vowel points, for the first time transcribed into a living language; the variations of the text itself, especially in difficult passages, as in the Book of Job, where many verses are placed otherwise than in our Bible; the commentary of Karkasini, with his rules on Biblical interpretation, and his allowing the substitution of one word for another, &c., for example, in Exodus xxxii. 20 he says that the writer intended to write "melted" (the golden calf), and wrote instead "ground," which has no meaning, so that we see that R. Jone was not the first of that opinion,—all the above points would require a special article.

The third division, K c, contains thirteen volumes, all lyrical, some in the noblest poetical strain, some philosophical. The ideas of the gradual development of creation, and that one element was the origin of the others, and that the origin of all life is "motion," are expressed as early as the year 1433 in one of these MSS.

The fourth division, K d, has nine volumes, mostly on sects and religions, also about the Samaritan doctrines.

The fifth division, K e, has seven volumes, on grammar and lexicography, nearly all unique—one Arabic-Hebrew lexicon dated A.D. 1026. I shall soon write more about this division.

The sixth division, K f, contains only one philosophical volume.

The seventh division, K g, has eighteen volumes, all in the earliest Arabic writing. These are dated: 1, A.D. 1035; 2, 1033; 3, 1019; 4, 1015; 5, 959. Many of these are by Abu Jacob Joseph el Bazri, also by the Sheikh Joseph Harohe, especially his large philosophical book—I do not mean his 'El Machtowai,' which is also there, but his 'Katab Elasthe-hanna' (nearly 500 pages), supposed to be lost altogether, a rich source from which all the Jewish *philosophes*, even our Maimonides, have drawn.

I may mention that the medical part of my new collection has been left in Jerusalem.

M. W. SHAPIRA.

SALES.

IN our last number we gave an account of the first four days of the sale of the magnificent library of the author of 'Vathek,' at the rooms of Messrs. Sotheby, Wilkinson & Hodge, and may now notice the six following. The prices obtained for books in fine bindings have never been equalled, as will be clear from those we are about to quote:—Boydell's Houghton Gallery, 205*l.* Brant, Nef des Folz, 32*l.* Brantome, Œuvres, bound by Derome, 23*l.*, purchased in Heathcote's sale for 12*l.*; another copy in calf, 12*l.* 10*s.*, purchased for 6*l.* 15*s.* Briennæ Comitis Itinerarium, the author's rare copy, 76*l.* Britton's Fonthill, large paper, 26*l.* Bruce's Travels, large paper, 27*l.* Breughel's Humorous Plates, 38*l.* Bruno, Candelaio, bound by Padeloup, 37*l.* Bruscambille, ses Fantaisies, quoted by Sterne for its Prologue on Long Noses, 19*l.*, purchased in Col. Stanley's sale for 8*l.* Bry, Emblemata, 290*l.* Brydges's Biographical Peerage, usually termed the "Scandalous Chronicle," with fifteen pages of Mr. Beckford's autograph notes, 23*l.*, the usual price being as many shillings. Buchanani Psalmi, a beautiful specimen of the library of Thuanus, covered with Grolier tooling, 310*l.*; another edition (1579), also from the Thuanus Library, 54*l.* Buck's Views, 87*l.* Buteonis Opera, De Thou's copy, 20*l.* 10*s.* Cabinet des Fées, illustrated by Marillier, 38*l.* Cæsarum et Imperatorum Vitæ, printed on vellum, 30*l.* Callot, Misères de la Guerre, 50*l.* Capodelista, Itinerario di Terra Santa, 21*l.* Cardani Opuscula, from the library of Cardinal de Bourbon (Charles X. of the League), 29*l.* 10*s.* Carmina Poetarum Italorum, a fine specimen of the library of Marguerite de Valois, 242*l.* Carter's Drawings of Antiquities, 31*l.* Cavalleriis, Imagines Pontificum, bound by N. Eve, 36*l.*; Antiquæ Statuæ, presumed to have been Grolier's copy, 22*l.* Caylus, Pierres Gravées, 23*l.* Celestine, 22*l.*, having sold in the Soleinne sale for 80 francs. Ceremonies and Processions, in 26 plates, 41*l.* Cervantes, Don Quixote, the Spanish Academy edition, 30*l.* 10*s.*; Jarvis's translation, on large paper, 84*l.*; and Mary Smirke's translation, on large paper, 68*l.* Champlain, Voyage en la Nouvelle France, 166*l.*; Voyages et Descouvertes, 43*l.*; Voyage de Canada, 37*l.* Champollion, Monuments de l'Égypte, 28*l.* 10*s.* Chartier, Œuvres, printed in 1529 by Galliot du Pré, 34*l.*, having sold in the Cailhava sale for 450 francs. Chaumont, Ambassade à Siam, 23*l.* Chauncy's Hertfordshire, 21*l.* Chevalier de la Tour, 68*l.*, having sold in [illegible]'s sale for 12 francs. Chinese drawings of temples and idols, 145*l.* Chinese drawings of vases, 48*l.* 10*s.* Chodowiecki's Works, 122*l.* Choffard, Vignettes des Metamorphoses, 21*l.*; Vignettes for Contes de La Fontaine, 22*l.* 10*s.* Christi Passio, by De Gheyn, 21*l.* Cicero de Divinatione, Fato, Natura Deorum et Tusculanæ Disputationes, being 3 vols. of the Opuscula Philosophica, in common condition not worth three shillings, but being bound by Boyer with arms of Count Hoym, 52*l.* 10*s.*; Ciceronis Officia, printed by Aldus on vellum, 49*l.*; Ciceronis Epistolæ ad Atticum, Plantin edition, bound by Boyer, with Count Hoym's arms, 52*l.* Claude's Liber Veritatis, 121*l.* Claudiani Opera, from the library of Francis I., 99*l.* Clerck, Icones Insectorum, 40*l.*, selling in the Gouttard sale for 511 francs. Cochin, Estampes, 290*l.* Cœlemans, Cabinet de Boyer d'Aquilles, 62*l.* Colbert, Testament, bound by Desseuil, 38*l.* 10*s.* Coleridge's Sibylline Leaves, pronounced by Mr. Beckford "ineffable doodleisms," 38*l.* Colligny, sa Vie, 25*l.*, having sold in the Solar sale for 162 francs. Comicorum Græcorum Sententiæ, with arms and devices of Marguerite de Valois, 75*l.* Commines, Memoires, the Elzevir edition, three copies, the one bound by Desseuil, 56*l.*, and the two others bound by Roger Payne, 25*l.* 10*s.* and 21*l.*; Godefroy's edition, on large paper, bound by Derome, with his ticket, 155*l.* Cook's Three Voyages, with proof plates, 142*l.* Cordero, Flores de Seneca, L. Ploed's copy, tooled and painted in compartments in the Grolier style, 39*l.* Cordiner's Ruins of North Britain, proofs, 32*l.* Corneille, Rodogune, with frontispiece engraved by Madame de Pompadour, who had the work printed at Versailles, her own copy, and magnificently bound by Monnier, 325*l.* Coryate's Crudities, presentation copy to the Countess of Bedford, with author's autograph inscription, 46*l.* Costumes of all Nations, 81*l.* Courmesnin, Voyage du Levant, large paper, with arms of Louis XIII. and Anne of Austria, 163*l.* Cozens, Studies of Skies and Animals, 25*l.* 10*s.*; Forest Trees and Method of Drawing, 27*l.* Cronica del Rey Don Rodrigo, 35*l.* Dallas, Recollections of Lord Byron, 16*l.*, on account of sarcastic notes by Mr. Beckford. Damerval, Livre de la Deablerie, 85*l.* Dante, first Aldine edition, fine, but title a reprint, 11*l.* 15*s.*; second Aldine edition, 13*l.* 5*s.*; Marcoloni's edition, 21*l.*; the Lione 1571 edition, bound by Boyer, with Count Hoym's arms, 19*l.*; the Sessa edition, with devices of Marguerite de Valois, 36*l.*; Zapata's edition, on large paper, 18*l.*; Lombardi's edition, with Flaxman's plates, 32*l.* David, Anacreon Vengé, Soubise's copy, 21*l.* Debat des deux Gentilzhommes Espanolz, 39*l.* Decker's Fürstlicher Baumeister, 29*l.* 10*s.* Della Bella, Opere, 48*l.* Description du Cabinet du Duc d'Orléans, 2 vols. large paper, bound by Derome, 84*l.* Deshouliers, Poesies, bound by Boyer for Count Hoym, 81*l.* Desormeaux, Maison de Bourbon, plates only, 48*l.* Desprez, Sur les Spectacles, 20*l.* 10*s.* Diane de Poictiers' copy of the Statuts de l'Ordre de St. Michel, printed on vellum, 155*l.* Dibdin's Works, on large paper, 486*l.* 12*s.* Dilettanti Society's Publications, 27*l.* 10*s.* Dionysii Areopagitæ Opera, Charles IX.'s copy, bound by N. Eve, 26*l.* Diury, Triomphes de France, 23*l.*, having sold in Solar sale for 400 francs. Dorat, Fables, the plates of Morillier only, 30*l.* 5*s.* Doublet, Histoire de l'Abbaye de S. Denys, with arms of Marguerite, Duchesse d'Orléans, 200*l.* Drake's York, on large paper, 63*l.* Drawings of Oriental Scenery, 56*l.* Drury's Exotic Insects, 25*l.* 10*s.* Du Chesne, Histoire de la Maison de Montmorency, from the library of Marguerite de Montmorency, Dame de Fosseteau, 120*l.* Dugdale's Warwickshire, first edition, 20*l.*; Baronage, on large paper, 20*l.*, &c. The ten days' sale, comprising 2,689 lots, realized 23,672*l.* 15*s.* 6*d.* Two more days will see the end of the first portion of Mr. Beckford's magnificent library. The second and third portions are preparing for sale, the catalogues of which will be issued as soon as printed.

The library of the late Mr. D. G. Rossetti was sold by Messrs. Wharton, Martin & Co. on July 7th. The original MS. and sketch book of William Blake, upon which much of the recent Blake literature has been based, fetched 105 guineas, and Poliphili Hypnerotomachia (1467), quarto in modern binding, 38*l.* The presentation copies fetched high prices. Mr. Swinburne's Atalanta in Calydon fetched 31 guineas; Mr. P. Marston's Poems, two volumes, 6*l.* 6*s.*; W. B. Scott's Poems, 3*l.* 3*s.*; Mr. Hall Caine's Sonnets of Three Centuries, 2*l.* 12*s.* 6*d.*; Mr. Gosse's New Poems, 1*l.* 12*s.* 6*d.*; Mrs. Browning's Greek Christian Poets, 2*l.* 10*s.*; Keats's Poetical Works, presentation copy from Mr. W. M. Rossetti, with marginalia by D. G. Rossetti, 9½ guineas; Mr. John Payne's Masque of Shadows, 1*l.* 17*s.* 6*d.* The Germ (in wrappers with Mr. Holman Hunt's etching) went comparatively cheaply, 6*l.* 6*s.*

Literary Gossip.

MRS. LYNN LINTON has nearly completed a new novel called 'Ione.' The scene is laid partly in England, partly at Palermo. Mrs. Linton, who, we are glad to say, has quite recovered from her severe illness, is spending the summer in England.

MR. THOMAS HUGHES has just completed his 'Memoir of Daniel Macmillan.' The volume will be published immediately. It is just twenty-five years since Mr. Macmillan died. Along with his younger brother, the present head of the firm, he started at Cambridge the business of Macmillan & Co., now one of the largest and most famous publishing houses in the kingdom.

AN influential committee has been formed for the purpose of obtaining subscriptions towards the erection of an appropriate memorial to Samuel Pepys in the church of St. Olave's, Hart Street. It seems strange that no monument of any kind should exist in the church with which the diarist was so intimately connected during life, and where he was buried; and it is thought that many of those who have experienced pleasure in reading the 'Diary' will be willing to contribute something in order that the proposal may be carried out satisfactorily. The committee consists of the chief representatives of the institutions with which Pepys was connected, viz., the Master of Magdalene College, Cambridge; the President of the Royal Society; the Deputy Master of the Trinity House; the Secretary to the Admiralty; the Master of the Clothworkers' Company; and some others. The treasurer is Mr. Owen Roberts, Clerk to the Clothworkers' Company; and Mr. Henry B. Wheatley, 6, Minford Gardens, W., is the honorary secretary.

IN consequence of the retirement of Mr. William Chappell from the post—so honourably filled by him for seventeen years—of Treasurer of the Camden Society, the Council has elected Mr. J. J. Cartwright, of the Public Record Office, to succeed him. The other honorary officers of the Society for the year are: The Earl of Verulam, President; Mr. S. Rawson Gardiner, Director; and Mr. Alfred Kingston, Secretary.

ANOTHER volume of Mr. Gairdner's 'Calendar of Letters and Papers of the Reign of Henry VIII.,' including the year 1534, is in the press; also the continuation of the 'Calendar of Treasury Papers for the Reign of George I.,' edited by Mr. Joseph Redington.

VOL. XIV. of the 'Encyclopædia Britannica' will be out before long. Among the more important articles are:—Keats and Landor, by Mr. Swinburne; Kurdistan, by Sir H. C. Rawlinson; Labrador, by Rev. M. Harvey, St. John's, Newfoundland; Lace, by Mr. A. S. Cole, of the South Kensington Museum; La Fontaine, by Mr. George Saintsbury; Landlord and Tenant, by Prof. E. Robertson; Landseer, by Mr. F. G. Stephens; Languedoc, by Mr. Walter Besant; Lark, by Prof. Newton; Latin Language, by Prof. A. S. Wilkins; Latium, by Mr. E. H. Bunbury; Law, by Prof. E. Robertson; Lawrence, Lord, by Dr. George Smith; Lebanon, by Prof. A. Socin; Leeds, by Mr. T. W. Reid; Leonardo, by Prof. Sidney Colvin; Leopardi, by Mr. R. Garnett, author of 'Idylls and Epigrams'; Lessing, by Mr. James Sime; Levites, by Rev. W. Robertson Smith, LL.D.; Lhasa, by Col. Henry Yule, C.B.; Libraries, by Mr. H. R. Tedder and Mr. E. C. Thomas; Lichens, by Rev. James Crombie; Light, by Prof. P. G.

XUM

Tait; Lighthouse, by Mr. Thomas Stevenson, C.E.; Lighting, Electric, by Mr. John Hopkinson, C.E.; Liturgy, by Rev. F. E. Warren, B.D.; Livy, by Mr. H. F. Pelham; Lizard, by Dr. Günther; Locke, by Prof. A. C. Fraser; Logarithms, by Mr. J. W. L. Glaisher; Logic, by Prof. R. Adamson; and London, by Mr. T. F. Henderson and Mr. H. B. Wheatley, Secretary of the Topographical Society, London.

In addition to his report on the Traquair muniments, Mr. William Fraser, of Edinburgh, has completed for the Commissioners on Historical Manuscripts an account of the family papers of Lord Elphinstone. These are of great bulk, and include the correspondence of the well-known Field-Marshal Keith, who lost his life in the Prussian service at Hoch Kirch; and of John Lord Elphinstone, governor successively of Madras and Bombay.

The portions of Mr. Marvin's book, 'The Russian Advance' (reviewed in another column), which contain his account of General Skobeleff, are now being translated in the *St. Petersburg Herald*.

We have already mentioned that Mr. Percy M. Thornton is bringing out a third volume of his 'Foreign Secretaries of the Nineteenth Century: 1834 to 1880.' It includes a special analysis of the foreign policy of the Duke of Wellington in 1834–5, and of Sir Robert Peel in 1841–6, also the cause, hitherto overlooked, which precipitated, if it did not actually bring about, the Crimean War in 1853; likewise the Foreign Secretaryships of Lord Malmesbury, Lord Russell, and Lord Clarendon, compiled from private records and available public sources. Portraits of Peel, Wellington, Aberdeen, Russell, Clarendon, and Malmesbury accompany the volume, which Messrs. Allen will issue immediately.

The Society of Hebrew Literature will publish from January, 1883, a bi-annual journal in lieu of the miscellany volume. We hope that this publication will be more regular than the issue of the volumes of the series, of which nothing has appeared for nearly three years.

The Birmingham Historical Society—the first society of the kind, we believe, started in the provinces—appears to be prospering. Prof. Seeley has just been re-elected President, and a very good president he makes, showing a warm interest in the affairs of the Society, and giving much good advice. The following papers were read during the past session before the Society:—'First Notes of the Reign of Charles II.,' by Mr. Osmund Airy; 'Greece in the Fourteenth Century,' by the Rev. A. R. Vardy; 'George Canning,' by the Rev. W. Tuckwell; 'Giuseppe Mazzini,' by Mr. S. G. C. Middlemore. Lectures were also delivered by Mr. G. J. Johnson and Prof. Arber, upon 'Stanley as a Historian' and 'The Struggle of England with Spain under Elizabeth' respectively. The second volume of the *Transactions* will shortly appear.

The Rev. S. C. Malan, D.D., of Balliol College, Oxford, has in the press a monograph entitled 'Select Readings in the Greek Text of St. Matthew lately published by the Rev. Drs. Westcott and Hort.'

Bicycles are to have their historian. A work entitled 'Bicycles and Tricycles Past and Present,' a history of the machines from their infancy to the present time, with hints on how to buy and how to ride them, by Mr. Charles Spencer, author of 'The Bicycle Road Book,' &c., will be published shortly by Messrs. Griffith & Farran.

Under the title 'The Ancient Manuscripts of the New Testament for English Readers,' the Rev. F. T. Bassett, of Dulverton Rectory, will shortly publish a translation of the five earliest MSS. of the New Testament. The work will be issued by Mr. Elliot Stock.

The county records of Essex, some of which were lately discovered at Chelmsford, as reported in the papers at the time, are now being examined on behalf of the Historical Commissioners by Mr. J. C. Jeaffreson.

It is a significant indication of the increasing popularity of our education in India that a petition was recently addressed to the Lieutenant-Governor of the Punjab by the Sikh Association of Lahore, praying that elementary education might be made compulsory among the children of the Sikhs. The request was refused, on the ground mainly that, in the proportion of children attending schools, the Sikhs are at present in advance of the other classes of the community.

The thirty-sixth annual meeting of German philologists and teachers will take place at Carlsruhe, September 27th to 30th.

The Judæo-Persian manuscripts acquired lately by Dr. Neubauer, which were mentioned in our columns, and a detailed notice of which appeared in the *Revue Critique* by M. James Darmesteter, have been bought by the British Museum.

A monument to Rabelais was unveiled last week at Chinon.

The production of books in India is becoming so important that no time should be lost in securing one copy at least of every publication for the British Museum. It would be no hardship to extend the rule which applies to all English publishers to publishers in India also. On the contrary, it would make their publications better known, and secure a far wider market for them. During the quarter ending in March, 1882, the Bengal press alone brought out 375 publications.

The students of the new School of Law at Constantinople have prepared an address of thanks to the historian and mollah H.E. Ahmed Geodet Pasha, Minister of Justice, for the course of lectures he has given in Turkish on eloquence.

A number of correspondents have written to us, pointing out the obvious error which occurred last week in our review of Mrs. Kemble's book. Of course John Kemble was the lady's uncle, not her grandfather.

We are in a position to state that a work called 'Paradise Found,' recently published, and bearing the name of "Lady Frances H. Cecil" as the author, is not written by Lady Frances Cecil. Indeed, there seems to be no such person as "Lady Frances *H.* Cecil."

SCIENCE

Modern Metrology: a Manual of the Metrical Units and Systems of the Present Century, with an Appendix containing a Proposed English System. By Lowis D'A. Jackson. (Crosby Lockwood & Co.)

The natural history of metrology has not received the attention which it deserves at the hands of the writers on the subject, and yet a clear conception of the sequence of development must underlie any successful attempt at grasping the main principles of a systematic knowledge of measures. Rising with the rise and growing with the growth of civilization, the metrical system of any country or period is a sure exponent of the degree of scientific advance attained. All the early units of measure (which in the first place were only linear) are taken from the natural dimensions or movements of the human body. The step, the full pace, the length of the arm, the height of the figure, furnished the first units of comparative measurement; and the difference between the actual dimensions of local units bearing the same names, which yet linger in different parts of the world, is in accordance with the difference of stature of the various races. For weights, the earliest units were the load that could be borne by an ass, and the portion of grain or seed that could be allotted for the daily consumption of a man. Thus in all parts of the world we find that approximately, but never exactly, the same measures have been in use. The influences which converted this rude mode of measurement into a branch of science have been chiefly two, viz., the preciseness with which it was necessary to study the movement of the heavenly bodies for the purposes of astronomy and of astrology, and the need of defining small quantities of precious metals for the purposes of commerce. Geometry was in its origin the science of the astronomer. And in the sextile division of the circle we have the vestiges of that Chaldaic system of numeration which was carried through all the Assyrian, and many of the Aramaic, tables of measure and of weight. In the Phœnician shekel, or "weight," which is still represented by the Spanish silver ducat, we have the earliest ancestor of most of our smaller measures of weight. The influence of the (possibly) older Egyptian measures is less easy to trace.

If a view of the subject in which common sense concurs with literary record had been more generally adopted, our shelves would not groan under certain bulky and theoretic volumes on the subject of early metrology in which these two elements of consideration have been left out of sight. The attempt, for example, to carry back for more than 6,000 years a precision of measurement which it requires the best appliances of modern times to attain, is wholly inconsistent with what we know distinctly as to Egypt. The notation that accompanied the use of the hieratic characters was not such as to allow of minute division. This was only possible in early times by the use of something like the Chaldean radix, or method of scale. And Claudius Ptolemy, who cites the early astronomical observations which stretched back for 1,900 years before the time of Alexander the Great, never

descends lower than the Chaldean scrupule, or eightieth part of a degree, a period equal to eighteen seconds of time. As to linear measure, moreover, in Egypt, of the ancient Nilometers now known to exist no two agree as nearly as within 4 or 5 per cent. in the length of the indicated cubit.

Modern accuracy of measure cannot be traced back further than the discovery of the pendulum. And all that science can even now do is so to define a unit of linear dimension, from which other units may be derived, as to ensure its recovery if lost. Absolute unit there is none. In 1818 Capt. Kater determined the length of the pendulum vibrating seconds in London as 39·13842 inches. Eight years later he corrected this to 39·13929 inches. In 1821 Sir Edward Sabine determined the same as 39·13734 inches. But supposing this length to be finally ascertained, it is only the length for a given latitude, a given temperature, and a given barometric pressure. In 1799 the new French metric unit of length was determined after long and careful observation. It was intended to be the ten-millionth part of the quadrant of the meridian, and seven years were employed in measuring an arc of the meridian from Dunkirk to Barcelona, a measurement which at the present time it is proposed to carry on into Africa. The unit obtained (which was subsequently found not to be an accurate ten-millionth part of the arc) was such as to make the length of the seconds pendulum at Paris 0·99385 mètre. For this Mr. Jackson gives the two values of the "English commercial" equivalent of 1·093943 yard, and the "English scientific" equivalent of 3·280899 feet. But even had the seconds pendulum been taken as the unit of linear measure, which would have seemed to be the simplest and most scientific idea, there is a variation in length which is proportionate to the square of the sine of the latitude, and which amounts to more than two French "lines" between the Equator and the Pole.

Absolute metrical truth is thus unattainable. All that can be done is to attain the utmost comparative accuracy. Mr. Jackson has divided his inquiry into modern metrology into two parts, the first regarding metrical units, and the second metrical systems. In collecting the nominal measures of different parts of the world great research has been shown, and the list is more nearly complete than was that contained in the last series of tables that we had occasion to review. But there is the great defect in the book, considered as a book of reference, that it cites no authorities. Referring in his preface to the Reports of the Warden of the Standards from 1866 to 1878, and to Doursther's 'Dictionnaire des Poids et Mesures,' published at Brussels in 1840, Mr. Jackson says that "a small amount of information may have been taken from sources now forgotten .... some stray information may also have been gained from books of travel." An author does less than justice, either to his subject or to himself, who thus leaves on a loose basis that which is nothing unless it be accurate. It is beyond the limits of criticism to offer any opinion as to the trustworthiness of many pages of figures to which the author has not taken the trouble to furnish either reference or index. They may, of course, be all very accurate; but references are necessary to give to a new work the position of a standard authority. It may seem ungracious to cavil at the spelling of the names of foreign dimensions. In Arabic and Indian words there is some licence of spelling accorded. But it is hard to see that any advantage is gained by speaking of rupees and pice as "rupi and paise"; and the Italian language does not contain such words as "libbra," "rottolo," and "granattino."

For the large collection of measures brought together in his pages Mr. Jackson supplies the French scientific equivalents, in terms of the metrical system. He also gives throughout a double set of English equivalents, the first of which he calls the "commercial measures," as legally determined at the temperature of 62° Fahrenheit, and the second the "scientific value," which he says "is determined at 32° Fahrenheit *in vacuo*, though the water used for comparison of weight and volume is at its maximum elasticity, involving a temperature of about 39°." How far an artificial comparison of this kind will take rank hereafter as the true scientific scale we cannot venture to predict. But there is no doubt as to the great amount of labour that must have been devoted to the calculation; and the juxtaposition of the two values affords an easy means of checking the work by comparison.

The author observes that "Part I. can be referred to for the value of any single or detached unit of measure used in the present century," while "Part II. contains the more common metrical systems and collections of measures." The repetition thus caused the author thinks is compensated by the fact that "the arrangement is more suited to rapid reference." He adds, "The book has been enlarged by about one-third during its progress through the press, with the object of rendering it more complete than was originally intended." In the first chapter of Part II., which is on "Systems and Modes of Subdivision," the Egyptian, the Arabic, and the Hindoo measures are referred to; but there is no reference to that very important Aramaic system of both measures and weights of which full details can be collected from the Talmud, and of which, probably owing to a Phœnician channel, the influence is so distinctively to be traced throughout Europe. "All the ancient talents of a certain epoch" (p. 246), says Mr. Jackson, "were divided into 60 pounds or manah, and these manah into sixtieths or shekel." This is not correct. The Aramaic and Assyrian measures were partly sextile and partly decimal or quinary in their division. Fifty shekels (each of which was equal to 100 carats or 320 troy grains) went to the mina, and 60 minæ, or 3,000 shekels (as may be observed in the Pentateuch), to the ciccar or talent.

It is impossible to accord practical value to the new English scientific system proposed by Mr. Jackson. All scientific men who have been accustomed to the use of the French metrical system are aware of the great advantage that it possesses over the rule-of-thumb system prevalent in old France and in other parts of the world. That it may prove convenient to adopt one English unit and treat it decimally is very often true. But when it is proposed to give new values to old terms, such as "rod" and "chain," for the sake of unity of system, we think confusion will be increased rather than diminished. What is now the great requisite of metrical science is the adoption of a universal system. As to this, the French metrical system, although arbitrary, has so much the start of any other that there can be little doubt that it is by the general adoption of that system that there is the greatest probability of the attainment of the end desired.

WE have received a pamphlet by Mr. E. Mawley, *The Weather of* 1881, *as observed in the Neighbourhood of London, and compared in all respects with that of an Average Year*, which gives an interesting and complete account of the weather during a very exceptional year. It is the third year of publication of this annual, which on each successive occasion has become more full, observations of the duration of sunshine being added in 1880; of the force of the wind, form of cloud, and temperature of the soil in 1881. Mr. Mawley's place of observation is Addiscombe, where his self-recording anemometer (the cups of which are fifty feet above the ground and fifteen feet above the roof of the house) has attracted general attention. The cistern of the barometer is 210 feet above the sea-level, the funnel of the rain-gauge eight feet lower. The sunshine recorder is secured to the summit of one of the chimneys at the south end of the house. Mr. Mawley thus sums up the more prominent features of last year:—"The great frost, gale, and snow of its opening month will be well remembered; the stormy and continuous north-easterly winds of the spring; the succession of five dry months (March to July); the rare incident of a ground frost in June; followed by a day in July hotter than any of which there is any reliable record. The two succeeding months of harvest were rendered disastrous, the first through great cold and wetness, and the latter by its frequent rains, humid atmosphere, and sunless skies. October, which will certainly rank as one of the coldest ever known, brought with it a long and destructive westerly gale; and with November, which was almost as exceptionally mild, came another of still greater violence; while the closing month of the year proved to be one of many storms and much rough weather. Surely such a year as this cannot fail to be memorable in the weather annals of the present century."

An Elementary Treatise on the Construction of Roofs of Wood and Iron. By E. W. Tarn. Illustrated. (Crosby Lockwood & Co.)—Although we might demur to the omission of vaulting from an elementary treatise on roofs, the special divisions of wooden and of iron framework for roofs are clearly and, so far as the limits of the work extend, adequately illustrated by Mr. Tarn. Examples of the most noteworthy roofs in each material are given, and the general principles of roof design, as now adopted by English architects, are clearly and correctly indicated. One kind of roof which ought to have come under the first description is omitted by the author; but it is, perhaps, little known out of Italy, although there it forms one of the most universal expedients for roofing. This is the "beaten roof," which is usually supported by whole timbers, and which is formed into a watertight terrace on the top of the house. The 80 ft. span roof of the Birmingham Theatre, the 80 ft. 3 in. span roof of Drury Lane Theatre, the 75 ft. span roof of the theatre of the University of Oxford, and the 68 ft. span hammer beam roof of Westminster Hall, among wooden roofs; with the domical roof of the Albert Hall, the plan of which is an ellipse of 219 ft. major and 185 ft. minor axes; the bowstring roof, of 212 ft. span, of the New Street Station at Birmingham; the waggon roofs, of 190 and

XUM

164 ft. spans, of the Cannon Street and Charing Cross Stations; and the 240 ft. span roof of the St. Pancras Station, are among the most striking examples of roof design given in this handy and trustworthy little book.

Lectures on the Science and Art of Sanitary Plumbing. By S. S. Hellyer. (Batsford.)—Under a somewhat stilted title, Mr. Hellyer, "as the joint employer of the largest number of working plumbers of any plumbing house in the United Kingdom," asks for "a patient hearing while laying down what he considers the true principles of sanitary plumbing and house drainage." The adjective is somewhat of a surplusage. The aim of the book is to give practical advice as to the handicraft of the plumber, an intelligent and conscientious practice of which is rendered daily of more importance from the increase of our urban populations. As such, it is hardly before a literary or even a scientific tribunal that the claim of the author for attention should be raised. As the advice of a practical plumber to his fellows or his followers, the book has much that deserves attention. But "a colloquial style," a general resort to italics to emphasize the meaning of the writer, a fondness for small, though very harmless, attempts at jokes, and a eulogium of the late Dean of Westminster at the end of seventeen rules for the regulation of drains, aptly as they might tell on a sympathetic audience, cannot be regarded as literature. How far Mr. Hellyer's hearers may call for his book it is for him to decide. As matter of taste, the less said of the volume the better; as matter of practical utility, many of the views it sets forth deserve hearty recommendation.

GEOGRAPHICAL NOTES.

THE issue for July of the *Proceedings* of the Royal Geographical Society is of interest. Mr. Daly's paper on surveys and explorations in the native states of the Malayan peninsula contains the result of geographical labours spread over a period of seven years in a region teeming with natural resources and capable of high development. A very useful map accompanies the paper and shows the position and the geography of the group of states, which may be described shortly as provinces in the Malayan peninsula under the immediate rule of native princes, some of whom act under the advice of British officers accredited to their courts, while some pay tribute to the King of Siam, and others are quite independent of either British or Siamese control. The natural resources comprise tin, the alluvial deposits of which permeate the whole length of the Malayan peninsula on the western side of the dividing range, and rice, coffee, tapioca, and other agricultural products, which have only commenced to yield a land revenue since British intervention afforded protection to the tillers of the soil. On the hills in Sunjei Ujong, near Malacca, estates have been planted with tea, jalap, chinchona, and ipecacuanha. This is wholly due to British capital and enterprise; and the general benefit derivable from British rule may be realized from an anecdote which Mr. Daly tells—how his elephants broke into a plantation during the night and destroyed some young cocoa-nut trees, upon which he had them duly valued and reimbursed the owner accordingly. This news appears to have been spread far and wide, and a neighbouring rajah addressed his followers thus: "In former times, when a rajah entered the villages, his elephants often destroyed our gardens and fruit trees, and he never paid for them; but now that the country is governed by white men, you see they do what is fair by us." Mr. Daly reports that there is a vast extent—more than half—of the Malayan peninsula still unexplored, of which we have only the position of the coast line, while of the internal government, geography, mineral products, and geology of those countries we know nothing. Their richness and proximity to British possessions make a better knowledge of them very desirable.

A very meagre record of an important journey of Dr. Regel in Darwaz finds place in the same *Proceedings*. All students of Central Asian geography know of the interest which centres in this most inaccessible cradle of the Aryan race, hitherto very partially revealed by the travels of the Indian "Mullah" and "Havildar." Dr. Regel testifies to the fact that the Tadjiks of Darwaz are of pure Aryan type; their hair, sometimes dark, sometimes fair, is rarely shorn, and they wear a short dress. The women go about unveiled and marry by consent, and their cast of features is, curiously enough, both European and gipsy-like. Their dwellings are built with stone and mortar, and their national melodies are like those of Europe. These are curious and interesting evidences of the Aryan nationality which still lingers in this secluded tract, to which Col. Yule, the late Mr. Shaw, and other authorities have long invited the attention of students and explorers.

We are indebted to Prof. Reinisch, of Vienna, for a most satisfactory grammar and a few short texts of the language spoken by the tribes occupying the plateau north of Abyssinia, watered by the river Ansaba. They call themselves Bilin, but they are called by their neighbours Bogos. The professor has visited this region twice, and a translation of the Gospel of St. Mark, prepared under his superintendence, is now passing through the press. The language belongs to the Hamitic group, and is spoken by about 20,000 persons. Though descended from the same stock as the Agau, it has in the course of time become so different that the speech of the Agau and that of the Bogos are mutually unintelligible, and they have to communicate in Tigré or Amharic.

SOCIETIES.

ARCHÆOLOGICAL INSTITUTE. — *July* 6. — Lord Talbot de Malahide, President, in the chair.—The Rev. W. Loftie read a paper and offered some observations upon the hawk sacred to Chonsu, with special reference to Rameses XII. and Raneferoo his queen, and described the manner in which the various towns of Egypt favoured the worship of different animals, and the high favour in which the hawk was held, evident, indeed, as the noble Chairman observed, at the present day.—Mr. W. Brailsford read a paper on the monuments of the Seymours at Great Bedwyn, Wilts, which included a notice of the remarkable and lengthy inscription on the tomb of Sir John Seymour, the father of Edward, Duke of Somerset, and Jane Seymour, and who died in 1536.—Prof. B. Lewis read a paper 'On the Antiquities of Autun, the Capital of the Æduі of Cicero,' giving an eloquent and exhaustive account of the treasures in the Musée Lapidaire, including the famous Christian epitaph, the ceramic inscriptions, the architectural peculiarities of the cathedral, the Roman gates, &c. Prof. Lewis stated that, according to the best authorities, Bibracte was situated not at Autun, but on Mont Beuvray; this Gallic Oppidum included within its ramparts three plateaux, La Terrasse, Le Parc aux Chevaux, and Le Champlain, separated by three valleys, La Goute Dampierre, L'Ecluse, and La Corne Chaudron. In ancient times La Terrasse was the most important locality, as it contained the Temple and the Forum. On the other hand, La Corne Chaudron is the most amusing to us, on account of M. Bulliot's discoveries, which throw much light on the art of working in metal as practised by the Gauls, and more especially on their processes of enamelling. Prof. Lewis further expressed a hope that English antiquaries might be induced to deviate from the beaten path of tourists, and see for themselves the results of the "Fouilles du Mont Beuvray."—Capt. E. Hoare read some notes on a sepulchral statuette, which he exhibited, of an hereditary lord and landowner, of a very rare type, *circa* 1000 B.C.—Mr. H. R. H. Gosselin laid before the meeting some fourteenth century tiles from Bengeo Church, Herts. The Chairman made some observations on the Roman remains and other antiquities in Algeria, and exhibited some flint celts and several early antiquities from that country.

Science Gossip.

MESSRS. GRIFFITH & FARRAN will publish immediately, under the title of 'Talks about Science,' a collection of popular lectures on scientific subjects by the late Thomas Dunman. It will be prefaced by a brief biographical sketch by Mr. Charles Welsh.

A NEW volume of the classified catalogue of the library of the Royal Institution, compiled by Mr. Vincent, the librarian, has been issued.

THE Yorkshire College at Leeds is to be completed at once. It will be remembered that the only part of the permanent building erected is that which is devoted to textile manufactures and dyeing. The contracts for the other divisions have now been let, and the works will be commenced forthwith.

THE crescent moon will be in conjunction with the planet Venus on the evening of next Tuesday, the 18th inst., and with Mars about noon on the following day. The two planets will be in close proximity in the early days of August, their conjunction taking place on the 2nd of that month. Mercury will be at his greatest western elongation on the morning of the 20th inst., and will be visible for a few days just before sunrise.

THE Moore collection of fossils, in the Bath Royal Literary and Scientific Institution, is being classified and arranged by Messrs. R. Etheridge, jun., and R. Bullen-Newton, of the British Museum, who have undertaken the invertebrate portion. Mr. W. Davies will afterwards arrange the vertebrates.

PROF. GREEN, of the Yorkshire College, in his scientific evidence before the House of Commons on the Hull and Barnsley Extension Railway, named Carlton as a point at which coal might be expected to occur; good coal has been discovered at this place. At Snaith, near Goole, a deep boring passing through the Permian and Trias has reached true coal-measure shale, and the discovery of the extension of the Yorkshire coalfield beyond the limits assigned by the Coal Commission is anxiously expected.

THE death is announced of Dr. George Hamilton, of Falkirk, in his seventy-ninth year. Deceased was the author of a popular work on the steam-engine, a text-book on animal physiology, and other works, together with numerous fugitive articles.

M. PASTEUR received from his friends and admirers on June 25th a commemorative medal. On the 26th the President of the Académie des Sciences reported on this. The address of M. Dumas and M. Pasteur's reply are printed in the *Comptes Rendus* for that date.

THE *Report* for 1881 of the Chief Inspector of Mines for Victoria, presented to both Houses of Parliament by the Minister of Mines, which we have received, informs us that out of 38,436 miners employed, 72 men were killed and 108 injured in 157 accidents.

PROF. HOUSTON, of Philadelphia, reports, after a series of elaborate investigations, that wires for the electric light are in every way less liable to accident if placed in the earth than wires placed overhead. The municipal authorities of Chicago have therefore determined that the wires for lighting their city shall be placed underground.

PROFS. E. S. HOLDEN AND C. S. HASTINGS publish in the *Report* for 1880 of the Smithsonian Institution a 'Synopsis of the Writings of Sir William Herschel,' which from its completeness commands attention.

CAPT. MAGNAGHI'S floating compass, which is in use in the Italian navy, has been subjected to some very severe tests on board the Duilio. The needle, enclosed in a hermetically sealed ellipsoidal case, which is delicately suspended upon a conical brass pivot, floats in water to which has been added one-tenth its volume of alcohol. The compasses were not in the least disturbed by the discharge of the 100-ton gun on board the Duilio.

MM. DEVILLE AND DEBRAY brought before the Académie des Sciences on the 12th ult. a 'Note on some Explosive Alloys of Zinc and Platinum Metals.' Osmium is the only one of these which does not retain zinc when acted on chemically by acids. The heat liberated in the union of zinc with iridium is enormous, and greatly exceeds that produced by the union of osmium and iridium.

THE *Records* of the Geological Survey of India, Part II. for 1882, has been received. This part contains several important papers. Dr. King contributes two memoirs, one 'A General Sketch of the Travancore State,' and another on 'The Warkilli Beds'; and the Senior Superintendent, Mr. W. T. Blanford, F.R.S., reports 'On the Pench River Coalfield in Chhindwára District.' These papers are illustrated by good geological maps.

FINE ARTS

The GROSVENOR GALLERY.—SUMMER EXHIBITION.—NOW OPEN, from Nine till Seven.—Admission, 1s.; Season Tickets, 5s.

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The NINETY-SEVENTH EXHIBITION is NOW OPEN, 5A, Pall Mall East, from Ten to Six.—Admission, 1s. Catalogue, 6d.; Illustrated ditto, 1s.
ALFRED D. FRIPP, Secretary.

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

LAST FOUR WEEKS.—EXHIBITION of ROSA BONHEUR'S great Picture, THE LION AT HOME.—This great Chef-d'œuvre is NOW ON EXHIBITION DAILY, at L. H. LEFEVRE'S Gallery, 1A, King Street, St. James's, from Ten to Six. Unanimously acknowledged by the Press as being the finest work of this celebrated Artist ever shown since 'THE HORSE FAIR.' Has been visited by thousands during the Season.—Admission, 1s.

THE PARIS SALON.—BRITISH and AMERICAN ARTISTS.—The Pictures by these Artists, which have attracted so much attention in the Paris Salon this year, are NOW ON VIEW at the FINE-ART SOCIETY'S, 148, New Bond Street.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Sir Christopher Wren, his Family and his Times, 1585–1723. By Lucy Phillimore. (Kegan Paul, Trench & Co.)

The Towers and Steeples designed by Sir C. Wren. By A. W. Taylor. Illustrated. (Batsford.)

OF the two books named above architects will prefer Mr. Taylor's, which is an essay preliminary to a complete collection of small drawings to a uniform scale. The author rightly ascribes to Wren a singular mastery of scientific construction, such as is shown in St. Dunstan's-in-the-East; a careful choice of sound materials in everything he touched, except the Sheldonian Theatre at Oxford, his first work; and happy art in dealing with the proportions of his structures, as in the churches of St. Stephen, St. Mary-le-Bow, and St. Vedast, Foster Lane; the design of the last was his own gift to the parishioners. Any one of these works, scale apart, seems to us in many respects the architectural equal of St. Paul's, and in some respects its superior. Mr. Taylor is stronger in matters of taste and artistic feeling than in archæology or the history of architecture. Therefore we find in this essay some very wonderful antiquarian lore mixed with much good criticism. As a scientific constructor Wren was far superior to Inigo Jones, whose masonry in the staircase of the Chapel of Lincoln's Inn was lately shown to be defective. When Wren examined the manner in which the magnificent western portico of St. Paul's had been tied on to the front of the Gothic cathedral, he found that it nearly pulled the main edifice to pieces. Sancroft reported to Wren: "There are no keystones at all to tie it to the old work; and all this being very heavy with the Roman ornaments on the top of it, and being already so far gone outwards, cannot possibly stand long." "His new case of stone," so wrote the indignant dean, "in the upper walls (massy as it is) was not set upon the upright of the pillars, but upon the core of the vaulting"!

The grace, dignity, and, above all, variety of Wren's towers and spires are attractively displayed in Mr. Taylor's little drawings; but it is a pity he did not execute these sketches with care worthy of the subjects and of the veneration he professes for the architect. The perspective of some of them is questionable, and they are on an unfortunately small scale.

It is amusing to find in Miss Phillimore a thoroughgoing admirer of Charles I., Laud, and Bishop Matthew Wren. To their careers and troubles a large portion of her book is devoted. According to her the former two were "murdered," and the last was "persecuted," as the saints in other days have been. In Miss Phillimore's eyes the Puritans are responsible for every ecclesiastical and ecclesiological wrong which occurred before their time, and, it would seem, for much that happened long after the corpses of their chiefs had been torn from the grave and dishonoured so far as spite could dishonour them. She admits that Prynne was "fined, branded, and imprisoned in Carnarvon Castle," yet these seem small matters to one who ignores the "&c. Oath," the Star Chamber, and the *stigmata Laudis* of which Prynne complained. With her the people opposed to the king impersonate wickedness, those who defied the bishops were a "mob of sectaries" and a "rabble," with whom no person of well-constituted mind need have a moment's patience.

It would be hardly worth while to discuss the political views, or rather the sentimental fancies, of a writer upon whom nearly all modern research with regard to the time she professes to illustrate has been wasted. So unfair is our author, that when the high-handed proceedings of Bishop Wren had set East Anglia on fire his opponents are described as schismatics and factious men, and Heylin's saying of their lecturers that they were "bats or rere mice, being neither birds nor beasts," is quoted as just. The prelate's tyranny in forbidding private gentlemen to have chaplains he had not sanctioned, and endeavouring to compel the Norwich weavers to renounce the modes of worship which their fathers left their own Low Countries to preserve, is described as laudable "firmness," and the archbishop is commended for forcing the "translated Liturgy" upon the "schismatics." To these men had been granted freedom of worship by Elizabeth, and the usages of three generations had confirmed their liberties. Miss Phillimore, on the other hand, praises Lord Scudamore, who was "minded"—a term much in vogue with writers like this lady—to restore Abbey Dore, which had been abandoned since Henry VIII.'s time. The peer set up again "the old stone altar upon its four pillars and provided the church with everything needful for service." Surely our author must know that to use a stone altar was direct defiance of the law, although Bishop Wren "busied himself in drawing up an office for that occasion." That this prelate met "charges of idolatry" with "a full denial" was no justification in the eyes of a House of Commons which stood, so says our author, in need of instruction as to ordinary rules of church discipline. It was well for his nephew Christopher, the second nephew who bore this name, that he was of a more forbearing temper than Laud's *protégé*. Miss Phillimore's account of the bishop is an example of her partiality no less than of her lack of judgment. Yet even allowing for this, it is difficult to read with patience an absurd and superstitious story of the detection of an alleged murderer by means of blood flowing from the wounds, as well as the opening of the eyes of a corpse when an accused person was brought to touch it. "At this awful witness," writes the lady, "the murderer fell on the ground and avowed the crime which he had secretly committed."

With regard to the great architect Miss Phillimore's compilation has added something to the information supplied by the elder Elmes's scrambling 'Memoirs' and 'Wren and his Times,' and she has certainly added order in the arrangement of the materials and care in respect to dates, as to which poor Elmes was always in confusion. Granger's 'Biographical History' is quoted as an excellent authority, with more modern and equally well-known books. The lady claims to have used an "old heirloom copy of the 'Parentalia'"; but what she has derived from this document we are not told. Some one should reprint the 'Parentalia,' which is now scarce, and add the notes referred to from the heirloom copy. Meanwhile we are indebted to Miss Phillimore for a letter, never before printed, to Faith Coghill of Bletchingdon from her then lover and husband to be, in which Christopher Wren appears in an amiable light, and writes tenderly, although according to the ornate manners of his day. He had returned "a drowned watch" to his sweetheart with a letter including this passage:—

"I have sent the watch at last, and envie the felicity of it, that it should be soe neer your side, and soe often enjoy your Eye, and be consulted by you how your time shall passe while you employ your hand in your excellent workes. But have a care of it, for I put such a Spell into it that every Beating of the Ballance will tell you 'tis the pulse of my Heart, which labours as much to serve you, and more trewly than the watch; for the watch I believe will sometimes lie, and sometimes perhaps be idle and unwilling to goe, having received soe much injury by being drenched in that briny bath, that I dispair it should ever be a trew servant to you more. But as for me (unlesse you drown me too in my teares) you may be confident I shall never cease to be, Your most affectionate humble servant, CHR. WREN."

Shortly after this, December 7th, 1669, was written, Christopher and Faith were wedded in the Temple Church, and a union began which fate soon determined. The bridegroom became Sir Christopher, November 20th, 1673, and, with a salary of 200*l.* a year, Surveyor of St. Paul's. Miss Phillimore, while noticing that the Duke of York nearly broke Wren's heart by insisting on the addition of side chapels to the cathedral, omits to tell us why the duke was so pressing. When quoting Wren's report

of the state of the Gothic cathedral after the Great Fire she ought to have shown more knowledge than appears in the following: "Besides these injuries Wren's accurate eye detected graver faults in the original design, some of which he enumerates, 'The pillars of the nave, though eleven feet in diameter, were only cased with stone and filled up with rubbish inside.'" The fact is, Wren must have known that the practice of Gothic builders was to construct the vastest piers in this way, filling the cores, not with "rubbish," as we understand the word, but with concrete or rubble. Pillars built in this way had stood the tests of centuries before his day, and have been made to last till now without any sign of failing. Not pillars alone, but walls, were and are built thus; nor did the practice originate with the mediæval architects.

Wren's first son by Faith died, and a second son, well known to us by the family name of Christopher, was born. Faith herself died in September, 1675, and was buried in the church of St. Martin's-in-the-Fields. The widower soon married Jane, daughter of the second Baron Fitzwilliam, and thenceforward he encountered the troubles and honours with which we are familiar. The picture already shown of Wren as a lover is pretty enough, and the reader will welcome a study in sadder tones, but still to the honour of the architect, which presents him as a father tenderly admonishing Faith Coghill's son Christopher, who went to Paris in 1697, and promptly spent more than his allowance of money. After some kind advice and deprecation of an intention to proceed further on the Continent, the wise and good parent adds:—

"I sent you to France at a time of businesse and when you might make your observations and find acquaintance who might hereafter be usefull to you in the future concernes of your life: if this be your ayme, I willingly let you proceed, provided you will soon returne, for these reasons, the little I have to leave you is unfortunately involved in trouble, and your presence would be a comfort to me, to assist me, not only for my sake, but for your own, that you might understand your affaires before it shall please God to take me from you, which if suddenly will leave you in perplexity and losse. I doe not say all this out of parsimony, for what you spend will be out of what will in short time be your owne, but I would have you be a man of businesse as early as you can bring your thoughts to it."

When Miss Phillimore wrote of the old church of All Hallows, Bread Street, not only that Milton was baptized there, but that Sir Isaac Newton was buried within its precincts, it is difficult to see what led her into so conspicuous an error. On Newton's gravestone in Westminster Abbey are the words: "Hic depositum quod mortale fuit Isaaci Newtoni." It is true that Bishop Newton, editor of Milton, was buried in St. Paul's, and his monument, by Thomas Banks, relegated, because it is so ugly, to St. Mary-le-Bow, another of Wren's churches. Have we thus traced the line of error?

The Architectural History of the City of Rome. Abridged from J. H. Parker's 'Archæology of Rome' for the Use of Students. (Parker & Co.)—In this small volume we find put together in a portable shape the main points which have been previously stated more at length in the fourteen divisions of Mr. Parker's 'Archæology of Rome.' Some of the most interesting monuments in Rome are here spoken of, which the travelling student will not find described in the ordinary guide-books. Amongst these, careful accounts are given of the upper stories of the Coliseum, pp. 153–4; of the vaults on the Palatine called the Baths of Livia, p. 168; of the shops in the Forum of Trajan, p. 228; of the house of Mæcenas, p. 173; and of the Stadium on the Palatine, p. 169. Mr. Parker's ideas as to the earthworks and early separate fortifications on each of the seven hills are clearly and succinctly stated; but his hypotheses, which cannot, unfortunately, be distinctly proved in every case, are supported by some positive assertions which appear to go beyond the facts justified by existing remains. The wall on the Aventine as described p. 34 does not bear the character of such early work as we should expect in the case of an original hill fortress. The early fortifications of the Esquiline have disappeared, and those of the Cælian and the Quirinal cannot be distinctly recognized. But as the separate occupation of the more prominent of the hills is the most probable account which can be given of their original colonization, and is supported by the legendary indications relating to the first settlers, it must be accepted as upon the whole the most reasonable interpretation of those facts. The influence which these groups of separate communities had upon the later history of Rome was commented upon in a paper sent to this journal on March 16th, 1878. The hypothesis upon which Mr. Parker grounds his explanation of the deeply sunk position of the Roman ruins, namely, that they were placed at the side of deep fossways, seems to us not to be wide enough. We must admit that the great earthworks implied corresponding trenches from which the earth was thrown up, but we cannot suppose that this was ever the main cause of the vast accumulations of soil and rubbish surrounding the ruins, which must be considered as the gradual deposits of conflagration, decay, and other general causes of ruin. The plates at the end of the book illustrating the different modes of construction are most useful. Those which represent the walls of Aurelian and Honorius, plates xiii., xiv., xv., showing the corridors, and also plate xxvii., which is a restoration of the substructure of the Coliseum, appear to us to be valuable and striking. A few errors must be noticed. In the description of the Basilica Julia, Mr. Parker's statement that the alterations and enlargement made by Augustus were such that "the length became the breadth" does not seem to be justified by the simple words of the Monumentum Ancyranum, to which we suppose he refers, where the Latin expression is only "ampliato ejus solo," and the Greek *αὐξηθέντι τῷ ἐδάφει*. Nor do we understand how the word *mœnia*—which strictly refers to the habitable buildings of a city, and not to the fortifications, which are called *murus*, as may be seen in the famous line of Virgil, "Mœnia lata videt triplici circumdata muro"—can be interpreted of the outer bank of earthworks along the Velabrum. There are several other important contradictions to the currently received opinions of Roman archæologists in this volume. The eight prominent columns usually considered to be those of the Temple of Saturn are said to have been part of the Temple of Vespasian. The figure of the emperor on the marble basreliefs now placed at the north-west end of the Forum has the name of Marcus Aurelius given to it, whereas the more common opinion among Roman archæologists has been that the emperor here represented is Trajan. The line of the Via Sacra, as traced p. 83, does not accord with the last accounts of excavation given by Jordan in his valuable lecture on the Capitol and Forum. The expressions "screens of the Comitia" (p. 128), "their soles" (p. 154), "Tuscan" order of architecture in the Coliseum (p. 161), and "fossæ Quiritium" (p. 29), seem to be open to objection. Yet upon the whole, and most especially for the useful illustrations at the end of this little book, the students of Roman antiquities ought to feel grateful to the author for its publication.

Antike Bildwerke in Rom. Von F. Matz und F. von Duhn. 2 vols. (Leipzig, Breitkopf & Härtel.)—This work contains a most learned and useful descriptive catalogue of all the ancient sculptures to be found in the private residences and palaces at Rome. A student can easily discover whether any illustrations of his subject or examples suitable to his sphere of work are to be seen in the great public galleries, because catalogues and plates enumerating and representing the contents of such galleries are easily accessible. But it has always been impossible for any art student to know, without some publication of the kind now issued under the above title, whether more apt illustrations might not be hidden in private collections of sculpture, and therefore the work now before us is most welcome. The collections which have been visited and described are very numerous, but there is no list of them given in the work, which is to be regretted. The principal monuments described here are in the well-known palaces bearing the names Rospigliosi, Colonna, Borghese, Doria, Farnese, Medici, Barberini, and Albani. But a host of others not commonly seen or heard of by the tourist, and known only to the art student, are also enumerated. The authors have also included in their catalogue, and have given careful descriptions and accounts of, some of the sculptures to be found in churches and in public buildings and on piazzas. Thus we find on p. 260 of the first volume a most elaborate history of the statues on the Piazza di Monte Cavallo, with references to all the authorities giving the dates of erection, movements, and alterations. Sculptures to be seen at the grave of Cæcilia Metella on the Via Appia, and at the Baths of Caracalla and the Via di Pasquino, with many others not ordinarily known, are here described and catalogued. The arrangement of such a great number of works of ancient art, amounting to 3,438 as numbered in these volumes, is most carefully carried out. We have "Statues," "Hermæ," "Busts," and "Heads" in the first volume, and the second volume is occupied with descriptions of relief sculpture or sarcophagi. These are all divided under the names of the deities or the characters represented, and the mythological and archæological illustrations thus afforded are most convenient and valuable. The great work of Clarac is referred to as one of the principal helps used by Herr Matz, who, at the suggestion of Otto Jahn, devoted much time at Rome to the completion and union of the catalogues of private galleries. The work of Matz was taken up at his death and carried on by his friend Herr von Duhn, who publishes this work by the support of the Imperial Archæological Institute.

A Description of the Remains of Roman Buildings at Morton, near Brading, Isle of Wight. By J. E. Price, F.S.A., and F. G. Hilton Price, F.G.S. A Paper read before the Royal Institute of British Architects.—*On a Bastion of London Wall, or Excavations in Camomile Street, Bishopsgate.* By J. E. Price, F.S.A. (Nichols & Sons.)—The antiquities which are treated of in the latter of these publications are a life-size figure of a Roman soldier from a funereal monument, and various fragments of sculpture of less determinate character. They are preserved in the Guildhall Museum, and to a grant of money by the Common Council is due the present record. It is fully illustrated, and deserved to be so, on account of the interest and accuracy of the archæological knowledge which has been bestowed on its preparation. The remains, however, were both displaced and broken up, and neither the bastion nor the wall into which they were built was Roman. The recent discoveries at Brading are in this latter respect incomparably more im-

XUM

portant, and it is fortunate that they have received the attention of the same accomplished antiquary. Literature fails to give more than general hints about the development of Roman Britain. We start from Cæsar's project of invasion and Cicero's warning (Epist. vii. 6) to the friend who was to take part in it, which Dean Swift translated as applicable to more modern foreign visitors—"In Britannia ne ab essedariis decipiaris caveto," — "Be on your guard against impositions by the hackney coachman." Through wars and convulsions we reach a time when Ammianus Marcellinus refers to Londinium as an obsolete name of the Roman city of Augusta. It is to such explorations as these of which an opportunity has offered at the Isle of Wight that we must trust to recover a truly historical conception of the social condition of our predecessors at the close of the Roman rule. Inspection of the excellent map provided makes it clear that the south-east angle of the Isle of Wight, of which the highest ground is Bembridge Down, only became united to the larger adjacent island by the silting up of the depression between Sandown and the present mud flats of Brading Harbour. While this was in progress the inlet on the Brading side would afford admirable shelter for smaller craft at least, and thus a station for trade. Enigmatical as much must be considered about the partially disclosed villa, the conclusion of Mr. Fergusson may be safely accepted that the disposition of some of the apartments implies that they were store-rooms, warehouses rather than living rooms, and that the general structure was in truth a factory in connexion with the trade across the Solent at least, if not across the Channel. Certain mosaic pavements imply an attached dwelling-house; but though of extraordinary interest in themselves, they are of execution far too rude to entitle the house to be regarded as a villa in the higher sense of a luxurious dwelling. Some fragments of human bones have been uncovered about the place and some traces of burning, but little, on the whole, to recall the circumstances of a final catastrophe. The coins which have turned up give a series more continuous than could have been expected; the terminal examples remarkably enough round off the story of the Roman occupation of our island. The earliest are of Domitian, the son of Vespasian, who first added Vectis to the Roman empire, and the latest are of Honorius (A.D. 395–423), whose difficulties caused the final withdrawal of the last Roman legion from Britain. The subjects of the mosaics, which are reproduced faithfully in colours, are curiously illustrative of the compromises and conflicts of opinions and beliefs at the commencement of the fifth century, which were not exhausted at its close, and appear to have been as rife at this extremity of Europe as they continued to be at the eastern. When Stilicho withdrew the legions to which, according to Claudian ('De Laud. Stilich.,' ii. 247), had been due the defence of Britain against the northern Picts, the Scots of Ireland, and the Saxon pirates, it was to rescue Honorius at Milan from the mingled Christian and heathen hordes of Alaric. Very soon afterwards Rome was sacked by the barbarians. St. Augustine, writing at the time, pointed the moral that the heathen gods were impotent to rescue the city, which remained their great stronghold. Yet Zosimus, half a century later, ascribed the catastrophe — and we may be certain not without sympathetic response — to the wrath of these very gods at the neglect of their secular rites. It is to this period of conflicting and fluctuating convictions that numerous designs in mosaic, painting, and sculptured sarcophagi are to be referred which present something between a fusion and a confusion of Christian and heathen emblems and symbols. No positive—at most a disguised and ambiguous—Christian emblem appears at Brading, but a very conspicuous place is given to the particular subject which we find elsewhere adopted as expressive of sympathy between the drift of the chief competitive systems. The pavement of Chamber VI. exhibits Orpheus playing on the lyre with attentive animals round him, precisely as in the Roman catacombs he appears in the centre amidst bordering groups taken from both the New and the Old Testament. In another compartment a figure with the head of a cock reproduces the type so familiar to us upon the Gnostic gems, which are memorials of another scheme for blending Oriental, Egyptian, Greek, and Christian religious associations. Other subjects are selected from the poetical mythologies which were in most intimate relation with Orpheus as the reputed author of a mass of religious poetry, current both popularly and in the mysteries which still commanded veneration. Rude as the execution of these mosaics may be, they exhibit an appearance of systematic design which merits attentive study even beyond what has already been bestowed upon it by the zealous and ingenious editors. It is to be hoped that the appeal for subscriptions to the "Roman Villa Fund" may be freely responded to, to meet the expense of protecting what has already been discovered and of completing an exploration of truly national interest.

THE illustrated edition of *The Imitation of Christ*, published by Messrs. Nimmo & Bain, is tastefully but somewhat too delicately bound. The translation of 'The Imitation' is that of Mr. Benham. The printing by Messrs. Clay is at once legible and fine; the text is enclosed by broad borders of conventional foliage of well-known types, in the manner of the sixteenth century, combined with figures of unequal merit, mostly adapted from the works of masters of renown, and, like the foliage, excellently drawn and cut. The peculiar feature of this edition is ten etchings by M. L. Fleming after designs by M. J. P. Laurens, borrowed from the French edition. These designs are most happily suited to the contemplative enthusiasm of the text, because the serious and dignified inspiration of the artist accords with the motives of the ascetic devotee to whom the world owes the book. The frontispiece of the 'Author in Ecstasy,' with the radiant spirit behind him, is one of the least happy of the ten designs; at once dramatic and grave is 'Hildebrand reproaching Bruno'; 'St. Jerome in the Cave' is a just and pathetic representation, the fitter to the subject owing to some grotesqueness it possesses, and beautifully etched. The best design is 'St. Thomas Aquinas resisting Temptation,' where the largeness of the style of the devotee's figure redeems the somewhat trivial and dull invention displayed by that of the temptress.

Catalogue, Descriptive and Historical, of the Pictures and Sculpture in the Corporation Galleries of Art, Glasgow. Compiled by J. Paton. —Mr. Paton, who is the superintendent of the galleries this handy catalogue describes, gives a general history of the formation of the noteworthy but very unequal collection of works of art under his charge, among which the pictures are 496, excluding the dreadful things which were withdrawn from exhibition on the advice of Mr. J. C. Robinson. Mr. Robinson recommended the Corporation of Glasgow to rid themselves—"eliminate," he called it—of a hundred and ten pictures, and the authorities had the good sense to follow his advice. By way of compensation he stands sponsor for a Giorgione which De Waagen (not the safest authority in the world) discovered; he answers for a dilapidated Titian; and he finds an unrecorded Antonello da Messina in a certain portrait of Sixtus IV., of whom, strange to say, there is a "fine bronze medallion by Guaccialotti," a medallion possibly in Mr. Robinson's own collection. In addition to the general history of the gathering, Mr. Paton has arranged his notes on the works in the modern manner, grouping the paintings, old and modern, in the alphabetical order of the artists' names, and adopting for those names the accepted English modes of spelling. The cataloguing seems to have been carefully studied, and there are few questionable statements. Among these is the designation of Mabuse as the "patriarch" of the Flemish School. The fact is, Mabuse was the last of the Flemish School of the old mode of his country, and one of the first of those who practised the Italian mode.

Rubensbriefe. Gesammelt und Erläutert von Adolf Rosenberg. (Leipzig, Seemann.)—Dr. Rosenberg concludes his preface thus:—"And so may this collection of letters serve to place the many-sided genius of this extraordinary man in a bright light, and may they render more easy the labours of the biographer, who sets himself the honourable task of sketching out a full portrait of the master on the background of his time." It may fairly be said that this collection of all the hitherto discovered letters of Rubens will be of genuine service to the future biographer. The editing and presentment seem all that can be required. Dr. Rosenberg has discovered no new documents, but he has given in full some few of the letters which had hitherto only been printed in part. It is certainly remarkable, considering the extensive correspondence of Rubens with distinguished persons of his time—we are told he sometimes wrote six or eight letters a day—that the collection only numbers 177. Surely careful search should give us many more, and every one of Rubens's letters is good reading.

AN *Album of the Russian Antiquities of the Province of Vladimir* has lately been published by a Mr. Goluishef, a local archæologist, whose career is one of considerable interest. The son of a peasant, he was educated in a parish school, and then sent to Moscow, where he learned to draw. On his return to the village of Goluishevko he set up a lithographic establishment, occupying himself with the production of the coloured illustrations for which there is so large a demand in the popular market. But besides these rude specimens of rustic art he has issued from his village press several archæological works of note, such as 'The Antiquities of the Church of the Epiphany in the Village of Mstera,' 'Memorials of Old Russian Wood-Carving,' and 'Memorials of the Wooden Churches in the Government of Vladimir.'

NEW PRINTS.

MR. LEFÈVRE has sent us an artist's proof of his newly issued plate, engraved in a pure and noble line manner by M. E. Blanchard, the greatest artist of the day in this mode of art. This print reproduces, with fidelity, delicacy, and solidity, Mr. Alma Tadema's picture 'The Torch Dance,' which is now in the Grosvenor Gallery Exhibition. We should not have selected this work as a particularly desirable specimen of the powers of the painter while his superbly energetic 'Danse Pyrrhique' remains unengraved. It is not one of his best productions. As an engraving the print is worthy of the producer's skill in all matters referring to expression, action, energy, drawing, modelling, finish, and taste. That it lacks the colouring and some of the rich tones of the painter is but a small shortcoming in comparison with these extraordinary advantages, the preciousness of which is hardly to be over-estimated while in England draughtsmanship is neglected and finish is subordinated to effectiveness.

The Autotype Company proposes to issue in three parts reproductions of the seventy-one published mezzotints of Turner's 'Liber Studiorum,' with critical notices by the Rev. Stopford A. Brooke. Of this work the first part lies on our table in the form of an appropriate volume with ample margins, free from inartistic ornaments, and containing twenty plates, the greater number of which are of excellent

XUM

quality. The best instances are 'Sketch of Shipping,' 'Sketch from Sea-piece,' 'Holy Island Cathedral,' 'Jason,' and 'Hind Head Hill.' These need only a very little clearness in the shadows to be almost equal to the best impressions of the original prints. 'Dunstanborough Castle,' 'Bexhill,' 'Marine Dabblers,' 'Falls of the Clyde,' and several others, are far inferior, and are acceptable only as memoranda. Mr. S. A. Brooke says that it was found impossible to dispense with the aid of an engraver in reproducing these plates. This artist has done his office admirably, but we are not quite sure that those reproductions which owe least to his efforts—*e. g.*, 'Hind Head Hill'—are the worse on that account. We hope to say more of this important publication when the other volumes are in our hands. From the same company we have a few photographs from pictures at Hampton Court, selected from many more, but not numerous enough to justify an opinion of the whole issue. The larger plates after Lely, Greuze (*?*), and Schoorel promise well.

The Society for Photographing Relics of Old London had need make haste in the execution of its useful and honourable task. Shaftesbury House, the Chapel of Lincoln's Inn, and not a few interesting structures have fallen upon evil days or been abolished altogether. In fear of destruction overtaking Ashburnham House, Mr. A. Marks, of Long Ditton, the energetic and faithful secretary to the Society, has pushed forward a group of views of the beautiful interior of that building, and additional representations of its exterior. The interiors attest the beauty of the design — it is not safe to call it architecture—but they do not prove the authorship of Inigo Jones. *Pace* Mr. Marks, they form the strongest evidence against it. That it should have been deemed possible to destroy such lovely decorative works is an astounding proof of the well-known fact that, despite the centuries of classical studies, the true classical feeling is but skin-deep in this country and merely of the literary sort—a pedantry of letters, and nothing more.

SALES.

MESSRS. CHRISTIE, MANSON & WOODS sold on the 8th inst. the following pictures, being the fourth instalment of the works from Hamilton Palace:—Holbein, Queen Catherine Parr, in a crimson dress embroidered with gold, 840*l.* Steenwyck and F. Francks, An Interior of a House, with figures, 204*l.* W. Van de Velde, A Calm, with a man-of-war saluting, 304*l.* A. Van Dyck, Four small Portraits of Eminent Personages, 210*l.*; Head of Charles II. when a Boy, in crimson dress and lace collar, 231*l.*; James, Duke of York, when a Child, with a dog, 231*l.* G. Honthorst, Portrait of the Princess Henrietta-Maria, Duchess of Orleans, in yellow silk dress and pearl necklace, and Portrait of Charles II., in pink dress and lace collar (the companion), 462*l.* Breughel, A Fair in a Dutch Village, 451*l.* Rottenhammer and Breughel, Apollo, with Venus and Cupids dancing, 304*l.* Rubens, Bellerophon slaying Chimæra, 378*l.* D. Teniers, Interior of a Kitchen, with a peasant in a red cap with feather, 945*l.*; A River Scene, with peasants, cattle, and sheep, 231*l.* H. Steenwyck, Interior of a Church, with figures, 204*l.* Rottenhammer, Jacob's Dream, The Finding of Moses, Israelites gathering Manna, and St. John Preaching (the set of four), 945*l.* Rembrandt, The Magdalen reclining on the Bank of a River, under a Rock, 220*l.* A. De Lorme, Interior of a Church, with figures and dogs, 714*l.* L. Cranach, Portrait of a Lady, in a crimson dress, holding a miniature, 325*l.* J. Mabuse, The Labours of Hercules (the set of eleven small pictures), 525*l.* R. Wilson, Distant View of Rome, sunset, 1,050*l.* Sir P. Lely, Portrait of General David Leslie, with crimson scarf and sword, 388*l.* J. Glover, A View in Borrowdale, 210*l.* Mignard, Portrait of Cardinal Mazarin, 357*l.* Fragonard, A Lady in a Crimson Jacket, 472*l.* J. L. David, Portrait of Napoleon I., whole length, 378*l.* N. Largillière, Portraits of James, Prince of Wales, and his Sister, in the garden of St. Germains (and the engraving), 882*l.* H. Rigaud, Portrait of Maréchal de Foix, 215*l.* G. Poussin, A Grand Classical Landscape, 204*l.* N. Poussin, The Entombment, 504*l.* L. A. Blanchet, Henry B. M. C. Stuart, Cardinal of York, 1,365*l.* J. L. Tocqué, Le Marquis de Marigny (Abel François Poisson), 630*l.* Claude Lorraine, Ariadne and Bacchus, or more probably Ulysses discovering himself to Nausicaa, 840*l.* Velazquez, Portrait of a Youth, in a hat with feather, 283*l.*; Philip IV. of Spain, wearing the Order of the Golden Fleece, 6,300*l.* Murillo, The Infant Christ Sleeping, holding a crook with scroll, 2,415*l.* Coello, Portrait of the Duke of Alva, in white dress and ruff, 420*l.* Juan Pantoxa, A Council of Eleven English and Spanish Statesmen, 2,520*l.* Unknown: Portrait of Gaston, Duc d'Orléans, in crimson and lace dress, 294*l.*; Portrait of Chrétienne, Duchesse de Savoie, in crimson and lace dress, 315*l.*; View of Paris from the Pont Neuf, with numerous figures, and View of the Louvre from the Seine (the companion), 241*l.*

The National Gallery again secured the most desirable among these pictures, although others of very considerable interest have passed into private hands, and of these several will cross the seas, probably never to return. The National Portrait Gallery obtained, at a large but not extravagant cost, lot 1,143, that galaxy of portraits of Spanish and English statesmen which Mr. Scharf is inclined to award to Marc Gheerardts although it is signed "Pantoxa +," an inscription assumed to indicate Pantoja de la Cruz, Coello's pupil, and an able portrait painter, several of whose works are in this country—*e. g.*, at Cobham Hall—which are signed "Jn: Pantoja de la + faciebat," &c. The Madrid Gallery contains several fine works by Pantoja, especially a striking portrait of a lady in black. Mr. Scharf will, no doubt, tell us all he can discover about a picture now one of the greatest ornaments of the collection of which he has been lately named Director. Mr. Burton's purchases include Steenwyck's 'Interior of a House, with figures by F. Francks,' lot 1,019, a fine example, remarkable for its golden warmth of illumination and solid finish, and fitted to represent the painter where he has hitherto been unknown. A picture in all respects answering to this was sold with Mr. Slade's collection in 1801 for 3*l.* 7*s.* The Steenwyck from Fonthill, sold on the 17th ult. to Mr. Heseltine for 37*l.*, seems to have been sold in 1841 for seventeen guineas. Lot 9, 'St. Jerome,' by the same artist, belonged to Lord Gwydir, and was sold in 1829 for fifty guineas. Mr. Radley bought it on the 17th ult. for 199*l.*

A second portrait of Philip IV. of Spain, additional to No. 745, by Velazquez, has been added to our treasures. For this magnificent whole-length picture Mr. Burton wisely paid the highest price ever given for a Velazquez. A portrait by the same painter of this prince going to hunt, mentioned by Buchanan, i. 146, was sold in 1858 with Col. Baillie's pictures for 152*l.* Buchanan in 1813 valued Velazquez's 'Count-Duke Olivarez' and the portrait of the painter, which are now at Bowood, at 600 guineas. 'A Calm' (1020), by Van de Velde, which Mrs. Noseda bought, is very silvery, solid, and delicately painted. The four small portraits in *grisaille* bearing Van Dyck's name seem to have belonged to the series he produced for the "Icones Principum," &c., of which the Duke of Buccleuch has a considerable number. They have every appearance of being genuine, and are as animated in expression, as crisp and frankly touched, as the better known examples. Of course Holbein did not paint the 'Queen Catherine Parr' (1016), which Messrs. Colnaghi bought. Wyke's 'Battle of Bothwell Brigg' (1017), which Mr. Davis bought for 178*l.*, is a curious picture, and shows how cannon were used in William III.'s time.

Jan Breughel's 'Fair in a Dutch Village' (1027) and the charming 'Apollo, with Venus and Cupids dancing' (1028), will go across the Atlantic. Mr. Arnot's courage in giving unprecedented prices for them has been rewarded by the possession of two elegant, crisply touched, and delicate pictures of great choiceness. The former is rich in varied and animated incidents. Very interesting indeed is the little group of portraits of 'Christian IV. of Denmark (brother of James I.'s queen) and his Wife' (1010), by Karel Van Mander, the historian of Dutch artists; it was sold "for a song." The painter is said to have been a pupil of Lucas de Heere. This work shows taste not unworthy of Van Dyck at his best—masculine feeling and a distinct Italian manner. We believe lot 1028 was sold with the Winstanley collection, in 1865, for 13*l.* 10*s.* At Lord Bute's sale, in 1822, a 'Diana and Actæon,' with 'A Riposo,' by Jan Breughel and Rottenhammer, were sold together for 19 guineas! A 'Diana and Actæon,' probably the former of these, was sold as a Rottenhammer with Sir Thomas Lawrence's pictures for 7*l.* 10*s.*; was it lot 1063 of Saturday last? We suppose the 'Riposo,' lot 24 of the current sale, sold to Messrs. Agnew for 115*l.*, was Lord Bute's picture. 'The Elements,' lots 55 and 56 of last Saturday, were sold for 19 guineas in 1863. A set of four similar pictures, attributed to Rottenhammer, were sold in 1839 for 80 guineas. We note that Earl Dudley has four 'Elements,' attributed to Breughel, whose name is often interchanged with that of Rottenhammer. The subjects of these works were much affected during the lives of both these artists, who often worked together. At Mr. Hope's sale 'A Fair,' by Breughel, was sold for 43*l.*; is this lot 1027?

Teniers's 'Interior of a Kitchen' (1045), bought by Mr. Arnot at a stupendous price, is a capital replica of a well-known engraved composition. The so-called P. G. Rembrandt's 'Prince of Gueldres threatening his Father' (1034), for which Mr. Nathan gave 21*l.*, is an indifferent copy of the famous engraved No. 802 at Berlin, and really represents 'Samson threatening his Father-in-law.' The Rembrandt, 'Magdalen on the Bank of a River' (1049), which Mr. Denison bought, includes a Chinese parasol and a peacock. It is a capital example, in perfect condition, and not mentioned by M. Vosmaer. Messrs. Agnew were fortunate in securing the 'Portrait of a Lady' (1052), by Lucas Cranach, which is signed with his dragon, and dated 1561. The so-called Mabuse, lot 1065, representing the 'Labours of Hercules,' in eleven small pictures, which Mr. Arnot bought, is nothing like a Mabuse. It is remarkable for comprising perfectly natural nude figures, which are exquisitely finished in a hard, smooth, and brilliant manner. The four pictures by Rottenhammer (1048) are characteristically golden in colour and pure in illumination; so is the abovementioned 'Diana and Actæon' (1063), which is attributed to Rottenhammer and J. Breughel. Van Dyck's 'Head of Charles II. when a Boy' Mr. Arnot bought; it looks genuine, but there are many versions of the subject. The Windsor portrait of the same is in armour; Mr. Arnot's portrait wears a crimson dress. Of several fine portraits by Lely, that of a 'Lady in Blue and Brown Drapery' (1085), which Mr. Denison bought for 73*l.*, is doubtless the best; it is in the painter's purest manner, that nearest to Van Dyck's. We presume the views of Paris, lots 1128 and 1129, for which Mr. Denison gave very high prices, are by Baut, by whom there are similar views at Knowsley and Blenheim. The Hamilton Palace Sale Catalogue describes them as by an unknown artist. Claude's 'Ariadne and Bacchus' (1134), which Mr. Arnot bought, was sold at Lord Ashburnham's sale in 1850 for 1,123*l.* Enthusiasm of a refreshing kind induced the same buyer to give

nearly 2,500*l.* (!) for the Fonthill picture Murillo's 'Infant Christ Sleeping.' At the Wells sale of 1842 the same artist's 'St. Thomas distributing Alms' was sold for 2,992*l.* 10*s.* The latter was at Manchester in 1857, at Bethnal Green and at the Academy in 1872. It came from the Capuchin convent at Genoa. Baron L de Rothschild's Murillo, called 'The Good Shepherd,' which had been in the Palais de Lassay, in the Presle Collection, and in that of Citizen Robit (sold in 1801), has always been considered a great work, yet the baron gave not much more (3,045*l.*) for it than the trivial 'Infant Christ Sleeping' realized on Saturday last. The folly of these prices fades before the 615,300 francs given by the Louvre in 1852 for the Soult Murillo.

The following pictures by M. G. Courbet were sold at the Hôtel Drouot: Les Lutteurs, 5,800 fr.; L'Aumône d'un Mendiant à Ornans, 9,000 fr.; Baigneuse, vue de dos, 14,000 fr.; Portrait de Rembrandt, copie, 4,810 fr. In the same place were sold the following pictures belonging to the Comte de X——: Drouais, Portrait de Mdlle. Le Normant d'Étioles, Fille de la Marquise de Pompadour, 5,700 fr. Nicolas, Portraits de la Famille Le Normant de C——, 5,000 fr. Van Loo, Portrait de la Marquise d'Humières, 5,000 fr. Madame Vigée Lebrun, Portrait de la Fille de Sédaine, 9,100 fr. Watteau (attribué à), L'Opéra, and La Comédie Italienne, 19,000 fr. From the collection of M. de Lestang-Parade the following pictures were sold: F. Clouet, Portrait de Femme, 6,000 fr. Simone Martini, Triptyque, 3,800 fr. Raphael (attribué à), Portrait de M. Antoine, 9,000 fr. G. Terburg, Le Concert, 11,650 fr. Inconnu, XVe siécle, Un Évêque, 5,700 fr. From the collection of M. B—— the undermentioned pictures changed hands: Troyon, Le Retour du Marché, 11,100 fr.; En Forêt, 5,600 fr. J. Dupré, La Rentrée des Moutons, 10,605 fr.; La Mare, 5,100 fr. Decamps, Les Juifs au Prétoire, 10,250 fr. Daumier, En Troisième Classe, 5,000 fr.

EXCAVATIONS AT EPHESUS.

A COMMITTEE of persons eminent in art and archæology has been formed for the purpose of resuming and completing the excavations at Ephesus on the site of the Temple of Diana under the superintendence of Mr. J. T. Wood, who carried them on for so many years for the Trustees of the British Museum. The proposed excavations will be undertaken with the view of rescuing the sculptured frieze and other portions of the superstructure of the temple which were precipitated beyond the limits of the present excavation, and it is hoped that the result of further explorations will be the recovery of sculptured marbles quite equal in value and interest to those already deposited in the Elgin Gallery at the British Museum.

A meeting at the Mansion House, under the presidency of the Lord Mayor, is to be held on the 24th inst., when an appeal will be made for subscriptions in aid of the enterprise, to which we heartily wish success. On the committee are the Archbishop of Canterbury, the Bishop of Durham, the Dean of Westminster, Rt. Hon. A. J. B. Beresford Hope, Sir Frederic Leighton, P.R.A., and others. Prof. T. Hayter Lewis is the honorary secretary.

Fine-Art Gossip.

MR. SCHARF has signalized his well-won promotion to the Directorship of the National Portrait Gallery by acquiring at the Hamilton Palace sale the extraordinarily interesting picture formerly attributed to Pantoja de la Crux, which this authority is now disposed to ascribe to M. Gheerardts. Apart from its pictorial merit, which is very considerable, this picture contains wonderfully characteristic portraits of the leading statesmen of the time, some of which are not otherwise known. The portrait of Robert Cecil is very expressive; those of the Earls of Devonshire, Northampton, and Nottingham are hardly inferior. Mr. Scharf likewise bought the whole-length portrait of James II. ascribed to Kneller, lot 1073.

ANOTHER important bequest has been made to the South Kensington Museum, a collection of about four hundred pieces of carved jade and Oriental crystals. They have been on loan for some time past at the Museum, in two cases, in the court where the Chinese and Japanese objects are kept. The late owner, Mr. Arthur Wells, has left the whole collection to the nation; he died about three months ago. Many of the specimens of jade are extremely fine and valuable, among them especially a small inkstand or writing case of white jade covered with perforated panels of green jade and decorated with rubies. This is worth at least 1,100*l.* Other admirable examples are some extraordinary pieces of open work. There are three or four large pieces of the very rare mixed white and red jade. The gift is a most desirable addition to the treasures in the South Kensington Museum, and in money value cannot be estimated at less than from 25,000*l.* to 30,000*l.*

THE obituary of the 3rd inst. records the death at Florence, in his seventy-third year, of Mr. Charles Heath Wilson, whose last appearance before the artistic world was in 1876, as the author of the 'Life and Works of M. Angelo,' a book which embodied the researches and some of the conclusions of the Commendatore A. Gotti, of Florence, and is an extremely valuable biography, enriched with not a few ingenious criticisms. He was the son of Mr. Andrew Wilson, a landscape painter of considerable ability, who exhibited at the Academy in 1810 and afterwards. Andrew Wilson was Teacher of Drawing at Sandhurst till 1818, and till 1826 Master of the Trustees' School in Edinburgh, where C. H. Wilson was born. He subsequently lived in Genoa, and busied himself in buying pictures from the Balbi and other palaces of that city, and importing them to England. Some of them passed into the collection of Lord Radstock. A picture of his importing, Rubens's 'Elevation of the Brazen Serpent,' is in the National Gallery. Andrew Wilson, after a lengthened sojourn in Italy, returned to Edinburgh, and practised as an architect. He died in Italy in 1848. When the so-called Schools of Design were instituted Mr. C. H. Wilson was appointed Director of the Edinburgh branch; and when Dyce found it impossible to resist the pressure of the commercial element then ruling the art education of the country, Wilson was installed in his post at Somerset House, where he carried on the struggle as best he could until, an organized remonstrance from the leading students having compelled inquiry into the arrangements, he retired from office in May, 1845, and accepted the mastership of the art school then newly opened at Glasgow. There he distinguished himself by filling the windows of St. Mungo's Cathedral with Munich transparencies in painted glass, and in other ways. When the Department of Science and Art abolished the art-masterships of the Board of Trade, Wilson was pensioned; this was in 1864, after which he lived mostly in Florence.

MR. T. L. ATKINSON has, with the consent of Mdlle. R. Bonheur, undertaken to finish the engraving of the plate after that lady's picture 'The Lion at Home,' which Mr. W. H. Simmons left incomplete.

WE have to record the death, on Saturday last, at Hove, of Mr. Hablot Knight Browne, well known as a designer of humorous and satirical subjects and an etcher of considerable skill, whose signature "Phiz" appears at the foot of most of the illustrations to 'Pickwick,' the original draughtsman, Seymour, having committed suicide, and R. W. Buss not continuing to supply designs after, we believe, the fourth number. 'Nickleby,' 'Dombey and Son,' 'Chuzzlewit,' 'Copperfield,' and other works of Dickens, and many of the novels of Lever, Ainsworth, and Scott ("Abbotsford Edition"), and the "Illustrated Byron" were greatly indebted to "Phiz." He was born in 1815, and was therefore quite young when he became distinguished. He produced a vast number of illustrations of books. Among his more ambitious efforts was a cartoon measuring fifteen feet by twelve feet, and representing 'A Foraging Party of Cæsar's Forces surprised by the Britons,' which appeared as No. 65 at the Westminster Hall exhibition of 1843. This, notwithstanding the "scratchy" manner of its execution, displayed remarkable skill and abundant energy of design. At the same gathering was another cartoon attributed to him, of which the energy bordered on caricature; it was named 'Henry II. defied by a Welsh Mountaineer,' No. 91. H. K. Browne sent figure pictures of humorous and dramatic character to the exhibitions of the British Institution in 1843, 1844, 1849, 1850, 1863, 1866, and 1867, and of the Society of British Artists in 1865, 1866, and 1869.

MR. M. H. BLOXHAM has now at press the eleventh edition of his 'Principles of Gothic Ecclesiastical Architecture.' It is considerably over half a century since the appearance of the first edition, and the tenth has long been out of print, and we have seen it priced in catalogues at nearly three times its publishing price. It is not often that a handbook has enjoyed so long a popularity, and we congratulate the venerable author on his being able once more to revise it and put it on a level with the times. The new edition is much enlarged, and will fill three volumes.

AFTER many delays and the death of one of the sculptors—an event due, it is said, to fatigues endured in preparation of the work — the great bronze equestrian statue of Charlemagne, grouped with Roland and Oliver one on each side, produced by the brothers Rochet, is now being erected on the Place du Parvis-Notre-Dame, Paris. The pedestal on which this work stands was designed for the purpose by Viollet-le-Duc.

A HISTORY of Colchester Castle, which is to contain much fresh material connected with the architecture and the associations of this interesting old relic, will shortly be published by Messrs. Benham, of Colchester.

MUSIC

THE WEEK.

ROYAL ITALIAN OPERA.—'Mefistofele.'

IT would seem that M. Lenepveu's 'Velleda' has proved a more unqualified failure than even the least sanguine had ventured to anticipate, as it has only survived two performances, the third being announced, but promptly countermanded. If the system under which Italian opera is now carried on were less contemptible this *fiasco* might excite surprise; but as matters stand there is no cause for wonderment, and, indeed, a more favourable result would have been, in a certain sense, unfortunate. It was gratifying to note the firm attitude of the public in the matter as expressed by the thin attendance on Friday week and the crowded house on Tuesday when 'Mefistofele' was produced. Despite some eccentricities, Boïto's opera is a work of undoubted genius, and is therefore worthy of attention and respect. There is always charm in freshness of style, even if it be clouded by errors of judgment or a tendency towards extravagance. The Italian composer's treatment of the time-worn subject is absolutely original, having nothing in common with that of Schumann, Berlioz, Liszt, or Gounod. As a drama his

book is radically defective, from its fragmentary and disjointed nature; but his aim seems to have been not so much to present the world-famous story in a connected and symmetrical form for lyrical purposes as to find vent for his own feeling about the proper musical expression of certain scenes and situations. In this he has been remarkably successful—at any rate in some instances. The "Prologue in Heaven" may seem *bizarre* and deficient in dignity, save in the fine peroration; but the piquancy of the garden scene, the grotesqueness and musical cleverness of the revel on the Brocken, the pathos of the prison scene, and the calm beauty of the "Classical Sabbath," appeal with irresistible force alike to musicians and general hearers. Whether Boïto will be equally successful in the composition of a more regular and consistent opera remains to be ascertained. Two years ago he was understood to be engaged upon an opera on the subject of Nero; but the work, if completed, has not yet seen the light. The Covent Garden performance of 'Mefistofele' is, on the whole, less meritorious than that at Her Majesty's in 1880, when a perfect *ensemble* was attained. The principal falling off is in the title *rôle*, M. Gailhard's mannerisms and self-consciousness being disagreeably prominent in the part of Mephistopheles, which was rendered by Signor Nannetti with much breadth and dignity of outline. As Margherita Madame Albani is only inferior to Madame Nilsson in the garden scene, the suggestion of hysterical excitement in the celebrated quartet being comparatively feeble and ineffective. But the Canadian artist fairly attains the height of expression demanded by the situation in the prison scene, her singing and acting being here characterized by combined power and pathos. Signor Mierzwinsky is strangely disappointing as Faust. He frequently gives occasion for dissatisfaction in the opening scenes of an opera, but on Tuesday this weakness prevailed throughout the performance, his intonation at times being painfully defective. It may be that he was not in full possession of his physical resources; but, at any rate, he failed to render justice to the music, much of which is grateful to the singer. Mdlle. Tremelli, in the small parts of Marta and Pantalis, was commendable, though, of course, not equal to her predecessor, Madame Trebelli. The *mise en scène* is elaborate and showy, if not always in the purest taste, and the general performance leaves comparatively little to be desired.

NEW PUBLICATIONS.

Schubert's Songs. Vol. I. *Mezzo-soprano.*—*Pianoforte Albums.* Nos. 7 and 8, *Marches.* Edited by Berthold Tours.—*Minster Bells.* Cantata for Female Voices. By Franz Abt.—*Caractacus.* Cantata. By J. F. H. Read.—*Twenty Original Voluntaries for Harmonium.* By A. H. Brown. (Novello, Ewer & Co.)

Stray Leaves. By Florian Pascal. (Joseph Williams.)

ALTHOUGH Schubert is universally recognized as the greatest of song composers, it is astonishing how few of his matchless *Lieder* are heard in the concert-room. Considerably more than half of his 575 songs are published, but the changes are rung on some ten or twelve examples, and many noble compositions lie entirely neglected. The issue of a new edition may have the effect of drawing attention to these, and we therefore welcome the first instalment as named above, the volume containing twenty songs, for the price of eighteenpence. For the graceful translation by Madame Natalia Macfarren we have nothing but praise; but it would have been an advantage if the original words had been added. It should be noted that the selection does not include the hackneyed compositions referred to, and that the songs are for mezzo-soprano, not contralto, a voice not so generally recognized in Schubert's time as at present.

There can be very little harm, if not very much good, in a collection of marches from various sources arranged for one performer on the pianoforte, if the originals are simply transcribed. Such, unfortunately, is not wholly the case in the volumes before us. The first item is termed a 'Hero's March' by Mendelssohn, being nothing less than the second subject of the B minor Capriccio, Op. 22, with the introduction to the same work by way of "trio." It is only fair to say, however, that similar want of reverence has not been shown in any other instance, most of the thirty marches included being genuine transcriptions.

'Minster Bells' differs in nought from Mr. Abt's previous cantatas for female voices. There is no pretence at a story in Mr. Edward Oxenford's smoothly written verses, and the music is pleasing and tuneful rather than ambitious. The voices required are three soloists and three-part chorus.

Mr. Read's work is more lengthy and elaborate. The libretto, by Mr. E. J. Stokes, deals with the captivity of Caractacus, the love of his daughter for a Roman soldier, and their ultimate pardon by the Emperor Claudius. The composer shows a considerable amount of musicianship and knowledge of effect, though perhaps little freshness of idea. The choruses are vigorous and far from simple in structure; and the solo parts, five in number, would be found rather arduous. On the whole, 'Caractacus' is well worthy of a performance.

Mr. Brown's voluntaries are stated to be for "organ or harmonium," but as there is no *obbligato* pedal part they are more suitable for the latter instrument. They are in various styles, and all more or less modern in feeling, but they present no special characteristics on which it is necessary to dwell.

'Stray Leaves' are twelve little sketches for the pianoforte, easy, graceful, and calculated to please young players.

DRAMA

Dramatic Gossip.

THOUGH revived nominally for one performance only, Holcroft's comedy of 'The Road to Ruin,' given on Saturday last at the Vaudeville, will probably, like other pieces produced under similar conditions, find its way into the regular bill. As in previous cases at the same theatre, the interest is diminished in consequence of an earlier revival of the same play. The features of most importance are, moreover, those with which the playgoer is most familiar. Mr. Farren's ripe performance of Old Dornton and Mr. Thorne's thoughtful and capable representation of Silky are well-known impersonations. Power enough was displayed by Mr. Charles Warner's Young Dornton, which also has been previously seen. The representation remains, however, over-accentuated, and is melo-dramatic and unequal. Mr. F. Thorne is seen to moderate advantage as Goldfinch. As Sophia Miss Alma Murray shows a more distinct vein of comedy than she has previously exhibited. Mr. H. Wigan as Sulky, Miss Kate Phillips as Jenny, Mr. Maclean, and other members of the company supplied a competent cast.

UPON its revival at the Criterion, Mr. Gilbert's whimsical farce 'The Wedding March' failed to win a favourable reception. The result is chiefly attributable to actors who overcharge their parts, and, in their delight in comic "business," fail to preserve the individuality of the characters assigned them. One or two of the exponents are less guilty than the rest; but the representation as a whole is unworthy of the theatre.

THE death of Mr. Benjamin Webster occurred so far as the stage is concerned long ago. During recent years Mr. Webster has rarely been seen in public. A good but unequal actor, he is chiefly remembered by the present generation in such melo-dramatic characters as Richard Pride and Robert Landry in 'The Dead Heart.' As Triplet in 'Masks and Faces' and Penn Holder in 'One Touch of Nature' he was always received with favour. He was a good actor in comedy, though of late years his efforts in this line were infrequent. A large span of time is covered by his career, his earliest recorded appearance as a London actor dating back to 1818. In 1824 he is known to have acted at Drury Lane, and in 1829 his name appears in the bills of the Haymarket Theatre, of which house he subsequently became manager. The dramas which bear his name are principally adaptations from the French.

MR. WILLIAM RIGNOLD, who, while playing Macbeth at Drury Lane Theatre, has been seriously hurt, is the second victim during recent years of the absurd practice of using sharp weapons upon the stage. His wound, like that of Mr. Warner, was due to a dagger. Some species of supervision such as is used with regard to children will be necessary if actors have no more sense than to employ in mock combats weapons capable of inflicting grave and even fatal injury.

IN one respect the lady who, under the title of Marian, now appears in the Alhambra extravaganza of 'Babil and Bijou' as the Queen of the Amazons, is entitled to be called a great actress. Her height may well be, as is stated, eight feet two inches. No similar *début* has, so far as chronicles are to be trusted, been seen upon the stage. In a lady with such special endowments of nature artistic excellence is scarcely to be expected. It is, at least, not forthcoming. If "it is excellent," as Isabella asserts, "to have a giant's strength," it may be objected that, so far as stage progress is concerned, the new-comer can only "use it like a giant."

MR. BYRON'S comedy of 'Old Solders' and Mr. Gilbert's fantastic play 'Creatures of Impulse' have been presented during the early portion of the present week at the Gaiety. On Thursday 'Partners for Life,' also by Mr. Byron, was substituted for the comedy first named. The representation was for the benefit of the victims of agrarian or political trouble in Ireland. It is not often that a West-End theatre is occupied during an entire week by performances of this class. Nothing in the acting calls for criticism.

A COMEDY-DRAMA in four acts, by an author assuming the pseudonym of L. S. Dee, has been produced, under the title of 'Won by Honours,' as a morning entertainment at the Comedy Theatre. Its characters are conventional, and its dialogue suggests obligation to a French source. The story, however—which shows the efforts of a girl to escape from a gambling-house in which she is confined by a brother who seeks to use her as a decoy—is simple and fairly sympathetic. With an adequate interpretation 'Won by Honours' might hope to rival more than one play at present holding possession of a West-End theatre. In spite of some good acting, however, by Mr. E. S. Willard, Mr. Cooper, and Mr. Alexander, the interpretation is weak. It is weakest in the female characters.

TO CORRESPONDENTS.—W. D.—L. S. V.—received.

C. P.—You are obviously unacquainted with the negotiations that actually took place.

T. F. V.—Too late.

LITERATURE

Tristram of Lyonesse, and other Poems. By Algernon Charles Swinburne. (Chatto & Windus.)

THIS is the most varied and important volume of verse that Mr. Swinburne has yet published, and in all probability it will be the most popular. Wider in its appeal than any previous book of his—more romantic, too, and more interesting—it yet retains the rhythmical power and prophetic passion which have hitherto been the most noticeable characteristics of his work. His experience in dramatic composition has been of considerable service in the construction and development of 'Tristram of Lyonesse.' This has been especially so in the last canto, where the famous death scene of Tristram is rendered with a dramatic intensity rarely seen in narrative as distinguished from purely epic poetry. On the whole, indeed, it may perhaps be said that the dramatic method of soliloquy and suggestive subtlety of dialogue has never before been so liberally imported into this form of poetic art. By dramatic method we do not mean simply the method where the action moves by aid partly of narrative and partly of dialogue (for this is the method adopted by other narrative poets, notably by Thomas the Rhymer and by Gottfried von Strasburg, who have dealt with the Tristram story), but by dramatic method we mean the method where the dialogue has that quality of suggestiveness and subtle inference which we expect to find in drama, and perhaps in the dramatic ballad rather than in the narrative poem.

In telling the story of 'Tristram of Lyonesse' Mr. Swinburne has mainly followed Thomas the Rhymer, but not entirely. The material for the first canto, for instance, is composed partly from Thomas's vigorous poem and partly from other pre-Mallorian authorities, with episodical illustrations from 'Morte Arthur.' In cantos two, three, four, and five Thomas is followed. In canto six again Thomas is pretty closely followed (though of course the discovery by her brother of the virginity of Tristram's wife is effected by a more delicate accident than that of which Thomas makes use); while her brother's expedition with Tristram to Cornwall, King Mark's mistake of Brangwain for Iseult, and the subsequent love passages are taken from Thomas and the French romances quoted by Scott in his admirable edition of the Auchinleck MS. The loan of Joyous Gard to Tristram and Iseult by Launcelot at Guinevere's suggestion is, of course, from Mallory. The materials of canto seven seem to be entirely Mr. Swinburne's own. In canto eight the Welsh episode is transplanted from an earlier canto of Thomas's poem. In canto nine, treating of the last expedition, the wound, the message to Iseult, the return of the ship, and the revenge of Tristram's wife, Sir Walter Scott's conclusion to Thomas's poem (based, it will be remembered, on French originals) is followed. Mark's compassionate speech and the burial of the lovers together are also based on the same materials.

Gottfried of Strasburg Mr. Swinburne does not seem to have consulted at all. Yet Gottfried is worth consulting; for not only is his poem full of a passionate colour astonishing when compared with the works of even such fine writers among his contemporaries as Wolfram von Eschenbach, the author of 'Parcival,' but it is full of dramatic situations beautifully rendered (such as that of the hunter coming upon the lovers in the Grotto of Love), which are hardly surpassed in the whole range of romantic poetry.

The French and English sources of the story have, however, been carefully studied by Mr. Swinburne, and his collations have in most cases been happy. We are curious, however, to know what has led him to follow so many modern writers in his choice of the forms of the names of the hero and the heroine. Having chosen the English form Tristram in preference to the French form Tristan, why did not he and Mr. Matthew Arnold choose the beautiful English form Ysonde or Ysoude instead of the French Iseult? They might just as reasonably, as far as we can see, have chosen the Welsh Essylt or the Provençal Iseus. These, however, are quite minor matters when the subject under discussion is so noble a poem.

Tristram, the orphan son of Rouland Rise, Lord of Ermonie, and Blanche Fleur, sister of King Mark of Cornwall, has no proper place in the Arthurian cycle, though Mallory and others have tried to give him one. It will be remembered that he was cured of a desperate wound by Iseult, daughter of the King of Ireland. When Tristram afterwards returned to the court of his uncle, King Mark, he described in such glowing terms the beauty of Iseult that Mark fell in love with her without having seen her, and sent Tristram to Ireland to woo her by proxy and bring her across the sea to Cornwall. This Tristram achieved, and in the ship Swallow set sail for Cornwall with the princess on board. But Iseult's mother, in her anxiety for the prosperity of the match, had concocted one of those mysterious love-potions which play such an important part in the early romances of Europe. To Iseult's handmaiden, Brangwain, the queen-mother secretly entrusted this potion, and she kept the golden flask containing it by her side night and day. All went on happily at first. The men rowed through the summer night, while Tristram amused Iseult with harp and song varied by stories of King Arthur's court.

And her heart sprang in Iseult, and she drew
With all her spirit and life the sunrise through,
And through her lips the keen triumphant air
Sea-scented, sweeter than land-roses were,
And through her eyes the whole rejoicing east
Sun-satisfied, and all the heaven at feast
Spread for the morning; and the imperious mirth
Of wind and light that moved upon the earth,
Making the spring, and all the fruitful might
And strong regeneration of delight
That swells the seeding leaf and sapling man,
Since the first life in the first world began
To burn and burgeon through void limbs and veins,
And the first love with sharp sweet procreant pains
To pierce and bring forth roses; yea, she felt
Through her own soul the sovereign morning melt,
And all the sacred passion of the sun;
And as the young clouds flamed and were undone
About him coming, touched and burnt away
In rosy ruin and yellow spoil of day,
The sweet veil of her body and corporal sense
Felt the dawn also cleave it, and incense
With light from inward and with effluent heat
The kindling soul through fleshly hands and feet.
And as the august great blossom of the dawn
Burst, and the full sun scarce from sea withdrawn
Seemed on the fiery water a flower afloat,
So as a fire the mighty morning smote
Throughout her, and incensed with the influent hour
Her whole soul's one great mystical red flower
Burst, and the bud of her sweet spirit broke
Rose-fashion, and the strong spring at a stroke
Thrilled, and was cloven, and from the full sheath
came
The whole rose of the woman red as flame:
And all her Mayday blood as from a swoon
Flushed, and May rose up in her and was June.
So for a space her heart as heavenward burned:
Then with half summer in her eyes she turned,
And on her lips was April yet, and smiled,
As though the spirit and sense unreconciled
Shrank laughing back, and would not ere its hour
Let life put forth the irrevocable flower.

After a time the wind freshened, and the sea growing rough, Tristram lent a hand to the oarsmen:—

For Tristram being athirst with toil now spake,
Saying, "Iseult, for all dear love's labour's sake
Give me to drink, and give me for a pledge
The touch of four lips on the beaker's edge."
And Iseult sought and would not wake Brangwain
Who slept as one half dead with fear and pain,
Being tender-natured; so with hushed light feet
Went Iseult round her, with soft looks and sweet
Pitying her pain; so sweet a spirited thing
She was, and daughter of a kindly king.
And spying what strange bright secret charge was
kept
Fast in that maid's white bosom while she slept,
She sought and drew the gold cup forth and smiled
Marvelling, with such light wonder as a child
That hears of glad sad life in magic lands;
And bare it back to Tristram with pure hands
Holding the love-draught that should be for flame
To burn out of them fear and faith and shame,
And lighten all their life up in men's sight,
And make them sad for ever. Then the knight
Bowed toward her and craved whence had she this
strange thing
That might be spoil of some dim Asian king,
By starlight stolen from some place of sands,
And a maid bore it here in harmless hands.
And Iseult, laughing—"Other lords that be
Feast, and their men feast after them; but we,
Our men must keep the best wine back to feast
Till they be full and we of all men least
Feed after them and fain to fare so well:
So with mine handmaid and your squire it fell
That hid this bright thing from us in a wile":
And with light lips yet full of their swift smile
And hands that wist not though they dug a grave,
Undid the hasps of gold, and drank, and gave,
And he drank after, a deep glad kingly draught:
And all their life changed in them, for they quaffed
Death; if it be death so to drink, and fare
As men who change and are what these twain were.
And shuddering with eyes full of fear and fire
And heart-stung with a serpentine desire
He turned and saw the terror in her eyes
That yearned upon him shining in such wise

As a star midway in the midnight fixed.
Their Galahault was the cup, and she that mixed;
Nor other hand there needed, nor sweet speech
To lure their lips together; each on each
Hung with strange eyes and hovered as a bird
Wounded, and each mouth trembled for a word;
Their heads neared, and their hands were drawn in one,
And they saw dark, though still the unsunken sun
Far through fine rain shot fire into the south;
And their four lips became one burning mouth.

On landing Iseult was received by King Mark with an affection which is touchingly described. So great was the fame of Iseult's beauty that the knight and minstrel Palamede, who during Tristram's absence had obtained of the king a rash promise to grant him whatever he might ask, demanded the queen herself, and Mark was compelled by his oath to yield her up. Palamede rode off with his prize; but his triumph was of short duration. Tristram followed him, and, after vanquishing him, rode away with Iseult into the woods. Then follow the love passages in the woods, which, though they nearly overpass the border line of modern erotic poetry, are so full of beauty, and are, moreover, so charged with the chivalry and high heroism which alone can make beautiful a lawless passion, that it is impossible to wish them unwritten:—

There was a bower beyond man's eye more fair
Than ever summer dews and sunniest air
Fed full with rest and radiance till the boughs
Had wrought a roof as for a holier house
Than aught save love might breathe in; fairer far
Than keeps the sweet light back of moon and star
From high kings' chambers: there might love and sleep
Divide for joy the darkling hours, and keep
With amorous alternation of sweet strife
The soft and secret ways of death and life
Made smooth for pleasure's feet to rest and run
Even from the moondawn to the kindling sun,
Made bright for passion's feet to run and rest
Between the midnight's and the morning's breast,
Where hardly though her happy head lie down
It may forget the hour that wove its crown;
Where hardly though her joyous limbs be laid
They may forget the mirth that midnight made.
And thither, ere sweet night had slain sweet day,
Iseult and Tristram took their wandering way,
And rested, and refreshed their hearts with cheer
In hunters' fashion of the woods; and here
More sweet it seemed, while this might be, to dwell
And take of all world's weariness farewell
Than reign of all world's lordship queen and king.
Nor here would time for three moons' changes bring
Sorrow nor thought of sorrow; but sweet earth
Fostered them like her babes of eldest birth,
Reared warm in pathless woods and cherished well.
And the sun sprang above the sea and fell,
And the stars rose and sank upon the sea;
And outlaw-like, in forest wise and free,
The rising and the setting of their lights
Found those twain dwelling all those days and nights.
And under change of sun and star and moon
Flourished and fell the chaplets woven of June,
And fair through fervours of the deepening sky
Panted and passed the hours that lit July,
And each day blessed them out of heaven above,
And each night crowned them with the crown of love.
Nor till the might of August overhead
Weighed on the world was yet one roseleaf shed
Of all their joy's warm coronal, nor aught
Touched them in passing ever with a thought
That ever this might end on any day
Or any night not love them where they lay;
But like a babbling tale of barren breath
Seemed all report and rumour held of death,
And a false bruit the legend tear-impearled
That such a thing as change was in the world.
And each bright song upon his lips that came,
Mocking the powers of change and death by name,
Blasphemed their bitter godhead, and defied
Time, though clothed round with ruin as kings with pride,
To blot the glad life out of love: and she
Drank lightly deep of his philosophy
In that warm wine of amorous words which is
Sweet with all truths of all philosophies.

Having been banished from Cornwall by his uncle, Tristram wandered through Spain, Ermonie, and Brittany, and eventually married the daughter of the Duke of Brittany, another Iseult—"Iseult of the White Hand"—a beautiful girl of sixteen. But Tristram's heart was still with that first Iseult who was weeping for him at Tintagel. To the daughter of the King of Brittany he was a husband only in name, and when taxed with this by his wife's brother Ganhardine, Tristram confessed the reason, and depicted so vividly the charms of the Cornish Iseult that Ganhardine demanded to see her, and in consequence the two heroes started together for Cornwall. But Ganhardine on first beholding Brangwain, Iseult's maid, was so stricken with admiration and love of her that he had no eyes for the beauty of the Cornish princess, and in order to gain Brangwain lent aid to Tristram in his intrigue with Iseult. The end of all this was that Tristram and the Cornish queen eloped to Joyous Gard, which Launcelot and Queen Guinevere lent them as a refuge. Here

Many a noon
They took the moorland's or the bright sea's boon
With all their hearts into their spirit of sense,
Rejoicing, where the sudden dells grew dense
With sharp thick flight of hillside birds, or where
On some strait rock's ledge in the intense mute air
Erect against the cliff's sheer sunlit white
Blue as the clear north heaven, clothed warm with light,
Stood neck to bended neck and wing to wing
With heads fast hidden under, close as cling
Flowers on one flowering almond-branch in spring,
Three herons deep asleep against the sun,
Each with one bright foot downward poised, and one
Wing-hidden hard by the bright head, and all
Still as fair shapes fixed on some wondrous wall
Of minster-aisle or cloister-close or hall
To take even time's eye prisoner with delight.
Or, satisfied with joy of sound and sight,
They sat and communed of things past.

Altogether, life at Joyous Gard seems to have been modelled on that of the *cour amoureuse* patronized by Queen Isabeau in the luxurious times of Charles VI.

But all that year in Brittany forlorn,
More sick at heart with wrath than fear of scorn
And less in love with love than grief, and less
With grief than pride of spirit and bitterness,
Till all the sweet life of her blood was changed
And all her soul from all her past estranged
And all her will with all itself at strife
And all her mind at war with all her life,
Dwelt the white-handed Iseult, maid and wife,
A mourner that for mourning robes had on
Anger and doubt and hate of things foregone.
For that sweet spirit of old which made her sweet
Was parched with blasts of thought as flowers with heat
And withered as with wind of evil will;
Though slower than frosts or fires consume or kill
That bleak black wind vexed all her spirit still.

Her love turned to hate is finely depicted in a long soliloquy:—

O thou my lord that hadst me to thy wife,
Dost thou not fear at all, remembering me,
The love that bowed my whole soul down to thee?
Is this so wholly nought for man to dread,
Man, whose life walks between the quick and dead,
Naked, and warred about with wind and sea,
That one should love and hate as I do thee?
That one should live in all the world his foe
So mortal as the hate that loves him so?
Nought, is it nought, O husband, O my knight,
O strong man and indomitable in fight,
That one more weak than foam-bells on the sea
Should have in heart such thoughts as I of thee?
Thou art bound about with stately strengths for bands:
What strength shall keep thee from my strengthless hands?
Thou art girt about with goodly guards and great:
What fosse may fence thee round as deep as hate?
Thou art wise: will wisdom teach thee fear of me?
Thou art great of heart: shall this deliver thee?
What wall so massive, or what tower so high,
Shall be thy surety that thou shouldst not die,
If that which comes against thee be but I?
Who shall rise up of power to take thy part,
What skill find strength to save, what strength find art,
If that which wars against thee be my heart?
Not iron, nor the might of force afield,
Nor edge of sword, nor sheltering weight of shield,
Nor all thy fame since all thy praise began,
Nor all the love and laud thou hast of man,
Nor, though his noiseless hours with wool be shod,
Shall God's love keep thee from the wrath of God.

But sorrows now began to encompass the lovers. King Arthur had summoned Tristram to do his duty as a knight by quelling the Welsh giant Urgan, who was ravaging the domain of King Triamour, and also ordained that Iseult should be restored to her husband King Mark. Tristram's task of quelling Urgan was not trifling. He achieved prodigies of valour. After killing Urgan he returned to his forsaken wife in Brittany, wounded so sorely that his only hope of recovery lay in the skill of the Cornish queen, who had cured an equally grievous wound on a former occasion. Accordingly he sent his faithful brother-in-law Ganhardine to Cornwall in his ship carved with the semblance of a swan, and entrusted to him a ring, to be secretly conveyed to the queen, in the hope that she might be induced to forsake King Mark once more and repair to Brittany.

"But make thee two sails, one like sea-foam white
To spread for signal if thou bring her back,
And if she come not see the sail be black,
That I may know or ever thou take land
If these my lips may die upon her hand
Or hers may never more be mixed with mine."
And his heart quailed for grief in Ganhardine,
Hearing; and all his brother bade he swore
Surely to do, and straight fare forth from shore.
But the white-handed Iseult hearkening heard
All, and her heart waxed hot, and every word
Thereon seemed graven and printed in her thought
As lines with fire and molten iron wrought.
* * * *
So bitter burned within the unchilded wife
A virgin lust for vengeance, and such hate
Wrought in her now the fervent work of fate.

Ganhardine succeeded in his mission, and set sail for Brittany with the queen on board. Mean time Tristram lay languishing, tended by his wife, and gazing over the sea in quest of a white sail, sometimes hoping and sometimes despairing.

Far to west
Had sunk the dead moon on the live sea's breast,
Slain as with bitter fear to see the sun:
And eastward was a strong bright wind begun
Between the clouds and waters: and he said,
Seeing hardly through dark dawn her doubtful head,
"Iseult?" and like a death-bell faint and clear
The virgin voice rang answer—"I am here."
And his heart sprang, and sank again: and she
Spake, saying, "What would my knightly lord with me?"
And Tristram: "Hath my lady watched all night
Beside me, and I knew not? God requite
Her love for comfort shown a man nigh dead."
"Yea, God shall surely guerdon it," she said,
"Who hath kept me all my days through to this hour."
And Tristram: "God alone hath grace and power
To pay such grace toward one unworthier shown
Than ever durst, save only of God alone,

Crave pardon yet and comfort, as I would
Crave now for charity if my heart were good,
But as a coward's it fails me, even for shame."
Then seemed her face a pale funereal flame
That burns down slow by midnight, as she said:
"Speak, and albeit thy bidding spake me dead,
God's love renounce me if it were not done."
And Tristram: "When the sea-line takes the sun
That now should be not far off sight from far,
Look if there come not with the morning star
My ship bound hither from the northward back,
And if the sail be white thereof or black."
And knowing the soothfast sense of his desire
So sore the heart within her raged like fire
She could not wring forth of her lips a word,
But bowing made sign how humbly had she heard.
And the sign given made light his heart; and she
Set her face hard against the yearning sea
Now all athirst with trembling trust of hope
To see the sudden gates of sunrise ope;
But thirstier yearned the heart whose fiery gate
Lay wide that vengeance might come in to hate.
And Tristram lay at thankful rest, and thought
Now surely life nor death could grieve him aught,
Since past was now life's anguish as a breath,
And surely past the bitterness of death.
For seeing he had found at these her hands this grace,
It could not be but yet some breathing-space
Might leave him life to look again on love's own face.

* * * *

And high from heaven suddenly rang the lark,
Triumphant; and the far first refluent ray
Filled all the hollow darkness full with day.
And on the deep sky's verge a fluctuant light
Gleamed, grew, shone, strengthened into perfect sight,
As bowed and dipped and rose again the sail's clear white.
And swift and steadfast as a sea-mew's wing
It neared before the wind, as fain to bring
Comfort, and shorten yet its narrowing track.
And she that saw looked hardly toward him back,
Saying, "Ay, the ship comes surely; but her sail is black."
And fain he would have sprung upright, and seen
And spoken: but strong death struck sheer between,
And darkness closed as iron round his head:
And smitten through the heart lay Tristram dead.
And scarce the word had flown abroad, and wail
Risen, ere to shoreward came the snowbright sail,
And lightly forth leapt Ganhardine on land,
And led from ship with swift and reverent hand
Iseult: and round them up from all the crowd
Broke the great wail for Tristram out aloud.
And ere her ear might hear her heart had heard,
Nor sought she sign for witness of the word;
But came and stood above him newly dead,
And felt his death upon her: and her head
Bowed, as to reach the spring that slakes all drouth;
And their four lips became one silent mouth.

What strikes the reader most forcibly on reading the poem is the heroic splendour of the erotic passages. That these should have been written by the author of 'Poems and Ballads' is not so anomalous, however, as at first appears. In discussing that remarkable volume it is the fashion to ignore a poem so full of genuine passion as 'The Triumph of Time,' and to dwell upon such youthful travesties of passion as 'Dolores.' A true criticism should have at once recognized these productions as being nothing but literary exercises of a genius that must needs disport itself in the very exuberance of its strength, and as having no relation whatsoever to the young poet's capacity or incapacity of rendering the genuine and healthy passions of man. The fact is that, heroic as is Tristram's love in this poem, it is not a whit more heroic than is the temper shown in 'The Triumph of Time'—one of the few poems in 'Poems and Ballads' which seem to have come from the poet's heart, as, assuredly, it is one of the few poems in that volume which have any relation to nature, or are of value save for merely rhythmical qualities. We are not of those, however, who think there is any burlesque passion in 'Chastelard.' On the contrary, we think 'Chastelard' a remarkable example of passionate poetry. The picture of a young man enslaved by a beautiful woman, not so much in spite of as on account of her unlovely moral qualities, is most vigorous and most true. Brutal selfishness such as that displayed by Mary Stuart in relation to Chastelard and to all her lovers save Bothwell would have been repulsive in any other woman, but was in her an added charm. That it is a very unpleasant and unprofitable phase of the love passion is true, yet it was worth treating for once, and no one will say that Mr. Swinburne did not treat it with vigour. This phase of love, indeed, is only a form of that animal appetite beyond which the love poetry of the Greeks rarely reached. But the law of man's development seems to be this, that what were originally appetites become passions and sentiments; and between the mere animal appetite of Greek poetry and the sentimental phase of love, which, growing up during the youth of feudality, blossomed at last into the poetry of chivalry, love as a magnetic attraction, partly animal and partly sentimental, engaged the attention of the poet and the romancer, and gave rise to the love-philtre which plays so prominent a part, not only in the Völsunga Saga and the Tristram story, but in much other poetry and romance. For the love-philtre of the Middle Ages was not the love-philtre of Theocritus, Virgil, and others, but a charm affecting the sentiments primarily, and through them the appetites of the drinker. This quality is, of course, much more strongly seen in Gottfried von Strasburg than in so coarse a writer as Thomas the Rhymer, and more, certainly, in the Völsunga Saga than in Gottfried. As a *motif* of a modern erotic poem the love-philtre is more difficult of treatment than any other, as so great and noble a poet as Mr. Tennyson has shown, and we congratulate Mr. Swinburne upon his success. From the metrical point of view there can be no doubt that 'Tristram of Lyonesse' is an important addition to our poetical literature. The introduction of the Drydenic triplet and alexandrine, however, is bold, but not always successful, we think. The triplet is cumulative and climacteric in its metrical effect, and Dryden always managed that there should be an answering cumulative and climacteric effect in the matter. Mr. Swinburne is not always so careful in this adjustment; he will even introduce a triplet clenched by an alexandrine into the midst of a sentence when the ear imperatively demands rest. Consequently these variations of movement embarrass the extraordinary fluency of Mr. Swinburne's lines. It is poets of the Keats order, and not poets having a kinship with Shelley, who have any real affinity to Dryden and his essentially epigrammatic movements. 'Lamia' gains as much as 'Tristram of Lyonesse' loses by the introduction of the triplet and the alexandrine. But never before has the heroic couplet become so lyrical, never before has it allowed itself such freedom in the introduction of anapæstic bars, and never before has it been able to achieve so completely the fluent continuity of blank verse. That this lovely freedom and variety is mainly achieved by skilful vowel-elision we need scarcely say; yet it must be admitted by the most ardent admirers of Mr. Swinburne's magical effects, that he, on occasion, attempts a vowel-elision which is impracticable save by a scansion arbitrary and unnatural. We do not object to a line like this:—

Bowed toward her and craved whence had she this strange thing;

for between the liquid and the vowel there is no pause; but such a line as the following—

Who hath said ye have mercy toward us, ye who have might?

is far more free from the governance of iambic law than such lines as Donne's—

Let us live nobly, and live, and add again.

In the most beautiful examples of elision, such as are to be found in Chaucer, there is no pause whatever after the elided vowel or liquid:—

Then help me, Lord, to-morrow in my battaille:

or where there is a pause it is so slight as to almost enhance the sweetness of the elision, as in Gower's 'Confessio Amantis':—

For ever I wrastle, and ever I am behind.

As to the poems about children, these will carry the present volume into places where Mr. Swinburne has hitherto been a stranger. They are to be ranked with the child poems of Victor Hugo for intensity, and for delicate charm with those of Miss Christina Rossetti.

Mr. Swinburne's sonnets to his friends are always generous; but there are three or four of these tributes in the present volume, notably the sonnets to John Nichol and the sonnet to W. B. Scott on the appearance of 'A Poet's Harvest Home,' which are especially large-hearted and noble.

A remarkable feature of the volume consists of a group of twenty-one sonnets on the English dramatic poets from 1590 to 1650. It may be said without any hesitation that the gifts required for their production are peculiarly Mr. Swinburne's own, and that the sonnets could have been written by no other poet. The sonnets on Webster and Decker are perhaps the finest of a group all of which are fine.

An Etymological Dictionary of the English Language, arranged on an Historical Basis. By the Rev. Walter W. Skeat, M.A. (Oxford, Clarendon Press.)

A Concise Etymological Dictionary of the English Language. (Same author and publishers.)

MR. SKEAT has now completed his great undertaking. Of the character and merits of the work, of its many excellences and few shortcomings, we spoke at length in a notice of the first part of the larger dictionary when it appeared in 1879. In estimating the work as a whole we have little to add to or withdraw from the judgment which we then expressed of a part. The dictionary gives abundant proof of vast erudition and of enormous labour, but it does not to our mind show a lexicographical faculty of the first order. Mr. Skeat has few rivals in knowledge of the English language and its history; and as for philology, there is no doubt that the root of the matter is in him. Etymology with him is a scientific process, and not a mere series of guesses more or

less ingenious and successful. He is well read both in literature and philology, patient, industrious, and painstaking. Accordingly his dictionary is indispensable to all who would study the English language and its origin scientifically and historically. It is not only a copious *résumé* of modern philological research in a field which has been diligently and successfully cultivated, but it adds to the labours of others the mature results of Mr. Skeat's own profound studies in the same field.

Such is the general character of the work. But the praise which is justly due to it is subject to considerable deductions. The work is unequal; in some cases it is admirable, in others it is inadequate. We have already pointed out some of its defects in our notice of the first part. It was not to be expected, perhaps, that Mr. Skeat should alter the whole structure of his work after it had been begun and in part published, but it is none the less to be regretted that he should not have more carefully considered beforehand the true limits and conditions of such a work as he had undertaken. An etymological dictionary is not a philological treatise; still less is it the function of an etymological dictionary of the English language to give detailed accounts of words which really belong to another language in all but the spelling, type, or termination. If words of this kind—especially those which are really Greek and Latin, and not English at all—had been either omitted or treated, as they might have been, in a single line, the dictionary would have been considerably reduced in bulk and not impaired in value. Again, the use made throughout the book of what are called "Aryan roots" seems to belong rather to philology than to etymology, and to philology of a somewhat speculative type. It is a good lesson in philology, no doubt, to learn that *panorama*, *ornament*, *velvet*, *wool*, *ward*, and *garrison* may all possibly be traced to the same ideal Aryan root, but it does not add much to our practical knowledge of the etymology and history of any of these words.

In a very candid preface Mr. Skeat affords, unconsciously perhaps, some explanation of what we cannot but consider the shortcomings of his book. "Near the beginning of the work," he says, "I had no copy of Littré of my own, nor of Palsgrave, nor of some other very useful books." To have no copy of Littré of his own would be in any case a misfortune, though it might, of course, have been fully repaired if Mr. Skeat's work had been done in a library where a copy of Littré was at hand. But if Mr. Skeat's statement means that he began to work at an English etymological dictionary without having previously made a study of Littré, or that he pursued his task at the outset without continuous reference to his French *collaborateur*, the statement is little short of astonishing. Even this statement, however, is not more remarkable than one which follows. After confessing, with a candour that does him credit, that "it is proper to state that with many articles I am not satisfied," Mr. Skeat continues:—

> "Those that presented no difficulty and took up but little time are probably the best and most certain. In very difficult cases my rule has been not to spend more than three hours over one word. During that time I made the best I could of it and then let it go. I hope it may be understood that my object in making this and other similar statements regarding my difficulties is merely to enable the reader to consult the book with the greater safety, and to enable him to form his own opinion as to how far it is to be trusted. My honest opinion is that those whose philological knowledge is small may safely accept the results here given, since they may else do worse, whilst advanced students will receive them with that caution which so difficult a study soon renders habitual."

It will be seen shortly that we ourselves belong in Mr. Skeat's opinion to the category of those whose philological knowledge is small. We confess that, speaking in that capacity, we should have been disposed to use the 'Etymological Dictionary' with greater confidence if Mr. Skeat had told us that he had never found it necessary to give more than three hours to tracing the etymological history of words that presented no difficulty, but that in very difficult cases he had given just as much time as the particular case required; and we should certainly have liked to have some plain indication of the words of which Mr. Skeat made the best that he could in three hours and then let go.

It is of course difficult to judge of Mr. Skeat's work by selecting isolated specimens. But his treatment of the word "trifle" may be instanced as possibly one of which the best was made in a given space of time. He makes it a doublet of "truffle," and there is, of course, no doubt that in M.E. "trifle" was commonly spelt "truffle." But what is to be said to the following explanation?—"It is supposed that a *truffle* became a name for a small or worthless object, or a subject for jesting. Similarly in English the phrases 'not worth a straw,' 'not worth a bean,' 'not worth a cress' (now turned into *curse*), were proverbial; so also 'a *fico* for the phrase' or 'a *fig* for it.'" "Truffle" is no doubt *tartufola*, and that is probably *terræ tuber*, as Mr. Skeat says, following Diez, Littré, and others. It was originally used indiscriminately, perhaps, of any tuberous root, such as an artichoke, as well as a truffle; hence it has become in German *kartoffel*, a potato. But that *terræ tuber* should first have been worn down into "truffle," and then that the rare and much-prized tuber that bears the specific name should have been used for a thing of no value, like the *flosci*, *nauci*, *nihili* of the Latin Grammar, is simply incredible in default of specific evidence. "Not a *fico*" is intelligible enough; figs are as common in Italy as blackberries in England, and the Italian form of the word explains the English usage. But where and when have truffles been as common as figs? Until Mr. Skeat can find time to spend a number of hours on the word sufficient to produce an authentic instance of the usage he suggests, we must, although perhaps novices in philology, be allowed to exercise the caution which he recommends to advanced students.

"Trash" is another word which deserves a fuller treatment than Mr. Skeat has given it. After a full discussion of the word in the sense of "clippings of trees," and an adequate account, based upon Wedgwood, of its usage and probable etymology in this sense, Mr. Skeat seems to have reached his three hours' limit, since the article ends as follows: "This throws no light on *trash* as in Shak., 'Temp.,' I. ii. 81, which has prob. a different origin." We should have liked to have some explanation of this different origin, if, indeed, it is different, which we very much doubt. The passage is as follows:—

> Being once perfected how to grant suits,
> How to deny them, who to advance, and who
> To trash for over-topping.

Surely the word is merely a verb made out of the substantive in its original sense, and the metaphor is explained by the Roman fable of the tall poppy-heads. This explanation is given by Steevens in his note on the passage and supported by reference to a similar usage in books on gardening published in the time of Queen Elizabeth. There is, however, a usage of the word in Shakspeare which is referred to by Mr. Skeat, but in no way explained:—

> If this poor trash of Venice whom I trash
> For his quick hunting.
>
> *Othello*, II. i. 312.

The substantive here signifies a hound, as is clear from the context, and the verb may be a doublet of "thrash." We cannot but wish that Mr. Skeat had given a little more time to the elucidation and discrimination of these words.

Of omissions in Mr. Skeat's dictionary we mentioned some in our former notice. We had hoped to find the Oxford term "battel" in the Addenda; "manciple" is another word much in use at Oxford of which no notice is taken; and though "sconce" is explained in two senses, the local usage in the universities is entirely ignored. "Scrannel" again is a word which claims explanation, if only for its usage by Milton in a well-known passage. We are bound to acknowledge that in one article in the Addenda Mr. Skeat has condescended to notice one of our former criticisms. Under "carriage" he says:—

> "I give the etymology under *carry*. I have been taken to task for not mentioning that the use of the modern E. *carriage* has been affected by confusion with F. *carrosse*, a carriage, frequently spelt *caroche* in old authors. It seemed to me hardly worth while to mention a fact so obvious, as I had given the reference to Trench's 'Select Glossary,' and I presuppose *some* knowledge of English literature on the part of readers and critics. All this has nothing to do with the *etymology* of *carriage*, which I have given *quite correctly from the only possible source*."

"Carriage" does not occur in the body of the dictionary. The article on "carry" is as follows:—

> "*Carry*, to convey on a car (F.—C.). M.E. *carien* with one *r*; Chaucer, Ho. of Fame, iii. 190.—O.F. *carier*, to carry, transport in a car.—O.F. *car*, a cart, car. See Car. Der. *carri-age*, formerly *cariage* with one *r*, Prompt. Parv., p. 62; see Trench's 'Select Glossary.'"

We do not question the etymology, but we still think the history of the word and its usage are very imperfectly given both in the original article and in the addendum. "Carriage" rarely, perhaps never, means a coach or carriage of pleasure prior to its confusion with *caroche*, and in at least one sense its true original is the Low Latin *cariagium*. If Mr. Skeat's dictionary had been purely etymological like Brachet's, which gives no explanation or definition of the words investigated, his article on "carry" might have been sufficient and have sufficed

for "carriage" as well. But Mr. Skeat defines his words and also investigates their history; surely a word to which Todd's 'Johnson' gives eight several senses, which means both that which carries (as of a gun or a sword) and that which is carried (as in "We took up our carriages"), and which, though ultimately traceable to a Celtic original (or else to the Latin *currus*) through O.F. *car*, has two independent ancestors in *cariagium* and *carrosse* or *carrozza*, was entitled to separate treatment. The object, moreover, of a dictionary of such pretension as Mr. Skeat's should surely be to digest and reproduce the results of previous inquiries. It is hard for a student, who naturally expects to find what he wants in Skeat, to be referred back again to works of less completeness, less pretension, and less scientific character.

It is almost inevitable that the critic of such a piece of work as Mr. Skeat's should be led rather to point out shortcomings than to dwell upon excellences. It is all the more necessary, therefore, to say in conclusion that the merits of the whole work far transcend its occasional defects in detail. It is a very solid piece of work throughout, but, as has already been remarked, the execution is unequal. Mr. Skeat is a scientific philologist and a learned lexicographer, but he is not a scholar of the force of Littré or Grimm. In making this comparison we desire to be understood as saying a very great deal in favour of the book and very little against it.

There is little space left for noticing the 'Concise Etymological Dictionary,' which is based on Mr. Skeat's larger work. It is not a mere abridgment, as Mr. Skeat is careful to explain, but has been entirely rewritten. It is arranged on what the author calls "an unusual but excellent plan." All the derivatives of a given word are made to follow the original word, but the derivatives are also given in their alphabetical order with a cross-reference to the parent word. The plan is certainly unusual; as to its excellence there will probably be much difference of opinion. It is no doubt a useful and instructive philological exercise to find ranged under "regent" the following list of words running almost through the alphabet:—address, adroit, alert, correct, direct, dirge, dress, erect, escort, insurgent, insurrection, interregnum, rajah, real, realm, rectangle, rectify, regal, region, reign, resource, resurrection, royal, rule, sortie, source, surge, unruly; but it is a little startling to find such entries as "Trowsers, see 'torture,'" or "Synonym, see 'onomatopœia.'" It is doubtful if a dictionary can be made with advantage to do work of this kind; what is gained in philological precision is more than lost in time and temper. In spite of this rather whimsical and vexatious arrangement, the 'Concise Etymological Dictionary' conveys a great deal of very valuable instruction in a very compendious form.

Quatre Bras, Ligny, and Waterloo: a Narrative of the Campaign in Belgium, 1815. By Dorsey Gardner. (Kegan Paul, Trench & Co.)

FROM a scientific point of view the battle of Waterloo has lost much of its value, for since it was fought the conditions of warfare have undergone momentous changes. Moreover there was little manœuvring at any of the battles fought during the campaign, and but little tactical skill displayed on either side. As a great historical and military event, however, the brief struggle which closed on the 18th of June will always attract interest. Still we should have thought that the subject had been thoroughly threshed out, and that there was no room for any new contribution to the history of the campaign of 1815.

Mr. Gardner, who is apparently an American civilian, justifies the appearance of his book in the following words:—

"Of late years honest and capable investigators have collated the Waterloo literature of many countries and sifted out the truth from the overlying falsehood. None of them, it has so happened, has put the result of his labour into the form of consecutive narrative; yet they have made it possible for others to do so. The collecting of such an account is what has been attempted in the following pages."

Not only a mere narrative of the campaign, but also an acute and exhaustive criticism has been culled by Mr. Gardner from the best authorities, and both have been well put together. It is with the criticism only that we propose to deal. Skilful as was Napoleon's plan of campaign, the execution was below his reputation. The explanation is that both his health and mental powers had deteriorated. Thiers and Chesney have asserted that he "was physically capable of fully bearing the fatigues incident to a bold aggressive campaign"; but Mr. Gardner points out that on the evening of June 15th he was so knocked up that he went to bed at 9 P.M.; that on the following morning he was sunk in prostration and languor, unable to attend to business; that he went to bed immediately after the close of the battle of Ligny; that on the 17th access to him till late in the morning was impossible, though orders were needed, while that tendency to barren expatiation described by Charras caused a further delay of those orders till noon; that on the 18th he secluded himself till nearly noon, and that during the battle "he remained motionless for long intervals, seated at a table, frequently sinking forward upon it, asleep"; and lastly, that during the flight he was so drowsy that he could only be kept in his saddle by two of his officers holding him up. The fact was that not only was he liable to maladies of the bladder and stomach, but "he had lost," to quote Charras, "perseverance in elaborating thought, and, what was more, promptness and fixity of resolution. Like certain men in the decline of age, he loved to talk, to expatiate, and he wasted long hours in barren words." Without the key thus given much in the history of the campaign would be inexplicable, and it is to be regretted that this key has been strangely ignored.

Of course Wellington was not surprised in the ordinary sense of the word, but it is certain that he was a long time in doubt as to the direction of Napoleon's attack; and by believing that the emperor would attack his right instead of his left he very nearly lost the game. At 4 A.M. on the 15th the leading French troops came into contact with the Prussians near Thuin, and at noon the French were in possession of Charleroi, thirty-six miles from Brussels and thirteen miles from Quatre Bras, on the Charleroi-Brussels road. Zieten had at 4 A.M. sent an officer to inform Wellington of the advance of the French, but that officer took twelve hours to accomplish a ride of about forty miles. Wellington thereupon issued orders for such a concentration of his army as would have made Nivelles the easternmost point occupied by his troops, apparently overlooking the importance of maintaining connexion with Blucher by the occupation of Quatre Bras. Subsequent information received between 9 and 10 A.M. from Blucher, announcing that Napoleon had crossed the Sambre, and a despatch from Mons stating that the French in front of that town had moved towards Charleroi, did not induce him to materially change his dispositions or to modify his orders of a few hours previously that the Prince of Orange was to collect the bulk of his corps at Nivelles. Luckily, General Perponcher, commanding the Second Dutch-Belgian division, recognized the absolute necessity of retaining his hold on Quatre Bras, and in the absence of the Prince of Orange he took it on himself to order Prince Bernhard of Saxe-Weimar and his brigade to stand fast. The Prince of Orange, who arrived at 3 A.M. on the 16th from the Duchess of Richmond's ball, found that his outposts had been engaged the previous evening, and that at Quatre Bras there was about to be a serious battle, and approved of Perponcher's conduct. The other brigade of Perponcher's division came up by battalions during the early morning, and the Prince of Orange, assuming the offensive, regained from the French outposts some of the ground which they had wrested from Prince Bernhard the previous evening. This appearance of strength caused Ney to hesitate, and saved Wellington from a serious disaster. Englishmen naturally shrink from criticizing Wellington; but it must be admitted, first, that he ought not to have established his headquarters so far in the rear; secondly, that his arrangements for obtaining speedy information of the enemy's movements were very defective. One of the most inexplicable things connected with the battle of Waterloo itself was that Wellington not only detached 18,000 men to Hal, but kept them there throughout the day. Not only were they detached to Hal, about nine miles from the British right, but, to keep up communication with them, Chassé's Dutch-Belgian division, 6,669 strong, were at Braine la Leude, about three-quarters of a mile west of Wellington's reserve. This division was, however, at the crisis of the battle, brought into the second line. The explanation accepted by Chesney is that Wellington had resolved, if defeated, to fall back with his left wing in the direction of Wavre and with his right upon Hal. To our mind the true explanation is that Wellington, according to his own statement to Mr. Charles Greville, considered that Napoleon ought to have attacked in the direction of Hal, and thought that he would do so. Whatever, however, Wellington's anticipations were previous to the battle, he must have been pretty well aware, as early at least as 10 A.M. on the 18th, that no strong body of Napoleon's army was moving on Hal. If he were not so convinced from the display of the French army, surely a simple cavalry patrol

despatched from Hal at daybreak on the 18th would have ascertained that there was nothing to fear on that side. At all events, it must have been clear to Wellington's mind early on the 18th that the decisive blow would be struck where it was actually dealt. Such being the case, it seems strange that at 11 A.M. he did not send an aide-de-camp to bring up the force from Hal. It would have taken him less than an hour to deliver his message, and the 18,000 could have reached the British position in the course of the hour between 4 and 5 P.M. Now it was between 6 and 7 P.M. that the British position was nearly forced.

Mr. Gardner has done good work by exposing most fully and conclusively the gross inaccuracies—to use no harsher term—of Thiers; but it was almost a waste of time and trouble to deal with his statements, for he is already known by all who have studied military history to be but a writer of military romances, and not an historian at all in the true sense of the word. In order to thoroughly exhaust Waterloo literature, Mr. Gardner devotes a chapter to "Waterloo Poetry," a good deal of which is sad stuff and might well have been omitted.

Roumania, Past and Present. By James Samuelson. (Longmans & Co.)

A WISH has been freely expressed by Roumanians that some Englishman would write a book about their country; and they ought to be grateful to Mr. Samuelson, for he has fulfilled their desire in a manner which cannot fail to be pleasing to them. Their merits he has put prominently forward. Their demerits he has kept discreetly in the background, or at all events he has mentioned them with the reluctance of a chronicler who closed his ears, as he tells us, "to a good many things that savoured of scandal" during his visit to the country. Now and then he hints at the existence of something which falls short of perfection, as when he admits that the application of a little dynamite to the State Normal School for young men intended as country teachers might be productive of excellent results, "if it could be done without injury to human life." But he has generally the pleasure of recording vast changes for the better quite recently brought about. It has been stated by malignant statisticians that four-fifths of the young Roumanians who are sent to Paris for their education "return with a perfect acquaintance with the French language, the *cancan*, and nothing more." But Mr. Samuelson triumphantly proves that "of late years youths have in some cases been sent to our English universities and public schools rather than to those of the gay city." It is certain that in the "gay city" the representatives of what is now Roumania used not to bear the best of reputations. They were looked upon with distrust by various classes of men, but especially by publicans and gamblers. The general badness of their reputation may be gathered from an ancient joke, revived for their benefit some years ago in one of the French comic journals. "Do you see that youth of seventeen? He is a Moldo-Wallachian," says one Parisian to another. "Only seventeen, and *already* a Moldo-Wallachian!" is the reply. But, after all, this merry jest may have been due to the notorious haziness of the French mind as regards geography.

Mr. Samuelson has treated Roumania geographically, ethnographically, and historically, with a fulness of detail which deprives English readers of any excuse for such ignorance as was justly stigmatized by our Consul-General at Bucharest in an official report to the Foreign Office nine years ago. At that time he was obliged to state that

"ignorance seems to extend even to the geographical position of Bucharest. It is not surprising that letters directed to the Roumanian capital should sometimes travel to India in search of Bokhara, but there can be no excuse for the issue of a writ of summons by one of the superior law courts of the British metropolis, directed to Bucharest in the kingdom of Egypt, as I have known to happen."

This experience is as strange as that of the traveller who in the post-office of Hercules Bad, in Hungary, recently found letters waiting which were intended for luckless sailors on board H.M.S. Hercules. It must be admitted that not very long ago some justification might have been pleaded for the disinclination of Western Europe to become intimately acquainted with the Danubian Principalities. The country was only just emerging from that stubborn barbarism which long oppression engenders. The conduct of the public authorities was characterized—if the proclamation may be trusted which was issued by the Provisional Government on the compulsory abdication of Prince Couza—by "anarchy and corruption, violation of the laws, squandering of the national finances, and degradation of the country at home and abroad." And the behaviour of the private citizens who represented the Principalities in Parisian society was calculated to shock the susceptible delicacy of the French mind. Foreigners who deceived trusting women might possibly be pardoned; but when they intensified their guilt by defrauding trusting men of their gains at baccarat they became unendurable.

Very different is the state of what is now the kingdom of Roumania. With a government capable of making its decrees respected, a public credit which has succeeded in inspiring a certain amount of confidence in the minds of investors, an army that has proved its mettle to an unexpected degree, a court which has already exercised a bracing influence upon the relaxed moral tone of society, an agricultural population in process of being transformed from thralls into yeomen, and an upper class about to be edified by the brilliant example of those of its representatives whom an English public school and university training has indefinitely improved—with all these actual and potential advantages, Roumania is a land which deserves to attract the attention of Western Europe. To all readers who wish to study its history or its institutions Mr. Samuelson's conscientious and trustworthy account of the country may be safely recommended. It is based on solid personal knowledge, and its conclusions are supported by the evidence of those among our officials who are best acquainted with the subject, at the head of whom stands our present Minister Plenipotentiary at Bucharest, Mr. W. A. White. Having thus stated our opinion of the soundness and accuracy of Mr. Samuelson's work, we need criticize it no further, but proceed to notice a few of its points of special interest.

Mr. Samuelson speaks favourably of the common people. The Roumanian peasant is "old-fashioned and slow to move, but he has also excellent qualities." He is hardy and enduring, will work all day during the terrible heat of summer without complaining, and will face the keenest cold with a bared breast, satisfied with *mamaliga*, or maize-meal boiled and flavoured with a little salt, as his daily food. He is usually illiterate, he is apt to pass his Sundays in drinking, and he has of late taken to imbibing a liquor resembling our own gin instead of the good old plum spirit which used to exhilarate its recipient without driving him wild. "All things considered," we are happy to hear, "the future of the peasant is not dark." It is his own fault if he does not own his farm, and if his possessions do not annually increase. And Mr. Samuelson thinks that

"soon he will appreciate the fact, already known to all enlightened persons in Roumania, that upon the labours and exertions of the peasantry depend not only their own fortunes, but the future progress and prosperity of the fatherland."

Of the boyards, the aristocrats who used to hold all the soil, not much good can be said:

"Improvidence and *fermage* have sounded the knell of the old landed gentry. Their estates have in many cases been bought up by the *fermiers*, their sub-tenants; the peasantry have purchased considerable quantities of land in addition to that allotted them by the State, and merchants and traders have also obtained possession of a portion by purchase, thus laying the foundation of an influential middle class, which at the present time can hardly be said to exist in the country. The consequences of this change cannot fail to be the development of agriculture, provident landowners, and the general prosperity of the entire nation."

Mr. Samuelson's comparison "between the past land reforms of Roumania and those in progress in Ireland or impending in Great Britain," slight as it is, is worthy of the careful consideration of all whom such measures concern. The upper classes in Bucharest are described as being "remarkably hospitable and social," and Mr. Samuelson repudiates the statement made by some writers that their chief occupation is "getting divorced or being buried in state." He also protests against the idea that "the city of joy," as it is called by the Roumanians, is "a great continuous *Mabille*," offering a succession of romantic scenes peopled by "charming Roumanian belles, with flashing eyes and the sweetest of voices; dark-eyed gipsies, chaste as Diana and as fleet of foot; grave boyards, stately Turks," and the like. It is really "a large, irregular, straggling city of about 175,000 inhabitants, situated on a dirty little stream called the Dambovitza," the highly vaunted *apa dulçe* of which is a water less sweet than medicinal.

Much that is interesting might be quoted from Mr. Samuelson's pages with respect to the various institutions of the country, especially as regards the education of the people and the administration of justice, the prisons and the monasteries. The account of the gipsies is also very curious. But we will

content ourselves with a reference to what is said about the King and Queen of Roumania. King Charles is described as a handsome man, rather above the average height.

"He usually wears a somewhat severe expression, but the moment he begins to converse this at once disappears. His manner is quiet and earnest, although he often warms into enthusiasm, and he has the happy faculty of placing all with whom he comes into contact at perfect ease. He possesses a wide range of information, and speaks with evident knowledge on all matters of interest to his subjects or to civilization. Of course he is well acquainted with his adopted country and its resources, takes a lively interest in its trade and capabilities; and so far as the geographical configuration of Roumania is concerned, he not only knows all about the level country, but has either ridden or walked through every part of the Carpathians."

In politics, we are told, "although a Hohenzollern, he is a Constitutional Liberal," and, notwithstanding some misunderstandings with his ministers, "he has managed to steer clear of unconstitutional courses." His demeanour towards his subjects "is everything that can be desired"; he is "hospitable, genial, and very regular in his habits," and there can be no doubt that

"it is to his bravery as a general, and to his tact and patience as a statesman, that Roumania is largely indebted for her independence and her promise in the future."

Altogether he is a model monarch, and one on whom a kindly fortune has conferred the great gift of a worthy spouse. Of her Mr. Samuelson speaks with an enthusiasm which we believe to be well founded. Queen Pauline Elizabeth, formerly Princess of Wied—of whom, dressed in the national costume, a charming photograph is given—is of the middle height, and has "an amiable face and still more affable manner." She might pass for a lady from any Western country, there being very little to indicate her German nationality.

"Her voice is soft and melodious, and although she can speak well on literary and scientific subjects, there is not the slightest pedantry or affectation of learning in her discourse."

She speaks English remarkably well, and she is said to be able to express herself fluently in five other languages, including her native German.

"She is a poetess, and her verses are often marked by great depth of feeling. She possesses, too, considerable scientific knowledge and great taste in art, and one of her chief desires is to promote national industry."

In the interest of the lower classes, who stand greatly in need of popular instruction, she has done all in her power to circulate among them such publications as may be suited to their intelligence; and she has attempted, but without any great success, to win them over to knowledge by means of popular lectures. Under the pseudonym of Carmen Sylva she has published a volume of 'Rumänische Dichtungen,' part of the dedication of which is quoted by Mr. Samuelson. There is but one dark spot in the bright picture which he brings before our eyes while depicting the home life of the Roumanian royal couple: "Unfortunately, the sole offspring of their union, a little girl, lies interred in the grounds of the Asyle Hélène."

Of this Asyle Hélène, a kind of foundling asylum, in which about 250 girls are brought up, a very attractive account is given. It has all the advantages of which our best institutions for the education of young ladies can boast, and has one thrown in which has a special charm. A teacher or other young man who is bent upon marriage "applies to the committee for an introduction to a suitable girl." They, if they are satisfied that he is deserving of the boon, "ascertain which of the girls desires to be married," and present him to her. "The marriage takes place in the Asyle, the bride receiving her trousseau and a very respectable little dowry, and the event is always the occasion of great rejoicing." It is to be hoped that none of the young couples thus brought together has found it necessary afterwards to appeal to the Divorce Court, in which in the year 1880 no less than 3,891 couples were waiting for severance. Equally interesting institutions, though of a different nature, are the two salt-mines worked by convicts, a visit to one of which Mr. Samuelson graphically describes. Until the year 1848 the prisoners

"lived, or rather died a slow death, entirely in the mine. They were compelled to sleep in their clothes on the floor of rock salt; never saw the light of day after they had once entered the mine; and whatever might have been the nominal term of their sentence, disease and their unnatural surroundings invariably cut short their miserable existence after about four years' confinement."

They now leave the mine at the end of their day's work, and spend the night in a penitentiary a mile distant, sleeping "in dirty dormitories, where the men lie in long rows upon wretched pallets. The air of these dormitories is foul, and burning resin is used to fumigate them." On the whole, a Roumanian murderer might be justified in refusing to share Mr. Samuelson's admiration of Roumania's abolition of what he calls "the vindictive capital sentence of 'a life for a life.'"

NOVELS OF THE WEEK.

Northam Cloisters. By the Author of 'Alcestis.' 2 vols. (Smith, Elder & Co.)

Silken Meshes. By Temple Laurence. 2 vols. (Remington & Co.)

Fra le Corde. By Salvatore Farina. (Milan, Brigola.)

"'I HAVE done nothing all day,' he said; 'you shall go and sit in the stern,' pointing to the bows." This sentence is the most characteristic in the book of one defect which mars the author's style in 'Northam Cloisters.' There is a great deal of bright and educated writing in this as well as in the earlier novel, and much insight and sympathy in the treatment of the love affairs, which in this case are picturesquely surrounded by the old cathedral precincts or by the combes and bays of Somersetshire; but there is a good deal of strange confusion of a reprehensible sort which makes the book hard to read. Thus we have Thomas figuring as Edward and Buckler as Stuart, till one gets fairly puzzled among the numerous *dramatis personæ*. Some rather indifferent punctuation, which may be the printer's fault, contributes to the reader's distress. All this is the greater pity in that there is a good deal of descriptive power and occasionally much striving after detail, and a little more pains to ensure accuracy would have made the whole a life-like piece of writing. As it is we can sympathize the more, perhaps, with the unworldly professor, whose name seems to be William Milton, and who with so much misgiving wins the heart of Althæa, the canon's daughter. Althæa is a very gracious figure, her father's daughter, and, like fathers' daughters sometimes, all the more womanly for her touch of masculine teaching. Mrs. Vyvyan, the canon's wife, is well imagined, as a worldly and other-worldly person in violet tints, who soon consoles herself when her kindly, rather cynical husband leaves his daughter forlorn. Next in importance to the canon and Milton are Mr. Temple, the ambitious barrister, and an amiable young athlete and musician rejoicing in the name of Countismain Granfer, whose somewhat obscure method of conducting his love affairs so nearly leads Milton to an irremediable mistake about Althæa's feelings. Temple is too thick-skinned, in spite of his "culture," to make one wish he had been true to Caroline, a very noble sort of woman, who is far better matched with the young enthusiast Granfer. The politician has, however, the merit of pushing zeal for public life, unchastened by anything like respect or faith in anything higher than himself. On the whole, there are many shrewd sketches of character in the book, but all is too hasty and confused.

'Silken Meshes' is a rather sad little story, told without much power, but with a good deal of appreciation and in a pleasant, refined style. It is the story of a girl married by her mother's command to a man much older than herself, who treated her coldly, but without positive unkindness. Afterwards she fell in love with another man, and promised to send for him if ever she became free. The husband having been killed suddenly, all might have ended happily but for one of those little mishaps so dear to inexperienced novelists, which take place through the delay of a telegram. The story, if not original, is consistent, and the writer has drawn a good picture of a heroine who, with all her weakness of character, is never anything but a lady.

Under the title of 'Fra le Corde' Salvatore Farina has written a graceful idyllic novelette of village life in a typical Italian valley, whose half-southern, half-northern loveliness he has reproduced with happy touches. The story itself, though slight, is original in conception and handling. It is told with gentle humour by the village doctor, a secondary personage in the pretty love story that forms the pivot round which the plot revolves. The characters are happily sketched, especially that of the hero, Orazio, a musical monomaniac, whose endeavour is to translate into musical terminology the language of the trees, flowers, and streams of his native Alps.

THEOLOGICAL BOOKS.

Texte und Untersuchungen zur Geschichte der Altchristlichen Literatur. Von Oscar von Gebhardt und Adolf Harnack. Vol. I. Parts I. and II. (Williams & Norgate.)—The title of this volume indicates with sufficient clearness its object and aim. The two scholars, already well known by their edition of the apostolic fathers,

propose to print documents relating to the history of the Christian Church before Eusebius which have not been published before or have been published incorrectly. The plan does not exclude some works which were regarded by the early Christians as inspired, such as Jewish apocalypses, the Sibylline oracles, &c. Particular attention will be given to MSS. in this department of literature, and discussions of important questions will be forthcoming. The proposal commends itself to all who are interested in the history of the early Church, and desire to have light thrown upon it. The present volume deals in the first place with the Greek apologists of the second century, beginning with a description of the MSS. of Tatian. The second chapter relates to the works of the apologists both in the old Church and the Middle Ages, including Quadratus and Aristides, the writing ascribed to Aristo of Pella, the Disputation of Jason and Papiskus, the Oration of Tatian, Melito, Miltiades, and Theophilus. In the examination of Tatian, Harnack rightly objects to Zahn's opinion that his Diatessaron or Harmony was in Syriac. The volume is full of valuable matter which will be of great service to future historians. The list of all the MSS. of the Greek apologists, with a survey of those which are of most worth in the construction of an accurate text, is specially important. We recommend the work to the attention of scholars, believing it to be a welcome contribution to the department in which Halloix, Grabe, and Routh have earned well-merited praise. The scholars to whom we are indebted for it are highly competent to the work, and have made such preparations for its successful prosecution as must secure attainment of the object they have in view. None other in Germany could have undertaken the task with equal hope of its adequate execution.

The Question whether Marriage with a Deceased Wife's Sister is or is not Prohibited in the Mosaic Writings Answered. By Paul de Lagarde, D.D. (Göttingen, Dieterichs.)—Prof. Paul de Lagarde's dissertation arrives at the just conclusion that the well-known verse in Leviticus does not forbid marriage with a deceased wife's sister. His knowledge of the English language enables him to write in it, a thing quite exceptional among the professors at German universities. His learning, sagacity, and acuteness are well known. He can correct the mistakes which no mean scholars have made, suggest new views, and support them plausibly. Nothing that he writes is without value, and much of it is both original and correct. The dissertation consists of three parts. Starting with the Hebrew word צָרָה, the technical name of a secondary wife introduced by a husband into his house as an addition to the more fortunate first wife, the learned author directs his attention to the word translated "to vex," which he derives from צָרָה through the denominative verb צָרַר; so that he brings out the meaning "to make her a fellow-wife." Arabic, Syriac, and Chaldee are compared throughout—languages with which the author is familiar. He finds support for the new rendering in the Septuagint version and Jerome, but not in Onkelos. According to this novel interpretation, two exegetical clauses are appended to the first part of the verse, "Neither shalt thou take a wife to her sister," a thing not common; and the authority of Onkelos is lightly considered by the professor. The proposed translation and the way by which it is reached are ingenious. But it is hardly so certain as it looks to be, and the apparatus through which it is evolved might have been simpler. A denominative verb צָרַר is made from צָרָה in order to set aside the verb צוּר, from which the usual meaning is taken. Why should this course be adopted? Is there any valid objection to the common acceptation of the verb to which לְצָרֵר is referred by the lexicographers? Doubtless the Hebrew dictionaries, which are all spoken of disparagingly, may be corrected in some cases, but Gesenius's 'Thesaurus' cannot come with justice under De Lagarde's sweeping sentence. The scholar who will undertake to supersede it by the production of a better is still non-existent, and likely to be so for many years to come.

The Coptic Morning Service for the Lord's Day. Translated into English by John, Marquess of Bute. (Masters & Co.)—A preface tells us that the object of this publication is to provide English-speaking travellers with a means of following intelligently the Sunday morning service of the native Christians; and four or five pages contain some very brief remarks upon the offices of the Egyptian Church, certain modern practices observed in it, the arrangement of Egyptian churches, and the pronunciation of the Coptic language. Lord Bute, however, has not merely met the want of which he speaks, but has given to students of the Oriental liturgies a further help which will be found useful. The Liturgy is printed in two parallel columns; in one is the Coptic original, in the other an English translation, with an occasional note of explanation. An appendix is added upon the Divine, or daily, Office as distinguished from the Liturgy itself. We may cordially thank the Marquis of Bute for this contribution to books on ritual, although it can scarcely be put in the same rank for importance as his translation of the Roman Breviary.

DR. HENDERSON has sent us the *Processionale ad Usum Sarum*, which, we understand, he has edited for subscribers only. Like all Dr. Henderson's editions of the old service books, this has been very carefully done, printed in a clear type, and with fac-similes of the curious old woodcuts which occur in some of the editions of the sixteenth century. The Processional is one of the rarest and not the least important among the mediæval rituals of the English Church, and this edition—the first after an interval of more than three hundred years—is a welcome supplement to those which we already possess. The volume is preceded by a preface of about sixteen pages.

WE have on our table *Micah*, with notes and introduction by the Rev. T. K. Cheyne, published in the series of "The Cambridge Bible for Schools," under the general editorship of Dr. J. J. S. Perowne, Dean of Peterborough. Mr. Cheyne "allows for the possibility that the text has at certain points been incorrectly transcribed. Providence has not interfered to preserve the Scriptures from the ordinary errors of scribes and editors." He admits also that the headings have no binding authority, and that there are some interpolations in the text. This frankness does honour to the orthodoxy of the annotator; but it may be questionable if such remarks are in place in a school-book. The short introduction gives a fair account of the life of the prophet, of the arrangement of the book and its style and subject-matter, and of the contemporaneous social, religious, and political state of Judah. The notes, which of course must be limited in a school-book, contain a good deal of information, historical as well as philological. It is doubtful whether the prophecy in the first chapter of Micah refers to the same invasion by the Assyrians as that referred to in the tenth chapter of Isaiah. It is true that the localities mentioned in both chapters are situated in Philistia; but those of Isaiah are to the north of Jerusalem, whilst those in Micah are to the south. Mr. Cheyne is right in noticing likely readings of the text which the Greek translators had before them. It is beyond doubt that in i. 10 the translation "In Acco weep ye not" is preferable to "Weep ye not at all." Mr. Cheyne ought to have noticed that the word "shame" (i. 11) is not in the Septuagint (the reading *areha τὰς πόλεις αὐτῆς* for *eryah*, "naked," gives a better sense, "thou inhabitant of the fairest of its towns"), and is therefore in the Hebrew text a gloss, a sort of antithesis to the name of Saphir, "fair," analogous to *Ish Bosheth*, "man of shame," for *Baal* (1 Chron. viii. 33; ix. 39). In ii. 10 the right reading in the Hebrew text is *thekhubblu hebel*, "you shall be destroyed *with* a sore destruction." The theological subtleties about "Beth-lehem Ephratah" (v. 2) are unnecessary, since we find a similar combination of the ancient and modern names of a town in Beth-el Luzah (Joshua xvi. 2), LXX. *εἰς Βαιθὴλ Λουζᾶ*, A.V. "from Beth-el to Luz."

WE have received a reprint of the *Meditations and Disquisitions upon the First Psalm, the Penitential Psalms, and Seven Consolatory Psalms*, by Sir Richard Baker, Knight (first printed 1639–1640), edited with a "Memorial Introduction" by the Rev. Dr. Grosart, and published by Mr. Charles Higham. It is another of the many reprints which Dr. Grosart delights to issue. Sir Richard Baker (whose 'Chronicle' is well known to—it is difficult to say who) was a gentleman at one time of large means and some learning; he got heavily and hopelessly into debt, and thereupon was thrown into the Fleet Prison, where he died. Being insolvent he had to cast about for means to pay his dues and commons in the Fleet, and he took to writing for the booksellers. Among other works appeared these 'Meditations'—second-rate stuff, but such stuff as always finds readers, on its first appearance, among sombre spinsters of a certain age. When works like this are once dead and buried it is indeed a marvel that any man should care to look at them again. Dr. Grosart, however, has his own reasons for playing the part of literary resurrectionist, and who shall blame him? He is to be envied in that he has exactly found his *métier* and duly reaps his reward.

GUIDE-BOOKS.

MR. J. E. MUDDOCK is not troubled with false modesty. His guide-book to Switzerland, entitled *The Alps, and How to see Them* (Simpkin & Marshall), bears across its fly-leaf the word "Indispensable." Evidently he does not think accuracy indispensable. Looking through the book, his readers come at the outset to an historical sketch in which they find that about 917 A.D. "East Switzerland fell to Swabia, and the west to Burgundy"; and that Rudolf of Hapsburg "eventually succeeded in building up a kingdom and placing himself on the throne." Further on they come to the remarkable statement that at Geneva the southern side of the Rhone is French. Of course that ancient impostor Mont Iséran is named among the peaks of the Graian Alps; though, probably more by good luck than good guidance, no height is assigned to it. Blunders then come thick and fast. The height of Monte Rosa is given as 14,229 feet, and Mr. Muddock says that its ascent is *often* undertaken by ladies. Saas is spelt "Sass," and the Segnes Pass, "Sequer," in each case more than once; and, what is more grotesque, in each case both the right and the wrong forms appear in the index. Under the Riffelhorn and Mont Blanc fatal accidents which occurred on those peaks are mentioned, with errors as to details. These are, perhaps, not very important, but it would have been quite easy to have said nothing about them. The traveller who reads that Nauders is "at the foot of the Stelvio Pass" and sixty-eight miles from Landeck will be as agreeably surprised to find that he can reach the latter place in an easy day's walking as he will be disappointed to learn that it will take him at least as long to get to Eyrs, where the Stelvio road branches off from that which leads through the valley of the Etsch to Botzen. Finally, Monte della Disgrazia does not mean "the Disgraceful Mountain."

XUM

It may be said, on the other hand, that the introduction of a short account of the routes to Switzerland is of some use (though there was no need for several pages about the battlefields round Metz), and that the remarks about hotels are sometimes to be commended for their frankness. The price of the book — half-a-crown — also compares favourably with that of the older-established guides of the same bulk. But it must be confessed that this is quite as much as the book is worth.

Tourists' Guide to Berkshire, by Mr. E. Walford (Stanford), supplies a well-selected mass of memoranda, which, so far as they go, will prove invaluable to pedestrians and hasty travellers, such as bicyclists. Such a guide needed not to be made readable; abbreviations, systematic arrangement, and terse modes of description would have made room for interesting data we miss. We could have dispensed with many statistics of the nature of those which, on p. 19, declare that in Sonning there were, in 1871, 15,408 inhabited houses and only 10,918 inhabitants, while in Wantage 33,317 houses were required to accommodate a population of 9,850. We did not know that King Alfred's townsmen needed more than three houses each. Surely the compiler will verify this statement for the next edition of a book which is good enough to deserve improvement.

MESSRS. A. & C. BLACK send a new edition of Mr. C. B. Black's guide to *North France, Belgium, Lorraine, and Alsace.* It is a good guide-book, containing a great deal of information presented in a concise form. The routes are well laid down, the maps are abundant, and attention is paid to the inns. Mr. Black should revise his accounts of the campaign of 1815 with the aid of Mr. Dorsey Gardner's book, which we review in another column. The narratives of Scott and Sir Archibald Alison are altogether out of date.

OUR LIBRARY TABLE.

IN his volume on *The Growth of English Industry and Commerce* (Cambridge, University Press) Mr. W. Cunningham has attempted to give a compendious account of the origin and progress of English industry and commerce from the period when Britain became England until the commencement of the present century. For the purpose of doing so he has accumulated a considerable quantity of material, the sources of which are fully and faithfully set out for the further information of others in the list of "Authorities Cited" at the end of the work. Mr. Cunningham himself does not pretend to give much more than a sketch of his subject, and he has adopted a somewhat eccentric arrangement in doing so. Nevertheless the outline thus sketched is drawn with a bold and firm hand and displays true historical insight. It is deficient in some respects in its perspective, as when the establishment of the woollen manufacture as a staple industry under Edward III., and the great increase of all manufacturing industry in England after the Revocation of the Edict of Nantes, are not given as prominent a place in the narrative as they are entitled to; but, on the other hand, some details, equally necessary to the proper comprehension of the subject and not often adequately dealt with, are treated with skill and knowledge. This is especially the case with what may be termed the jurisprudence of the subject, and particularly its archaic jurisprudence. All that relates to that most fruitful field of research is treated judiciously, if briefly. The book is lacking in most of the ordinary elements of popularity, but contains good work and valuable matter nevertheless. To many readers it should be instructive; to all it must be suggestive.

The Earliest Known Printed English Ballad: A Ballade of the Scottysshe Kynge, written by John Skelton, Poet Laureate to King Henry VIII. Reproduced in Fac-simile, with an Historical and Bibliographical Introduction by John Ashton. (Stock.)—Mr. Ashton insists on claiming for the 'Scottysshe Kynge' the honour of being the first printed English ballad, although Prof. Skeat pointed out in these columns that the 'Nut-brown Maid,' printed in 1502, preceded it by eleven years. The 'Nut-brown Maid' was not printed separately, but as a part of a book, Arnold's 'Chronicle,' while the 'Scottysshe Kynge' was issued with title-page and colophon. Skelton's piece, therefore, is the earliest ballad printed in ballad form,—not the earliest printed ballad. But so great is Mr. Ashton's affection for his *protégé* that he refuses to recognize the 'Nut-brown Maid' as a ballad at all, on the ground that there "are no antiphonal ballads properly so called." We are not disposed to enter upon a discussion as to what constitutes a ballad, but content ourselves with remarking that a definition which would exclude 'Sister Helen' is clearly inadequate. It may safely be predicted that the 'Nut-brown Maid' will continue to hold its time-honoured place in the forefront of early English ballads notwithstanding Mr. Ashton's assault. The interest attaching to the 'Scottysshe Kynge' is mainly antiquarian. In his "ribble rabble rhimes Skeltonical" the balladist taunts the poor Scots most unmercifully. The piece was written immediately on the receipt of the news of the battle of Flodden Field, before the facts were properly known; for the writer speaks of King James, who fell on the field of battle, as a prisoner at Norham:—

> For to the castell of norham
> I understonde to soone ye cam,
> For a prysoner there now ye be
> Eyther to the deuyll or the trinite.

On July 26th, 1613, while King Henry was engaged in besieging Tereouenne, a town in the province of Artois, the Scotch king sent him a letter, wherein, after raking up a number of old grievances, he peremptorily demanded that Henry should stay all hostilities with Louis. This letter is quoted by Mr. Ashton, together with Henry's reply, from Hall's 'Chronicle.' Throughout the ballad the court poet is chiefly engaged in attacking James for his presumption in daring to use such freedom of speech towards his "souerayne lorde." The piece begins as follows:—

> Kynge Jamy | Jomy your. Joye is all go
> Ye sommnoed our kynge why dyde ye so
> To you no thyng it dyde accorde
> To sommon our kynge your souerayne Lorde.
> A kynge a somner it is wonder
> Knowe ye not salte and auger asonder
> In your somnynge ye were to malaperte
> And your harolde no thynge experte
> Ye thought ye dyde it full valyauntolye
> But not worth thre skppes of a pye.

In this strain it continues through seventy-three lines, concluding with the loyal wish:—

> God save kynge Henry and his lordes all
> And sende the frensshe kynge suche an other fall.

Both editor and publisher have done their best to render the book attractive. The copious extracts from Hall are agreeable reading, and the editor is careful to write as little as possible in the first person. His abstinence is to be commended, for the opening chapter, on the "Origin of Ballads," is clumsily put together.

WE have received the half-yearly volumes of the "rival magazines," the fifth volume of the *Antiquary* and the first volume of the *Bibliographer*, published by Mr. Stock, and the first volume of Mr. Walford's *Antiquarian Magazine and Bibliographer*, published by Mr. Reeves. Of Mr. Stock's periodicals the *Bibliographer* seems to be distinctly the better, and will probably prove a valuable help to a branch of literature ill represented in this country. Mr. Walford has secured some good contributors, and may be congratulated on having made an excellent start. He might, however, acknowledge a little more frequently his indebtedness for items of news to the *Athenæum*.

WE have on our table *Notes and Jottings on Animal Life*, by the late Frank Buckland (Smith & Elder), — *The Sun*, by C. A. Young (Kegan Paul),—*Handbook of the Polariscope and its Practical Applications*, from the German edition of H. Landolt (Macmillan), — *Notes on the History of the Liturgical Colours*, by J. W. Legg (Leslie),—*Familiar Allusions*, by W. A. Wheeler and C. G. Wheeler (Chatto & Windus),—*The Tea Industry in India*, by S. Baildon (Allen & Co.),—*Egyptian Obelisks*, by H. H. Gorringe (Trübner),—*Percy Pomo* (Griffith & Farran), — *Week-Day Living*, by S. Pearson (Kegan Paul),—*Prairie and Forest*, by P. Gillmore (Allen & Co.),—*The Old Bridge of Athlone*, by the Rev. J. S. Joly (Dublin, Herbert),—*Stephanie*, by L. Veuillot (Dublin, Gill),—*Scenes from the Life of 'Goody Two-Shoes,'* by E. Ransome (Griffith & Farran), —*Poems*, by L. Berry (Rugby, Kenning),—*A Birth Song*, by W. Freeland (Glasgow, MacLehose),—*English Work and Song*, by an Englishman (Low),—*Wiclif's Place in History*, by M. Burrows (Isbister),—*The Book of Judges*, by the Rev. J. J. Lias (Cambridge Press),—*Study of the Church Catechism*, by C. S. Dawe (Rivingtons),—*Importance of Faith in Scripture Miracles* (Haughton),—*A Critical Greek and English Concordance of the New Testament*, by C. F. Hudson, H. L. Hastings, and E. Abbot (Bagster),—*A Philosophy of Immortality*, by the Hon. R. Noel (Harrison), — *Sacred Similes*, by P. E. Vizard (S.S.A.),—*Passio et Miracula Beati Olaui*, edited by F. Metcalfe (Oxford, Clarendon Press),—*Otium Norvicense Pars Tertia, Notes on Select Passages of the Greek Testament*, by F. Field (Oxford, Hall),—*Die Pflanze*, by Dr. F. Cohn (Breslau, Kern),—*Sophokles' Oedipus Tyrannos*, edited by F. Brandscheid (Trübner),—and *Iordanis de Origine Actibvsque Getarvm*, by A. Holder (Williams & Norgate). Among New Editions we have *Pearson's Exposition of the Creed*, by the Rev. R. Sinker (Cambridge Press),—*Memorials of Theophilus Trinal*, by T. T. Lynch (Clarke), —*Jean Paul Marat*, by E. B. Bax (Modern Press),—*The Agamemnon of Aeschylus*, by B. H. Kennedy (Cambridge Press),—*Elementary History of Music*, by N. D'Anvers (Low),—*Out of Court*, by Mrs. Cashel Hoey (Low),—*Wholesome Houses*, by E. G. Banner (Stanford),—*Useful Information on Electric Lighting*, by K. Hedges (Spon),—*Elements of Acoustics, Light, and Heat*, by W. Lees (Collins),—*The Andria of Terence*, by W. Wagner (Bell),—and *The Havton Timorvmenos of Terence*, by W. Wagner (Bell).

THE REV. THOMAS MOZLEY AND MR. HERBERT SPENCER.

In the 'Reminiscences, chiefly of Oriel College,' by the Rev. Thomas Mozley, there occurs on p. 146, vol. i., the following passage:—

"I had indulged from my boyhood in a Darwinian dream of moral philosophy, derived in the first instance from one of my early instructors. This was Mr. George Spencer, [honorary] Secretary of the Derby Philosophical Association founded by Dr. Darwin,* and father of Mr. Herbert Spencer. My dream had a certain family resemblance to the 'System of Philosophy' bearing that writer's name. There was an important and saving difference between the two systems, between that which never saw the light, and perished before it was born, without even coming to wither like grass on the housetops, and that other imposing system which occupies several yards of shelf in most public libraries. The latter makes the world of life, as we see and take part in it, the present outcome of a continual outcoming from atoms, lichens, and vegetables, bound by the necessities of existence to mutual relations, up to or down to brutes, savages, ladies and gentlemen, inheriting various opinions, maxims, and superstitions. The brother and elder philosophy, for such it was, that is mine, saved itself from birth by its palpable inconsistency, for it retained a Divine original and some other incongruous elements. In particular, instead of rating the patriarchal stage hardly above the brute, it assigned to that state of society a heavenly source, and described it as rather a model for English country gentlemen, that is, upon the whole, and with certain reservations."

As I find by inquiring of those who have read it, this passage leaves the impression that the doctrines set forth in the 'System of Synthetic Philosophy' as well as those which Mr. Mozley entertained in his early days were in some way derived from my father. Were this true, the implication would be that during the last five-and-twenty years I have been allowing myself to be credited with ideas which are not my own. And since this is entirely untrue, I cannot be expected to let it pass unnoticed. If I do, I tacitly countenance an error and tacitly admit an act by no means creditable to me.

I should be the last to under-estimate my indebtedness to my father, for whom I have great admiration, as will be seen when, hereafter, there comes to be published a sketch of him which I long ago prepared in rough draft. But this indebtedness was general and not special—an indebtedness for habits of thought encouraged rather than for ideas communicated. I distinctly trace to him an ingrained tendency to inquire for causes—causes, I mean, of the physical class. Though far from having himself abandoned supernaturalism, yet the bias towards naturalism was strong in him, and was, I doubt not, communicated (though rather by example than by precept) to others he taught as it was to me. But while admitting, and indeed asserting, that the tendency towards naturalistic interpretation of things was fostered in me by him, as probably also in Mr. Mozley, yet I am not aware that any of those *results* of naturalistic interpretation distinctive of my works are traceable to him.

Were the general reader in the habit of criticizing each statement he meets, he might be expected to discover in the paragraph quoted above from Mr. Mozley reasons for scepticism. When, for example, he found my books described as occupying several yards of library shelves, while in fact they occupy less than two feet, he might be led to suspect that other statements, made with like regard for effectiveness rather than accuracy, are misleading. A reperusal of the last part of the paragraph might confirm his suspicion. Observing that, along with the allegation of "family resemblance," the closing sentence admits that the course of human affairs as conceived by Mr. Mozley was the reverse in direction to the course alleged by me—observing that in this only respect in which Mr. Mozley specifies his view it is so fundamentally anti-evolutionary as to be irreconcilable with the evolutionary view—he might have further doubts raised. But the general reader, not pausing to consider, mostly accepts without hesitation what a writer tells him.

Even scientific readers, even readers familiar with the contents of my books, cannot, I fear, be trusted so to test Mr. Mozley's statement as to recognize its necessary erroneousness; though a little thought would show them this. They would have but to recall the cardinal ideas developed throughout the series of volumes I have published to become conscious that these ideas are necessarily of much later origin than the period to which Mr. Mozley's account refers. Though, in Rumford's day and before, an advance had been made towards the doctrine of the correlation of heat and motion, this doctrine had not become current; and no conception, even, had arisen of the more general doctrine of the correlation and equivalence of the physical forces at large. Still more recent was the rise and establishment of the associated abstract doctrine commonly known as the "conservation of energy." Further, Von Baer's discovery that the changes undergone during development of each organic body are always from the general to the special was not enunciated till some eight years after the time at which Mr. Mozley was a pupil of my father, and was not heard of in England until twenty years after. Now, since these three doctrines are indispensable elements of the general theory of evolution (the last of them being that which set up in me the course of thought leading to it), it is manifest that not even a rude conception of such a theory could have been framed at the date referred to in Mr. Mozley's account. Even apart from this, one who compared my successive writings would find clear proof that their cardinal ideas could have had no such origin as Mr. Mozley's account seems to imply. In the earliest of them—'Letters on the Proper Sphere of Government'—published in 1842 and republished as a pamphlet in 1844, the only point of community with the general doctrine of evolution is a belief in the modifiability of human nature through adaptation to conditions (which I held as a corollary from the theory of Lamarck) and a consequent belief in human progression. In the second and more important one, 'Social Statics,' published in 1850, the same general ideas are to be seen, worked out more elaborately in their ethical and political consequences. Only in an essay published in 1852 would the inquirer note for the first time a passing reference to the increase of heterogeneity as a trait of development, and a first recognition of this trait as seen in other orders of phenomena than those displayed by individual organisms. Onwards through essays published in several following years, he would observe further extensions in the alleged range of this law; until, in 1855, in the 'Principles of Psychology,' it begins to take an important position, joined with the additional law of integration, afterwards to be similarly extended. Not until 1857, in two essays then published, would he find a statement, relatively crude in form, of the law of evolution, set forth as holding throughout all orders of phenomena, and joined with it the statement of certain universal physical principles which necessitate its universality. And only in 1861 would he come to an expression of the law approximating in definiteness to that final one reached in 1867. All which facts the scientific reader who took the trouble to investigate would see are conclusive against the implication contained in Mr. Mozley's statement; since, were this implication true, my early writings would have contained traces of the specific doctrine set forth in the later ones. But, as I have said, even a reader of my books cannot be trusted to recall and consider these facts, but will certainly in many cases, and probably in most, passively accept the belief Mr. Mozley suggests.

Seeing this, I have felt it requisite definitely to raise the issue; and for this purpose have written to Mr. Mozley the following letter. It is made long by including a general outline of the doctrine of evolution, which it was needful to place before him that he might be in a position to answer my question definitely. Perhaps I may be excused for reproducing the letter in full, since ninety-nine out of a hundred do not know what the doctrine of evolution in its wider sense is, but suppose it to be simply another name for the doctrine of the origin of species by natural selection:—

"My dear Sir,—The passages from three letters of my father, sent herewith—one written in 1820, which was about the date referred to in your account of him, one written some thirteen years later, and the other twenty years later—will prove to you how erroneous is the statement you have made with regard to his religious beliefs. Having in this case clear proof of error, you will, I think, be the better prepared to recognize the probability of error in the statements which you make concerning his philosophical ideas and the ideas which, under his influence, you in early life elaborated for yourself.

"The passage in which you refer to these gives the impression that they were akin to those views which are developed in the 'System of Synthetic Philosophy.' I am anxious to ascertain in what the alleged kinship consists. Some twelve years ago an American friend requested me, with a view to a certain use which he named, to furnish him with a succinct statement of the cardinal principles developed in the successive works I have published. The rough draft of this statement I have preserved; and that you may be enabled definitely to compare the propositions of that which you have called 'the younger philosophy' with that which you have called 'the elder,' I copy it out. It runs as follows:—

"'1. Throughout the universe in general and in

* It was more than a dozen years after Dr. Darwin's death in 1802 when my father became honorary secretary. I believe my father (who was twelve years old when Dr. Darwin died) never saw him, and, so far as I know, knew nothing of his ideas.

detail there is an unceasing redistribution of matter and motion. 2. This redistribution constitutes evolution where there is a predominant integration of matter and dissipation of motion, and constitutes dissolution where there is a predominant absorption of motion and disintegration of matter. 3. Evolution is simple when the process of integration, or the formation of a coherent aggregate, proceeds uncomplicated by other processes. 4. Evolution is compound when, along with this primary change from an incoherent to a coherent state, there go on secondary changes due to differences in the circumstances of the different parts of the aggregate. 5. These secondary changes constitute a transformation of the homogeneous into the heterogeneous—a transformation which, like the first, is exhibited in the universe as a whole and in all (or nearly all) its details; in the aggregate of stars and nebulæ; in the planetary system; in the earth as an inorganic mass; in each organism, vegetal or animal (Von Baer's law otherwise expressed); in the aggregate of organisms throughout geologic time; in the mind; in society; in all products of social activity. 6. The process of integration, acting locally as well as generally, combines with the process of differentiation to render this change not simply from homogeneity to heterogeneity, but from an indefinite homogeneity to a definite heterogeneity; and this trait of increasing definiteness, which accompanies the trait of increasing heterogeneity, is, like it, exhibited in the totality of things and in all its divisions and subdivisions down to the minutest. 7. Along with this redistribution of the matter composing any evolving aggregate there goes on a redistribution of the retained motion of its components in relation to one another: this also becomes, step by step, more definitely heterogeneous. 8. In the absence of a homogeneity that is infinite and absolute, that redistribution, of which evolution is one phase, is inevitable. The causes which necessitate it are these—9. The instability of the homogeneous, which is consequent upon the different exposures of the different parts of any limited aggregate to incident forces. The transformations hence resulting are complicated by—10. The multiplication of effects. Every mass and part of a mass on which a force falls subdivides and differentiates that force, which thereupon proceeds to work a variety of changes; and each of these becomes the parent of similarly-multiplying changes: the multiplication of them becoming greater in proportion as the aggregate becomes more heterogeneous. And these two causes of increasing differentiations are furthered by—11. Segregation, which is a process tending ever to separate unlike units and to bring together like units—so serving continually to sharpen, or make definite, differentiations otherwise caused. 12. Equilibration is the final result of these transformations which an evolving aggregate undergoes. The changes go on until there is reached an equilibrium between the forces which all parts of the aggregate are exposed to and the forces these parts oppose to them. Equilibration may pass through a transition stage of balanced motions (as in a planetary system) or of balanced functions (as in a living body) on the way to ultimate equilibrium; but the state of rest in inorganic bodies, or death in organic bodies, is the necessary limit of the changes constituting evolution. 13. Dissolution is the counter-change which sooner or later every evolved aggregate undergoes. Remaining exposed to surrounding forces that are unequilibrated, each aggregate is ever liable to be dissipated by the increase, gradual or sudden, of its contained motion; and its dissipation, quickly undergone by bodies lately animate and slowly undergone by inanimate masses, remains to be undergone at an indefinitely remote period by each planetary and stellar mass, which since an indefinitely distant period in the past has been slowly evolving: the cycle of its transformations being thus completed. 14. This rhythm of evolution and dissolution, completing itself during short periods in small aggregates, and in the vast aggregates distributed through space completing itself in periods which are immeasurable by human thought, is, so far as we can see, universal and eternal—each alternating phase of the process predominating now in this region of space and now in that, as local conditions determine. 15. All these phenomena, from their great features down to their minutest details, are necessary results of the persistence of force, under its forms of matter and motion. Given these as distributed through space, and their quantities being unchangeable, either by increase or decrease, there inevitably result the continuous redistributions distinguishable as evolution and dissolution, as well as all those special traits above enumerated. 16. That which persists unchanging in quantity but ever changing in form, under these sensible appearances which the universe presents to us, transcends human knowledge and conception—is an unknown and unknowable power, which we are obliged to recognize as without limit in space and without beginning or end in time.'

"I am not aware that my father entertained any of these views, either definitely or vaguely. But if he did, or if under his influence you reached views similar to these or any of them, it will, I presume, be possible to indicate the resemblances. Or if specific resemblances are not alleged, still it will be possible to point out what were the ideas you received from him which potentially involved conclusions such as are above set forth.

"I fear I am entailing some trouble upon you in asking an answer to this question, but the importance of the matter must be my apology. I am, my dear sir, faithfully yours,

"HERBERT SPENCER."

In Mr. Mozley's reply he stated that he had been obliged already to send off his corrections for a second edition, adding that, "as therefore nothing can be done now, you would not care for any discussion." The result is that I remain without any reply to my question. One passage, however, in Mr. Mozley's letter serves to give a widely different meaning to his statement; and, having obtained his permission, I here quote it as follows:—"You will observe that I have only a vague idea of my own 'philosophy,' and I cannot pretend to an accurate knowledge of yours. I spoke of a 'family likeness.' But what is that? There is a family likeness between Cardinal Newman's view and his brother Frank's."

Now, if the "family likeness" alleged is not greater than that between the belief of a Roman Catholic and the belief of a Rationalist who retains his theism, my chief objection is removed; for just as the views of the brothers Newman have a certain kinship in virtue of the religious sentiment common to them, so Mr. Mozley's early views and my own may have had the common trait of naturalistic interpretation—partially carried out in the one and completely in the other: a common trait, however, which would give Mr. Mozley's early views a "family likeness" to other philosophies than mine. This being understood, the only further objection to Mr. Mozley's statement which I have to make is that I do not see how, even in this vague sense, a likeness can be alleged between that which he names and describes as "a *moral* philosophy" and "a system of philosophy" of which the greater part is concerned with the phenomena of evolution at large—inorganic, organic, and super-organic—as interpreted on physical principles, and of which only the closing portion sets forth ethical conclusions as corollaries from all the conclusions that have preceded.

There remains only to answer the question—How could Mr. Mozley have been led to imagine a resemblance between things so different? He has himself gone far towards furnishing an explanation. In his introduction (p. 1) he admits, or rather asserts, that "reminiscences are very suspicious matter"; and that "the mental picture of events long passed by, and seen through an increasing breadth of many-tinted haze, is liable to be warped and coloured by more recent remembrances, and by impressions received from other quarters." He adds sundry illustrations of the extreme untrustworthiness of memory concerning the remote past; and in chap. lxxxiii. he characterizes Denison's Reminiscences of Oriel College as "a jumble of inaccuracies, absurdities, and apparent forgets." Moreover he indicates (p. 4) a special cause of distortion; saying of those "whose memory is subordinate to imagination and passion" that "they remember too easily, too quickly, and too much as they please." Now, as is implied by his religious ideas and ecclesiastical leanings, and as is also shown by a passage in which he refers to the scientific school with manifest aversion, Mr. Mozley is biassed towards an interpretation which tends to discredit this school, or a part of it; and obviously, to fancy a resemblance between scientific views now current and those which he describes as a "dream" of his youth, which disappeared with his manhood, is not unsatisfactory. On looking through the "many-tinted haze" of sixty years at what he admits to be "a vague idea" of his early philosophy, he has unconsciously "warped and coloured" it, and imagined in it a resemblance which, as I have shown, it could not possibly have had.

I will add only that serious injustice is apt to be done by publication of reminiscences which concern others than the writer of them. Widely diffused as is Mr. Mozley's interesting work, his statement will be read and accepted by thousands who will never see this rectification.

HERBERT SPENCER.

A COMPLAINT.

I DO not know how far it is permissible for one author to use the materials of another without acknowledgment, but here is a case in point to which I should like to call attention. In the 'Life of Victor Emmanuel,' by G. S. Godkin, published 1879, and the 'Life of Garibaldi,' by Theodore Bent, published in 1881, not only are the extracts from Italian authorities in many cases identical, but the original composition shows at times such a similarity as could hardly be accidental. The following passages are specimens:—

'Life of Victor Emmanuel.'	*'Life of Garibaldi.'*
"All Italy was on fire. Lombardy and Venice were already in arms, and the Milanese after five days' terrible fighting drove the Austrian troops out of the city. The declaration of the war of independence could no longer be delayed."—P. 27.	"All Italy was thereat aroused. Lombardy and Venice were already in arms, and the Milanese, after their 'glorious five days,' had driven the Austrians out of their city March 23. So the declaration of the war of independence could no longer be postponed."—P. 45.
"The Lombards, who had begun the war with such heroism as was displayed in the five days' struggle, did not maintain the same noble bearing throughout. They were divided against themselves, and failed to support the Piedmontese as the king had been taught to expect. They and the Venetians spent the precious time in disputing as to what form of government they would have while the Austrians were still in possession of Italian soil. The Mazzinians were busy haranguing against monarchies and circulating libellous stories about the Savoy family," &c.—P. 42.	"The Lombards too, after their five days' struggle, became divided among themselves, and so did the Venetians, fighting as to what form of government they should have while Austria was still in possession. And Mazzini was busy too, running down monarchies the while, and spreading libels about the King of Sardinia."—P. 49.
"Aspromonte gave the final blow to the Rattazzi ministry. Never very popular, it was utterly shaken by the reaction in favour of Garibaldi. Now that the danger was passed and the untamable old lion *hors de combat*, his rash inconsiderateness, his violation of the laws, were overlooked, and only his past glorious services remembered."—P. 249.	"Aspromonte gave a final blow to the Rattazzi ministry, never, indeed, very popular, but now utterly shaken by their conduct to Garibaldi. Now that the untamable old lion was for the time laid aside, nothing but his past glorious services were remembered. Nobody for a moment thought that his futile attempt on Rome had been in any way rash or inconsiderate."—P. 215.

I do not pretend to say that these passages contain anything very original or novel. Mr Bent could easily have obtained the information by reading the accounts of the Italians who took part in, or were spectators of, the Revolution, if he chose to take the trouble of looking up the original authorities and condensing for himself. But when he wanted to make his book in a hurry and use the readiest materials that came to his hand, he ought to have given references to the works which supplied them.

G. S. GODKIN.

MORE KARAITE MANUSCRIPTS.

Cannon Street Hotel, July 19, 1882.

IN an article in the *Athenæum* of July 15th, headed "Karaite Manuscripts," I mentioned that I would write soon more on the fifth division (K e) of my catalogue, containing six MSS. on grammar and lexicography, and one Yemenite book on the Massorah, which I gladly do before leaving London.

The chief elements necessary to a sound understanding of the Old Testament and to the execution of a good translation are unquestion-

ably the following:—First, a good ancient text or texts; secondly, good vowel-points and accents; thirdly, good ancient lexicons translating the Hebrew into a living language; and fourthly, good and early translations and impartial commentaries. Until lately, however, these four necessary elements have not been all that could be desired.

The collections acquired in 1881 of good ancient texts and the great work of Dr. Ginsburg on the Massorah have remedied in a measure the want of the first.

There is now in the British Museum material enough to enable any diligent Hebrew student to work out the different systems of the so-called Assyrian and Palestinian punctuations. Nothing has as yet been done for the study of the different systems and the gradual development of our twenty-six forms of accents (I myself possess several old MSS. with different systems of accents). But the greatest hindrance to a right understanding of the Bible, and especially of words touching on natural history or of a technical character, was the lack of ancient Biblical lexicons explaining those terms in a living language, by authors who lived in Bible lands, and were able to take advantage of the near relationship which exists between kindred tongues. The Targum and even the Talmud are often a great help in this respect, but, alas! they often need an interpreter. The Aruch and Kimshi, who wrote only Hebrew, could not help us much there.

It is true the Bodleian Library possesses an excellent Hebrew-Arabic Talmudical lexicon of Tanchum Jerushalmi, called 'Murshid el Kafiah,' and the Imperial Library of St. Petersburg possesses now a Biblical Hebrew-Arabic lexicon of Ali ben Saleiman. (In my new collection, now in the British Museum, are many works of the last-mentioned author, dated twice A.D. 1035, who was only known till now by his lexicon and never mentioned in any of the Karaite books.) But what are the opinions of a few authors of not very great critical ability on such an important point as the translation of the Bible? Any additional help to that aim seems to me of great importance; I will therefore point out the interest of this small division of seven books now in the British Museum.

No. 1 of the division K is a large fragment (three hundred pages small quarto) of a unique Arabic-Hebrew lexicon, in which the difficult words of the Bible and Mishnah are well and clearly worked out. For instance, of the word עכביות, acubijoth —mentioned in the Talmud as being the דרדר (thistles) of Gen. iii. 18—our author says that it is a plant with many thorny leaves which grows in abundance around Damascus, and that at the top of it is a thistled crown, which is the favourite food of the camel, and is called in Damascus "acub." It is also, he says, found in abundance in Morocco and Andalusia, where the thorns are peeled and cooked or roasted together with garlic and eaten. They are of two colours; some are ash-grey and some rosy. It is also a favourite dish in Cairo, but it is called there "lach-lach," לחלח. The "ar-ar" (ערער) of the Bible is also, according to the Targum of Onkelos, the well-known "acub." Then he goes on to say: "The general opinion that 'dardar' and 'acubijoth' are the fruit of 'badngan' (egg plant) is only held by those who talk from hearsay, without having any real knowledge of the thing. They ought to have known that this plant 'badngan' was never planted in Palestine in early days, neither did the Jews of old know it; even Galen, who lived after the second exile, does not mention 'badngan,' because he never saw it. Even Rabbi Haii Goan makes a mistake in rendering it by the word 'banjar,' בנזר (beet-root, &c.); and Ebn Ganaeh translated it 'harshaph,' חרשף, which is also not the real 'acub' or thistle, although 'harshaph' has also many thistles and may be of the same kind," &c. It is a pity that this lexicon comprises only six letters of the Hebrew alphabet.

No. 2 is most probably the earliest Arabic-Hebrew and Arabic-Chaldaic lexicon yet known. The forms of its triliteral roots, its order and Chaldaic part, require description by scholars more competent than myself.

No. 3 is the well-known 'Sepher-harikma' of the most highly praised and much abused Ebn Ganaeh, in the original Arabic, but not complete.

No. 4 is a special treatise on the Yemenite Massorah. The author, who must have lived only two or three centuries ago, is very interesting to us for several reasons:—First, for his quotations of early Massoretic works and authors not known to us, *e.g.*, Posikta, Massorah of Saadia Gaon, Mesorta Denardai, Ben Melch, &c.; secondly, for his pointing out the variations between the Jerusalemitic and old Yemenite texts, even with regard to full words; thirdly, for showing the difference between the Yemenite Targum and our Targum.

No. 5 is a concordance to the similar terminations of words of the Bible (for lyric purposes).

No. 6 comprises six fragments of Biblical as well as Talmudical Hebrew-Arabic lexicons, mostly very old. In order to give an idea of their high value, and to encourage collectors in searching for more lexicons of this kind, I shall give here in the original one of the shortest articles, upon the word מעצד (the root עצד), as follows:—

אלעין ואל צאד ואל דאל (עצד)

מעשה ירי חרש במעצד הו
אלפאם ופי כלאם אלאויל אם היה
חרש נותנין לו שני מעצדין אי פאסין
הכדא פסר פיה רבינו האיי גאון ז"ל

No. 7 is an alphabetical list of all the passages and anecdotes to be found in the Talmud Babli and Jerushalmi. It has over 6,000 texts, some very long.

The fourth element necessary to a good understanding of the Hebrew, namely, ancient impartial translations and comments in Arabic or any other living language (of which there was hitherto a great want), is now well supplied by the new acquisitions of the Trustees of the British Museum. I will return to this part of my collection in your next number.

M. W. SHAPIRA.

EMERSON TO CARLYLE.

WE publish two more letters from Emerson to Carlyle. Bronson Alcott, mentioned in the first letter, was the father of Miss Alcott, the author of 'Little Women.' Dr. Tuckerman, mentioned in the second letter, was a Unitarian minister. The journal started by Margaret Fuller was, of course, the *Dial*.

Concord, March 15, 1839.

MY DEAR FRIEND,—I will spare you my apologies for not writing, they are so many. You have been very generous: I very promising and dilatory. I desired to send you an account of the sales of the 'History,' thinking that the details might be more intelligible to you than to me, and might give you some insight into literary and social as well as bibliopolical relations. But many details of this account will not yet settle themselves into sure facts, but do dance and mystify me as one green in ledgers. Bookseller says 991 copies came from Binder, 9 remaining imperfect, and so not bound. But in all my reckonings of the particulars of distribution I make either more or less than 991 copies. And some of my accounts are with private individuals at a distance, and they have their uncertainties and misrememberings also. But the facts will soon show themselves, and I count confidently on a small balance against the world to your credit.

The Miscellanies go forward too slowly, at about the rate of seventy-two pages a week, as I understand. Of the *Fraser* articles and of some others we have not a single copy—such are the tough limits of some English immortalities and editorial renowns, but we expect the end of the printing in six weeks. The two first volumes, with title-pages, are gone to the binder—260 copies—with strait directions; and I presume will go to sea very soon. We shall send the two last volumes by a later ship. You will pay nothing for the books we send, except freight. We shall deduct the cost of the books from the credit side of your account. We print of the second series 1,250 copies, with the intention of printing a second edition of the first series of 500 if we see fit hereafter to supply the place of the emigrating portion of the first. You express some surprise at the cheapness of our work. The publishers, I believe, generally get more profits. They grumbled a little at the face of the account on the 1 January; so in the new contract for the new volumes I have allowed them 9 cents more on each copy sold by them. So that you should receive 91 cents on a copy instead of $1. When the 250 copies of our two first volumes are gone to you I think they will not have but about 100 copies more to sell.

Your books are read. I hear, I think, more gratitude expressed for the Miscellanies than for the History. Young men at all our colleges study them in closets, and the Copernican is eradicating the Ptolemaic lore. I have frequent and cordial testimonies to the good working of the leaven, and continual inquiry whether the man will come hither. *Speriamo.*

I was a fool to tell you once you must not come: if I did tell you so, I knew better at the time, and I did steadily believe, as far as I was concerned, that no polemical mud, however much was thrown, could by any possibility stick to me; for I was purely an observer; had not the smallest personal or *partial* interest; and merely spoke to the question as a historian; and I knew whoever could see me must see that. But, at the moment, the little pamphlet made such stir and excitement in the newspapers; and the whole thousand copies were bought up. The ill wind has blown over. I advertised, as usual, my winter course of Lectures, and it prospered very well. Ten Lectures—I. Doctrine of the Soul; II. Home; III. The School; IV. Love; V. Genius; VI. The Protest; VII. Tragedy; VIII. Comedy; IX. Duty; X. Demonology.

I designed to add two more, but my lungs played me false with unseasonable inflammation, so I discoursed no more on "Human Life." Now I am well again. But, as I said, as I could not hurt myself, it was foolish to flatter myself that I could mix your camp with mine and hurt you. Nothing is more certain than that you shall have all our ears, whenever you wish for them, and free from that partial position which I deprecated. Yet I cannot regret my letter, which procured me so affectionate and magnanimous a reply.

Thanks, too, for your friendliest invitation. But I have a new reason why I should not come to England—a blessed babe, named Ellen, almost three weeks old, a little fair soft lump of contented humanity, incessantly sleeping, and with an air of incurious security, that says, she has come to stay, has come to be loved,—which has nothing mean, and quite piques me.

Yet how gladly should I be near you for a time. The months and years make me more desirous of an unlimited conversation with you; and one day, I think, the God will grant it, after whatever way is best. I am lately taken with the Onyx Ring; which seemed to me full of knowledge, and good bold true drawing. Very saucy, was it not? in John Sterling to paint Collins; and what intrepid iconoclasm in this new Alcibiades to break in among your Lares and disfigure your sacred Hermes himself in Walsingham. To me, a profane man, it was good sport to see the Olympic lover of Frederica, Lili, and so forth, lampooned, and by Alcibiades, too, over whom the wrath of Pericles must pause and brood ere it falls. I delight in this Sterling, but now that I know him better, I shall no longer expect him to write to me. I wish I could talk to you on the grave questions, graver than all literature, which the trifles of each day open. Our doing seems to be a gaudy screen or popinjay to divert the eye from our non-doing.

I wish you could know my friends here. A man named Bronson Alcott is a majestic soul, with whom conversation is possible. He is capable of truth, and gives me the same glad astonishment that he should exist which the world does.

As I hear not yet of your reception of the Bill of Exchange, which went by the Royal William in January, I enclose the duplicate. And now all success to the Lectures of April or May! A new kingdom with new extravagances of power and splendour I know. Unless you can keep your own secret better in Rahel, &c., you must not give it me to keep. The London Sartor arrived in my hands 5 March, dated 15 November, so long is the way from Kennett to Little & Co. The book is welcome, and awakens a sort of nepotism in me—my brother's child.

R. W. EMERSON.

I rejoice in the good accounts you give me of your household; in your wife's health; in your brother's position. My wife wishes to be affectionately remembered to you and yours. And the lady must continue to love her *old* Transatlantic friend.

New York, March 18, 1840.

MY DEAR FRIEND,—I have just seen the steamer 'British Queen' enter the harbour from sea, and here lies the 'Great Western' to sail to-morrow. I will not resist hints so broad upon my long procrastinations. You shall have at least a tardy acknowledgment that I received in January your letter of December, which I should have answered at once, had it not found me absorbed in writing foolish lectures which were then in high tide. I had written you, a little earlier, tidings of the receipt of your 'Fr. Revolution.' Your letter was very welcome, as all your letters are. I have since seen tidings of the 'Essay on Chartism' in an English periodical, but have not yet got my proof-sheets. They are probably still rolling somewhere outside of this port, for all our packet ships have had the longest passages; only one has come in for many a week. We will be as patient as we can.

I am here on a visit to my brother, who is a lawyer in this city, and lives at Staten Island, at a distance of half-an-hour's sail. The city has such immense natural advantages and such capabilities of boundless growth, and such varied and ever increasing accommodations and appliances for eye and ear, for memory and wit, for locomotion and lavation, and all manner of delectation, that I see that the poor fellows that live here do get some compensation for the sale of their souls. And how they multiply! They estimate the population to-day at 350,000, and forty years ago, it is said, there were but 20,000. But I always seem to suffer from loss of faith on entering cities. They are great conspiracies; the parties are all masquers, who have taken mutual oaths of silence not to betray each other's secret and each to keep the other's madness in countenance. You can scarce drive any craft here that does not seem a subornation of the treason. I believe in the spade and an acre of good ground. Whoso cuts a straight path to his own bread, by the help of God in the sun and rain and sprouting of the grain, seems to me an universal workman. He solves the problem of life not for one but for all men of sound body. I wish I may one day send you word, or better, show you the fact that I live by my hands without loss of memory or of hope. And yet I am of such a puny constitution, as far as concerns bodily labor, that perhaps I never shall. We will see.

Did I tell you that we hope shortly to send you some American verses and prose of good intent? My vivacious friend Margaret Fuller is to edit a journal whose first number she promises for 1 July next, which I think will be written with a good will if written at all. I saw some poetical fragments which charmed me,—if only the writer consents to give them to the public.

I believe I have yet little to tell you of myself. I ended in the middle of February my ten lectures on the Present Age. They are attended by 450 to 500 people, and the young people are so attentive and out of the hall ask me so many questions, that I assume all the airs of age and sapience. I am very happy in the sympathy and society of from six to a dozen Persons who teach me to hope and expect everything from my countrymen. We shall have many Richmonds in the field presently. I turn my face homeward to-morrow, and this summer I mean to resume my endeavour to make some presentable book of Essays out of my mountain of manuscript, were it only for the sake of clearance. I left my wife, and boy, and girl – the softest, gracefullest little maiden alive, creeping like a turtle with head erect all about the house—well at home a week ago. The boy has two deep wells for eyes, into which I gladly peer when I am tired. Ellen, they say, has no such depth of orb, but I believe I love her better than ever I did the boy. I brought my mother with me here to spend the summer with William E—— and his wife and ruddy boy of four years. All these persons love and honour you in proportion to their knowledge and years. My letter will find you, I suppose, meditating new lectures for your London disciples. May love and truth inspire them. I can see easily that my predictions are coming to pass, and that having waited until your Fame was in the flood-tide we shall not now see you at all on western shores. Our saintly Dr. Tuckerman, I am told, had a letter within a year from Lord Byron's daughter, informing the good man of the appearance of a certain wonderful genius in London named Thomas Carlyle, and all his astonishing workings on her own and her friends' brains—and him the very monster whom the doctor had been honouring with his best dread and consternation these five years. But do come in one of Mr. Cunard's ships as soon as the booksellers have made you rich. If they fail to do so, come and read lectures which the Yankees will pay for. Give my love and hope and perpetual remembrance to your wife, and my wife's also, who bears her in her kindest heart, and who resolves every now and then to write to her, that she may thank her for the beautiful Guido.

You told me to send you no more accounts. But I certainly shall, as our financial relations are grown more complex, and I wish at least to relieve myself of this unwonted burden of booksellers' accounts and long delays, by sharing them. I have had one of their estimates by me a year, waiting to send. Farewell.

R. W. E.

SALES.

THE sale of the first portion of the Hamilton-Beckford Library was concluded at the rooms of Messrs. Sotheby, Wilkinson & Hodge on Thursday, and the prices paid for the work of eminent binders continued to be enormous. Having in former numbers noticed the first ten days' sale of Mr. Beckford's library, we proceed to mention the choicer articles knocked down on the eleventh and twelfth days, and the prices realized. The principal attraction of the eleventh day was a copy of the 'Iconographie' of Van Dyck, in all probability the finest, and certainly the most complete, ever offered for sale. The impressions of the portraits were brilliant, and many of them in three and four states, especially his own excessively rare etchings, that of Vander Wauwer in the first state being, as we have before mentioned, finer than Mr. Bale's, which has always been considered unique, and was purchased by Baron E. de Rothschild for 450*l*. This collection was eagerly contested, the first bidding being one thousand guineas, the second fifteen hundred guineas, gradually rising by fifty pounds in succession, until knocked down to Mr. Thibaudeau (it is understood for Baron Edward de Rothschild) at 2,850*l*. Amongst other choice articles were the following: — Dunker's Vignettes et Culs de Lampes pour l'Heptameron, 28*l*. 10s. Du Noyer, Lettres Historiques, Madame de Pompadour's copy, bound by Derome, 36*l*. Dupleix, Mémoires des Gaules, the dedication copy to Louis XIII., 190*l*. Du Puy, Histoire des Favoris, bound by Derome, 23*l*. Dürer's Engravings, 185*l*.; Passio Christi, the quarto woodcuts, with artist's autograph inscription, 51*l*.; and another without, 41*l*. Du Somerard, Arts du Moyen Age, 126*l*. Dutch Etchings, 70*l*. Du Val, Rosa-Hispani-Anglica, with the rare frontispiece by Hollar, a presentation copy to the famous Duke, then Marquis, of Buckingham, with his arms on binding, 25*l*. Duvet, Apocalypse Figurée, 23*l*. Dyalogus Creaturarum Optime Moralizatus, with curious woodcuts, 58*l*. Edwards's Drawings of British Birds, 100*l*. Description de l'Egypte, 59*l*. Elizabeth I. of Russia, her Coronation, the dedication copy to the Czarina, 29*l*. 10s. Entrée de Charles IX. en Paris, De Thou's copy, 80*l*., having sold in the Sauvageot sale for 155 francs. Erasmi Paraphrases, bound by Desseuil, 27*l*. 10s. Euripides, Cura Canteri, De Thou's copy, 78*l*. European Magazine, with manuscript notes by Mr. Beckford, 39*l*. Eutropius et Paulus Diaconus, Paris, 1560, a beautiful specimen of the library of Marguerite de Valois, 100*l*., in common condition repeatedly sold for two shillings. Everdingen's Views, 35*l*. 10s. Fabritii Proverbi, 34*l*., sold in Hibbert's sale for 24*l*. 10s. Faithorne's Portraits, 72*l*. Fénélon, Avantures de Télémaque, first edition, giving the whole of the author's manuscript, printed in 1717, bound by Boyer, 85*l*.; the edition of Amsterdam, 1734, with the suppressed Examen de Conscience, Vie, &c., 58*l*. 10s. Fêtes pour le Mariage du Dauphin, bound by Padeloup for Louis XV., 60*l*. Fian the Sorcerer, 60*l*., purchased for 6*l*. 6s. in the sale of G. Steevens, who quotes it frequently in his notes to 'Macbeth.' Fielding's Works, bound by Staggemeier, 34*l*. Filholii Sacra Regum Historia, from the library of Marguerite de Valois, 65*l*. Flamen, Paisages, Emblemes, Figures des Oyseaux et Poissons, 82*l*. 2s. 6*d*. Flaminii Psalmorum Expositio, from the library of the poet Desportes, 34*l*. Flandin, Voyages en Verse, 31*l*. Florentinum Museum, 51*l*. Flores, Aurelio et Isabelle, the 1555 edition, bound by Boyer for Count Hoym, 30*l*. 10s. Florus, printed by Elzevir, 1631, Count Hoym's copy, 48*l*. 10s. Folengii Opus Macaronicorum, Count Hoym's copy, 71*l*.; another copy with autograph, "Grolierii et Amicorum," 25*l*. 10s. Fontenelle, Œuvres, three volumes, large paper, bound by Derome, 32*l*. Fonthill and Hafod, views, 40*l*. Foreign Portraits, by Visscher, &c., 100*l*. Fowler's Mosaic Pavements, 34*l*. Fouquet, Defenses, Archbishop Colbert's copy, with his arms as Abbé of Bec, 29*l*. A collection of thirty-six Maps, executed for Henry IV., and bound for him by Clovis Eve, 375*l*. Franchini, Poemata, from the libraries of Grolier, De Thou, and Marquis de Menars, 230*l*. Franeau, Jardin d'Hyvers, De Thou's copy, 28*l*. Frobisher's Three Voyages, with two rare maps, 300*l*. Froissart's Chronicles, translated by Col. Johnes, 26*l*. Fuller's Worthies, with index (reprint), 32*l*. 10s., having been bought in at the Fonthill sale for 17*l*. 5s., &c. The twelve days' sale comprised only 3,197 lots, and realized 31,516*l*. 5s.

The sale of the third portion of the Sunderland Library commenced at Messrs. Puttick & Simpson's on Monday last. The following are some of the most important prices obtained during the first three days of the sale:— Gorges (Jardin), America painted to the Life, 4 parts complete, small 4to. 1659, 42*l*. Lydgate's Siege of Troye, R. Pynson, 1513 (bound with Gower's De Confessio Amantis, T. Berthelet, 1532), 145*l*. Gregorius IX., Decretales (with arms of Louis XIII.), printed by P. Schoeffer, 1473, 30*l*. Gruterus, Inscriptiones Antiquæ, 2 vols., crimson morocco, Amsterdam, 1707, 21*l*. Jacques de Guesle, Les Remonstrances, large paper, bound in old red morocco, Paris, 1611, 21*l*. Coustumes d'Orleans, printed upon vellum, and bound in old morocco, Orleans, 1583, 75*l*. S. Hieronymi Epistolæ et Tractatus, 2 vols., old morocco, Romæ, Sweynheym et Pannartz, 1468, 50*l*. Higden's Polycronycon (imperfect), Southwark, P. Treveris, 1527, 25*l*. 10s. Homeri Opera Omnia Græcè, *editio princeps*, 2 vols., old morocco, Florent. B. et N. Nerliorum, 1488, 48*l*. Homeri Opera Græcè, a fine specimen of contemporary Venetian morocco binding, Venet. Aldus, 1524, 50*l*. The Horaces took up nearly the whole of Thursday's sale, many of the minor editions producing from 2*l*. up to 15*l*. Horatius, Sermones, 1470, 8 ll., 29*l*.; Opera cum Comment. Acronis et Porphyrionis, 2 vols. mor., Mediol. Ant. Zarotus, 1474, 20*l*.; Landinus, Comment. in Horatium, *editio princeps*, printed upon vellum, 150*l*.; Opera, the first Aldine edition, in contemporary morocco of a chaste Italian design, small 8vo., Venet., 1501, 92*l*.; second Aldine edition, old morocco, 8vo., Venet., 1509, 19*l*. 10s.; Poemata, first Giunta edition, in contemporary morocco, 8vo., 1514, 18*l*. 10s.; Poemata, fourth Aldine edition, old morocco, Venet., 1527, 15*l*.; Opera, Elzevir edition of 1629, complete, 8vo., Ludg. Bat., 1629, 10*l*. 10s.; Opera, Pine's first edition, 2 vols., uncut, 8vo., 1733-37, 39*l*.; De Arte Poetica, 4to., impensis Petri Os de Breda, *s.a. et l.* (16 ll. only), 22*l*. 10s.; Epistolæ, lit. goth., printed on vellum, and the first book printed in Caen by J. Durandus in 1480, 290*l*. The total of the day's sale was over 1,000*l*.

XUM

Literary Gossip.

THE journals kept by the late Mr. Nassau W. Senior during his residence in Egypt in the winter and spring 1855–56 will shortly be published. Although the events are past and the situation is changed, these journals may certainly be expected to add to our knowledge of individuals at a juncture which contributed much to the making of subsequent history.

MR. EIRIKR MAGNUSSON, of the University Library, Cambridge, has nearly completed his long expected edition of the 'Saga of Thomas à Becket' in the Rolls Series, which will establish several points of great interest and novelty. Mr. Magnusson will be able to show the singular veneration which Becket enjoyed in Iceland, and the especial influence of his principles on Bishop Gudmund Arason, of Hólar (1203–1237), whose fanaticism eventually cost Iceland its independence. He will also be able to determine for the first time the dates and order of the contemporary lives of Becket, showing that the earliest, those of Fitzstephen and Benedict of Peterborough, were written before July, 1172; that William of Canterbury's compilation of Becket's miracles was then in progress; and that the others were written before 1176, except that of Alan of Tewkesbury (1180) and Herbert's (1187). Alan's, there is every reason to believe, was derived from those "magna volumina" which John of Salisbury states to have been left behind by Becket himself.

THE election to the Professorship of Jurisprudence connected with Corpus Christi College, Oxford, has been deferred. Owing to the confused wording of the statute, there is difficulty in ascertaining the minimum amount of residence required of the professor, and the chair will not be filled until an effort has been made to remove the ambiguity.

THE British Museum has lately received from the neighbourhood of Babylon three beautiful boundary stones covered all over with inscriptions, hieroglyphs (those generally considered as zodiacal signs), and very nice human figures. The first stone bears the name of Meli-sikhu, king of Babylon (whose name is contained in the list of kings discovered by Mr. T. G. Pinches), who ruled about 1175 B.C. The second is dated in the fifth year of Nabu-kaïn-abli, king of Babylon, whose name has not yet been found either in the cuneiform documents or in the classics, but by the style of writing his reign ought to be placed at the beginning of the seventh century B.C.; on this stone are the image of the king and that of Ziria, to whom the estate was granted. The third stone is more interesting; it has been engraved with great care, and one side is entirely covered with the so-called zodiacal signs. We understand this care when we learn from the inscription that the stone was set up by order of Nebuchadnezzar as a memorial of the taking back of a piece of land from the Elamites and its restoration to the country of Akkad. The document contains no date. Mr. Rassam, who is at Bagdad, has recovered from the fall from his horse which lately disabled him. Thirteen cases of antiquities in all have recently arrived at the British Museum from Bagdad.

ACCORDING to the last accounts M. Maspero remains at Cairo. MM. Emil Brugsch and Vasalli have left.

MR. FROUDE, one of the Honorary Fellows of the Royal Historical Society, has been selected by the Council for the new class of Emeritus Fellows, which is limited to two in each year.

THE Council of the Camden Society are glad to be able, contrary to their expectations, to publish during the present year a holograph letter-book of Gabriel Harvey, of Saffron Walden. It is a small quarto volume of one hundred and five folios, of which ff. 1–34 and ff. 85–105 contain fair copies of his letters during his residence at Pembroke Hall, Cambridge. The middle part of the book is filled with rough drafts of his poems and correspondence—mostly unpublished—with his great friend Edmund Spenser the poet, under the *nom de plume* of "Immerito," about the year 1579. This portion of the book—from the many allusions to the contemporary literature and drama of the day, as well as the mention of Sir Philip Sidney, George Gascoigne, Edward Dyer, Tarleton the Jester, and many other celebrities—is extremely valuable and interesting, being, in fact, the earliest chap-book or private note-book of an English poet and author. Unfortunately it is just anterior to Shakspeare's time, otherwise we might have expected some curious notices of him, or at least of his works. The book will be edited by Mr. E. J. L. Scott, of the British Museum.

MESSRS. HANSARD'S Monthly List of Parliamentary Papers for June, 1882, contains fifty-eight Reports and Papers, thirty-four Bills, and thirty Papers by Command. Among the first will be found the Statement of the Moral and Material Progress and Condition of India during the Year 1879–80; a Return of the Population, &c., of Parliamentary Constituencies; a Return showing the Financial Position of the Irish Church Temporalities Commission, now represented by the Land Commission; the Indian Finance and Revenue Accounts; and the Report and Evidence on the Artillery Ranges Bill and on the Electric Lighting Bill. Among the Bills occur the titles Ancient Monuments and Public Offices Site (amended). The Papers by Command include the Return of Accidents on the Railways of the United Kingdom during the Year 1881 (with plans), and the Statistical Abstract for the Colonial Possessions of the United Kingdom in each Year from 1866 to 1880, being the eighteenth number of the series.

MR. CHARLES DARWIN, a kinsman of the late distinguished naturalist, has been appointed manager of the *Yorkshire Post* (published at Leeds); and Mr. Charles Pebody, of the *Bristol Times and Mirror*, who lately wrote a volume in "Cassell's Shilling Library" on 'English Journalism, and the Men who have Made It,' has been appointed editor of the same important daily newspaper.

THE last design from the pencil of "Phiz" was a frontispiece to 'A Salad of Stray Leaves,' by George Halse, which is now in the press.

AN article on 'Personal Recollections about Garibaldi,' by Karl Blind, will appear in the next number of *Fraser*.

MESSRS. HURST & BLACKETT will shortly publish a new novel, in three volumes, entitled 'Saint and Sibyl,' by C. L. Pirkis, author of 'A Very Opal' and 'Wanted an Heir.' The same firm will also issue during August 'New Babylon, or Daughters of Eve,' by Paul Meritt and "Owl."

THE death of Canon Robertson, which we announced last week, is a great blow to Kentish antiquaries. He was always eager to encourage archæologists and to render assistance from his own abundant stores of knowledge. Nor was he a mere Dryasdust. He was well read in modern poetry and fiction, and sympathized with all workers, however dissimilar their studies from his own. He had won the esteem alike of rich and poor by his kindliness and generosity.

PART X. of the entire series of 'Roxburghe Ballads,' beginning a new volume, is being issued to members of the Ballad Society—the fourth of this large and important work, and first of those under the editorship of Mr. J. W. Ebsworth. The "Group of Anti-Papal Ballads" is given in this part. It is preceded by "Miscellaneous Ballads," and will be speedily followed (in Part XI.) by others of similarly varied character. Altogether, the opening "Miscellaneous Ballads," conjoined with the "Anti-Papal Group," now form twenty-one sheets, or 336 pages, and contain fully ninety-four complete ballads or poems. Every one of the numerous fresh woodcuts has been drawn and engraved single-handedly by the editor, in fac-simile of the rare originals, and entirely gratuitously.

THE August number of the *Atlantic Monthly* will have a portrait of Emerson, engraved on steel, which is thought by the family to be the best.

A JESUIT Father, Rev. W. Forbes Leith, has been compiling for some years an account of the Scots men-at-arms in the service of France. The volume will be ready shortly.

A CORRESPONDENT writes:—

"All who had the good fortune to number among their friends the late Mr. Henry Hill, whose sudden death on the 17th is announced in the *Times* of Thursday, will share the deep regret with which the sad intelligence will be received by all his colleagues in the various literary societies of which he was so active and intelligent a member. His strong common sense, high principles, and thorough business habits rendered him valuable to such societies, while his genial temperament and uniform good temper endeared him to his associates."

A NEW edition, by M. Efremof, of the works of Poushkin is announced from Moscow. Besides all that was comprised in the last, the eighth edition, in which the latest texts published during the author's lifetime were followed, and in many instances collated with the original manuscripts, the present edition will include an additional volume of the poet's letters to intimate friends and kinsfolk, and constitute in all seven volumes. The new edition will be adorned by the portrait of the author, engraved by Wright, which Poushkin had intended should head the third edition of his works, which he was preparing for the press at the time of his death. There will be also another portrait of the poet which has never

yet been published. This is a sketch made by Poushkin himself in 1820, and now preserved in the Moscow Museum. The 'History of the Revolt of Pougatchof' will also be accompanied by a portrait of that remarkable pretender.

AN unfinished work of Kant, never before printed, is to appear in the *Altpreussische Monatsschrift*.

THE old struggle between the Persian-Urdu and the Devanagari alphabets has broken out again in India. The *Liberal*, Keshub Chunder Sen's paper, stands up for Devanagari. "Which alphabet," it asks, "is the better, fuller, and more scientific? All India, from the Himalayas to Comorin, will answer the Devanagari, and not the Persian-Urdu. We may use any words we like, Sanskrit, Persian, or English, but the alphabet must be the Sanskrit, as being the fullest and best that has been discovered up to this time. The objection generally brought to the Devanagari relates to its elaborate and complicated structure, whereas Urdu, they say, may be written faster and easier. This argument is not worth much. The Urdu may be written faster, but it is unintelligible even, perhaps, to the writer. As a system of stenography it will be found to be a failure, if ever tried. We, however, have used Bengali, a related alphabet to Devanagari, in reporting, and we have found it as easy as English. In Northern India we have found Devanagari written very fast—as fast again as Bengali. If it is a question of scientific principle, then one cannot ignore the indigenous alphabet of India; but if the rulers wish to pamper prejudices and foster race jealousy, then Urdu must be found to be the only practical alphabet in the world."

SCIENCE

A Manual of the Geology of India: Part III. *Economic Geology*. By V. Ball, M.A., F.G.S.—*Memoirs of the Geological Survey of India*. Vol. XVIII. Parts I., II., III. —*Palæontologia Indica*. Vol. III. Parts XI., XII., XIII.—*Records of the Geological Survey of India*. Vol. XV. Part I. (Trübner & Co.)

MR. MEDLICOTT, Superintendent of the Geological Survey of India, in his preface, states that in 1879 the first two parts of the "Manual," with a general geological sketch map of nearly the whole of India, were published. A corresponding summary of the mineral resources of India was part of the design of the work, but this, from some unexplained cause, "was postponed under various pretexts more or less justifiable." Eventually Mr. V. Ball has thoroughly accomplished the work which has been so long postponed. The information available regarding the probable value of the metalliferous deposits of India is without doubt defective, but notices of the occurrence of ores in many places are abundant enough. Mr. Ball has carefully studied the isolated observations, both published and unpublished, and colligated all the scattered information in groups of subjects and districts, indicating the relation to the geology of those parts of the country which have been examined by the officers of the Geological Survey of India.

After an introduction, in which Mr. Ball explains the objects of his work and indulges in some replies to "insensate attacks made against the small body of officers constituting the Geological Survey of India," which are not, in our opinion, very discreet, he proceeds with the examination of the occurrence of the diamond, graphite, and amber. The examination of the diamond-bearing strata has not resulted in throwing any definite light on the conditions under which the crystallization of carbon took place; and the author, no doubt correctly, refers this to its being still a matter of doubt whether in any single case in India a diamond has been found in its original matrix. Each diamond-producing district is carefully described, the history of the discoveries given where any information is obtainable, and some interesting myths are related regarding diamond seeking, and the superstitions of the natives as to the special patronage of the goddess Lakshmi and the sacrifices made to propitiate her and restore diamonds to exhausted streams. Plumbago receives a satisfactory notice, but of amber we are told the only worked source of any value is Payentoung in Burma. The coal-fields of India, which have been fully discussed in the *Memoirs* of the Geological Survey of India, are succinctly described in this volume, and the economy of the production, the laws and rules by which the workings are regulated, given in sufficient detail.

Looking at the large and probably extravagant outlay now being made upon the gold-fields of Madras, it would have been valuable in such a work as this to have found some trustworthy information given by the officiating Deputy-Superintendent of the Geological Survey of India as to the present condition of the gold-mines and their probable prospects. Instead of this, short descriptions of each district are given, a few assays, and tables of the total yield. Four chapters are devoted to the consideration of the copper and lead ores, to zinc and tin and the rarer metalliferous minerals. The important subject of iron ore is dealt with in one chapter, in which Mr. Ball discusses the question of leaving the manufacture of iron and steel to the support of Government, the general conclusion being that the manufacture of iron is carried on at a loss.

The remainder of this volume is devoted to the more or less important earthy minerals, ornamental stones, building materials, fire-clays, and kaolin. The appendices give the values of the imports of mineral products and of coal into British India, which we think somewhat out of place in a volume devoted to the economic geology of British India. The index to references is an example of the most painstaking industry, and furnishes in a clearly classified method references to nearly every book or memoir which has been published on the subject treated of in this volume. There are several excellent maps, and a few lithographs and woodcuts, which add to the usefulness and interest of a really valuable book devoted to a very important national subject.

Each part of the *Memoirs* of the Geological Survey of India is devoted to a memoir. Part I., by Mr. C. L. Griesbach, is an important contribution to our knowledge of an interesting country, 'Geology of the Section between the Bolan Pass in Beluchistan and Girishk in Southern Afghanistan.' Mr. V. Ball in Part II. gives 'The Geology of the Districts of Mánbhum and Singbhúm'; while in Part III. Mr. W. King deals with the 'Geology of the Pránhita-Godavari Valley.'

The *Palæontologia Indica*, by Dr. Ottokar Feistmantel and Dr. William Waagen, maintains its high character for the delicate execution of the plates of the fossils and the concise and clear descriptions by which these are accompanied.

The *Records* contain the annual report, seven memoirs by the members of the Geological Survey, analyses of and experiments on coal and fire-clay, and general statements of matters relating to the Museum and the Library at Calcutta.

GEOGRAPHICAL NOTES.

LIEUT. GIRAUD, of the French navy, who has recently left for Eastern Africa, will remain during three or four months at Zanzibar to study the language. He will then endeavour to push inland as far as Lake Bangweolo, travelling either by the ordinary trade route to Ujiji or by the road first explored by Mr. Thomson. Having succeeded in reaching the lake, he will launch upon its bosom an English-built boat, which he carries with him. If successful in all his plans he will reappear at Brazzaville, on the Lower Congo.

L'Esploratore publishes Capt. Casati's map of the route from Rumbek to Tangasi in the Mombutto country, and not far from Munza's old residence. Capt. Casati, after visiting the grave of his countryman Miani and having an interview with Dr. Junker at Mambanga's, on the Welle, made an effort to push in a south-westerly direction into the unexplored parts of Africa. His progress was, however, stopped at Azanga's town, five days' journey beyond Tangasi. Capt. Casati's last letter bears date December 31st, 1881, and, looking to the present condition of Egypt and the Sudan, many months must elapse before any further information from him can reach us.

Signor Mosconas, in the same number of *L'Esploratore*, furnishes a few particulars on the career of Mohammed Ahmed, who claims to be the Imâm Mehdi, whose resurrection on the Day of Judgment is believed in by the Shiya. This impostor is in reality an old agent of Ziber Pasha, the slave dealer, whose son Suleiman was shot by Capt. Gessi. He claims that the fact of his being Mehdi was revealed to him in the appearance of that name on leaves and the shells of eggs, and succeeded in gathering the Bakkara and other nomad tribes around his standards. He aims at getting rid of both Turks and Europeans. His first act was to murder the Mudir of Fashoda. Soon after one of his adherents, Ahmed Tahir, summoned the city of Sennar to surrender; but Jotad Effendi, although disposing of only three hundred soldiers, succeeded in defeating his assailants, and Ahmed Tahir himself was taken prisoner. "Thus ends the career of Mehdi," says Signor Mosconas, whose letter is dated Kasala, May 22nd, 1882.

Petermann's *Mittheilungen* publishes the first instalment of Dr. Emin Bey's journeys, between March and May, 1881, to the west of the Bahr-el-Jebel, accompanied by a most valuable map, on a scale of 1 : 500,000. Starting from Gondokoro, Dr. Emin travelled through Belinyan and Liria to Tarangolle in the Latuka country, first made known to us by Sir S. Baker. The Latuka differ from all the surrounding negroes in physique and language, but they are not apparently Gallas, whose country begins, how-

ever, a few days' journey to the east of them. The Behr or Berri to the north and the Shuli or Wagan in the south are kin. The map embodies the information collected by Mr. F. Lupton, for some time Dr. Emin's representative among the Latuka, and since appointed Mudir of Bahr-el-Ghazal.

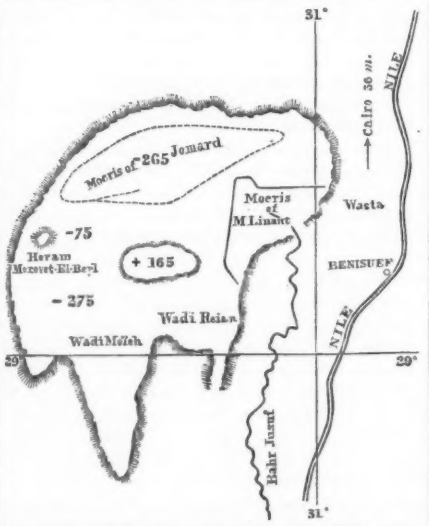
The same number of the *Mittheilungen* brings an account of the Jeannette expedition, with maps and illustrations taken from the *New York Herald*, and an article on M. Désiré Charnay's discovery of the "phantom city" in the territories of the Lacandones. In Dr. Behm's "Monthly Report" will be found a letter from Dr. Schweinfurth, who spent April and May in an exploration of the edges of the valley of the Nile between Siut and Assuàn, in the course of which he made several discoveries which will show even on a small-scale map of Egypt. Incidentally he alludes to politics. He says that the people he came in contact with are unanimously in favour of Arabi, and exhibit a childish (*kindische*) joy at Egyptian soil having at length produced a "character." They are content with the existing Government, and curse the days of Ismail Pasha. "The European in the interior is, as ever, an object of veneration, and I nowhere met with a want of politeness or respect." This, it is to be observed, was written in the beginning of June.

The *Revue de Géographie* for July contains a paper on the projected canal across the isthmus of Kra, by M. François Deloncle, who came expressly to England in order to consult documents at the India Office and elsewhere. The paper is apparently compiled with much care, and it might be worth while to translate it.

ASTRONOMICAL NOTES.

HERR A. THRAEN, of Dingelstaedt, Thuringia, from four normal places of Wells's comet (the first of which was made on March 22nd, the last on June 2nd), has computed a set of elliptic elements giving the somewhat long period of 3,617 years. Mr. Lewis Boss, Director of the Dudley Observatory at Albany, N.Y., where that comet was discovered, communicates to *Astronomische Nachrichten*, No. 2441, observations of it made at midday with the transit circle on June 11th and 12th, after the perihelion passage which occurred about midnight of our time on the 10th. At the observation of June 11th, which was sixteen hours after that, "the true nucleus was plainly seen (with magnifying power 180) as a perfectly round and sharply-defined disc of moderate illumination. The nebulosity of the coma was quite uniform and faint, and about 10″ in diameter." Next day, June 12th, the comet "was a very easy object. The nebulosity had increased in brightness. The image was very unsteady, however, and, either for that reason or because of the increased brightness of the vaporous screen, the nucleus proper could not be seen."

The observations of Mars by the famous Schröter at Lilienthal have been at last published under the superintendence of Prof. Van de Sande Bakhuyzen, Director of the Leiden Observatory. The author's death in 1816 prevented his publishing them in a collected form himself.



The tail of the comet shown on the photographs taken during the total eclipse of May 17th is considerably inclined to a line drawn from the sun's centre to the head of the comet. It is evident that this cannot be due merely to an effect of perspective, for if the tail were directed away from the sun's centre it would appear radial to the sun from whatever position it was viewed. In *Knowledge* Mr. Ranyard argues that since the tails of comets are usually directed away from the sun, the inclination to the radial in this instance was probably due to the passage of the comet through the resisting medium of the corona, which caused the tail to incline backwards as if blown by a wind. The head of the comet was situated at about a solar diameter from the sun's limb and the tail has a slight curvature towards the south, so that the comet was probably moving upwards in space, but there is nothing to indicate whether it had come up to, or had passed, perihelion. The comet has not been seen since the eclipse, so that it probably decreased rapidly in brightness on leaving the sun.

We have received the *Memoirs* of the Italian Spectroscopical Society for May. The most interesting communications contained in it are observations of the spectrum of Wells's comet (*a*, 1882) by Profs. Tacchini, Riccò, and Zona; and a determination of the orbit of the comet (*e*, 1881) discovered by Mr. Barnard in America on the 17th of September, made by Prof. Millosevich, of the Royal Observatory of the Collegio Romano at Rome.

We have received another instalment of the valuable 'Bibliographie Générale de l'Astronomie' of MM. Houzeau and Lancaster, comprising the completion of the second part and a general introduction. This second part (Memoirs and Notices), which will ultimately form the second of the three volumes, is thus published first, as being a more pressing and general desideratum. The authors remark that the last astronomical bibliography, that of Lalande, was published in 1803, and was not even complete for the last fifty years of the eighteenth century. It is here revised, completed, and the extensive additions made which are rendered necessary by the great and constantly increasing scientific activity of the present age. Great care has been used in bringing it up to the date 1880, and we have frequently ourselves had occasion, when referring to it, to notice the accuracy of the information conveyed.

LAKE MOERIS.

THE other day Mr. Cope Whitehouse gave an account, at the rooms of the Ascham Society, of his efforts to solve the problem of Lake Moeris. We have already mentioned that his conclusions differ from those hitherto held. Finding on the one hand that a substantial agreement developed itself from a critical examination and collation of the various passages, and that on the other the errors of the maps, as far as they were successively detected, removed objections which had been urged as fatal, Mr. Whitehouse determined to examine the desert between the parallels of Gizeh and Behnesa. The result of these explorations may be seen on the following map:—

Lucas (1707) first identified the Birket el-Qerun with Lake Moeris. D'Anville (1765) placed it in the Nile valley. Jomard (1800), with the advantage of a personal examination of the Fayoum, reverted to the Birket el-Qerun, which he supposed had been about 20 feet deeper. The depth of 300 feet he ignored. The circumference of 125 miles instead of 450 miles was due to "a successive confusion of two 'schoenes' and two 'stadia.'" The direction of Moeris from north to south presented a great difficulty against a lake which runs from east to west, which he avoided by a forced translation.

The most important result of Mr. Whitehouse's explorations is to show that to the south of the Fayoum there is a large basin excavated or eroded in the extremely friable nummulite limestone over 270 feet below the level of high water at El-Lahun, and connected through the Bahr Jûsuf with the Nile. It contains no trace of human occupation, and bears in two places the name of Meri or Moïeh ("Moeyl," Calliaud), and resembling in a striking manner the Lacus Meridis of the Ptolemaic maps of the Roman family. The remains in the Fayoum proved to be of a late Greco-Roman period, so that this basin also might have been filled to the Nile level in the time of Herodotus. If the dyke or weir of El-Lahun is destroyed by the retreating insurgents, or even, left unprotected, crumbles away at high tide, an appalling catastrophe, overwhelming a population of upwards of 150,000 souls, will show what might have happened in the time of "Menes."

Having spoken of the geological formation, the alluvial deposit, the traces of water, the shore, and the ancient remains, and compared the accounts of Herodotus, Diodorus Siculus, Strabo, Mutianus, and Pliny, confirmed by Ælius Aristides, Stephen of Byzantium, and the text and maps of Ptolemy, Mr. Whitehouse showed that in length, volume, position, purity of water, colour, depth, in its rich fisheries, its desert coast, its pyramids, its direction and utility, it satisfied every condition; and that the ancient maps, the papyrus of Boulaq, the folios of Cl. Ptolemy, the mediæval representations of the Fayoum, contained nothing at variance with this view, but corroborated it against the modern maps. The distinguished chairman of the meeting, Dr. Birch, expressed his warm interest in the subject and his agreement with the opinion, expressed in letters, of Stone Pacha and Dr. Schweinfurth, that a minute survey of this southern basin was in the highest degree desirable, and might lead to a partial restoration of the ancient lake.

SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—*July* 11.—General Pitt-Rivers in the chair.—Lord Talbot de Malahide read a paper 'On the Longevity of the Romans in North Africa.' The author gave several instances of epitaphs and inscriptions on tombs of persons whose age had exceeded 100 years; in some cases an age of 120, 130, and even 140 years had been attained.—Capt. R. F. Burton read a paper on some neolithic stone implements and other objects brought by himself and Capt. Cameron from Wásá, on the Gold Coast.—General Pitt-Rivers read a paper 'On the Egyptian Boomerang.'—A large collection of Bushman drawings was exhibited by Mr. M. Hutchinson.

MEETINGS FOR THE ENSUING WEEK.

TUES. Horticultural, 11.—Scientific and Fruit and Floral Committees.
— Photographic, 8.
FRI. Quekett Microscopical, 8.—Annual Meeting.

Science Gossip.

ENTOMOLOGISTS may be glad to know that Mr. Grote, president of the New York Entomological Club, has written an essay on the Noctuidæ of North America, with coloured illustrations of some forty-five species, which will be published in this country by Mr. Van Voorst.

THE first part of *Philosophical Transactions* of the Royal Society for the present year has just been published. Among the contents we find Dr. Sanderson's paper 'On the Electromotive Properties of the Leaf of Dionæa in the Excited and Unexcited State'; a paper on 'Lucifer, a Study in Morphology,' by Mr. W. K. Brooks,

of the Johns Hopkins University, Baltimore; a paper by Mr. W. K. Parker 'On the Structure and Development of the Skull in Sturgeons'; Mr. G. H. Darwin's paper 'On the Stresses caused in the Interior of the Earth by the Weight of Continents and Mountains,' being one of a series on the same subject published in previous parts; 'Experimental Determination of the Velocity of White and of Coloured Light,' by Dr. J. Young and Prof. G. Forbes, in which, by very ingenious experiments, a measurable difference is demonstrated; and Dr. Tyndall's interesting paper 'On the Action of Free Molecules on Radiant Heat, and its Conversion thereby into Sound.'

MR. VAN VOORST has nearly ready for publication a volume which ought to be of importance to all interested in gas manufacture, viz., Prof. Lunge's treatise on coal-tar distillation.

MR. THOMAS FLETCHER, of Warrington, exhibited at the Soirée of the Society of Chemical Industry at Owens College, on the 6th inst., an example of flameless combustion of considerable interest and much practical value. A gas flame was directed on a mass of iron wire until it became red hot; a blast of air being turned on, the flame totally disappeared, but the iron fused and ran into drops. It was evident that the highest heat was obtained when the flame was entirely absent.

M. ANTOINE BREQUET, the son of the well-known M. Brequet, the member of the Institute, died quite suddenly on the 8th inst. of heart disease, at the age of thirty years. For two years he had been editor of the *Revue Scientifique*, and the director of the Brequet optical workshop. After the electrical exhibition, to which he gave great aid, M. A. Brequet was created Chevalier of the Legion of Honour, and made President of the Chambre Syndicale by the unanimous vote of the electricians.

PROF. ELIAS LOOMES, of Yale College, furnishes to the *American Journal of Science* for July his seventeenth paper, 'Contributions to Meteorology,' being results derived from an examination of the observations of the United States Signal Service and from other sources, which have especial reference to the relation of rain areas to areas of low pressure.

PROFS. JOSEPH LE CONTE AND W. B. RISING, of the University of California, give in the *American Journal of Science* a most instructive paper 'On the Phenomena of Metalliferous Vein Formation in progress at Sulphur Bank, California.' This paper discusses a series of most important facts, and is deserving of the closest attention as giving evidence of mineral veins in the state of actual formation.

MR. R. S. NEWALL writes:—"Will you allow me to point out a mistake in the notice at p. 53 of the *Athenæum* of my pamphlet, 'Facts and Observations relating to the Invention of the Submarine Cable, and to the Manufacture and Laying of the first Cable between Dover and Calais in 1851'? I do *not* claim to have *laid* the first ocean telegraph, but I do claim to have designed it. It has been the model of nearly every cable that has been laid since then, and it is still in operation."

MM. WITZ AND OSMOND have extracted vanadium from the basic scoriæ of the Creusot Ironworks in industrial quantities. They stated at the Séance of the Académie des Sciences of July 3rd that the Creusot scoriæ contained vanadium which they estimated to be equal to 60,000 kilogrammes annually; and that they are able to extract either metavanadate of ammonium or other vanadic products specially applicable to the manufacture of aniline blacks with chlorides.

M. LECOCQ DE BOISBAUDRAN on July 3rd brought before the Académie des Sciences a notice of a peculiar decomposition of protochloride of gallium. Metallic gallium is dissolved in the cold state in concentrated hydrochloric acid. The clear liquor produced if left to itself yields gas very slowly, but if water be added gas is poured forth in torrents.

FINE ARTS

The GROSVENOR GALLERY.—SUMMER EXHIBITION.—NOW OPEN, from Nine till Seven.—Admission, 1s.; Season Tickets, 5s.

ROYAL SOCIETY OF PAINTERS in WATER COLOURS.—The EXHIBITION will CLOSE on SATURDAY, July 29th.—5, Pall Mall East, from Ten to Six.—Admission, 1s. Catalogue, 6d.; Illustrated ditto, 1s. ALFRED D. FRIPP, Secretary.

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

LAST THREE WEEKS.—EXHIBITION of ROSA BONHEUR'S great Picture, THE LION AT HOME.—This great Chef-d'œuvre is NOW ON EXHIBITION DAILY, at L. H. LEFÈVRE'S Gallery, 1a, King Street, St. James's, from Ten to Six. Unanimously acknowledged by the Press as being the finest work by this celebrated Artist ever shown since 'THE HORSE FAIR.' Has been visited by thousands during the Season.—Admission, 1s.

THE PARIS SALON.—BRITISH and AMERICAN ARTISTS.—The Pictures by these Artists, which have attracted so much attention in the Paris Salon this year, are NOW ON VIEW at the FINE-ART SOCIETY'S, 148, New Bond Street.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 23 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Japanese Marks and Seals. By J. L. Bowes. Illustrated. (Sotheran & Co.)

THE privilege of dedicating a book "by direct permission to His Imperial Majesty the Mikado" is, for the present, reserved to the wealthy citizen of Liverpool who has aided materially in making the art of Japan known in England. This privilege will doubtless soon cease to be unique; meanwhile, it is not a mere feather in our collector's cap, but equal to a grant of a right to use the imperial chrysanthemum or kiku badge by way of augmentation of honour—a sort of Japanese imprimatur, if not a voucher for the correctness of this richly illustrated collection of signatures. The need for such a collection, if it were only to be used for comparisons of marks the one with the other and for identification of wares and examples, calls for no proof. Since the sixteenth century, when the manufacture of true porcelain was begun in Hizen, the craftsmen of that province, to say nothing of other Japanese workmen, have diligently impressed or painted Chinese marks on their wares, adopting modifications of dates and badges (not crests, as our author calls them) which are at once trademarks and signatures. The modern potters of Hizen courageously forge the marks of Chinese dynasties without the slightest reverence for the Ming dynasty itself, whose mode of "six-marking" was, till lately, dear in every sense to all who go by marks, signatures, names, and stamps. Those who believe nothing but documentary evidence will find abundance of materials for puzzling themselves in the thousands of ciphers of every sort which Mr. Bowes, Mr. Franks, and others have transcribed and secured for use in a future time when our knowledge of Japanese ceramic art is no longer what it is at present, almost wholly tentative.

As to the history of Japanese "pots," little will be learnt from the marks placed on Hizen ware by the makers, who, until quite recently, never thought of putting their own names on their wares. In Satsuma it is a rare act to sign a piece. On the other hand, Kaga ware very generally bears painted signatures. The manufactories themselves differ in age, from the more ancient works of Hizen to those of Owari, not a specimen of which is more than fifty years old. As the Greek potters of the main land and of Samos stamped their wares with their own names—imprints which are as much loved by one class of students as the ciphers of Dürer and the emblem of the "Master of the Caduceus" are by other amateurs—so the potters Dohachi and his fellows, of the province of Kioto, paint, or much less often stamp, their names on precious porcelain, the manufacture of which differs materially in Japan and China. Chinese characters are almost invariably used in Japan for marks and seals—a circumstance which goes far to confirm the accepted history of the origin of Japanese ceramic works. This point has before escaped notice. The custom of marking these wares, being very general, will facilitate future researches into the history of a beautiful craft, which, as every traveller says, is rapidly deteriorating under modern trade customs and commercial immorality. Some very interesting examples in the great collection at Dresden, which was formed while porcelain and pottery were untainted in Japan, bear the marks of Chinese date-periods and yet were unquestionably manufactured in the island empire. One of these dates is that of the Tch'ing-hoa period, 1465–1487. It occurs on a dish which bears a representation of the baptism of Christ, a subject which could only have been handled subsequently to the introduction of Christianity into Japan in 1549. So says Mr. Bowes; but he adduces no evidence to prove that, although we need not deny the Japanese origin of the dish, its maker did not, while he copied the Chinese date, likewise copy a Chinese design of the baptism. Whatever may have been the ignorance of the Japanese at the period in question, about which much has been assumed, there is no doubt that the Chinese were better informed about the life of Christ.

Among the anomalies of marking which Mr. Bowes is not the first to notice, although he does so in a very efficient manner, is the fact that Japanese potters of Seto in Owari frequently decorate their wares with lines of Chinese verse. Conspicuous illustrations of this and similar practices have appeared in very remote parts of the world, greatly to the bewilderment of antiquaries. Japanese characters proper are, as Mr. Bowes affirms, employed as auxiliaries to the Chinese letters, to connect or complete a sentence in an inscription rather than simply to form one. Occasionally, when the maker desired to state that he had taken unusual pains in the production of certain pieces of his ware, he added the characters *sei sei*, a sort of "fecit." When working "to order," the potters add "respectfully made" to their marks. An equivalent to "& Co." attests the co-operation of more than one hand. A copyist admits his indebtedness by placing "Utsusu" after his name. Eleven generations of potters of the Chojiro family have continued to use characters derived from a gold seal given to the first of them by Jaico Sarma, and bearing the character *Raku* (enjoyment). This seal was given to Ameya, the son of a Corean potter, who settled in Kioto in 1550; and the wares so marked, although rude in form and devoid of decoration, are highly prized, especially during the tea-drinking ceremonies called "Cha-no-yu," to which we referred while reviewing Mr. Franks's 'Japanese Pottery,' a book which should be studied before Mr. Bowes's collections of marks are considered. Mr. Bowes gives eight of the eleven seals of this family, borne on the black ware which displays the character

Raku and is known by its name. The examples are tea-bowls of the type represented on p. 53 of Mr. Franks's book. They are extremely rough, and bear traces of fingers. The hereditary descent of a craft is shown by the further instance of the Yeiraku family, members of which have practised potting during thirteen generations: the tenth member invented a stamp signifying "everlasting enjoyment." It seems likely that before the break up of feudalism in their country, some, at least, of the Japanese craftsmen in earthenware and porcelain were in the direct employment of the provincial daimios in whose territories they laboured. Students of the history of Occidental ceramics will remember more than one example of an analogous practice. The so-called Henri Deux "pots" were made by F. Charpentier for a provincial noble, Hélène de Hangest, Dame de Boisy, and her son. Dresden, Sèvres, and other factories are due to the same system. A prince of Hizen not only founded the factory at Ohokawachi, but reserved all its productions for himself and his friends. Some of the badges on the wares of this category are very beautiful in design; for example, that of the Tokugawa family consists of three lotus-like flowers pointing to the centre of a circle which encloses them, and is as finely designed as an artist of the best mediæval times could have made it.

Mr. Bowes groups his numerous examples of seals and marks according to the provinces where they are employed, and copiously illustrates the whole. A section of this book, which treats of illuminated manuscripts and printed books so far as their marks are concerned, will be very useful to the many collectors of such relics, and possesses attractions different from those of the ceramic signatures. Lacquer ware, enamels, carvings in wood and ivory, *cloisonné* enamels (the dates of which the writer does not attempt to fix), and works in metal, such as mirrors and weapons, afford materials for a useful chapter. A good index concludes the book, which is an honourable labour of love.

Antiquities of Ionia. Published by the Society of Dilettanti. Part IV. 31 Plates. (Macmillan & Co.)

AFTER having had more than one occasion to complain that works professing to initiate the modern world into a better knowledge of ancient art fall short egregiously of perfection in the style and execution of their illustrations, we open with delight this magnificent folio. It places securely and adequately on record the details of Ionic architecture as practised by the Greeks in the latest age which retained pure and dignified principles of design. It worthily supplements, corrects, and completes the three parts already before the world. We know, indeed, of no work on classical architecture that can compare with it in elegance but the 'Ægina and Bassæ' of the late Prof. Cockerell.

It is well known that the Society of Dilettanti, now flourishing in its hundred and forty-eighth year, combines social geniality with interest in classical art; its history proves that art has been a gainer by the alliance. The publications the Society has originated and promoted constitute the most important authorities for an exact knowledge of pure Greek architecture. Their materials have been obtained from time to time by costly missions to Greece and Asia Minor, and the results given to the world with an unsparing employment of the best skill of the engraver that could be commanded. The journey of Chandler, Revett, and Pars in 1764, of Sir William Gell with the architects Gandy and Bedford in 1812, and of Mr. Penrose in 1849, produced the three previous parts of the 'Antiquities of Ionia,' the 'Unedited Antiquities of Attica,' and the palmary work of Mr. Penrose himself on the Parthenon. In 1862 the Society commissioned Mr. R. P. Pullan to proceed to Asia Minor and make a preliminary report upon sites where it might still be possible to rescue important monuments from threatened obliteration between the upper and nether millstones of civilization and barbarism—from the carver of turban-stones and the road-maker. Upon his representation it was determined to concentrate resources on the thorough excavation of three Ionic temples—that of Priene, of highly refined style, which had only been superficially examined and in consequence imperfectly published; that of Dionysus at Teos, with which the same was the case; and the temple of Apollo Smintheus in the Troad, which had recently been discovered by Capt. (now Admiral) Spratt. The results of these necessarily prolonged operations are now before the world, and lay claim to the admiration of a wider public than the architectural profession. If we see with some regret that the Society has resorted to the assistance of foreign artists, we must needs be content to acquiesce in their decision. It is too true that at the present time, easy as it is to secure at home the most satisfactory rendering of mediæval architecture and details, Greek subjects, unless serious disappointment is to be risked, must be entrusted to what these beautiful engravings prove to be the conscientious skill of artists on the Continent.

A few years since it might have been thought that, whereas the Society originally was in advance of architectural knowledge and taste, it might be likely in a later publication to find that fashion, at least, if not exactly taste, had passed it by. It may not be too sanguine now to hope that certain signs of the time intimate a revived esteem for refined proportions, exact finish, and reasoned combinations in details as in design at large—qualities which commended themselves pre-eminently to the Greeks, but which are also of the very essence of fine art on whatever lines it may proceed. We would refer in conspicuous illustration of these qualities to plates xi., xii., xiii.; these exhibit a series of varied profiles of mouldings accurately transferred by the cymagraph, which are delightful to the eye even as merely graceful and gracefully combined curves; and this charm they have apart from the enhancement of beauty by exquisite effects of graduated sharpness and shadow which they receive when the models are executed in the solid and in the round.

The frontispiece of the work is a beautiful perspective view of the temple of Athene Polias at Priene with the true local background. The ruins of this temple were in such confusion that the precise height of the column, which it was a chief object of the exploration to recover, could not be determined by the recomposition of any single shaft; but all the scattered drums on the ground were carefully measured, and by study of these and of the indicated entasis a result was laboriously but satisfactorily obtained which is admirably verified by the grace and majesty of the restored elevation. The date of the temple is but slightly later than that of the Mausoleum, with which it agrees in many characteristics of style. The stone bearing the finely incised dedication by Alexander the Great was found in perfect preservation and is now in the British Museum.

The text of the work is contributed by four members of the Society. The interesting and comprehensive introduction, 'On the Origin of the Greek Orders of Architecture,' is by Mr. Fergusson, and is distinguished by the acuteness and by the independence which are expected from the author of the 'History of Architecture.' The very lucid argument has bearings of importance on the history of Hellenic art generally. It is made clear that the Doric column was no spontaneous evolution from the primitive wooden post, but in respect both of the capital and fluted shaft the modified type of an Egyptian example, of which specimens belonging to a very early date make it probable that more have perished. This type of proto-Doric style, however, only comprises the column, and is far from attaining even there to the true refinements of the member, which declare themselves as due without precedent to Hellenic genius. Of pure Hellenic origin also are the details of the entablature and pediment, and in these we are directed to recognize reminiscences of carpentry construction, for which Egyptian monuments gave as little suggestion as for the weather-fending types of the roof and cornice.

The leading suggestions of the details and proportions of Ionic architecture are traced with equal cogency to Persia and to constructions as uniformly of wood as those of Egypt were of stone. Mr. Fergusson points out that the process by which details of carpentry are transferred to stone architecture, and which may be followed step by step in the Lycian monuments, has a close parallel in the development of architecture in India.

Mr. C. T. Newton gives completeness to the work by chapters on the history of the cities so far as known. That of Priene receives remarkable extension by some curious inscriptions; he also supplies notes on the sculptures obtained from the ruins and presented by the Society to the British Museum. Among these is a fragment of a Gigantomachia, which has much analogy to the groups from Pergamus now at Berlin.

An appendix comprises an analysis of the systems of proportion of the temples by Mr. Watkiss Lloyd, and a demonstration of the refined and peculiar entasis of the Priene column by Mr. Penrose. As regards proportions, the result arrived at is that the Ionian architects, like the Athenian, held it important to regulate dimensions by definite proportions of low numbers, but that they were contented with comparatively simple schemes of variation.

It is not likely that any Ionic temple of a

fine period remains to be discovered hereafter and demand renewed exertions for illustration of the style. By the publication of this beautiful volume the Society of Dilettanti has so far covered its ground; but other fields of Hellenic art are open, and in due time no doubt further proof will be given of the vitality of that interest in "Grecian taste" which comes down from predecessors who were immortalized by their colleague Sir Joshua Reynolds in the two most elaborate groups of portraits he ever painted.

L'Année Artistique, par V. Champier, 1881–1882 (Paris, Quantin), comes to us very late in the season, and would have been more welcome had it been published sooner. This delay is ascribed to changes in the Administration des Beaux-Arts in France which occurred early in the current year. The volume contains a vast mass of official and public information in connexion with the arts in most civilized countries. The lists of French artistic officials and things in general, including sales of works at the Hôtel Drouot, are complete. This portion might be more useful if the examples sold were grouped, with dates of the selling, under the names of the artists, and not, as now, indiscriminately and sale by sale. We turned with interest to the account of English art and were much disappointed to observe its many defects. Not a word is said about the Print Room, although the literary and antiquarian departments in the British Museum have fair mention. In the matter of obituaries also England is not well treated. It was William Burges, A.R.A., who died in April, 1881 (p. 509), and not "Mr. John Bagnold Burges." According to last advices the latter is still a living A.R.A., whose name is spelt with two *s*'s. "Burtou" (Decimus) should be Burton (p. 510), and "Caster" (p. 544) should be Carter. Apart from such occasional errors, which are pardonable, there can be no doubt of the great value of this volume.

The Journal of Decorative Art. Vol. I. (Manchester, Sutherland & Sons; London, Vickers.)—The first volume of this periodical contains matter useful to decorators and other art workmen, with patterns and types of ornament. The standard generally affected in these examples is by no means the highest—it is, indeed, rather popular than good; but it is at least a little above the taste, or no taste, of ordinary middle-class persons. The technical information about marbling, graining, and painting on wood and glass is likely to be acceptable to practical men. Examples of excellent taste judiciously applied abound among the numerous illustrations. Trade news of all sorts forms an element of this journal.

The Life and Works of Jacob Thompson. By L. Jewitt. Illustrated. (Virtue & Co.)—Mr. Llewellynn Jewitt undertook a kindly office when he proposed to write a biography of his deceased friend. Mr. Thompson achieved no fame, but led a happy rural life at Penrith. He was born in 1806 at Penrith, showed in early youth strong artistic tendencies, and, after desperate struggles to become a painter, was allowed to study at home. Attracting the notice of the late William, Earl of Lonsdale, he was sent to London, trained at the earl's expense at Sass's school, the British Museum, and the Royal Academy. At Somerset House he exhibited landscapes and portraits in 1832, 1833, and later. He copied pictures, took likenesses of the nobility, their dogs, and their houses, and taught them and their children to draw. Some of his portraits were engraved as well as 'The Highlands,' a landscape, of which J. T. Willmore's print is often taken to be a transcript of a Landseer. This and another which was thought to be exceedingly bad were at the Westminster Hall Exhibition in 1847. The print of the former has many fine points. Thompson married a sister of George Bidder, the engineer, and in 1841 settled at Penrith, where he remained peaceful, contented, and almost obscure, till death took him in 1879. One of his achievements was painting in 1845 two pictures in oil for St. Andrew's Church, Penrith. These, if they remain in the perfect condition ascribed to them in this book, are, on that account, at least, worthy of the attention of would-be fresco painters. They appear to have been severely tried by damp, gas-smoke, and fires. The painter describes, p. 31, his process of execution. The materials included Roman cement spread on oak laths, and saturated with linseed oil; the surface was covered, before painting on (with Roberson's Medium as a vehicle), with mastic spread with a trowel. Soon after completion the pictures were covered with two coats of coach-painter's copal varnish. This book is handsomely printed, copiously illustrated with pretty wood engravings, and looks fit for any drawing-room table; but, notwithstanding all Mr. Jewitt's affection and care, it is not likely to be often taken up. The subject did not afford matter for more than a few paragraphs.

A PORTRAIT OF CARLYLE.

Sandhills, Witley, July 15, 1882.

WILL you be so good as to permit me a few words in regard to an etching in the present Royal Academy exhibition? It is from a drawing by me of the late Mr. Carlyle, but the etcher has thought fit to add on the margin (by way of what is called *remarque*) the figure of a porcupine, with two books beside it. I have not been able to visit the exhibition, and have only just heard, with surprise and vexation, of this to my mind most objectionable addition, against which I would have strongly protested had I heard of it in time, as I now, with your leave, disown all share in it. During the six years and more in which I had the honour of knowing Mr. Carlyle, I never found him for a moment other than kind, gentle, and most friendly; but even had my own experience been different, I would no less have objected to such a marginal note upon the portrait.

HELEN ALLINGHAM.

SALES.

MESSRS. CHRISTIE, MANSON & WOODS sold on the 15th inst. the following miniatures from Hamilton Palace:—R. Cosway, A Lady, in a black dress, with pink ribbon in her hair, 194*l.* Unknown: Another Portrait of the same Lady, 204*l.*; Prince Charles Edward Stuart, in armour, with the blue ribbon, 210*l.*; A Pair of Illuminations from a Missal, with the Madonna and Child enthroned, and St. Joseph and the Virgin, 162*l.* S. Cooper, The Earl of Sandwich, in brown dress and lace cravat, 267*l.* J. Hoskins, Sir John Maynard, in black dress, white collar, and black skull-cap, 231*l.* P. Oliver, Lady Digby, after Van Dyck, 294*l.* N. Hilliard, Lady Arabella Stuart, with long flowing hair, lace ruff, and richly embroidered dress, 273*l.*; James I., in lilac dress brocaded with gold, blue ribbon, and lace collar, 2,835*l.* P. de Champagne, The Coronation of Henri IV., a miniature of unusual size, 325*l.* Janet, Portraits of Henri II., Henri III., Charles IX., Catherine de' Medici, Le Grand Dauphin, and Claude de France, whole lengths, 1,758*l.* J. Petitot, Louis Dauphin, Duc de Bourgogne, 682*l.*; Jean Baptiste Colbert, Minister of Louis XIV., in black dress, with lace collar, 241*l.*; Portrait of a Lady in blue dress and black lace head-dress, 189*l.* Such prices were never before given for Janets, Petitots, or Hilliards.

On the 18th inst., a bust of Peter the Great, in armour, in bronze, fetched 1,060*l.*; and a bust of the Empress Catherine II. (companion), 210*l.*

Fine-Art Gossip.

EVERY Londoner will be glad to hear that the Royal Academy intends to memorialize the Government on the proposed alterations at Hyde Park Corner, and pray that the Duke of Wellington and his horse may remain anywhere else than on the top of Decimus Burton's arch. Readers of our obituary notice of that architect (No. 2826, p. 858) will remember that he provided by will 2,000*l.* for the removal of the group, and thus the bequest remained until he withdrew it, and left his fame to the justice of his countrymen, that is, when they recover their artistic senses. The monstrosity was arranged to please an ignorant committee of subscribers to the monument, whom Lord Melbourne's government desired to conciliate. When, years after, the precious scheme was about to take effect because Wyatt, who was almost as much disgusted as Burton, had finished the group, the authorities of that day, repenting of the arrangements of their forerunners, protested in vain, and even offered to provide a pedestal and erect the monument between the club-houses in Waterloo Place, or on the Parade in St. James's Park. All remonstrances were rejected, so the memorial went up where it has been a laughing-stock for a whole generation. It is to be hoped the Academy will allow the memorial to be signed by all the artistic world.

AMONG the pictures exhibiting in the European Galleries, New Bond Street, is an important work by Mr. William Linnell, dealing with a subject admirably suited for classical landscape painting. It represents the 'Capture of Io.' Io with her companions, women, children, and men, is descending a rough woodland path at the foot of a mountain, the vista of which closes beyond, while over the shoulder of the spur of the hill a glowing champaign is displayed, with the distant sea in sunlight. The Phœnician traders who beguiled her stand on our left, and offer pearls and other jewels to the unsuspecting princess. One man holds up an idol. The figures, most of which are in a state of nature, or nearly so, are distinguished by wealth of deep tones, graceful and animated movements. The well composed groups, full of expressive incidents, are carefully adapted to the story, and original in all respects. Much fine colour and wealth of character mark this painting. The nude, when displayed on such a scale, demands thorough and searching draughtsmanship. This is not wanting, although a still finer touch and even higher finish would add to the charm of a remarkable production. In the same gallery are good paintings by MM. Van Seben, De Haas, Valles (of Rome), and others, besides a large and pretentious work of the decorative and spectacular sort by M. Maccari.

THE *Builder* records the death of an architect of note, Mr. George Somers Clarke, a pupil of Sir C. Barry. Mr. Clarke published many drawings and illustrated the Houses of Parliament in conjunction with Mr. J. Johnson. A number of drawings of Northamptonshire churches made by Clarke our contemporary praises highly; they have not been published. He was one of the architects appointed to compete for the designing of the Law Courts, National Gallery, and Foreign Office. His taste and studies led him to adopt Italian modes of design, and the drawings he prepared for the competitions, even when they exhibited Gothic forms, showed the effects of his training. His chief works in London are the Auction Mart, the offices of the General Credit Company, and Messrs. Brett's warehouses in High Holborn. Many country seats were designed by him. The chief of these is said to be Wyfold Court, Oxfordshire. Among his "restorations" is Dunstable Priory Church.

IN the Fine-Art Society's rooms may now be seen the pictures by artists of the United States and Great Britain to which we referred on the

24th ult. (p. 803) as having been selected from the *Salon* of this year. They include Mr. Sargent's 'El Jaleo,' a large, energetic, and original work.

MESSRS. CHRISTIE, MANSON & WOODS will sell to-day (Saturday) the famous drawings by Turner, the property of Mr. Ruskin, to which we referred on the 24th ult. (p. 803).

IT has been stated in error that the Steenwyck recently purchased by Mr. Burton will represent that painter for the first time in the national collection of pictures. 'The Palace of Dido,' No. 141, bequeathed by Lieut.-Col. Olney, bearing the name of this master, was lent to the National Gallery of Ireland about twenty years ago.

AT the Art Furnishers' Alliance, 157, New Bond Street, may be seen some interesting examples for mural decoration, the materials of which are papers of cheap kinds.

THE French journals of art express disappointment at the nation not having acquired important pictures at the Hamilton Palace sale. Insufficient funds hampered the French agent.

THE loan exhibition of pictures at the Royal Institution, Manchester, which had been open for eight weeks, closed on the 8th inst. As regards payment for admission it was a failure, nor has it attracted, as was expected, the working classes, although as an inducement to them to visit it during the last week it was open no charge was made for admission, and the hour of closing it was extended. Small results followed these concessions.

IT is understood Mr. Dennis has, for a time, suspended his excavations at Sardis.

THE Belgian sculptor M. Eugène Simonis died on the 11th inst., aged seventy-two years. He for a long time acted as Director of the Academy at Brussels. His chief work is the equestrian group of Godefroy de Bouillon in the Place Royale, Brussels.

MUSIC

NEW SHEET MUSIC.

IT is by no means an easy task to examine the quantities of new musical publications which are poured forth in a never-ending stream, with the view of calling attention to those compositions possessing merits of a kind superior to the average of their class. The dull level of conventionality is but seldom passed, and it is sufficiently evident that in the vast majority of instances a mere ephemeral popularity is the highest mark at which composers aim. With regard to pianoforte music there has, however, been a change of style amounting almost to a revolution within the last few years. The brilliant operatic fantasia appears to be a thing of the past, and the taste of the day inclines to a mild form of æstheticism, which finds its expression in reproductions of the old dance measures, and in endless nocturnes, romances, and reveries. The comparative simplicity of the present drawing-room pianoforte music must also be noted, scarcely half-a-dozen pieces of the immense number lying before us answering to the needs of advanced players. If this may be taken as a proof that those who have passed the elementary stage now concern themselves chiefly with standard and classical works, it is fair to indulge in a feeling of complacency at the improvement in public taste.

Leaving generalities, we may select for primary mention *Youth and Age*, six tone pictures by Mr. Baptiste Calkin (Ashdown & Parry). The composer of these little *genre* sketches is perhaps best known as a church musician, but the influence of Stephen Heller may be traced in his present efforts, which are carefully written and moderately effective, though the absurd and fantastic titles constitute a drawback which might have been easily avoided. The example set by Schumann in this matter is one that is too frequently followed. The same objection will apply to a series of seven easy pieces by Victor Delacour, which surely cannot be rendered more attractive by such meaningless titles as *Cœur Joyeux*, *Jeunesse d'Amour*, and the like. Otherwise these effusions might be recommended without qualification as being melodious, graceful, and in no respect vulgar. The same remarks will apply to a set of five pieces by Paul Delacour, save that in two instances—a *Souvenir de Seville* and a *Caprice Espagnol*—the name does convey some idea of the character of the music. A word of praise may be given to *The Chippendale Gavotte*, by Cotsford Dick; *Harvest Song*, by Henry Rogers; *Am Springquell*, by Carl Hause; and *Gavotte in F minor*, by E. Silas. The piece last named, however, has as much the character of a tarantelle as of a gavotte.—By the same composer we have *Gavotte, Minuet, and Jig*, Op. 103, and *Rigaudon*, Op. 104 (Weekes & Co.). The Jig in A minor is suitable as a study for acquiring facility in rapid finger work, and the Rigaudon is rather pretty. The others are not very interesting. Four pieces, entitled *Seconde Gavotte Moderne*, *La Blondine*, *La Brunette*, and *A Fairy Tale*, by Berthold Tours, may be recommended as simple and agreeable recreations for players not far advanced beyond the elementary stage; and with them may be coupled *Danse Romanesque*, by Henry J. Edwards.

The Fan Series (Lamborn Cock) deserves mention as consisting of a selection of short pieces by the best composers. The numbers before us contain a Fantasia in C, by Handel; Rubinstein's Romance and Melody in F; the final movement of Dussek's Sonata, Op. 9, No. 3; and a Gavotte and Courante in G of J. S. Bach. Mr. W. H. Holmes sends us a "fantasia sonata" in B flat minor, entitled *The Initials*. The name seems to have been suggested by the letters G A, being the initials of Prof. Macfarren's Christian names, and with these notes the work opens. The first movement, *allegro agitato*, is vigorous, with the contrast afforded by a Mendelssohnian second subject; the next section, an *allegretto* in F sharp, is undeniably pretty; and the final movement, *allegretto scherzando*, is pleasing and unlaboured. On the whole, Mr. Holmes's sonata may be considered a well-written and effective work, worthy of attention by pianists in search of novelty. Among drawing-room pieces issued by this firm, mention may be made of transcriptions of *The Unfinished Song* and *Sowing and Reaping*, two songs by Ciro Pinsuti; *Fifth Reverie in A flat*, by C. H. Couldery; and *Chant du Pêcheur*, by Francesco Berger.—A *Nocturne in D flat*, by Kate Ockleston (Forsyth Brothers), shows decided talent; but the composer in the endeavour to avoid conventionality has given the effect of restlessness by too frequent shifting of the tonality.—As teaching pieces of very moderate difficulty we may name *Deux Valses Impromptu*, in A flat and D flat, by Ignace Gibsone, Op. 87 (Stanley Lucas); *Idyll*, by G. E. Bambridge (same publisher); *Gavotte Pastorale*, by C. Tourville (Joseph Williams); and *Andante*, from a sonata by E. A. Sydenham (Novello, Ewer & Co.).—A good word must also be said for a melodious and well-written *Reverie* for piano and violin, by A. W. Nicholson (Wood & Co.).

We have before us a pile of ninety-one new songs, of which the following may be considered on the whole the most meritorious, although in very few instances are the effusions far removed from commonplace. In *Six Songs*, composed by Ann Mounsey Bartholomew (Stanley Lucas), the composer has wisely selected her words from standard poets from Shakspeare to Edgar Allan Poe. The musical setting is in each instance simple and straightforward, and in style thoroughly English. No. 1, 'Crabbed Age and Youth,' lies rather high for ordinary voices, but this defect will not be found in the remainder. *Ave Maria*, by Maude Valérie White, is a setting of the Latin text for contralto voice, flowing and melodious save for an ugly skip of a major seventh from F to E on the fourth space. Female amateurs desiring to meet with new and pleasing ballads will perhaps find *The Fisherman's Wife*, by Alice Williams, *Troubadour's Song*, by Dinah Shapley, and *Hesperus*, by C. A. Macirone, to their taste; while tenors and baritones may be pleased with *The Love that ne'er Grows Old*, by Ernest Ford, *To thee, my Love*, by Edward Holmes, *She and I*, by Rozelle, and *My Lady Sleeps*, by J. Bond Andrews. The last-named song has a violin *obbligato*. The same publisher sends us *Eventide*, a two-part song by Theo Marzials, and *Welcome*, a three-part song by E. J. Hopkins, both for ladies' voices and good of their kind.—*Night in Spring* and *The Zephyr's Wooing*, by Florence May (Lamborn Cock), are quiet and graceful little ditties, with English and German words, and with something of the German *Lied* character. *Time Passes On* and *Ten Years Ago* are by Walter Maynard. The first of these is an expressive song in this popular composer's best vein, but the other is extremely flimsy and commonplace. *Consider and hear me*, by W. A. Howells, and *I praised the earth*, by J. Greenhill, are acceptable sacred songs; while to those who prefer a lively ditty, *I love but one fair face*, a hunting song from the practised pen of Mr. John Hullah, may be strongly recommended. Among vocal duets *Cupid's Curse*, a musicianly setting of George Peele's words, with violin *obbligato*, by Alice Mary Smith, and *Day now is breaking*, by Masini, a graceful *morceau*, deserve mention. The former is for soprano and tenor, the latter for soprano and contralto. From the same publisher we have new editions of Handel's *Where'er you walk*, from 'Semele'; *Let me wander not unseen*, from 'L'Allegro'; and *What's sweeter than the new-blown rose?* from 'Joseph'—pieces which carry their own recommendation.

From a large number of songs published by Weekes & Co. we may select for commendation *The King's Ambassador*, a bright and spirited song for baritone, by Duncan Hume; *The Shepherdess*, by Hugo Beyer, a quaintly pastoral effusion with an odd five-bar rhythm; and, in the more conventional ballad style, *True as Gold* by A. J. Caldicott, for soprano; *Love's Ebb and Flow*, by Walter Spinney, and *At the Lattice*, by Otto Booth, for contralto; and *Down the River*, by H. J. Edwards, and *Dearest*, by George Belcher, the last two for male voice.—*May Morn*, *More than All*, and *The Captain's Daughter*, by Florian Pascal (Joseph Williams), are three pleasing and gracefully written songs; and *Stars*, by J. L. Hatton, will commend itself to contralto vocalists who appreciate this facile and popular composer.—Messrs. Boosey & Co. send us eight songs by Mr. Villiers Stanford, which on account of the composer's distinguished position demand careful consideration. They are quite removed from the stereotyped ballad style, and therefore may not contain the elements of popularity; but to that portion of the public which prefers something of a more artistic nature these compositions may be heartily commended. A setting of Heine's *Tragödie*, and one of the poem entitled *Requiescat*, by Mr. Matthew Arnold, are fine expressive songs, but necessarily of a melancholy nature; while Byron's *There be none of beauty's daughters* has received an extremely graceful though simple musical illustration. Three Cavalier songs from Browning's 'Dramatic Lyrics,' for baritone solo and male chorus, would be extremely effective if well sung. *Serenade* and *Lullaby*, by A. Goring Thomas, are pleasing, elegant songs, with somewhat of French character.

More in the stereotyped manner, but still good of their kind, are *Only a Year*, by C. S. Hartog, and *Old-fashioned Friends*, by Michael Watson (Ashdown & Parry); and a good word may be said for *The Cottage by the Sea* and *Strew on her Roses*, by H. Crossley (Novello, Ewer &

Co.); *A Shadow*, by Kate Ockleston (Forsyth); and *Dying Embers*, by Lindsay Sloper (International Musical Association).

Musical Gossip.

The Royal Italian Opera season, which closes this evening, has been one of the least eventful on record. Two operas have been performed for the first time at Covent Garden, but 'Mefistole' could not be regarded as a novelty, and M. Lenepveu's 'Velleda' proved an unqualified failure. The production of M. Massenet's 'Herodiade' would have given some interest to the campaign, but the work was only promised conditionally, and no one could have indulged in sanguine expectations of hearing it. The new singers have been few in number, and only Mdlle. Stahl, contralto, Signor Lestellier, tenor, and M. Bouhy, baritone, deserve mention as having rendered valuable service to the enterprise.

'The Sleeping Queen,' an operetta with four characters, by Balfe, was revived at the Avenue Theatre on Monday evening. The trifle, which is an adaptation of Boisselot's 'Ne touchez pas à la Reine,' was produced at the Gallery of Illustration sixteen years ago. The libretto is absurd, but some of the music is in Balfe's happiest vein. The present performance is below mediocrity.

The prospectus of the Three Choirs' Festival, which will be held this year at Hereford on September 12th, 13th, 14th, and 15th, has just been issued. The principal vocalists engaged are Madame Albani, Miss Marianne Fenna, Miss Anna Williams, Madame Patey, and Miss Hilda Wilson; and Messrs. Edward Lloyd, C. W. Fredericks, Frank Boyle, F. King, and Santley. The works to be given at the performances in the cathedral are 'Elijah,' 'Judas Maccabæus,' Goetz's '137th Psalm,' Bach's 'Magnificat,' 'St. Paul,' Dr. Garrett's cantata 'The Shunammite,' Beethoven's Mass in C, a selection from Molique's 'Abraham,' and the 'Messiah.' Miscellaneous concerts will be given at the Shire Hall on the evenings of the 12th, 14th, and 15th, at which the only novelty of importance announced is the setting by Mrs. Meadows White of Collins's 'Ode to the Passions.' Mr. Langdon Colborne, the organist of the cathedral, will conduct, and Mr. J. T. Carrodus will be the leader.

The programme of the approaching Birmingham Festival, which has just been issued, is most satisfactory, both as regards the number of important novelties which it contains and the recognition shown by it of the due claims of English composers. It commences on Tuesday morning, August 29th, with a performance of 'Elijah.' On the Tuesday evening Sir Julius Benedict's cantata 'Graziella' will be produced, followed by a miscellaneous selection, including Mr. F. H. Cowen's 'Language of the Flowers.' Wednesday morning will be devoted to Gounod's new oratorio 'The Redemption'; and on the same evening Mr. A. R. Gaul's sacred cantata 'The Holy City,' Mr. Villiers Stanford's Orchestral Suite, composed for the festival, and other works will be performed. The 'Messiah' is to occupy Thursday morning, and Gade's new cantata 'Psyche' will be given in the evening, Mr. Parry's new symphony forming an item of the miscellaneous programme which follows. The concert of Friday morning will be especially interesting, comprising Mozart's Symphony in G minor, Brahms's 'Triumphlied,' Cherubini's Fourth Mass, and Beethoven's 'Mount of Olives.' A repetition of Gounod's oratorio on Friday evening will bring the festival to a close. The soloists engaged are Madame Albani, Miss Anna Williams, Miss Eleanor Farnol, Madame Marie Roze, Madame Patey, Madame Trebelli, Messrs. E. Lloyd, W. H. Cummings, Maas, Santley, and F. King, and Signor Foli. Mr. Stimpson will, as usual, preside at the organ; Mr. W. C. Stockley will officiate as chorus master; while the announcement that Sir Michael Costa has sufficiently recovered his health to be able to discharge the duties of conductor will be received with general satisfaction.

Messrs. Schulz-Curtius have issued a preliminary announcement of six concerts to be given at St. James's Hall in October and November next under the conductorship of Herr Richter. A similar series of nine concerts is also announced to be given during April, May, and June of next year.

A musical festival is to be given at Brussels on the 20th and 21st of August, in which a chorus of 400 and an orchestra of 110 performers will take part. The programme will include Handel's 'Alexander's Feast'; Brahms's 'Deutsches Requiem'; a choral work, 'Die Rückkehr,' by Ad. Samuel; a 'Hymn to Beauty,' by Peter Benoît; an overture by Radoux; Gluck's overture to 'Iphigénie en Aulide'; and Mozart's 'Ave Verum.'

Mr. W. Reeves has just published, under the title of 'Art in Earnest; or, Wagner and No End,' an essay by B. F. Wyatt-Smith on the 'Meistersinger' and the 'Ring des Nibelungen.' We confess our inability to find out the appropriateness, or even to understand the meaning, of the second title; but the little essay is well considered and carefully thought out. Its chief object is to point out the seriousness of Wagner's art views; and while we think the author sometimes too favourable in her judgments, we cordially agree with the general tone of her remarks.

Under the title of 'A Compendium of Thorough Bass for Self-Instruction, compiled by F. W. von Kornatzki, exemplified on his Patent Chord-Denoter,' Messrs. Weekes & Co. have issued an ingenious apparatus for teaching harmony. The special feature of the invention is a glass plate on which the lines of the stave are ruled, and beneath which slides of cardboard, on which the examples are printed, can be placed. By means of an adjustment mark on the slides they can be so arranged beneath the glass plate as to show the harmonies in any key that may be desired, instead of each example being (as in ordinary instruction books) given only in one key—generally in that of C major. The chord-denoter is simple in its action, easy to use, and not liable to get out of order.

M. Massenet intends next winter to give symphonic concerts in Berlin, Hamburg, and Vienna, at which selections from his own works will be performed. It is said that his opera 'Hérodiade' is to be given in these cities.

In commemoration of the 250th anniversary of the founding of the Athenæum at Amsterdam, a festival performance of Berlioz's 'Damnation de Faust' was recently given.

The reorganization of the National Russian Opera is at present engaging attention at St. Petersburg. The chorus is to be increased to 120 and the orchestra to 100 members. For costumes, scenery, &c., a credit of 1,000,000 roubles has been granted. The next season is to be opened with Glinka's opera, 'Life for the Czar.'

DRAMA

THE WEEK.

Drury Lane.—Performance of Signora Ristori: 'Elizabeth, Queen of England,' a Drama in Five Acts, from the Italian of Giacometti.

Vaudeville (Morning Performance).—'Gammon,' a Comedy in Three Acts, from 'La Poudre aux Yeux' of Labiche and Martin, by Jas. Mortimer.

Of Signora Ristori it cannot be said as Shakspeare said of Cleopatra, "Age cannot wither her nor custom stale her infinite variety." It can, however, allowing for poetic exaggeration, be maintained in words that may be Shakspeare's, since they are found in the 'Two Noble Kinsmen':—

> The very lees of such millions of rates
> Exceed the wine of others.

Her Elizabeth of England remains a noble performance. Loss, rather than gain, attends the substitution of English for Italian as the language spoken. Such mastery of English as is displayed in Lady Macbeth, which Signora Ristori has obviously studied with patient and untiring labour, is not shown in Elizabeth. A good deal of the dialogue assigned Signora Ristori was indistinct and portions of it were unintelligible. At times, indeed, the general interpretation suffered from the efforts of the actress to recollect what came next, and from the nervousness sure to attend a task so arduous as that undertaken. While, however, much indulgence may be claimed by one who pays a homage to our literature and language such as Signora Ristori has yielded, and who accomplishes a feat which, in its line, has never perhaps been equalled, but little indulgence is required. The representation is a masterpiece of interpretation, and difficulties far greater than are encountered might well be faced for the sake of contemplating a triumph such as is obtained. For Lady Macbeth Signora Ristori is physically unfitted. She can neither look the character nor charge it with the requisite venom. Elizabeth meanwhile, as conceived by Signor Giacometti, is presented to the life. The points which were most noteworthy in her previous representations are those which again arrest attention. The close of the fourth act, when, after the news has reached her of the death of Essex, Elizabeth orders every one from the room, and, sinking in attitude of prayer, falls prone with her forehead in the dust, is even more impressive than before. This is the highest point of the performance. The death scene is a marvel of realistic detail. Complete as is, however, the conquest obtained by the realistic school—and it is now practically undisputed—we grudgingly accept it. So long as the absolute accompaniments of different kinds of deaths are conventional—and such they yet are and must ever be—the point at which realism is to stop must always be fair subject of dispute. If the death scene of Elizabeth in Signora Ristori's impersonation does not go beyond the limits of art, it at least suggests a feeling that the limits of art are reached. In other portions of the performance Signora Ristori's noble method is seen to high advantage. Her performance should be watched by all who care to charge their memories with such recollections as will not hereafter be easily attainable. At present, unhappily, the attendance at Drury Lane has been small. The support afforded Signora Ristori in the various characters is indifferent.

Plays produced for one occasion only might be supposed rarely to challenge criticism. During recent years, however, the representations given under such conditions have greatly improved. Sometimes, indeed, a performance of this class affords an opportunity of showing an actor in a line of parts he has no other opportunity of essaying. The representation at the Vaudeville of 'Gammon,' Mr. Mortimer's version of 'La Poudre aux Yeux,' was excellent. Mr. J. F. Young, an actor of whom London has seen comparatively little, evinced capacity

to play *bourgeois* parts; Mr. Edward Price gave an excellent representation of a comic countryman; and Miss Lydia Cowell exhibited an excellent study of character. Mr. Maclean, Mr. Crauford, Mr. Lestocq, Mrs. Sidney, and Mrs. Leigh were also seen to advantage. Mr. Mortimer has departed further than is his custom from the original. With the view of popularizing his dialogue he has made it almost coarse. 'La Poudre aux Yeux' is a two-act drama of M. Labiche written in collaboration with M. E. Martin, and first produced at the Gymnase on the 19th of October, 1861. It ridicules very happily *bourgeois* pretence and affectation, and is so innocent and healthy in plot that the fact that it has remained until this time unadapted may well cause astonishment. Mr. Mortimer has added an act without, however, making any important addition to the plot or dialogue. Though a little thin in story, 'Gammon' might easily win acceptance as a regular entertainment.

Dramatic Gossip.

A PERFORMANCE at the Gaiety Theatre by Miss Alleyn of Juliet in the balcony scene from 'Romeo and Juliet,' given on the occasion of the benefit to Mr. Odell, had slight claims upon attention. If we mention it, it is to point out a reading in this scene which no Juliet, so far as we know, has ever accepted. Two lines in the speech beginning "Thou know'st the mask of night," &c., are as follows:—

Dost thou love me? I know thou wilt say "Ay,"
And I will take thy word.

The "I" in the second line involves a play upon words the effect of which is equally sweet and natural. It ought accordingly to be pronounced caressingly and with slight emphasis:—

I know thou wilt say "*Ay*,"
And *I* will take thy word.

In support of the view, which, however, needs no confirmation, it may be said that in the Folio the text runs thus:—

I know thou wilt say I,
And I will take thy word.

'BILLEE TAYLOR,' by Messrs. Stephens and Solomon, has been revived at the Gaiety. With it is given a new farce, with musical accompaniments, by the same author and composer, entitled 'Through the Looking-Glass.' The piece met with an unfavourable reception and scarcely deserved a better fate.

THE regular season at the Gaiety will commence on the 7th of August with a revival of Mr. Burnand's burlesque 'Little Dick Whittington'; and that at Drury Lane on the 5th with a drama by Messrs. Pettitt and Harris, entitled 'Luck: a Story of 50,000*l*.'

THE regular season at the Olympic will close in a fortnight. The theatre will then pass temporarily into the hands of an American company, who will produce a piece entitled 'Fun on the Bristol.' On the 28th of August Miss Litton and the company at present with her at the Olympic will commence at Liverpool a two months' tour.

'LE ROI S'AMUSE' of M. Victor Hugo will be presented in November next at the Comédie Française with the following cast; François Ier, M. Mounet-Sully; Sallabadil, M. Febvre; Saint Vallier, M. Maubant; Clément Marot, M. Thiron; M. de Cossé, M. Garraud; Triboulet, M. Got; Blanche, Mdlle. Bartet; Maguelonne, Madame Samary; and Madame de Cossé, Mdlle. Feyghine. Fifty years will have elapsed in November since the first and only representation of this play. The performance will accordingly be announced as the second representation of 'Le Roi s'Amuse.'

SIDE-LIGHTS ON ENGLISH SOCIETY:

SKETCHES FROM LIFE, SOCIAL AND SATIRICAL.

By E. C. GRENVILLE-MURRAY,
Author of 'The Member for Paris,' 'That Artful Vicar,' &c.

Contents: Flirts — On H.B.M. Service — Semi-Detached Wives—Noble Lords—Young Widows—Our Silvered Youth or, Noble Old Boys.

With nearly 300 Characteristic Engravings from Designs by well-known Artists.

"This is a startling book. The writing is bitter, unsparing, and extremely clever; and we are informed by public advertisement that Mr. Mudie will not allow the book to circulate. Our readers should get the work and see whether Mr. Mudie is justified."—*Vanity Fair.*

*** Less than twenty Copies remain on hand of this singularly interesting work.

In demy 4to. handsomely printed and bound, with gilt edges, price 15*s*.

A HISTORY of CHAMPAGNE;

WITH NOTES ON THE OTHER SPARKLING WINES OF FRANCE.

By HENRY VIZETELLY.

Illustrated with 350 Engravings, from Original Sketches and Photographs, Ancient MSS., Early Printed Books, Rare Prints, Caricatures, &c.

Opinions of the Press.

"A very agreeable medley of history, anecdote, geographical description, and such like matter, distinguished by an accuracy not often found in such medleys, and illustrated in the most abundant and pleasingly miscellaneous fashion. .....Altogether a very pleasant book."—*Daily News.*

"Mr. Henry Vizetelly has written a quarto volume on the 'History of Champagne,' in which he has collected a large number of facts, many of them very curious and interesting. Mr. Vizetelly has traced the gradual growth in popularity of sparkling Champagne since the days of Dom Perignon, and he has not neglected the earlier history of the Champagne vineyards."—*Athenæum.*

"It is probable that this large volume contains such an amount of information touching the subject of which it treats as cannot be found elsewhere. How competent the author was for the task he undertook is to be inferred from the functions he has discharged, and from the exceptional opportunities he enjoyed."—*Illustrated London News.*

"A veritable *édition de luxe*, dealing with the history of Champagne from the time of the Romans to the present date.....An interesting book, the incidents and details of which are very graphically told with a good deal of wit and humour. The engravings are exceedingly well executed."—*Wine and Spirit News.*

LITERATURE

Natural Religion. By the Author of 'Ecce Homo.' (Macmillan & Co.)

IF it be the function of genius to interpret the age to itself, this is a work of genius. It gives articulate expression to the higher strivings of the time. It puts plainly the problem of these latter days, and so far contributes to its solution; a positive solution it scarcely claims to supply. No such important contribution to the question of the time has been published in England since the appearance, in 1866, of 'Ecce Homo.' That the same man should have written both books, that none but himself can be his parallel, argues a unique order of mind. He is a teacher whose words it is well to listen to. His words are wise but sad; it has not been given him to fire them with faith, but only to light them with reason. His readers may at least thank him for the intellectual illumination, if they cannot owe him gratitude for any added fervour.

The object of this book, one might say with logical precision, is to extend the connotation of the term "religion." It groups together all the great idealisms—art, science, culture—and claims that these are natural religion. Thus, according to this author, everything that takes us beyond and above our selfish aims is religion. The opposition between science and theology becomes vain and of no effect: both are forms of religion. The indifference of art for the conventions is but another form of the struggle against worldliness, and here again art and religion join hands. "Wer Wissenschaft und Kunst besitzt," said Goethe, and our author repeats the saying with approval, "hat auch Religion." Prof. Huxley and Mr. Burne Jones will be somewhat surprised to find themselves regarded as great lights in the religious world. The old triad of ideals, the good, the true, and the beautiful, are classed by this observer under the one genus of religion.

Turning to the practical side of the book, we have the demand that the Church should learn the error of her ways in not recognizing her two companions in the struggle against the lower life, and should renounce the parts of her doctrine that conflict with their ideals. The idea of development must be applied to religion as to everything else, and the conception of prophecy be revived in the modern form of a philosophy of history. Let the cultured classes teach culture, which is religion, to the lower classes, who will otherwise lapse into Nihilism; and let the cultured nations of Christendom spread the light of religion till one great bond of civilization span the earth. Above all, if we wish to master the art of life, let us study the experiments that have been made by time in the field of history and learn the lessons of "philosophy teaching by example."

Such, in main outline, are the theorems and problems of this brilliant book. The boldness of the *eirenicon* cannot but strike every reader; but the age is bold in these matters, and this quality is only another mark of the timeliness of the book. In looking at its practicability, however, a critic has to remember that while it takes two parties to make a quarrel, it also requires two to patch one up. Our author is wanting in one of the qualities of the peacemaker that are almost necessary for the due performance of his office: he lacks sympathy with one of the sides. He is entirely on the side opposed to the angels, and assumes too confidently that supernatural religion is spiritually defunct and its advocates ready to own their inefficiency. He is candid and clear-sighted, and sees distinctly that what he calls religion will be called in turn pantheism and paganism by "religious" people. But he trusts too readily that they will be convinced that in using these names they are miscalling persons of practically the same creed as themselves. He greatly underrates, one cannot help thinking, the power that such conceptions as miracles, and heaven and hell exert upon minds that have once firmly grasped them. At times this miscalculation leads him to adopt a tone towards the adherents of supernatural religion which is, to say the least of it, by no means conciliatory. Take, for instance, the following sentence:—

"The Eternal and the Infinite and the All-embracing has been represented as the head of the clerical interest, as a sort of clergyman, as a sort of schoolmaster, as a sort of philanthropist."

The reminiscence of Mr. Matthew Arnold might remind our author that Mr. Arnold has scarcely reconciled Dissent, however he may have undermined it. In short, our author appears to agree with Goethe when he cynically concludes the above-quoted epigram,

Wer Wissenschaft und Kunst nicht besitzt
Der habe Religion.

Further, our author is scarcely so successful in showing the fundamental identity of art and religion as of science and religion. When touching on the latter point he draws some instructive and novel analogies between the creed of science and the faith of the Old Testament:—

"I say that man believes in a God who feels himself in the presence of a Power which is not himself and is immeasurably above himself, a Power in the contemplation of which he is absorbed, in the knowledge of which he finds safety and happiness."

"But now, either under the name of God, or under that of Nature, or under that of Science, or under that of Law, the conception works freshly and powerfully in a multitude of minds. It is an idea indeed that causes much unhappiness, much depression. Men now reason with God as Job did, or feel crushed before Him as Moses, or wrestle with Him as Jacob, or blaspheme Him; they do not so easily attain the Christian hope."

"We have spoken of science as replacing miracle; prophecy it does not so much replace as restore. As it grasps human affairs with more confidence it begins to unravel the past and with the past the future. It shows the significance of each new social or political phase as the Hebrew prophets studied to do."

These quotations may serve to illustrate the author's main contentions as to the relation of science and religion. But it is more difficult to explain his views as to the connexion of the artistic and religious ideals. He points out the great influence of the poet on the higher life of the time, reviving Mr. Arnold's "criticism of life" view; and he recognizes the ideal tendencies of the Antinomianism that is generally associated with artistic impulses. But he almost invariably regards art as solely dealing with beautiful objects of sight, and thus bringing it into contact with the scientific observation of nature. We have throughout observed not one word devoted to music, yet there are thousands nowadays with whom the cultus of rhythmic and harmonic sounds has usurped the place of almost all other worship, and a work on natural religion should have taken notice of their case. And on art in general, barring a few excellent pages on Goethe and Wordsworth, little is said that justifies the position given her alongside of science and religion. That position may be deserved; but the arguments brought forward in this book do not show adequate appreciation of the artistic mind.

Apart from this lack of sympathy with the orthodox schools of religious opinion and an inadequate estimate of the artistic ideal, it is possible to find fault with other lines of the argument. There is, perhaps, a certain amount of professional exaggeration in the estimate formed of the historian's office. It is, to say the least, paradoxical to assert, "It is not exclusively but only *par excellence* that religion is directed towards God." It is obscuring a fundamental distinction to include, as our author often does, humanity in nature. The argument from Mohammedanism that there may be a religion without miracles (p. 192) may be turned another way when we reflect how inevitably the earliest traditions introduced miraculous events into the life of the prophet. And interesting as is the attempt to widen the meaning of religion, it too often results in mere paradox, and manages only to evade difficulties by denying that they exist. Still the aim of the author, which is to point out the large amount of agreement among conflicting parties, is perfectly legitimate, and permits a certain exaggeration in looking only at common qualities and neglecting divergencies.

Turning to the more pleasant and more profitable task of pointing out the many novel ideas and brilliant thoughts contained in this book, one has first to notice the power of acute social diagnosis that is throughout displayed. Take, for instance, the following *résumé* of the scientific temper:—

"Instead of that painful conflict with temptation which moralists describe, there may be an almost unbroken peace arising from the absence of temptation; instead of the gradual formation of virtuous habits, there may be the gradual disuse of all habits except the habit of thought

and study; there may be perpetual self-absorption without what is commonly called selfishness, total disregard of other people, together with an unceasing labour for the human race; a life in short like that of the vestal, 'the world forgetting, by the world forgot,' yet without any love or heavenly communion."

Or, again, take the few but weighty words dealing with Nihilism; or the account of the epidemic character of crime; or the remarks on the rise of self-distrust consequent on the decline of authority; or the view that the modern schoolmaster is a kind of professional parent. And joined to this power of observation is found the power of expressing its results in short, pithy phrases or sentences that stick in the memory. "Life is interesting if not happy" is a whole answer to Mr. Mallock. "Is life but a livelihood?" is a home thrust at a certain school of politicians. "Worship is habitual admiration" is not likely to be bettered for some time as a working definition.

Nowadays one is not allowed to call a book brilliant unless it says some witty and therefore spiteful things. Even these are not wanting in the pages of 'Natural Religion.' Let us cull a few that display this quality:—

"If you want to see the true white heat of controversial passion, if you want to see men fling away the very thought of reconciliation, and close in internecine conflict, you should look at controversialists who *do not differ at all*, but who have adopted different words to express the same opinion."

"What should we think then if its name and its glories formed the staple of our religious worship, if our church-goers sang—'Oh pray for the peace of England—they shall prosper that love thee'?"

"'Erudition' and 'philosophy' are terms of contempt in their mouths. They denounce the former as a busy idleness, and the latter as a sham wisdom, consisting mainly of empty words, and offering solutions either imaginary or unintelligible of problems which are either imaginary or unintelligible themselves."

But of far more importance than these isolated instances of acuteness of thought or phrase are the many new positions taken up in this book. The distinction between theology and religion has never been brought so clearly into connexion with the difference between scientific and imaginative knowledge. The three different phases of atheism—by which term is meant by this author want of adaptation to the environment—are excellently discriminated.

It may cause some surprise, but cannot fail to cause as much enlightenment, to find our author, most modern of the moderns as he is, advocating the closest possible union between Church and State, and defending his position by all the wealth of his historical knowledge. But has ever the modern temper been hit off more exactly than in the following passage?—

"Another maxim has to be learned in time, that some things are impossible, and to master this is to enter upon the manhood of the higher life. But it ought not to be mastered as a mere depressing negation, but rather as a new religion. The law that is independent of us and that conditions all our activity is not to be reluctantly acknowledged, but studied with absorbing delight and awe. At the moment when our own self-consciousness is liveliest, when our own beliefs, hopes and purposes are most precious to us, we are to acknowledge that the universe is greater than ourselves, and that our wills are weak compared with the law that governs it, and our purposes futile except so far as they are in agreement with that law."

But enough. We have given the main argument of the book, and selected some of its details for discussion or for admiration. It remains to discuss its probable effect on the two parties between whom, in a measure, it attempts to effect a reconciliation. It has already been pointed out that the religious world will regard its religion as having been misunderstood and not sympathized with; and this complaint will be just. It is natural at this point to compare the somewhat similar attempts of Mr. Matthew Arnold in this direction; and it must be owned that with regard to knowledge of, and sympathy with, orthodox belief, the whilom Oxford professor is the superior of his Cambridge rival, if we may venture so to term the author of 'Ecce Homo.' Mr. Matthew Arnold was bent on battling with religious Philistinism, and did not disdain to deal it some heavy and rather unfair blows, chiefly by way of irony. Our author, on the contrary, cares more to expound the position of *nous autres*, and has for the first time given an adequate exposition of the creed of culture. "Religion," he says, "has been revived under the artificial name of culture"; and again, "The momentary evanescence of the Church in modern life is only caused by the decay of one sort of Church coinciding in time with the infancy of another." In thus boldly pointing out that the spiritual currents now flow in other channels than those that are technically called religious the book says what many have been feeling. It must necessarily give courage to the Antinomians, and give for the first time a true sense of their position to the followers of ancient lines of thought. That the followers of culture will consent to call their ideal by the name of religion, and that the believers of religion in its old sense will grant that name, full of the most sacred associations, to the pursuit of truth and of beauty, are very doubtful propositions. So far, therefore, as our author seriously aims at these innovations his efforts appear doomed to failure. No *eirenicon* can be effected between two opposing schools by inducing them to adopt the same name on their banners. It is by bringing into full consciousness the thoughts and feelings of modern men that this book will exercise its chief influence. It will enable the adherents of the old and of the new faith to know for what the strife is being carried on. And it shows how fast and far the world has been drifting since 1866 to reflect that this book takes the place of an exposition of "Christ's theology" promised in the preface of 'Ecce Homo.' But the second or "practical" part of the book is not practical in any sense that leads to action. It merely shows that the natural religion which is his theme is really in action among us in influencing men's lives. It may set men thinking, it cannot lead them to act. Meanwhile let us close this notice of a book which we assume will be read by most thinking Englishmen with a final quotation, which shows at once the power and the weakness of the writer, his clear vision and his depressing tone:—

"For Art and Science are not of the world, though the world may corrupt them; they have the nature of religion. When therefore we see them shaking off the fetters of the reigning religion, we may be anxious, but we are not to call this an outbreak of secularity; it is the appearance of new forms of religion, which if they threaten orthodoxy threaten secularity quite as much. Now secularity is the English vice, and we may rejoice to see it attacked. It ought to be the beginning of a new life for England that the heavy materialism which has so long weighed upon her is shaken at last. We have been perhaps little aware of it, as one is usually little aware of the atmosphere one has long breathed. We have been aware only of an energetic industrialism. We have been proud of our national 'self-help,' of our industry and solvency, and have taken as but the due reward of these virtues our good fortune in politics and colonization. We have even framed for ourselves a sort of Deuteronomic religion which is a great comfort to us; it teaches that because we are honest and peaceable and industrious, therefore our Jehovah gives us wealth in abundance, and our exports and imports swell and our debt diminishes and our emigrants people half the globe."

La Jeunesse de Madame d'Épinay. Par Lucien Perey et Gaston Maugras. (Paris, Calmann Lévy.)

THE attitude of impatience is doubtless unworthy of the scholar, but it is difficult to resist that feeling in reference to the editing of certain French classics. It would, perhaps, while we still possess only an imperfect edition of Pepys's 'Diary,' be more strictly honest to omit the word French. But the fears, the carelessness, or the caprice of the editors of memoirs, letters, and diaries are, perhaps, more noticeable to the student of French literature because of the vast mass of such matter which that literature contains. It is not against MM. Perey and Maugras that his evil passions are aroused—on the contrary, they come to fill up the shortcomings of their predecessors; but it is rather too bad that the former editors of so well-known a book as Madame d'Épinay's 'Memoirs' should have taken upon them to omit a very considerable proportion of the MS. matter without giving the least indication of their proceedings, and without, as far as can be seen, any motive except mere caprice. Nor, while we make every allowance for the present writers, can we think that their own method is the ideally best. They have recovered the MS. of the 'Memoirs' and a great quantity of other MSS. from different sources, chiefly family records, but they have not attempted a new or complete issue of the 'Memoirs' themselves. They have in this volume (which is to be followed by another bearing the complementary title of 'La Vieillesse de Madame d'Épinay') arranged, partly in extract and partly in narrative, what they think most interesting of the unpublished matter as a supplement to the published 'Memoirs,' though of course they frequently refer to, and sometimes draw upon, matter published in those 'Memoirs' themselves. As a result, all, or almost all, the information desirable will doubtless be at the reader's disposal in one form or another; but it will lack symmetry.

Meanwhile this volume provides plenty of interesting reading for students of the eighteenth century, though in short, quotable passages of piquancy and individual attraction it is perhaps inferior to the published

'Memoirs.' The authors or editors have conceived a great affection for their heroine—an affection with which it is not, on the whole, easy to sympathize. Madame d'Épinay was not a bad specimen of the eighteenth century lady with no morals—indeed, she was a rather favourable one because of her unfailing amiability; but she had the peculiarly irritating quality of being absolutely wax in the hands of anybody who chose to mould her. Her husband might have kept his authority over her (despite the fact that they were cousins, and that the match was the afterglow of a boy and girl passion) if it had not been for her mother's interference and his own scandalous infidelity, for which that interference afforded some faint excuse. After she had quarrelled with him, her various lovers and mentors, Francueil, Duclos, Grimm, did with her whatever they pleased. MM. Perey and Maugras are very severe upon Duclos, still more so on Rousseau; they are not very well inclined even to Diderot, who was unquestionably the most disinterested of all the circle, courtly or literary. But they have an incomprehensible passion for Grimm. Conscious that two such magicians as Rousseau and Mr. Carlyle may have prejudiced us against this person, we look with hopeful doubt for a real rehabilitation. It is with some surprise that we find that the only proof of Grimm's excellences offered is that he took prompt measures for getting everybody else—Francueil, Duclos, Rousseau—out of the lady's good graces. Now this is exactly the charge made against him: *habemus confitentes*.

In the most debated part of the whole Grimm-Rousseau-Diderot-Épinay matter—the very ugly hypothesis, not necessary to give here at length, as to the reason which Grimm and Madame d'Épinay had for wishing Rousseau to accompany her to Geneva—the biographers are uncompromisingly on the side of their heroine. It may be admitted that Rousseau's own evidence or suspicion, or whatever it is to be called, is worth extremely little. But MM. Perey and Maugras give evidence on the other side which is worth less. All that they can say is that Tronchin was not a likely person to join in such a plot, and that they can find no record of any child having been born to Madame d'Épinay at Geneva. The second argument is evidently valueless, for in the first place it was never necessary to a belief in the plot that the child should actually have been born, and in the second it was not likely that its advent would have been published on the housetops, while at best the evidence is purely negative. The first argument is one of opinion merely. The "foul story" we fear remains, not less uncertain indeed, but not less foul than it was.

The pleasantest character in this book, one who will be new to most readers, is Madame d'Épinay's bachelor uncle, the Count de Preux, a country squire and sportsman of a kind frequent in novels and occasionally met in real life. M. de Preux is a benevolent oddity whose only drawback is detesting Paris. His consolation there is to go and hunt at Chantilly, whither the Prince de Condé invites him, and where, it is needless to say, "sans lui et son chien," the prince and all his train of hounds and huntsmen "auraient manqué la bête." This good squire, however, is by no means a mere equivalent of his English fox-hunting contemporary. His manners are unexceptionable, and though he is nearly as severe as Smollett's hero on the "mets trop recherchés," the "vins falsifiés" of the capital, his chief displeasure there is that "les femmes qu'il avait connues étaient vieilles et laides et avaient l'injustice de ne pas le trouver joli garçon." His end is not a little melancholy. He is a good counsellor to his sisters and niece as well as a generous brother and uncle. But his sporting habits are his ruin. The French gentleman of the last century, like his Scotch counterpart, was nothing without a "ganging plea," and M. de Preux duly has his about a manor, the title to which is disputed by a neighbour. Unluckily upon it is "my only preserve of red partridges," and to abstain from shooting these till the judges have decided is impossible. The rival claimants meet on the ground. M. de Preux, old and choleric, actually fires on his enemy, and the latter, replying in self-defence, wounds him mortally. The beginning of his will is worth quoting:—

"A mes héritiers,—Ceci est mon testament. Je n'entends pas les affaires; si j'avais plus de temps, j'y mettrais la forme, mais forme ou non, je déclare que je veux que tout ce que je vais dire soit exécuté. Je crois mes héritiers honnêtes gens et bons parents. Si par hasard ils se chamaillent après moi pour ma chétive succession, je les déshérite et je donne mon bien aux pauvres de ma paroisse; mais dans ce cas seulement où, pour manquer à mes volontés, ils prendraient pour prétexte le défaut de termes, de formes, qui ne sont que des simagrées, car c'est la volonté du testateur qui fait la loi, peut-être! Si j'ai le temps à Paris, je ferai passer tout cela par-devant notaire, mais au diable si j'en aurai le loisir, avec un procès.....Enfin je suis en bonne santé, j'ai bien ma tête à moi, je ne l'ai jamais eue meilleure, et je n'ai ni haine ni animosité..... Non, au moins contre aucun de ceux qui ont affaire ici. J'institue ma nièce Louise d'Esclavelles, femme de Bellegarde d'Épinay, ma légatrice universelle de tout ce qui est en mon pouvoir de disposer, meubles et immeubles; je crois que cela peut aller à trente mille écus, et je lui donne aussi une bourse de cuir, remplie de médailles, dont plusieurs d'or, antiques et modernes, que j'ai rapportées en grande partie du siège de Candie; c'est ma foi tout ce qu'il m'a valu."

Then follow descriptions of his servants: "cela boit et mange bien, cela a de la gaieté et fait rondement sa besogne," with legacies to them and to "the blind man who comes to the corner of the wood on Monday," and with a bequest to one unpleasant niece (Madame d'Épinay's great enemy) of "mon arbre généalogique afin qu'elle n'oublie pas que j'étais son oncle." This hearty and healthy figure is, to our thinking, the most really interesting feature of the book, and beside him his niece with her unreal loves, his nephew with his unenjoyed debaucheries, and the whole coterie of philosophers and people of fashion with its intrigues and petty brawls, look small enough.

The Prince. By Niccolò Machiavelli. Translated from the Italian by N. H. T. (Kegan Paul, Trench & Co.)

To the reader of the present day it seems impossible to account for the extraordinary obloquy which this famous treatise earned for its author among a generation whose political morality was what we know it to have been all over Europe in the sixteenth century. Yet that so it was is pretty clear. 'The Prince' was not published until after the author's death in 1527, and in the first part of 'Henry VI.,' which is one of Shakspeare's earliest plays, written probably within sixty years of it, we find "that notorious Machiavel" used in such a way as to show that the Florentine secretary's name was already a byword. It is curious that the first attack seems to have come from England, and from the pen of Cardinal Pole. Bacon, as might be expected, took a more philosophical view than either the churchman or that average respectability which Shakspeare may be held to represent. In the 'Essays' Machiavelli is often quoted or his thoughts referred to, and at least on two occasions he is mentioned by name—once with distinct approbation. The other passage (in the 'Essay on Goodness') affords an amusing proof of the extent to which his memory had already suffered. Bacon refers to him merely as "one of the doctors of Italy"; but the contemporary translator into Italian, as Mr. Wright informs us, has not been able to refrain from expressing his sentiments, and renders "*quel empio* Nicolo Machiavello." But where Bacon credits "Macciavel" with "noting well," the Italian "has only *un scrittore*." It evidently required a strong mind in those days to confess agreement with "Macciavel" even when his sentiments were in themselves harmless. Of all his works 'The Prince' was the one to which he chiefly owed his bad reputation—a reputation which even in these tolerant days, and in spite of Macaulay's well-known apology and Hallam's more careful apportionment of praise and blame, he has not wholly lost. It is curious, though, to notice that "Machiavelism" does not imply a following, corrupt or otherwise, of the practice, but of the preaching of Machiavelli. The word usually involves an idea of hypocrisy, or at all events of underhand dealing. Machiavelli is nothing if not cynical, even to the point of recommending judicious hypocrisy. The truth is, however, that 'The Prince' is not and does not profess to be a treatise on abstract morals; it is merely a summary of maxims founded on the observations made by an acute observer of the methods which in that country and at that time earned and confirmed success. It is not that he holds them up to approbation, or for that matter disapprobation either, though now and then we meet with phrases implying that he had a moral sense which did not approve; he merely says in effect, "If any man wishes to become and to remain the head of a state in Italy at the present time, this is, so far as I can see, the way in which he must go to work." He asks whether it is best for a prince to be loved or feared. "The answer," he says, "is that one would wish to be both" (not, as N. H. T. rather awkwardly puts it, "both are best"); "but seeing that it is difficult for these to exist together, it is safer to be feared than loved, if one has to go without one of the two." This is a specimen of his method. Even in his famous eighteenth chapter, "How Princes should keep Faith," he expressly bases his precepts on the general depravity of human nature:—

"A prudent prince [we are giving N.H.T.'s translation] neither can nor ought to keep his word when to keep it is hurtful, and the causes

which led him to pledge it are removed. If all men were good this would not be good advice, but since they are wicked [*tristi*, a sad lot] and do not keep faith with you, you in return need not keep faith with them.....It is necessary, indeed, to put a good colour on this nature [that of the fox, alluded to just above], and to be skilful in simulating and dissembling. But men are so simple, and governed so absolutely by their present needs, that he who wishes to deceive will never fail in finding willing dupes. One recent example I will not omit. Alexander VI. had no care or thought but how to deceive, and always found material to work on. No man ever had a more effective manner of asseverating, or made promises with more solemn protestations, or observed them less. And yet because he understood this side of human nature his frauds always succeeded."

In his sublime imperturbability Machiavelli often reminds the reader of Thucydides, and it is almost impossible not to believe that—if not in the original (and it seems more than doubtful whether he knew much Greek), at least in a translation—he had deeply studied the historian of the Peloponnesian war. That he does not make more direct references to him may arise from the fact that Italian history, ancient and modern, was both more to his purpose and more likely to furnish examples familiar to his readers. However this may be, such a passage as that which we have quoted might be paralleled with perfect ease from the older historian, whose moral character stands nevertheless well enough with the world. What excited special horror in regard to Machiavelli was probably the *personal* tone which he thought fit to give to his remarks. "*You* do this," "*you* must act thus," are for ever occurring; and his examples are mainly drawn from persons who were famous throughout Europe as the greatest scoundrels of the day, Cæsar Borgia being his brightest exemplar of all that a prince should be. Why the Church should have anathematized him it is not easy to see. But that John Bull, Philistine then as now, hating "foreigners," fancying he hated lies (chiefly because the truth is more often than not disagreeable to the hearer), wholly inappreciative of irony,—that he should, as soon as he heard it, coin from the Florentine secretary's name one of his most "dyslogistic" epithets was only to be expected. No doubt to this unfavourable judgment is due the fact that Machiavelli remained so long untranslated into English at a time when other masters of Italian literature were receiving the honours of subscription lists and large paper. The enterprise of Mr. Bohn produced the 'Florentine History,' 'The Prince,' and one or two small pieces; but the execution was not equal to the intention. N. H. T.'s translation, though in one or two places it might have been kept a little nearer to the original without injury to the English style, is so good as to excite a hope that he may render Machiavelli's masterpiece, the 'Florentine History,' the first attempt at a really scientific view of history which the modern world produced.

Before leaving Machiavelli it may be as well, perhaps, to give an extract showing him on his best side, that of a far-sighted Italian patriot. 'The Prince' concludes thus:—

"This opportunity then, for Italy at last to look on her deliverer, ought not to be allowed to pass away. With what love he would be received in all those provinces which have suffered from the foreign inundation; with what thirst for vengeance; with what fixed fidelity, with what devotion, and what tears, no words of mine can express. What gates would be closed against him? What people would refuse him obedience? What jealousy would stand in his way? What Italian but would yield him homage? This barbarian tyranny stinks in all nostrils. Let your illustrious house, therefore, take upon itself this enterprise with all the courage and all the hopes with which a just cause is undertaken; so that under your standard this our country may be ennobled, and under your auspices be fulfilled the words of Petrarch:—

> Brief will be the strife
> When valour arms against barbaric rage;
> For the bold spirit of the bygone age
> Still warms Italian hearts with life."

The triumph was not so near as Machiavelli thought, and even worse degradations than he had seen were in store for Italy. But we who have lived to see what he dreamt of can also see that he had at least the merit of keeping the flame of patriotism alive among a generation whose faults he judged only too accurately.

L'Ecclésiaste, traduit de l'Hébreu, avec une Étude sur l'Age et le Caractère du Livre. Par Ernest Renan. (Paris, Calmann Lévy.)

CANTICLES and Ecclesiastes, both passing under the name of King Solomon, have occupied M. Renan's attention more than any other of the Biblical books. The reason of this preference (he has only translated Job besides these two books) M. Renan gives at the beginning of the preface to Ecclesiastes in the following sentences. "Dans ce volume," M. Renan says,

"étrange et admirable, que la nation juive a donné à l'humanité, et que tous les peuples ont appelé *La Bible*, la pensée religieuse est tellement dominante, qu'on est d'abord surpris d'y trouver quelques pages profanes. Le Cantique des Cantiques prouve, comme on aurait bien pu le supposer *à priori*, que le vieil Israël fut jeune à son jour. Un second livre plus singulier, l'Ecclésiaste, montre que ce peuple, livré en apparence tout entier à la passion de la justice, ce vengeur ardent de l'honneur de Jéhovah, fut sceptique à certaines heures. J'ai essayé de faire connaître le Cantique des Cantiques et de résoudre quelques-unes des difficultés qu'il présente. Je regarde comme indispensable au tableau que j'ai voulu faire de la conscience d'Israël, d'examiner de près l'Ecclésiaste."

He then sums up the date of the composition of the book as well as its tendencies before proceeding to give his reasons in the following words:—

"L'ouvrage compte certainement entre les plus modernes de la littérature hébraïque. Quant au caractère sceptique ou épicurien de la composition, on peut incidenter sur le sens précis de deux ou trois versets; mais cela importe peu. Si l'auteur ne s'est pas tenu au scepticisme, il l'a traversé, il en a donné la plus complète, la plus vive, la plus franche théorie."

It is now generally admitted, even by Dr. Plumptre, that Ecclesiastes is full of Grecisms, and that the book must be placed at least as late as the time when Palestine was under the influence of Greek culture. On the other hand, it cannot be later than the time of Hillel (born 75 B.C., died about 5 A.D.), since the canonicity of the book was discussed in the schools of Hillel and Shamai. There is no doubt, judging from the last verses, which are by the redactor of the canon and not by the author of Ecclesiastes, that the book was, if not the latest book in the Bible as to its composition, certainly the latest admitted into the canon. This may be concluded also from its not being quoted in the New Testament and from its late translation into Greek. Whilst the earlier modern school, beginning with Ewald, thinks Ecclesiastes a production of the epoch before the Maccabees, Prof. Graetz takes it for a satire on Herod the Great, who is represented as the "old and foolish king" (iv. 13). M. Renan denies the Greek character of the book and places its composition a little earlier than Prof. Graetz. It will be well to quote M. Renan's own words, the admirable style of which could not be well reproduced in another language:—

"S'il fallait s'arrêter à une date un peu précise, c'est vers ce temps, une centaine d'années avant la naissance de Jésus, que je placerais la composition du *Cohélet*. L'auteur fut peut-être quelque arrière-grandpère d'Anne ou de Caïphe, de ces prêtres aristocrates qui condamnèrent Jésus d'un cœur si léger. Il fut l'idéal de ce qu'on appelait un sadducéen, je veux dire de ces gens riches, sans fanatisme, sans croyance d'aucune sorte en l'avenir, attachés au culte du temple qui faisait leur fortune, furieux contre les fanatiques et toujours enchantés quand on les mettait à mort. On a souvent cherché à prouver que la philosophie de l'auteur porte la trace d'une influence de la philosophie grecque. Rien n'est moins certain. Tout absolument s'explique dans le livre par le développement logique de la pensée juive. L'auteur est très probablement postérieur à Épicure; il semble bien cependant qu'il n'avait pas reçu d'éducation hellénique. Son style est sémitique au premier chef. Dans toute sa langue, pas un mot grec, pas un hellénisme caractérisé."

No plausible reason is given for the date of the composition of Ecclesiastes adopted by M. Renan, and we think that it is proved beyond doubt that the author of the book uses Grecisms. His language is not pure Semitic, and it has little resemblance to the language of the Mishnah as represented in the sayings of the Fathers or in the *Megillath Taanith* (the Scroll of Fasting), as M. Renan asserts. The style of Ecclesiastes is so peculiar and sometimes so rough that it can have been written only by a Jew unaccustomed to write Hebrew. Personal allusions, on the other hand, are so numerous in this book that we must rather agree with Prof. Graetz that it is a satire on the social state of Jerusalem at a certain period, and in our opinion at the time of the queen Salome, wife of Alexander Jannæus. Possibly the word *Koheleth* (Preacher), which is a feminine noun, involves some allusion to Salome, and this may have led to the reputed Solomonic authorship. Anyhow, M. Renan's opinion that the word *Koheleth* contains in its letters *k-h-l-t*, by some artificial alphabet, the enigmatical name of the author, like *Sheshakh* (Jeremiah xxv. 26) for Babel, and *Leb Kamai* (Jeremiah li. 1; A.V., "the midst of them that rise up against me") for *Kasdim* (Chaldees), is inadmissible. The word *kohelet* means "collector" or "compiler," and is analogous to the word *agur* (Prov. xxx. 1). Ecclesiastes, indeed, contains, besides the original satire, a heap of sentences borrowed from other writers, which M. Joseph Derenbourg believes to be written in rhythm—passages which M. Renan indicates by small print in his translation.

As we disagree with M. Renan as to the explanation of the word *Koheleth*, the date of the book, and its pure Semitic character, so we do not hesitate to reject his idea of making the author of Ecclesiastes a rich Jew, decrepit, old, and exhausted. "Le *Cohélet*," says our translator,

"est l'œuvre d'une absolue décrépitude. Jamais on ne fut plus vieux, plus profondément épuisé. Et dire que ce livre de scepticisme, à la fois élégant et morne, fut écrit peu de temps avant l'Évangile et le Talmud !.....Peuple étrange, en vérité, et fait pour présenter tous les contrastes ! Il a donné Dieu au monde, et il y croît à peine. Il a créé la religion, et c'est le moins religieux des peuples ; il a fondé l'espérance de l'humanité en un royaume du ciel, et tous ses sages nous répètent qu'il ne faut s'occuper que de la terre. Les races les plus éclairées prennent au sérieux ce qu'il a prêché, et lui, il en sourit. Sa vieille littérature a excité le fanatisme de toutes les nations, et il en voit mieux que personne les côtés faibles. Aujourd'hui, comme il y a deux mille ans, il clorait volontiers le rouleau sacré par cette petite réflexion de lecteur ami de ses aises : 'Assez de livres inspirés comme cela ! Trop lire fatigue la chair.'"

This is very poetical and might be effective in a philosophical drama ; but it is certainly out of place in a serious book, for the simple reason that it is not true. Further on in his work M. Renan is more explicit, and compares the author of Ecclesiastes to a modern rich Jew in Paris. He says :—

"L'auteur nous apparaît comme un Schopenhauer résigné, bien supérieur à celui qu'un mauvais coup du sort a fait vivre dans les tables d'hôte allemandes. Cohélet, comme nous, fait de la tristesse avec de la joie et de la joie avec la tristesse ; il ne conclut pas, il se débat entre des contradictoires ; il aime la vie, tout en voyant la vanité. Surtout, il ne pose jamais. Il ne se complaît pas dans l'effet qu'il produit ; il ne se regarde pas maudisant l'existence. Il est d'une parfaite sincérité en disant qu'il a tout trouvé frivole et creux. On aime à se le représenter comme un homme exquis et de bonnes manières, comme un ancêtre de quelque riche juif de Paris égaré en Judée du temps de Jésus et des Macchabées. Ce que le Cohélet, en effet, est bien essentiellement et par excellence, c'est le juif moderne. De lui à Henri Heine, il n'y a qu'une porte à entr'ouvrir."

M. Renan, not satisfied with this picture of the author of Ecclesiastes, makes him moreover a Stock Exchange Jew. He says :—

"Lui qui a bouleversé le monde par sa foi au royaume de Dieu ne croît plus qu'à la richesse. C'est que la richesse est, en effet, sa vrai récompense. Il sait travailler, il sait jouir.....L'enjeu da la vie est selon lui tout entier ici bas."

And he translates accordingly xi. 1, 2, as follows :—

"Lance hardiment ta fortune en haute mer ; avec le temps, tu la retrouveras agrandie. Fais-en sept parts et même huit ; car tu ne sais pas quel malheur peut tomber sur la terre."

And in the note he adds the following commentary :—

"Il recommande de diviser les chances de pertes, de varier les placements, pour que, si l'un est mauvais, l'autre fasse la compensation."

This interpretation is contrary to the Hebrew idiom. We could understand Voltaire giving such a meaning to these verses, but we should not have expected it from a Hebrew scholar. M. Renan in general is very arbitrary in his translation of Ecclesiastes ; he accepts nearly all the emendations in the text proposed by Prof. Graetz, and adds some of his own, which are certainly not happy. For instance, the reading of מצילהם for מנחם (iv. 1) is not only palæographically impossible (M. Renan gives too much weight to palæography in emending the text of a book evidently written in square characters), but also ungrammatical. We know a *matsilam*, but not *matsilham*. In many cases his translation requires justification in notes, which are not given. We should like to know how בעצלת (x. 18), suppressing the letters ים, can be rendered by "sur la tête des nonchalants"? Why not rather read *beatslat yad*, by slothfulness of "the hand," opposed to "hands" in the parallel passage? To sum up, we believe that the author of Ecclesiastes would not recognize himself in M. Renan's translation. And surely, if the doctors of the Mishnah found such difficulties in admitting Ecclesiastes into the canon, they would never have overcome their scruples if M. Renan's interpretation were the right one. Or is a poetical translation not bound by the trammels of faithfulness?

English Men of Letters.—Gray. By Edmund W. Gosse. (Macmillan & Co.)

THIS volume can hardly fail to take its place as the best life of Gray that has appeared. Everything of importance that is to be found in Mitford's 'Life' and in the volumes of Gray's correspondence with his various friends is given here, together with a number of interesting facts and excerpts (never before printed) from the Pembroke MSS. Nor is this all. Mr. Gosse has so dexterously marshalled the facts at his command, he has informed them so completely with his own idea of his hero, that his monograph forms a picture of Gray more vital than any that has preceded it. It is in the marshalling of facts and in informing them with an idea that the gift of the narrator manifests itself. The human mind has a natural repugnance to the reception of new facts until they are warmed into life by a central and vital thought. There is, for instance, nothing interesting in the fact that in Cornhill, on the 26th of December, 1716, a son called Thomas Gray was born to a certain milliner "of a genteel family" until the reader's mind has first received some image of Thomas Gray as a poet or as a man. It may be that the image of Thomas Gray existing in the reader's mind is the very image which the biographer intends to challenge and to overthrow, while to achieve this and to set up his own conception of Gray it might, perhaps, be convenient if the biographer could find that Gray was born on the 26th of June instead of the 26th of December, or that his mother was not a milliner, or, if a milliner, that she was not genteel. He is not like the novelist, who can easily make his facts interesting by inventing them, and inventing such only as indicate the qualities of the character to be depicted. Every new fact is in the hands of the novelist as a new touch of colour upon the artist's canvas, for it has been invented with this express view. But the biographer must not invent his facts. He must only present what he finds, though he may be conscious that the really important facts—those which would have truly pointed to the motive force of the character—have been lost or never recorded, while those which have been preserved for the biographer's use are perhaps either barren of any suggestion at all, or, taken by themselves, suggest to the ordinary reader a character such as the biographer believes to be untrue. The biographer who would be both picturesque and truthful has not only to start, and to show the reader that he starts, like the novelist, with a distinct conception of the character, but he has to develope this conception by aid of materials which are at once imperfect, scattered, and inflexible.

Mr. Matthew Arnold and Mr. Gosse, for instance, have both the same idea of Gray in his relation to the eighteenth century, an idea the exact opposite of the general one. In the eyes of these gentlemen Gray was not a *petit maître* of genius who, loving Keswick, yet feared to soil his shoes, but a spirit of gigantic proportions imprisoned in the sealed jar of eighteenth century convention. Yet the facts brought forward in support of this view point just as readily the other way—point, indeed, to the conclusion that what prevented him from speaking out was not that "he, a born poet, fell upon an age of prose," but that he lived in fear of that ogre Gentility, who ruled the eighteenth century, and, after being for a time overthrown by the French Revolution and Romanticism, is raising his head again in our own time as boldly as ever—so boldly that what is now called poetry would even ten years ago have been called *vers de société*. Mr. Gosse tells us that in later life, when Gray became fascinated by the youthful graces of Bonstetten,

"the very mention of his poems was distasteful to Gray. He would not permit Bonstetten to talk to him about them, and when the young man quoted some of his lines, Gray preserved an obstinate silence like a sullen child. Sometimes Bonstetten said, 'Will you not answer me?' But no word would proceed from his lips. Yet this was during the time when, on all subjects but himself, Gray was conversing with Bonstetten on terms of the most affectionate intimacy. .....They read together Shakespeare, Milton, Dryden, and the other great English classics, until their study would slip into sympathetic conversation, in which the last word was never spoken."

The Rev. W. Temple, who wrote an account of Gray in the (old) *London Magazine* of March, 1772, is outspoken upon this point :

"He also had in some degree that weakness which disgusted Voltaire so much in Mr. Congreve. Though he seemed to value others chiefly according to the progress they made in knowledge, yet he could not bear to be considered himself merely a man of letters, and though without birth or fortune or station, his desire was to be looked upon as a private gentleman, who read for his amusement."

The highest praise Gray could give to West's 'Ode to May' was that it was "genteel." Literary gentility is curious. In Greek literature the genteel finds no place, and it is quite proper that its birth should have been among a people so comparatively vulgar as the Romans of the Empire. A Greek Horace would have been as much an impossibility as a Greek Racine or a Greek Pope. Gentility, in short, is the true opposite of naturalism. It is the attempt of civilized societies at a certain stage to get away as far as possible from the conditions of the natural man. It reached its acme in France in the time of Louis XIV., and in England at the

XUM

very time when Gray began to write. Yet we must not suppose that in the eighteenth century Nature turned out men without imaginations and without the gift of natural speech; she does not work in that way. Imagination and the gift of natural speech are as old as the childhood of the human race and as new as the children of to-day. But in the eighteenth century poets were too genteel to be natural. Who, for instance, had a finer imagination than Collins? Who possessed more fully than he the imaginative power of seeing a man asleep on a loose hanging rock and of actualizing in a dramatic way the peril of the situation? But there is something very ungenteel about a mere man, as the eighteenth century had discovered. A man is a very homely and common creature, and the worker in "polite letters" must avoid the homely and the common; whereas a personification of Danger is Augustan and highly genteel. Hence Collins, having first imagined with excessive vividness a man hanging on a loose rock asleep, set to work immediately to turn the man into an abstraction:—

> Danger, whose limbs of giant mould
> What mortal eye can fixed behold?
> Who stalks his round, a hideous form,
> Howling amidst the midnight storm,
> Or throws him on the ridgy steep
> Of some loose hanging rock to sleep.

But Mr. Swinburne will launch his thunderbolts at any one who says a word against Collins, so we will turn to Gray and encounter the lambent summer lightnings of Mr. Arnold and Mr. Gosse. Take Gray's 'Elegy.' No one, not even Mr. Gosse himself, admires this noble poem more than we do. Yet its great fault is lack of individual humanity. Who is this "me" to whom, in company with "Darkness," the homeward-plodding ploughman "leaves the world"? The thoughts are fine; but is the thinker a moralizing ghost among the tombstones, or is he a fleshly philosopher sitting upon the churchyard wall? The poem rolls on sonorously, and the reader's imagination yearns for a stanza full of picture and pathetic suggestion of individual life—full of those bewitching qualities, in short, which are the characteristics of all English poetry save that of the Augustan era. At last, however, the poet does strike out a stanza of this kind, and immediately it sheds a warmth and a glow upon all that has gone before—vitalizes the whole, in short. Describing the tomb of the hitherto shadowy moralizer, Gray says:—

> There scattered oft, the earliest of the year,
> By hands unseen are showers of violets found;
> The redbreast loves to build and warble there,
> And little footsteps lightly print the ground.

Now at last we see that the moralizer is not a spectre whose bones are marrowless and whose blood is cold, but man, the homely creature that Homer and Shakspeare loved to paint; a man with friends to scatter violets over his grave and little children to come and mourn by it; a man so tender, genial, and good, that the very redbreasts loved him. And having written this beautiful stanza, having printed it in two editions, Gray cancelled it, and no doubt the eighteenth century approved the omission. For what are children and violets and robins warbling round a grave compared with "the muse's flame" and "the ecstasy" of the "living lyre," and such elegant things?

Now our contention is that, so far from Gray having struggled in vain against eighteenth century gentility, he never spoke out, because he loved gentility, and to speak out has always been ungenteel. He wrote so little because, as he himself declared, he could not write more. It is impossible to write much if you are very genteel. Congreve found this to be so, as did Horace before him, and as do all genteel writers. To cultivate himself like a Dutch garden, to be the fine gentleman all round, was the ambition of Gray. Yet in Gray gentility could coexist with a noble self-respect, which is not often the case with gentility. His notion that it was beneath a gentleman to take money for his inventions from the too-willing booksellers speaks well for the good breeding of both parties; in these days the obstacle to the passage of money mostly comes from the other side.

Gray's position as a poet is beyond all cavil; in relation to the mass of his work he is the greatest "maker" of single poetic lines in our literature, and in the quality of these lines Shakspeare alone is his superior, unless Keats be considered so. But he was much more than this. Though not strong enough to throw off the conventional diction of his time, he was yet strong enough to speak to us through that diction with a voice that thrills the ears of those who have listened to the song of Coleridge, Keats, and Shelley. We endorse all that Mr. Gosse says about the 'Elegy,' excepting that he calls it a lyric:—

> "The fame of the 'Elegy' has spread to all countries, and has exercised an influence on all the poetry of Europe, from Denmark to Italy, from France to Russia. With the exception of certain works of Byron and Shakespeare, no English poem has been so widely admired and imitated abroad; and after more than a century of existence, we find it as fresh as ever, when its copies, even the most popular of all, Lamartine's 'Le Lac,' are faded and tarnished. It possesses the charm of incomparable felicity, of a melody that is not too subtle to charm every ear, of a moral persuasiveness that appeals to every generation, and of metrical skill that in each line proclaims the master. The 'Elegy' may almost be looked upon as the typical piece of English verse, our poem of poems; not that it is the most brilliant or original or profound lyric in our language, but because it combines in more balanced perfection than any other all the qualities that go to the production of a fine poetical effect. The successive criticisms of a swarm of Dryasdusts, each depositing his drop of siccative, the boundless vogue and consequent profanation of stanza upon stanza, the changes of fashion, the familiarity that breeds indifference, all these things have not succeeded in destroying the vitality of this humane and stately poem."

No doubt one great cause of the vast popularity of this noble poem is its sonority. The English elegiac quatrain is naturally the most sonorous and at the same time the most pathetic in the language, and when the poet is as careful as Gray was to use, whenever occasion offered, the Drydenic pause, that is to say "the third-foot pause," the impressiveness of this stanza becomes irresistible.

Although moralizing in churchyards had been a favourite occupation of English poets ever since Hamlet's famous sermon at Elsinore, there can be no doubt that Parnell's 'Night Piece' had more than any other poem to do with the origin of Gray's 'Elegy'; and had Parnell been fortunate enough to select our great elegiac stanza instead of those stiff lines which may be called eighteenth century octosyllabics, his poem, displaying as it does the very quality which the 'Elegy' lacks, local colour, must have become too popular for Gray to work on the same lines. But almost nothing can stand against sonority. Little touches of picturesque detail, such as Parnell supplies, support the reader's imagination. While reading in the 'Elegy' about "the solemn yew-tree's shade," "the ivy-mantled tower," and the rest of the conventional accessories of such a situation, the reader yearns for such concrete pictures as we get in plenty, not only in Wordsworth and those who succeeded him, but in Parnell, as in the following lines:—

> The grounds which on the right aspire
> In dimness from the view retire:—
> The left presents a place of graves
> Whose wall the silent water laves;
> That steeple guides thy doubtful sight
> Among the livid gleams of night.
> * * * *
> Those graves, with bending osier bound,
> That nameless heave the crumbled ground,
> Quick to the glancing thought disclose
> Where toil and poverty repose.

Yet no one who reads Gray's letters can doubt that he had a finer eye for local colour than any other writer of his time save Chatterton. Mr. Gosse's remarks upon Gray's love of nature are appreciative and interesting. This side of Gray's nature has never before been brought into such prominence.

As a metricist Gray is to be placed nearly in the front rank. Nothing is easier than to invent a new metre, as Cowley has abundantly shown; nothing is more difficult than to invent one whose changes are governed by those laws of verbal melody which are inexorable in the most complex as in the most simple forms. This Collins did and perhaps Gray too.

We are glad, besides, to find Mr. Gosse doing justice to Horace Walpole and his extraordinary friendship for Gray. Since the appearance of Macaulay's brilliant essay it has been the fashion to speak of Walpole with contempt. But among those who sneer at Walpole where is there one who would have behaved to a friend as Walpole behaved to Gray? Those three years' travel on the Continent had such an important influence upon Gray's life, brought into contact as he was with all the culture and refinement of his time, that it is impossible to imagine Gray apart from that experience. The inert melancholy which was natural to him had fallen upon Gray when he left Cambridge in 1738, and he was a man without hopes and without plans. Walpole carried him off to the Continent, paid all his expenses, introduced him as his equal to the best people in Europe, and actually made his will before starting, appointing Gray his sole legatee, and did this without apprising his friend of what he had done. Surely such heroic friendship as this more than atones for all the little weaknesses with which we are accustomed to associate the name of Horace Walpole.

In style Mr. Gosse has produced no book equal to this—none in which ease and precision are so happily combined. If it leaves anything to be desired, it is, perhaps,

a little more glow and energy. But, from some cause or another, energy—that literary quality which enables the writer to bear the reader's imagination along whether the reader agrees with the writer or not—seems to have gone out of fashion. Sometimes, however, Mr. Gosse does undoubtedly rise to positive eloquence, as, for instance, in the long passage in which, discussing the relations between Gray and Fielding, he defends, with much generous warmth, what he calls the "mutual admiration societies" of our own day. And no doubt his arguments deserve attention.

"We may here confess," says he, "that Gray certainly misses, in common with most men of his time, the one great charm of the literary character at its best, namely, enthusiasm for excellence in contemporaries. It is a sign of a dry age when the principal authors of a country look askance on one another. Some silly critics in our own days have discovered with indignant horror the existence of 'mutual admiration societies.' A little more acquaintance with the history of literature might have shown them how strong the sentiment of comradeship has been in every age of real intellectual vitality. It is much to be deplored that the chilly air of the eighteenth century prevented the 'mutual admiration' of such men as Gray and Fielding."

We have not seen the strictures of the "silly critics" who are here castigated; but perhaps they, the critics, might reply that the point as to whether "mutual admiration societies" are sublime or ridiculous depends greatly upon the quality of the members—depends, in short, upon the very question here raised and begged, whether the mutual admirers are or are not "such men as Gray and Fielding."

A passage at the close of this volume provokes surprise and dissent. Of the many acts of vandalism perpetrated since Wyatt's time, one of the most wanton was the destruction of the college hall where Gray was seized with his fatal illness, and which had been trodden by the feet of Spenser. Such sacrilege, it might be supposed, would have been resented by every man who cared for poetry. Yet Mr. Gosse speaks of it as if the substitution of commonplace modern Gothic for the venerable buildings that Gray loved were a fitting tribute to his hero's memory! This curious insensibility to the charm of art and history is unworthy of a writer of Mr. Gosse's distinction.

NOVELS OF THE WEEK.

How They Loved Him. By Florence Marryat (Mrs. Francis Lean). 3 vols. (White & Co.)

A Ball-room Repentance. By Mrs. Edwardes. 2 vols. (Bentley & Son.)

AFTER a careful study of Ouidà's recent works Mrs. Francis Lean has written a stronger book than she ever wrote before. So much may be said for 'How They Loved Him.' It is not a pleasant story, either in its details or in its general aim. The seduction of an innocent girl of fifteen or sixteen and the substitution of her illegitimate child for a legitimate one that died are certainly not pleasant details. But it is still less pleasant to find a woman writing down her sex and exposing its weaknesses with a mixture of pity and contempt. Such things must, it is said, be done in the interests of truth and of art; but, on the whole, it is a sounder rule of art for the novelist to try above all things to please her readers, rather than to turn the novel into the social pulpit. Even in doing that an author might with advantage try to teach by example as well as by precept if she had in view the improvement rather than the demoralization of her public. In Mrs. Francis Lean's pictures of life there is no single character that is not base or mean or weak. It is no doubt the tendency of fiction nowadays to be what is called forcible, and if the writer is too weak to make a show of power in any other way she must make it by creating a strong effect of disgust. Mrs. Lean has succeeded in doing this, and, such as it is, she may claim the credit of success.

'A Ball-room Repentance' is not Mrs. Edwardes's best book, but it is so much better than the majority of the productions of her school that, judging by their standard, it is easy to overrate its merits. Yet at all events there is a story in the book and some decided character. Mrs. Edwardes shows, too, that strong feeling, if not genuine passion, can be dealt with without outraging propriety, and readers of the fashionable lady-novelists are pleased to be reminded that this is possible. Mrs. Edwardes lays her scenes at various foreign places—Monaco, Nice, Rome, and Switzerland—and adds something to her pictures of life by pleasant treatment of the backgrounds; but landscape is not her strongest point. The heroine is well conceived; and the scheming mother is a pleasant variation, with her taste for miscellaneous reading, which, by the way, recalls 'A Blue Stocking.' Mrs. Edwardes to some extent discovered the character, and is entitled to make the most of it. It has capabilities which she has not exhausted. The end of the story of 'A Ball-room Repentance' is happy, and it is prettily told; but many readers will think that the heroine was a little too thoughtless and unkind in her final treatment of the poor young Oxford man, who, after all, had adored her, had saved her life, and had proved his devotion in the manliest and most unselfish way. She ought to have said more than "We shall probably never meet again; good-bye, and I am much obliged to you."

HISTORICAL AND ANTIQUARIAN PUBLICATIONS.

IN noticing Mr. J. T. Godfrey's *The Court of the Honour of Peverel, in the Counties of Nottingham and Derby* (Nottingham, Derry), it is scarcely necessary to explain that the honour of Peverel took its name from William Peverel, the Norman, about whose parentage so much nonsense has been written. Gundreda de Warenne herself has not given occasion for more unreasoning speculation. The court of the honour does not seem to have differed materially from other manorial courts which existed in more than sufficient plenty during the Middle Ages. This one—owing to a series of fortunate, or perhaps we should say unfortunate, circumstances—remained in being, a shadow of its old self, until it was abolished by statute a little more than thirty years ago. Its ancient powers had long been curtailed, and in modern times it was but a cumbrous and uncertain machine for the recovery of debts. It had its prison down to the end of the last century. A gentleman who visited this building in 1798 gives a horrible picture of the misery of the poor inmates. If half of what he says be true he might well speak of it as a "disgraceful dreg of the feudal law." On one occasion, we are told, all the prisoners were liberated by their gaoler because he had no food allowed him for their support, and he was told that if any of them died from starvation he would be liable to be tried for murder. Mr. Godfrey's little pamphlet is a creditable compilation from printed sources. He might have added much had he carried his researches further.

IN his paper on *Kings' Briefs: their Purposes and History*, printed for private circulation, Mr. Cornelius Walford has undertaken to illustrate a phase of our social life which has been hitherto almost entirely neglected by historians and antiquaries. As the first book on the subject with any claims to be considered an historical treatise, it is worthy of notice, especially as great care has evidently been taken in the accumulation and arrangement of the material. The notices of briefs, as far as they occur in printed literature, are so widely scattered, and occur in such unlikely and obscure places, that Mr. Walford is not to be severely censured because he has not come upon every notice of them which has been deemed worthy of printers' ink. It is probable that the word "brief" will convey but a very vague idea to many persons of the present generation. Etymology will not help them, and most of our popular books of reference are silent, or only give information of a very vague character. A brief, in the sense Mr. Walford uses the word and in which it was painfully familiar to our grandfathers, was a royal mandate ordering collections to be made in churches and chapels, for building or rebuilding churches, for the relief of sufferers from fire, and sometimes also of those who had sustained losses on the sea, or of suffering Protestants abroad and refugees in this country. When they originated is unknown; for many generations they seem to have been very useful and not more subject to abuse than other State aids have been found to be. In the latter part of the last century, owing to the development of the newspaper press, they had become wellnigh useless. They were abolished by Act of Parliament in 1828. The demand that they should be put an end to had been clamorous for several years before they ceased to be issued. The expense of the machinery by which they were worked was very great, and the result commonly but small. In many parishes no collections were made; in some the ministers refused to read them; in others it was determined in parish vestry that they should be disregarded, but that a small sum, commonly one shilling, should be paid from the church-rate on each. No complete list of briefs has, as far as we know, ever been compiled, and if there be not among the State papers material for making such a calendar, we doubt if it will ever be possible to make one complete. The pages of local archæological societies' reports contain many extracts from parish accounts bearing on the subject; but it does not seem to have been the duty of the clergyman or any one else to keep a register of them. The most complete catalogue we know of is in the parish register of Stanton St. John's, near Oxford. This furnishes a pretty complete catalogue from 1662 to 1759 with a few memoranda of earlier date. The whole was printed in the tenth volume of the *Reliquary*. The Journal Books of the House of Commons furnish interesting data for the historian of briefs. On January 31st, 1643, Henry Marten, the regicide, was appointed "to bring in an order for inhibiting any collections upon any brief under the Great Seal." The king and the Parliament were then at war, and we imagine that it occurred to the latter that money might be raised in this manner to supply the king's wants, or to reward those who had suffered in his cause. On January 10th, 1648, a further order was made that no collections should be made on briefs except under the Great Seal "directed by order of both Houses of Parliament." Notices remain of several of these Parliamentary briefs. They seem to have been issued mainly to raise

funds for repairing the mischief done during the civil war. Bridgenorth, Milton Abbas, and Hagborne are among the places for which we have evidence of collections being made. It would be an interesting fact to ascertain whether there was a brief for the succour of the Protestant sufferers in the great Irish rebellion. We think there was, but are not in a position to prove it. The Netherlands came forward with a magnificent subscription in aid of their coreligionists. The then unexampled sum of 31,218*l.* 12*s.* 6*d.* was raised by voluntary contribution and deposited in the hands of eight commissioners, citizens of Amsterdam and Middleburgh. If Mr. Walford would compile a list, as complete as possible, of all briefs which have been issued, he would be doing service to the students of local history.

To the third part of the second volume of the new series of the *Transactions of the Essex Archæological Society* (Colchester, Wills), Mr. J. E. Price contributes an instructive paper on a Roman altar recently found at Colchester. It is dedicated, as it seems, to the Deæ Matres by a citizen of some place represented by the contraction Cant. This was no doubt quite intelligible when the sculptor carved it, but to us it conveys no certain knowledge. The mother goddesses are described in this inscription as Sulevæ, a word of rare occurrence in inscriptions. The Deæ Matres were invoked, as is shown by inscriptions, throughout the greater part of the Roman world; their worship was, it is probable, a late development. As household goddesses they were the beneficent protectors, as contrasted with the Lamiæ, who were objects of dread, from the belief that they wandered about at night and devoured the flesh of human beings. Two inscriptions have been found in Britain dedicated to Matribus Parcis. These foul beings could only have been invoked to ward off calamity. Mr. W. H. King prints some Essex church inventories of the time of Edward VI. They contain little that is not to be met with in other papers of the same kind, but will be of service to local antiquaries. There is also a careful but not very conclusive paper, by Mr. H. Ecroyd Smith, on an ancient burial-place at Saffron Walden; and a paper on the sons of the clergy who were admitted to Colchester Grammar School during a part of the seventeenth century.

The Journal of the Derbyshire Archæological and Natural History Society, Vol. IV., 1882, is hardly as valuable a volume as that issued in 1881. There is no paper of any special pre-eminence, and although the publication of the correspondence about the rebuilding of the chancel of Hope Church will probably do good, yet it is not satisfactory reading. The Rev. J. Charles Cox figures largely in this volume, four papers of varied lengths being contributed by him. Of these, by far the most important is 'The Sacrist's Roll of Lichfield Cathedral' in 1345, printed in the original Latin with a full translation. Although very curious in itself, it has little or no relation to Derbyshire. Mr. Sleigh's paper on Sir John Statham of Wigwell is interesting, as is that by the Rev. William Hope, entitled 'Jottings about Old Derby.' In another paper twenty-two early FitzHerbert charters are printed at full length, but it is not easy to imagine why this has been done. They are very ordinary charters, and the information they afford might have been given in three or four pages. For all practical purposes abstracts in English would have been quite as useful to the members of the Society and would have been read, whilst these will probably be skipped. 'The Stained Glass at Norbury Manor House' is the title of an illustrated paper by Mr. George Bailey, which will interest antiquaries; whilst Mr. Thomas Heath's article on 'The Pleistocene Deposits of Derbyshire and its immediate Vicinity' is addressed to the natural history members of the Society.

Collections for a History of Staffordshire, edited by the William Salt Archæological Society, Vol. II., 1881, is, like its predecessor, a fine portly volume and is a very worthy successor to it. It consists of two parts, the first of which is taken up by two very elaborate papers, one embracing the Staffordshire Pipe Rolls of the reigns of King Richard I. and King John, 1189 to 1216; and the other entitled 'The Staffordshire Chartulary,' Series I. of Ancient Deeds. These occupy no less than 276 pages, and are edited by the late R. W. Eyton, whose loss will be nowhere more keenly felt than by the members of this Staffordshire society. In part ii., which occupies 147 pages, the contents are more varied. The Hon. and Rev. G. O. Bridgeman concludes his 'History of the Parish of Blymhill,' commenced in vol. i., and gives a number of pedigrees, more or less carefully worked out, of families connected with the parish. Much labour has been spent on this history, which is in every way one to be highly commended. Mr. H. S. Grazebrook contributes a "Coppy of the Armes taken in the Visitation of ye County of Stafford made in Anno 1663 et 1664, by William Dugdale, Esq., Norroy K. of Armes," the original of which is to be found in Lansdowne MS. 857 in the British Museum, said to be in Dugdale's own hand. Mr. Grazebrook has annotated this MS. with much care and skill, and at the end he prints the "disclaimers" of gentility publicly made at Stafford, during this the last Visitation of the county, in August, 1664. The remaining paper in this part is by the same gentleman, and is entitled 'Obligatory Knighthood *temp.* Charles I.' It gives "the names of those Staffordshire gentlemen who compounded with the Commissioners for not taking upon themselves the order of knighthood at the coronation of that king," and is extracted from the original in the Public Record Office. This is, we believe, the first time such lists have ever been printed, and there is no doubt that the example which Mr. Grazebrook has here set will be followed in many other quarters. The members of the William Salt Archæological Society have every reason to be well satisfied with this volume of their transactions.

The Scandinavian Kingdom of Dublin (Dublin, Thom & Co.), a work of the late Charles Haliday, a Dublin merchant, has been edited by Mr. John P. Prendergast, who has added some notice of the author's life. The history of the Scandinavians in Ireland is no novel theme. It has been treated of by many writers from the twelfth century down to our own time. To those conversant with the materials already accessible in print in connexion with the Norsemen in Ireland the work before us will not afford much novel information. The portion treating of the "Scandinavian kingdom of Dublin" is composed of excerpts translated from succinct Irish annals, vague sagas, and other published works, brought together, it would appear, mainly with a view to exhibit the connexion which of old subsisted between Northumbria, Iceland, and Dublin. The annalistic form adopted by the author tends to augment the aridity inseparable from a work consisting chiefly of dates and brief entries relative to persons of whom little more than the mere names has survived. Thus much of the work is occupied with matter similar to the following, which we extract from pages 101–2: "Baugus was father of Gunnar of Gunnarsholt, and foster-brother of Ketel Hengs. .....Thordus, son of Viking, who settled at Alvidro, married Theoldhilda, daughter of Eyvind Austman; Ulf Skialgi, who colonized the whole promontory of Reykeanes, married Beorgo, another of his daughters, consequently both were great-grandsons of Cearbhall; and Thrandus Mioksiglandi, who colonized the country between Thiorsa and Laxa, was son of Biorn, the brother of Eyvind Austman." The prominence given by the author to details of this class renders more remarkable the circumstance that he has omitted some matters of the highest importance in connexion with the Scandinavians of Dublin. The reader will look in vain in this volume for a detailed account of the Hiberno-Norse coinage, or of the formidable engagement at Clontarf, near Dublin, A.D. 1014; or for a notice of the records, still extant, in which are specified lands held by the last of the Scandinavian rulers of that city. The subject of the coins is of special interest, and has been strangely allowed to remain in obscurity, although so far back as 1708 attention was called to it in a Latin treatise by a Swedish writer. An account of the Hiberno-Norse money, with accurate delineations of the specimens still extant, would be a valuable contribution to historical as well as to numismatic knowledge. Some of the details in the volume before us in connexion with the locality of the "Thengmote" and other vestiges of the Norsemen of Dublin were, we believe, given a few years since in Mr. Gilbert's history of that city. To Mr. Haliday's work on the Scandinavians are appended reprints of two papers by him, on the ancient name of Dublin, and on Dublin harbour in 1673, with reproductions of maps of the river, port, and parts of the city in the seventeenth and eighteenth centuries.

AMONG the recently issued works upon technical and especial branches of science is the *Urkundenlehre: Katechismus der Diplomatik, Paläographie, Chronologie, und Sphragistik*, of Dr. F. Leist in Weber's series of illustrated manuals (Leipzig, Weber). This is a handy little volume, carefully constructed as a manual for beginners. In many respects it resembles the well-known works of Chassant and the 'Chronology of History' by Sir Harris Nicolas, but it is more comprehensive and systematic in its arrangement. As in most educational works written by Germans, the arrangement is admirable. The materials employed by the scribes, the styles of writing in vogue at various epochs, the conventional formulæ of language, the miscellaneous methods and manners of fixing, reckoning, and calculating dates, and the many interesting points which belong to the study of seals and early monograms, all form sections in this manual, which is illustrated with a series of fac-similes of chrisms, monograms, and signatures of German monarchs and magnates found upon original *diplomata* now preserved among the royal archives at Munich. It is in reference to the fac-similes that the work acquires especial usefulness, for these curious specimens of ornamental, or, to speak accurately, ugly, flourishes and twirls are seldom to be met with except in the large, expensive, and often inaccessible productions of Ducange, Mabillon, Gloria, and the authors of the 'Nouveau Traité.' Dr. Leist's manual has the merit of being portable, concise, accurate as far as it goes, and instructive in design and character. If it were translated into English and sold at a moderate price, there can be little doubt that it would be in request among those who have found pleasure in following the work of the Palæographical Society. At present students have to consult a dozen works to obtain necessary information upon the elements of their chosen art which this one supplies within modest limits.

UNDER the title of *L'Entrevue de Bayonne de 1565 et la Question de la Saint-Barthélemy* (Paris, Fischbacher), M. Combes has printed some letters which he found at Simancas, and which he thinks show that the massacre of St. Bartholomew was planned at the meeting at Bayonne. They seem to us hardly to bear this idea out.

WE can only acknowledge the receipt of the first volume of an excellent *Histoire de France sous le Ministère de Mazarin*, by M. Chéruel (Hachette). It forms a supplement to the same writer's history of the minority of Louis XIV., and concludes with the downfall of the Fronde.

SCHOOL-BOOKS.

The Teacher's Handbook of Object Lessons. By A. Park. (J. Heywood.)—It is to be hoped that the "younger members of the teaching

profession," for whom Mr. Park writes, will skip the dedication and preface and mistrust the index, for the first two are curiously rich in solecisms, and the third is ingeniously inaccurate. The lessons themselves, however, are instructive and well arranged, and on the whole laudably free from errors and misstatements, although inaccuracies are not altogether absent. Thus neither the young anatomist nor the young grammarian should too unhesitatingly accept the statement that "the entire wing" (of a bird) "may be regarded as composed of three joints, united by a hinge," &c.; nor should the members of a senior class in their researches into the nature of flame be left without some explanation of the fact that it is produced from gas which is *let into* pipes (the italics are Mr. Park's). A commendable feature of this collection of model lessons is that the "object of the lesson" is clearly set forth at the beginning of the notes and kept steadily in view throughout them. Young teachers too often give oral lessons without definite aim and plan in their own minds, and, as a result, make but hazy and evanescent impressions in the minds of their scholars. A few of the subjects are ill chosen, being hardly susceptible of treatment in lessons of the kind. Of this sort are those discussed on pages 296 and 262. The lesson to an advanced class, "to show how interesting and instructing experiments can be performed in various branches of physics by the use of very simple apparatus," becomes, if we may with due apology say so, as nearly as possible twaddle; while that on phosphorus is of no educational value, because the "senior class" to which it is given has no preliminary chemical knowledge, and might therefore, without much affecting its utility, learn it backwards. Still the great bulk of the lessons, those which are not too advanced or of too ambitious scope, are likely to be of very great use to pupil-teachers and students in training colleges, for whose benefit they are compiled.

The Shilling Manual of Trigonometry. By W. Marsham Adams, B.A. (Burns & Oates.)—Mr. Adams tells us that in the preparation of this manual his first object was clearness; his second, continuity; and his third, cheapness. In publishing the work at one shilling the third object has undoubtedly been attained, but we are inclined to think that both clearness and continuity—whatever the author means the latter to include—have been sacrificed to cheapness. The first chapter opens with a definition of trigonometry which is eminently unsatisfactory, and prepares us for the unphilosophical treatment of the subject which follows. The statement that "trigonometry is the branch of mathematics which deals with the position of objects, whether accessible or inaccessible," is no doubt true as far as it goes, but we do not expect mathematicians will be inclined to accept it as at all an adequate definition of the nature and scope of the study. Mr. Adams is not happy in some of the proofs and explanations contained in the earlier chapters. There is a break in the "continuity" which he sets before him as one of his three main objects when, following the statement $\frac{\text{Circumference}}{\text{Diameter}} = \pi$, we read, "so that this quantity represented by the symbol π is the circular measure of a semicircle." Certain steps in the reasoning are absent, and if they were present it would have been better to say that π is the circular measure of two right angles. It would be easy to point out other examples of want of straightforwardness and clearness in style—*e. g.*, in the chapter on symbols of direction and in that on the ambiguous case. Mr. Adams every now and then indulges in mysterious utterances, as when he states that surds are quantities "which must be considered as existing intellectually." Imaginary quantities have always presented difficulties to beginners; but quantities which "exist intellectually" will, we fear, be quite beyond the grasp of readers of 'The Shilling Trigonometry.' In the chapters devoted to trigonometrical calculations and measurements a great deal of useful information is clearly and tersely given—much that will prove helpful to the student. The graduated exercises at the close of the book seem well chosen, but their use would have been greater if the answers had, where practicable, been given.

OUR LIBRARY TABLE.

MESSRS. BELL & DALDY deserve hearty thanks for celebrating the centenary of *Cecilia* by publishing a convenient reprint in two volumes of Fanny Burney's best novel. Mrs. Ellis supplies a confused introduction, but some excellent notes. We trust that many jaded novel-readers will turn to the delightful book which delighted their great-grandfathers.

MESSRS. KENT have hit upon an ingenious device. They have printed separately each of Shakspeare's plays in clear though small type, and they have manufactured a pocket-book in French morocco, provided with a patent clasp and a pencil, and just large enough to hold one of the plays. The Shakspeare fanatic can thus carry any play he chooses in his pocket without exposing it to wear and tear.

WE have to thank Messrs. W. H. Allen & Co. for the *India List*, one of the best works of reference published.—*The Royal Navy List* has also been sent to us by Messrs. Witherby. This useful publication has reached its nineteenth number.

WE have on our table *Lord Macaulay, Essayist and Historian*, by the Hon. A. S. G. Canning (Smith & Elder),—*The British in India*, by the late Right Hon. Sir W. M. James (Macmillan),—*How India is Governed*, by A. Mackenzie (Kegan Paul),—*Visitor's Guide to San Remo*, by J. Congreve (Stanford),—*A Visit to Madeira*, 1880-81, by D. Embleton (Churchill),—*A Holiday in South Africa*, by R. W. Leland (Low),—*Exercises on Morris's Grammar*, by J. Wetherell (Macmillan),—*An Account of the Harvard Greek Play*, by H. Norman (Boston, U.S.A., Osgood & Co.),—*The Scientific Basis of National Progress*, by G. Gore (Williams & Norgate),—*History of the Elementary School Contest in England*, by F. Adams (Chapman & Hall),—*An Essay on the Philosophy of Self-Consciousness*, by P. F. Fitzgerald (Trübner),—*Old Faiths in New Light*, by N. Smyth (Ward & Lock),—*Exercises in Legible Shorthand*, by E. Pocknell (The Author),—*Lectures on Tactics for Officers of the Army and Militia*, by Major F. H. Dyke (Allen & Co.),—*Church Rambles and Scrambles*, by a Perambulating Curate (Hodges),—*The Verbalist*, by A. Ayres (New York, Appleton & Co.),—*Selections from the Writings of the late William Forsyth* (Aberdeen, Smith & Son),—*Suicide*, by J. J. O'Dea, M.D. (New York, Putnam),—*Esau Hardery*, by W. O. OGAM INSCRIPTION IN SCOTLAND.

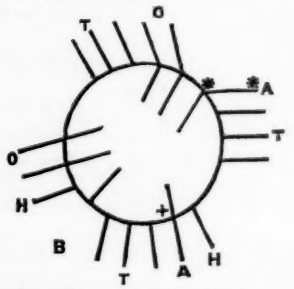
Kinnaird Castle, Brechin, N.B.



NEAR the house of Logie-Elphinstone, towards the centre of Aberdeenshire, stand three pillar stones, moved some sixty years ago from the adjoining moor of Carden, where, with another now destroyed, they formed a (probably circular) group. They are unhewn boulders, four or five

feet high, and all of them bear the symbols peculiar to North-Eastern Scotland, the seat of the Pictish monarchies. On one are engraved the crescent with the V sceptre-bar and the double-disc unbarred; on another are the conventional elephant and the V barred crescent; on the third appear the V barred crescent and the Z barred double-disc—both of these superimposed on the traces of an earlier unbarred double-disc; and towards the top of the stone there is a circle studded with Ogam characters, regarding which I desire to say a few words.

This inscription, remarkable from its unique circular arrangement and its association with the symbols in an evidently very early form, has not yet been interpreted, for reasons so well stated in the late Mr. Brash's posthumous work, 'The Ogam Inscribed Monuments of the Gaedhil' (p. 358), that I ask leave to quote the passage at length:—

"Surmounting all, on the head of the monument, there is an incised disc, upon the circumference of which are cut certain Ogam characters, and arranged in such a manner as to be a complete puzzle to the antiquary. As usual with Scottish Ogams, the scores are all of equal length, or nearly so, and there are apparently no vowels; there are two scores which cross the line, but as they are oblique we must presume it to be a consonant; another difficulty is that from the continuity of the stem-line we have no clue to the beginning or ending of the legend, while the confused position of the scores in relation to each other renders the satisfactory reading of it exceedingly difficult, if not impossible. Dr. Moore, in his 'Ancient Pillar Stones of Scotland,' has given an elaborate and learned disquisition on this legend; he pronounces it to be in Hebrew, and to read 'Obhen Pethech,' *i. e.*, 'stone of entrance.' .....Unhappily the doctor's philological labour has been lost, having been expended upon an inaccurate copy of the inscription, which is correctly given on the engraving illustrating this article, and which has been copied from a cast taken from the original stone."

This statement excludes Dr. Moore's version; Mr. Brash offers none; and regarding the cast referred to, a note by Mr. Atkinson (editor of the volume) informs us that it has gone astray, and that the separate engraving of the inscription (pl. xlviii.), which professes to be correct, is taken from a drawing made from a paper mould. As this last version differs from those given in Dr. Moore's work and in the Spalding Club 'Sculptured Stones of Scotland' (pl. iii., No. 2), I was anxious to satisfy my doubts by inspection of the original stone, for which an opportunity has recently occurred. The result

is that while Mr. Atkinson's drawing proves to be fairly accurate, it requires the addition of an unaccountably omitted stroke (* * in my diagram). This stroke is clear, though a little shallow; its existence was fully recognized by two gentlemen who were with me when I found it. Also, an ambiguous dotted line near the bottom of the circle needs removal, the course of the stroke (†) being perfectly defined. These corrections made, it remains to read and interpret the inscription, which the above rough sketch accurately represents as far as concerns the general arrangement of the letters.

In itself the circular plan offers little difficulty, the 'Book of Ballymote' (MS., c. A.D. 1370–90) giving the key for Ogams thus written; but three problems arise in considering this particular inscription: (1) Where does it begin? (2) In what direction does it move? (3) What is the power of the angled strokes? Should they be divided, and treated as consonants in conjunction with the adjacent strokes on the same side of the stem line? or are they angled consonants with a special power not mentioned in the key, or belonging to another key? or are they vowels, for some reason deflected from their usual straightness?

The almost certainty that an old Scottish circular inscription must move "deasil" (with the sun) seemed to answer the first question, leaving the second to be resolved by trial. Regarding the third, after many experiments it occurred to me that the angled strokes were the ordinary Scottish Ogam vowels, and that their deflexion was meant to indicate where the inscription began and ended. The stroke most to the left does not quite join at the angle, but the interval is too small to be important. Applying this rule, order took the place of confusion, and the inscription thus appeared, ATHAT BHOTO.

As regards the import of this inscription, circumstances seem to confine it to religious or burial rites; a mere proper name can hardly be signified, unless, perhaps, in conjunction with some burial formula, and it probably relates to the ancient paganism of Pictish Albyn. Leaving exact interpretation to those skilled in Celtic antiquities, I will only venture on a few brief suggestions.

Athat may denote Achadh or Atha, a plain, secondarily a place or site, or possibly Acad or Adad, a sun-god; and Bhoto is perhaps Bodh or Budh, variously described as a solar or a lunar deity; the whole word thus either signifying the Worship-place of Bodh, or representing the compound name Adad-Bodh.

But I believe that both names and symbols will be found to relate to ancient forms of the worship of the sun-god Mithras, whose representative among the Celtic and other nations seems to have been the double-natured deity Tho, Thoth, Teut, Teutates, Theo, Diw-Taith, to mention some among many names. On this view, Athat may be At-Taith, the Father Creator (active), and Bhoto may be Bo-Tho, the Bovine Tho, the Generator (passive). In old Persian theology the Mithraic bull is named Aboudad. The double-disc beneath the inscription is the sun, twofold in its aspects of summer force and mastery, and winter restfulness and subjection—or, with a slight change of view, the diurnal and nocturnal sun,—the active and the passive Generator. The moon relates to it in the latter capacity, and the crescent's dominant position in the present case may signify that the stone or temple-circle was chiefly dedicated to the nocturnal sun. The sceptre-bar across each symbol probably signifies divine, or spiritual, or magical energy. So far as known to me, this is the only instance of the super-imposition of one symbol on another. There is but one other inscribed symbol-bearing stone of similarly early character (at Kinnellar, some twelve miles from Logie-Elphinstone), and this shows in the angle of the crescent's V bar the letter T, the sacred initial of Teutates, which the Druids are stated to have frequently inscribed on the bark of cruciform trees.

Did space permit, these suggestions might be supported by references to many authors, but the subject is too large and difficult to be discussed on the present occasion. I may add that 'The Early Races of Scotland,' by the late Col. Forbes Leslie, is the best portable book for those who desire information regarding the Scottish sculptured stones and their symbols.

SOUTHESK.

TALKS WITH TRELAWNY.

II.

February 13, 1872.—Called again on Trelawny. He seems to be increasingly inclined to publish the further Shelley memoranda supplied by himself and Miss Clairmont, at his own expense if needful; on this point he will probably give me his decision next Tuesday. He agrees with me that several details in the Clairmont correspondence are too confidential for publication. I asked whether he thinks that Shelley, had he lived to the age of sixty or seventy, would have gone on writing poetry as his chief occupation, without taking up any other occupation in life. He says yes—poetry and prose. Trelawny and other friends had especially encouraged Shelley towards dramatic writing; and Trelawny thinks that if he had once had any public (more particularly any stage) success as a dramatist he would have taken up that line of writing, "filling up the gaps left by Shakspeare," more especially in English or other great historical subjects. Shelley once spoke of his poems as "alms for Oblivion"; and Trelawny believes he really did not regard them as destined to live for generations or ages. He never recited them or read them out within Trelawny's experience, but may from time to time have shown a new stanza or so to his wife. A good deal of talk ensued about the profusion and hospitality of American living and means of life; about Sir Charles Napier, the Indian general, whom Trelawny knew well and admired intensely, &c. Napier, on being appointed Commander-in-Chief in India, was required to dine with the Queen—a sort of thing he had always held aloof from. He mustered black trousers of his own, and put on a black coat and dress boots belonging to his valet. Trelawny believes that were war to break out between America and England (as now half apprehended by some people in connexion with the Alabama claims, &c.), England would suffer a downfall comparable to that of France last year in real damage; while, even if England were continuously victorious in naval engagements, &c., America would be damaged to no extent worth reckoning practically.

February 20.—I called again on Trelawny. He says that Shelley had an uncommon faculty for abstracting himself from anything going on about him in which he took no interest. If he met thoroughly stupid, commonplace persons, this faculty came into play: in miscellaneous company he would get into talk with such people as he felt disposed towards, of which he would judge mostly by the look of the face. He was a good judge of character. His voice was not to be called disagreeable; in the high notes it was somewhat unpleasant, but he generally spoke in a low tone, very earnest and distinct. Trelawny does not recollect his ever saying anything funny: he "never laughed." (This, I suppose, is not *literally* true.) Trelawny knew the second Mrs. Godwin, whom he thought an ordinary sort of person; was concerned in obtaining her a pension after her husband's death, and Rogers very handsomely lent his assistance. Trelawny knows nothing as to the sale of his own book on Shelley and Byron. Moxon did once, some years ago, send him an account of the sale, but he did not look into it.

February 27.—In the evening I called again on Trelawny, and once more had much interesting conversation—more, perhaps, about Byron to-day than Shelley. I mentioned to him two principal points in which a well-informed friend has contested statements made by Mrs. Godwin in the Shelley correspondence sent over by Miss Clairmont. He attended to what I said, but did not enter minutely into details; in fact, as he told me once before, he does not make himself closely, sometimes he is hardly at all, acquainted with the missives he receives from Miss Clairmont. These last two times I have seen him he has scarcely (to-day not once) started the question of publishing the correspondence; and I incline to think he won't take any definite steps—for some while to come, at any rate. To my intense satisfaction, he gave me a little piece (not before seen by me) of Shelley's skull, taken from the brow. It is wholly blackened—not, like the jawbone, whitened—by the fire. He has two such bits of jawbone, and three (at least) of the skull, including this one now in my possession. I must consider how best to preserve it. I inquired whether he has any of Shelley's hair. Answer—No, the scalp having, with the hair, been all eaten off the corpse when recovered: this point, I think, has never yet been notified. Shelley, Trelawny says, was not good at reciting poetry (this, however, I have seen stated contrariwise in some other authority); nor yet Byron, whose voice was full and melodious, but he had an affected twang in reciting, probably acquired at Harrow. Trelawny possesses the velvet cap—blue, now much faded—which Byron wore for about the last three years of his life, he making little use of a hat. Byron's head is known to have been small, Shelley's still more so. Byron's went up sloping to the apex. The shape of Shelley's could not be dis-

cerned owing to the thick growth of his hair. Byron's last words to Trelawny as they parted after landing in Greece were, "Now, Trelawny, it depends on what you do whether I put you into the next canto of 'Childe Harold' or into the next of 'Don Juan.'" A capital anecdotic touch this: it appears, but not identical in terms, in Trelawny's book. Byron projected, after leaving Greece, going to Naples, and there writing a fifth canto of 'Harold.' As to 'Don Juan,' he had no fixed plan, but would have continued it indefinitely—"as long as Murray pays 1,000*l.* a canto," he said to Trelawny. He enjoined Trelawny, in the event of his death, to have him buried in a desert islet near Maina—"don't treat me as you did Shelley"; and showed him the islet in the course of the voyage, saying it was the one he had had in view in 'The Corsair.' However, Trelawny did not find an opportunity of complying with this request. Byron had no religion at all, though a goodish deal of superstition; had *not* (as has been said) any superstition as to ill luck on Fridays. Shelley had no superstition of any kind whatever. Trelawny says the book which has been lately published about Medora Leigh is substantially true, but not that she really was Byron's daughter; the belief that she was so, however, was the impelling cause of Lady Byron's separation. I observed that I supposed a good deal of Trelawny's own early career is set forth in the 'Adventures of a Younger Son.' He assented, but did not seem to encourage further inquiry as to details. He stated, however, that the person there named De Ruyter really existed: he was of Dutch extraction, named Senouf (as I understood the name), and had a commission from Napoleon as a privateer. Byron was in a marked and extreme degree indifferent to ruins. He said on one occasion of an introduction proposed by Trelawny, that he wished to know no men under thirty nor women beyond it. Was to some extent jealous of Shelley's genius; had been startled at the evidence of dramatic power in 'The Cenci.' Trelawny says positively that 'Epipsychidion' was printed in Italy, in a version of Italian poetry written by Shelley himself for Emilia Viviani to read. I think he says that he personally saw it; scarcely gather whether or not he implies that this Italian-printed book contained the English poem along with the Italian, but I suppose he does imply this; at any rate, he is very decided as to the Italian version. This is an entirely new point in the history of Shelley's poems. Spite of Trelawny's positiveness, I should almost suspect some treachery in his recollection—tempered, however, by the consideration that there certainly is some inherent probability in the notion that Shelley would have put the poem into such form as that Emilia (who, I believe, was unacquainted with English) could read it. Mrs. Shelley, as Trelawny says, avoided writing anything about the Italian version; and in fact (as I reminded him) she preserved equal silence, in print, with regard to the English poem itself. Trelawny thinks he could have saved Shelley from the storm had he been able to accompany him. The oar found under rather suspicious circumstances after the wreck he believes to have really come from Shelley's boat, it being after an English pattern, though made in Italy. Capt. Roberts, who saw the last of the boat on its departure, knew but little of Shelley. Mavrocordato was not a genuine patriot. Shelley never walked out with his wife while Trelawny knew them: he was out almost all day, and would sleep under a tree or the like when he felt inclined. Dreamed much. He retained the habit of lying down before the hearth (recorded by Hogg), and often sat on the floor as readily as on a chair. Had no longer the habit (which Hogg speaks of) of propelling pellets of bread, nor that of launching paper boats, though he did this once at Trelawny's request. He would gaze a great deal at falling autumn leaves or leaves drifting on a stream. Fear was positively unknown to Shelley. (This Trelawny has said to me more than once.) The "Madam, I never saw Fear," was just a phrase in Nelson's mouth, but would have been strictly true of Shelley.

March 3.—I finished reading Elze's 'Life of Byron,' the English version. The initials "R. N." are given in it, and appear to be the initials of the translator. Trelawny had asked me to find out, if possible, who the translator of the book is, he himself being somewhat scurvily treated therein by the translator as apart from the German author.

March 5.—I called again on Trelawny. I asked him whether Shelley had—as Medwin intimates—any of the prepossessions of an aristocrat; whether, for instance, he would have had any preference for a well-bred intelligent man of good family over a like man of no family. Trelawny says Shelley had no such feeling; nor, indeed, does he think that even Byron had much of the aristocratic feeling in this particular direction; his disagreements with Leigh Hunt were not assignable to any such cause. Col. Leigh, the husband of Byron's half-sister, squandered his means on the turf, for which he had an infatuation. Mrs. Leigh was a person of full average intelligence. She was not the least like Byron in person; nor was any one of her children so, as far as Trelawny can say. He did not know Lady Byron, but seems to have a regard for her character, or at any rate the natural bent of her character. Trelawny wears no under-clothing at any season, even at his present advanced age; and even a light great-coat is the exception with him. Does not accurately know what became of Whitcombe, the man who attempted to assassinate him in Greece. He disappeared from society, and is no longer alive. Leicester Stanhope he considered a weak-minded man. He imported a number of Bibles into Greece, about the time of Byron's expedition there, for diffusion among the people; a large portion of the stock was eventually used for cartridge paper.

March 13.—I went to Trelawny's for the purpose more particularly of meeting Mrs. Hogg (Mrs. Williams). She entered readily and kindly into talk with me on any Shelleyan subject I started, though she did not continue of her own accord to dilate on such matters. Has never revisited Italy since 1822, the year of Shelley's and her husband's death. Shelley, she says, could not be called handsome or beautiful, though the character of his face was so remarkable for ideality and expression; his voice decidedly disagreeable. She was cognizant of his suffering from spasms, but not in any very frequent or alarming degree. Has heard him read passages from 'Prometheus Unbound' and from others of his poems; yet he did not make an ordinary practice of this. She related to me unsought the same anecdote which Trelawny has told me ere now—about Shelley's going out in a boat with her and her children, and suddenly asking her whether she and himself should forthwith try "the great unknown." She replied (as she tells me, for I think Trelawny gives greater detail), "Hadn't we better land the children first?" which was conceded. After this she did not again venture out on the water with Shelley. She thinks Shelley might have returned to England at some time or other had his life been prolonged; but he had no direct intention of doing so as long as she knew him. A portrait of Shelley which Mrs. Hogg possesses is, according to Trelawny, the one that Clint executed after a drawing done by Lieut. Williams.

April 4, 1873.—I called to see Trelawny, Miss T——r having notified to me the other day that they are now in town for a short while. I see no diminution in his energy and vigour. He has a very good opinion of Denis MacCarthy's recent book, 'Shelley's Early Life'; of MacCarthy himself he knows nothing beyond what I was able to tell him. I informed him of the work I am now engaged on regarding Shelley—collection of all writings of his having an autobiographical character—and inquired whether he would allow me to insert in it such hitherto unpublished letters of Shelley as he possesses, chiefly those which Miss Clairmont has lately sent him. He replied, "I don't know what they contain." It appears to me that, if he can be brought really to consider the matter, he is likely enough to accede to my request, but that the "if" is dubious. I abstained from pressing the point. He has lately sat to Millais for a picture (as he describes it) of an old mariner amid his grandchildren, narrating some of his adventures; speaks highly of the unsparing labour which Millais gives to his pictures. He says it is true that Byron went to Greece partly in order that he might be away from La Guiccioli, to whom he was by that time sufficiently indifferent, and of whom he would speak somewhat slightingly among intimates; "all his ardour was in pursuit, not in possession." His letters to La Guiccioli during the earlier stages of the courtship are, Trelawny believes, about the finest things ever done of their kind. They filled a good-sized box, and Mrs. Shelley read them, and told Trelawny about them. He supposes them to be still extant. Shelley knew nothing of boxing, or other athletic work for the hands; his power was in the lower limbs. Rogers, Hobhouse, and Moore were all decided freethinkers, but hypocritically held aloof from Shelley; when dining in his company along with Byron, they would wholly ignore him, to which Shelley paid no heed. (But Trelawny's memory must be at fault here regarding Moore, whom he certainly cannot ever have seen in the company of either Shelley or Byron.) Every now and then Shelley's scholarship would be in requisition on some point or other, and then he outshone all the *convives*. He had a certain respect and sympathy for Taafe (the Irish gentleman then at Pisa) on account of his undertaking the great task of translating Dante; did not, however, want his company, and if he had reason to think him coming would say, "I smell a bore in the wind." Trelawny insists that Sergeant-Major Masi, with whom that much-talked-of row in Pisa occurred, was substantially in the right. The English party were straggling all about and obstructing the road, and Masi, being on duty, had to pass as best he might: in his doing this, Taafe, a bad rider, took needless offence, and appealed to Byron. It was Byron's coachman who used the pitchfork on Masi, the coachman generally being a very inoffensive man. Trelawny is convinced Shelley would not have come to his death as he did had Trelawny been freed from the quarantine embarrassment at the moment, and at liberty to accompany him. Capt. Roberts, who built the Don Juan barque, is just dead; died in or near Leghorn. Leigh Hunt's incessant punning—the puns themselves being far from good—was a great infliction. I presented to Trelawny one of the two Japanese swords that I bought two or three week ago. He is not just now in correspondence with Miss Clairmont, nor has he taken any steps in regard to her communications of recent years; he thinks, however, of addressing her again soon.

April 14.—I called on Trelawny in the afternoon. He tells me he has given away the Japanese sword I lately presented to him; and he showed me another sword—far from identical, but bearing a considerable resemblance to mine as to arrangement of metal work, &c. This sword, Trelawny tells me, is one which he looted on a Chinese junk (the same case, I understand, that he describes in the 'Younger Son'), and he considers it to be Chinese, and that mine was also the same—not Japanese. A friend being present most of the time, Mr. Dillon, I got less Shelleyan conversation with Trelawny than usual. He says that Shelley was of a silent turn. During his lifetime (I think between the first period of Trelawny's acquaintanceship with Shelley and the second) Trelawny met Shelley's sisters, including Elizabeth, at an evening party. He says they were quite unlike the poet in appearance, though this seems contrary to the evidence of others. On again seeing Shelley, Trelawny mentioned the meeting to him; Shelley looked at him very earnestly, and then walked straight out of the room, his feelings being too strong for him. Trelawny thinks (but I fear not very resolutely) that he will produce a Shelley-Byron book this year, reissuing his previously printed matter with some more added. Mrs. Williams possesses a good portrait of herself by Clint, done when she was young. Shelley never spoke about himself.

April 21.—I got the piece of Shelley's skull, which Trelawny gave me more than a year ago, enclosed in a locket, having glass on both sides, wholly plain.

April 22.—I called on Trelawny. Showed him the piece of Shelley skull in the locket. Shelley's face, Trelawny says, was very mobile. The look of it, as centred in the eyes, highly impressive at a distance. Trelawny having often been fixed hereby when he happened to see Shelley at some considerable distance up the Lungarno of Pisa. Trelawny is much in the habit of saying "Good God." In relating to me this evening something that Shelley had said to him, he began by observing, "Shelley said, 'Good God, Trelawny!'" but he then corrected himself, explaining that Shelley did not, in fact, ever use that expression. Shelley, when he was alone, or supposed himself so, would sometimes recite passages of his own poetry; would, especially when out in the country, recite poems then in course of composition, so as to try on his own ear the effect of the metre and diction; was extremely fastidious as to diction, thinking that there would be always some best word or phrase of all discoverable for any particular passage, and that the fashioning of the verses ought not to be given up until this was attained. Trelawny again told me (what he has said more than once) that Shelley cared nothing about children; once, in Trelawny's presence, Shelley stepped over his own child Percy, near the threshold of the house, without observing that it *was* Percy till the nurse told him. On that occasion Trelawny made a jocular remark about "a wise man who knows his own children," when Shelley rejoined, "A *wise* man wouldn't have any." Trelawny also reiterates a denial (so far as his own observation and belief extend) of the statement—made by Medwin, if I recollect aright—that Shelley was short-sighted. He confesses to having a considerable sneaking kindness for Louis Napoleon, to which the Italian war of liberation powerfully conduces; he thinks, however, that he wanted resolution. Knew something of him in England. Trelawny showed me a book of Reminiscences by Villemessant recently published. Here some mention is made of Trelawny, as he was known in Paris at one period of his life; and, among other instances of his extraordinary strength, it is stated that he would take three "noisettes," each between one several pair of fingers, and would then close his fingers together and shatter the nuts. Trelawny tells me this is true. He spoke of the fine form (which he has often mentioned) of Shelley's legs, and how "finished" his hands and feet were. I asked whether a cast of the hand had ever been taken. No—nobody ever paid any attention of that sort to Shelley. Trelawny had tried hard to get Eastlake, then in Italy, to paint Shelley's portrait, but couldn't rouse his interest in the matter. Eastlake had evidently no sort of idea that Shelley would ever be regarded as illustrious.

W. M. ROSSETTI.

TRANSITIONAL FORMS IN FOLK-LORE.

IT is not often that we can get hold of a piece of evidence as to the variation in form of a popular superstition during its traditional existence from early times to modern times. But I have come across a very valuable example and propose to ask your attention to it.

In that very curious volume, published by the Record Commission, Cockayne's 'Leechdoms, Wortcunning, and Starcraft of Early England,' vol. i. pp. 399–405, is recorded a charm for bewitched land:—"Here is a remedy how thou mayst amend thine acres, if they will not wax well, or if therein anything improper have been done, by sorcery or witchcraft: Take then at night, ere it dawn, four turfs on the four quarters of the land and mark how they formerly stood. Then take oil and honey and barm, and milk of every cattle which is on the land, and part of every kind of tree which is grown on the land, except hard beams, and part of every wort known by name, except the buck bean (?) only, and add to them holy water, and then drop of it thrice upon the place of the turfs and then say these words." I need not repeat the formulæ; they are exceedingly curious and quite archaic in structure, but too long for quotation. "And after that bear the turfs to church, and let a mass priest sing four masses over the turfs, and let the green surface be turned towards the altar, and then let the turfs be brought to the places where they were before ere the setting of the sun." Then follows a description of how the turfs are to be laid. Then let him "gather all his plough apparatus together; then let him bore a hole in the plough beam and put therein styrax and fennel and hallowed soap and hallowed salt; then take the seed as above and put it on the body of the plough; then say [leaving out the formula]. Then let one drive forward the plough and cut the first furrow; then say [leaving out the formula]. Then take meal of every kind, and let one bake a broad loaf as big as will lie within his two hands, and knead it with milk and with holy water, and lay it under the first furrow; then say," &c.

Nothing could be more singularly significant of old agricultural custom than this. Its special importance appears to me, however, to rest upon the fact that it is an early (Anglo-Saxon) record of a tolerably complete formula, which we can study in its completeness instead of having to gather together the fragments in which traditional folk-lore has preserved it. Of these fragments I think I have discovered some examples. The *Warrington Guardian* for November 26th, 1881, records that "a woman asked the vicar of Lower Gornal in Staffordshire to cut a turf four inches square from a grave in which lay a man who could not lie at ease because of a guilty conscience, and stated that the putting of the turf on the communion table would cause all the ghosts to disappear." Here the formula is practically the same as the Anglo-Saxon, though the *motif* varies. But noting that the hearth was the primitive household altar, the following custom is much nearer the Anglo-Saxon. At the Yuletide festival in Banffshire and Aberdeenshire, Mr. Gregor says, a little water along with a handful of grass or a small quantity of moss was carried into the house and placed on the hearth (*Antiquary*, vol. v. p. 5; cf. Gregor's 'Folk-lore of N.E. Scotland,' p. 160). Then, again, Mr. Gregor says: "When the plough was 'strykit,' *i. e.*, put into the ground for the first time in autumn or spring, to prepare the soil for seed, bread and cheese, with ale or whiskey, were carried to the field and partaken of by the household. A piece of bread with cheese was put into the plough, and another piece was cast into the field to 'feed the crows'" ('Folk-lore of N.E. Scotland,' p. 181). Here, the materials being different, the formula is as nearly as possible identical. This is parallel to Hindu custom, of which I will give one instance from the Ambala district in Lahore. The zamindárs go to their fields with seven leaves of the akh, which they place on the harrow, and on the leaves some parched rice and sugar, and burn incense (*Roman-Urdú Journal*, Lahore, vol. iii. 1880, p. 11). There are thus *two* items of modern folk-lore—(1) the carrying from the field to the altar, (2) the blessing of the plough—which belong to *one* primitive custom. I leave these facts to tell their own tale of evidence as to transitional forms in folk-lore, or I fear you would not grant me the space my letter already claims. G. LAURENCE GOMME.

THE ETYMOLOGY OF "TRIFLE."

THE supposition that *trifle* is the same word as *truffle* is not mine, but due to Diez. Instead of there being no evidence for it, he points out that the Neapolitan *taratufolo*, a simpleton, is obviously the same word as the Italian *tartufolo*, a truffle; and that the Milanese *tartuffol* means both a truffle and a fool. He adds:—"Die sprache übertrug den namen einer kleinen frucht auch auf eine kleinigkeit in moralischen sinne, eine posse, albernheit." Littré also dwells upon the identity of O. French *truffe*, a jest, and *truffe*, a truffle; and both of these words are also found with the spelling *trufle*. I think we may accept their explanation, and that this point can hardly be made to tell against me.

As to the word *trash*, it is now some months since I came to the conclusion that my explanation *does* apply, as is now suggested, to the passage in the 'Tempest.' Continual labour suggests such corrections in abundance; and I shall be much obliged to all friends who will send me corrections for a future edition, though it may be several years before I shall have the strength of mind to face the thorough revision of my dictionary. Perhaps I ought to add that I only intend to make corrections where I am convinced that they are needed. I wish the work had been found more worthy, that England might have the credit of it.

WALTER W. SKEAT.

*** As to *trifle* and *truffle*, we hasten to acknowledge that Mr. Skeat has furnished the evidence we asked for. We have now little doubt that he is right. As to *trash*, we are glad to find ourselves in agreement with Mr. Skeat on the point he mentions. We should have liked, however, to have from him an explanation of the passage we quoted from 'Othello.'

MR. G. P. MARSH.

ANOTHER of the literary diplomatists who have reflected high credit on the Western Republic has passed away. The death is announced of Mr. G. P. Marsh, the well-known philologist. He belonged to a family of considerable distinction in Vermont, U.S. His grandfather was a noted Whig, and was for many years Lieutenant-Governor of the State, while his father was district attorney of Vermont under the presidency of Washington. Mr. G. P. Marsh was born at Woodstock, Vermont, March 17th, 1801, and was educated at Dartmouth College. Like his father, he practised successfully as a lawyer, and became a member of the Vermont Legislature, and afterwards of Congress. In 1849 his diplomatic career began by his appointment as United States Minister at Constantinople, and he remained there till 1853. In 1861 he was sent by Mr. Lincoln to represent his native country in Italy, and he continued to hold this post till his death. For some time past Mr. Marsh had been in failing health, and the news of his death is no surprise to his friends.

Mr. Marsh's philological studies were mainly directed to the Teutonic languages. He made his first appearance as an author with a disquisition on 'The Goths in New England.' This was followed by an Icelandic Grammar, founded on Rask's; but the books by which he is best known in England are his 'Lectures on the English Language,' published in 1860, and his 'Origin and History of the English Language,' which followed two years later. The former work consisted of lectures delivered at Columbia College, New York, and the adaptation of it edited by Dr. William Smith has become a popular school-book in this country.

Mr. Marsh was also known as a naturalist. He wrote a work on the camel and the possibility of introducing it into America; he made a report to the Government of his native state on pisciculture; and in 1864 he brought out an elaborate work, 'Man and Nature,' the theme of which may be stated in his own words:—"The earth is fast becoming an unfit home for its noblest inhabitant; and another era of equal human crime and human improvidence, and of like duration with that through which traces of that crime and that improvidence extend, would reduce it to such a condition of impoverished productiveness, of shattered surface, of climatic excess, as to threaten the depravation, barbarism, and perhaps even extinction of the species."

Whatever may be thought of the soundness of Mr. Marsh's theories, the author's strong individuality makes his book suggestive; and he introduced into it many interesting observations made during his travels in Northern and Southern Europe, in Egypt, &c. An Italian translation, under the title of 'L'Uomo e la Natura,' was brought out under the author's auspices at Florence some years ago.

SALE.

WE can now finish our account of the sale by Messrs. Puttick & Simpson of the third instalment of the Sunderland Library. On Friday the 21st and Saturday the 22nd the chief lots were: James I., his Majesties Poetical Exercises at Vacant Houres, original edition, sm. 4to., Edinburgh, R. Waldegrave, 1591, 21*l.* 10*s.* A collection of 2,475 engraved portraits, mounted and bound in 12 vols., 50*l.* Josephus, Opera, printed upon vellum, by P. Maufer, at Verona, 1480, 196*l.* Justinianus, Institutiones, *editio princeps*, printed upon vellum by Peter Schoeffer at Mayence in 1468, folio (one leaf wanting, some margins cut close), 140*l.* Of the Juvenals the one which fetched most was the second Lyons counterfeit of the Aldine edition of Juvenal and Persius, printed upon vellum, 1501, which brought 17*l.* 5*s.*; some leaves were soiled and one was mended. Of the books sold on Monday, Tuesday, and Wednesday the following may be mentioned:—Louise Charly dite Labé, Œuvres Poetiques, 8vo. (soiled), Lyons, Jan de Tournes, 1555, 61*l.* Lactantius, Opera, *editio princeps*, printed in the monastery of Subiaco in 1465 (with the two leaves of *errata* supplied in MS.), 210*l.*; fol., Romæ, Sweynheym et Pannartz, 1468, 41*l.*; Venet., Adam, 1471, printed upon vellum, fol., 110*l.*; Rostock, 1476 (the first book printed at Rostock), 59*l.* Lafontaine, Fables, first edition, Paris, D. Thierry, 1668, 62*l.* Lancelot du Lac, 3 vols. in 1, fol., Paris, J. Petit, 1533 (stained), 22*l.* Lascaris, Grammatica Græca, *editio princeps*, Mediol., D. Paravisinus, 1476, small 4to., 57*l.* Leland, Genethliacon, and other scarce original pieces, 17*l.* Livius, Historia, 3 vols. fol., Romæ, Ud. Gallus, 1470, 30*l.*; fol., Venet., Vind. de Spira, 1470, 28*l.*; Spira's edition, printed upon vellum, Decades I. and IV. only, 2 vols. illuminated, 520*l.*; in French, translated by P. Berchoire, fol., Paris, Regnault, 1514, 29*l.* 10*s.* Logus, Hendecasyllabi, Elegiæ, &c., printed upon vellum (perhaps unique), sm. 4to., Viennæ Pannoniæ, H. V. Silesius, 1529, 70*l.* Lopez de Gomara, Historia de las Indias, con la Chronica del Peru por Ped. Cieça de Leon, the rare first edition, fol., 1552–3, 59*l.* L'Orme, Le Premier Tome d'Architecture, original edition, finely bound, with arms and monogram of Henri Duc d'Orléans on sides, fol., Paris, F. Morel, 1567, 125*l.* Lucanus, Pharsalia, *editio princeps*, fol., Romæ, Sweynheym et Pannartz, 1469, 38*l.* Luciani

Opera, printed upon vellum at Florence in 1496 (title wanting), 59*l.*; Lucianus, Lucius sive Asinus, cum Prefatione Pogii, lit. goth., with woodcuts, sm. fol., ex off. et ductu Ludovici Hohenwanng de Elchmgen, s. a. (15 ll.), 88*l.* Lucretius, second Aldine edition, Venet., 1515, Grolier's copy, 300*l.* Macrobius, Opera Omnia, *editio princeps*, fol., Venet., N. Jenson, 1472, 20*l.* 10*s.* Magalhanes de Gandavo, Historia da Provincia Sancta Cruz (the original edition, very rare), 43*l.* Joannes Magnus, Historia Gothorum, Henry II.'s copy, 20*l.* 10*s.* Thursday saw the following books sold:—Maldonado, Cancionero, sm. 4to., Madrid, 1586 (one of the 'Don Quixote' library), 30*l.* Itineraries in Latin of Mandeville, Ludolph of Suchen, and Marco Polo, very rare, probably printed at Antwerp, sm. 4to., without date, 150*l.* Manilius, Astronomicon, *editio princeps*, Nuremb., Jo. de Regiomonte (*circa* 1472), 20*l.* Marcellinus, Romanorum Imperatorum Historia, *editio princeps*, fol., Romæ, 1474, 12*l.* 5*s.* Marco Polo, Description des Provinces, &c., de l'Inde Orientale (a very rare French translation), sm. 4to., Paris, Est. Groulleau, 1556, 18*l.* Marguerite de Valois, Dialogue en forme de Vision Nocturne et Le Miroir de l'Ame Pecheresse, 2 vols., sm. 4to., Alençon, S. du Bois, 1533, 31*l.*; Marguerite de Valois, L'Heptameron (first complete edition), 4to., Paris, B. Prevost, 1559, 30*l.* Marot, L'Adolescence Clementine (a very rare edition), 12mo., Paris, 1536, 30*l.* Martial de Paris, Les Vigilles de la Mort du feu Roy Charles VII., 4to., Paris, s. a., 31*l.* Martialis Epigrammata, fol., Venet., Vind. de Spira, s. a., 29*l.* 10*s.*; Martial, first edition with a date, Ferrara, 1471, 22*l.*; Martial, first Aldine edition, bound in olive morocco with elaborate ornamentation, 175*l.* This portion of the library fetched close upon 8,000*l.*, and the grand total of the thirty days' sale amounts to the large sum of 36,543*l.* 3*s.*

Literary Gossip.

We believe that M. Renan will after his return from the East publish a translation of the Psalms.

The family of the late George Henry Lewes have presented the philosophical and scientific portions (over 2,000 volumes) of his library to Dr. Williams's Trustees in order that the books may be available to special students at the library in Grafton Street. The only condition attaching to the generous gift is that the books be arranged on distinct shelves, and that each volume bear some record that it formed a part of the "George Henry Lewes Library."

The Women's Education Union, after a useful and honourable career of over ten years, has just been dissolved, the object for which it was organized having been satisfactorily achieved. Founded by Mrs. William Grey, to whom the cause of women's education owes so large a debt of gratitude, it had for its President H.R.H. the Princess Louise. A testimonial has been presented to Miss Louisa Brough in recognition of her services as secretary.

Mr. Edmund Gosse will contribute to the September number of the *Century Magazine* a critical article on Dan e Gabriel Rossetti. It will be illustrated by a portrait, drawn from life in 1848, by Mr. William Bell Scott. This and a painting by Mr. Watts, R.A., are believed to be, but we cannot at the moment verify the statement, the only portraits for which Rossetti ever sat.

Mr. Edward Stack, of the Bengal Civil Service, is about to publish, under the title of 'Six Months in Persia,' a narrative of his journey last year through Persia *en route* to England.

Mr. H. Buxton Forman will issue immediately, through the house of Messrs. Reeves & Turner, two new editions of Shelley's poetical works. One is a revised reissue of the four-volume library edition of 1876-7, brought down to date as far as practicable without upsetting the general arrangements of a page-for-page reprint. A great number of fresh collations have been made, and many of the controversial notes have been modified where the matter is no longer in controversy. Mrs. Shelley's invaluable biographical and critical notes have been inserted, by way of introduction, in a connected form; and a new subject index has been added so as to render the edition complete apart from the prose works—the former index having been made to cover the four prose as well as the four poetical volumes. The other edition is of the text alone, and is in two volumes. The text is the same as that of the library edition, and the arrangement of the poems is also to all intents and purposes the same.

The antiquarian collections of the late Rev. R. W. Eyton, which have been purchased by the Trustees of the British Museum, are now catalogued and ready for the use of the public. In addition to Mr. Eyton's collections for his 'History of Shropshire,' the MSS. contain an extensive collection for a history of Lincolnshire, and many valuable notes on the feudal baronage of England, in continuation and correction of Dugdale's work.

In the early autumn Messrs. Sampson Low & Co. will publish a new work, by the Rev. W. E. Winks, on the 'Lives of Illustrious Shoemakers.' Besides special chapters devoted to Shovel, Bloomfield, Gifford, and other famous disciples of St. Crispin, brief sketches will be given of about half a century of distinguished members of the craft.

The Report of the College of Preceptors for the half-year states that the examination of pupils in schools began on June 13th, and was carried on simultaneously at thirty-one centres. The total number of candidates examined was 4,616, of whom 2,493 were boys and 2,123 girls. The examination for teachers began on June 27th, and was attended by fifty-four candidates, of whom six were examined for the licentiateship and forty-eight for the associateship of the College. The Council has instituted a supplementary examination each half-year to meet the case of students seeking registration by the Medical Council or the Incorporated Law Society. The first was held in London in March last, and was attended by 135 candidates, of whom three obtained certificates of the first class and fifty-eight certificates of the second class. Arrangements are now under consideration for holding these examinations at local centres in different parts of the country.

Mr. R. H. Shepherd has in preparation 'The Life, Letters, and Uncollected Writings, in Prose and Verse, of W. Makepeace Thackeray.' It will probably be remembered that Thackeray did not wish any biography of himself to be published.

Mr. Edward Solly has investigated the question of the authorship of 'The Whole Duty of Man' in an elaborate article which will appear in the August *Bibliographer*. He describes the first edition, published one year earlier than the edition which Lowndes supposed to be the first.

Dr. Burnell's 'Metrical Translation of Manu,' intended originally for "The Sacred Books of the East," edited by Prof. Max Müller, will appear in "Trübner's Oriental Series."

Prof. Noiré's work, 'Die Lehre Kants und der Ursprung der Vernunft,' has just been published. A German edition of his 'Introduction to Kant's Critique of Pure Reason' is likewise advertised. It will contain, in addition to the portion published in Prof. Max Müller's translation of the 'Critique,' a full analysis of Kant's system.

The *Palatine Note-Book* for August will contain some curious letters, dated 1722, from the pen of Col. Francis Charteris, satirized by Pope and Arbuthnot for his ignorance and meanness. The letters are addressed to his steward in charge of his property at Hornby, Lancashire. The same number has a copy of the catalogue of the library of Sir Thomas Holcroft, Knight, at Vale Royal, Cheshire, in 1616, in which are enumerated some MSS. once belonging to Vale Royal Monastery. The names of several country gentlemen are noted as borrowers from the library.

SCIENCE

Spon's Encyclopædia of the Industrial Arts, Manufactures, and Raw Commercial Products. Edited by C. G. Warnford Lock. 2 vols. (Spon.)—Most of the articles in this encyclopædia have been contributed by specialists in the various departments of manufacturing industry, and the work consequently forms an important addition to our technical literature. From other cyclopædias of a kindred character it differs in several notable respects. One of its peculiarities lies in the prominence accorded to raw commercial products, such as dye-stuffs, vegetable fibres, resins, gums, oils, and fatty substances. Inasmuch as such materials form the basis of so many industrial arts, their study is of first importance to the technologist; while to an Englishman they have peculiar interest, since many of them are largely obtained from our colonial possessions. But while the editor and his staff have bestowed special attention upon vegetable and animal substances, they have unreasonably neglected the equally important products of the mineral world. Surely iron ores—to take only a single instance—are "raw commercial products" of some value; yet we fail to find in this book a single line about the occurrence of such minerals. Indeed, the arts of metallurgy and mining, with the raw materials which form the object of the miner's quest and the staple of the smelter's craft, appear to have been systematically excluded from the scheme of this cyclopædia. Another peculiarity of the work is to be found in the method of arrangement. Instead of devoting a special article to each subject, the editor has thought it well to group a number of allied substances under a general heading. Admitting that in many cases there is justification for such a course, we cannot blink the fact that it occasions some inconvenience to a reader not familiar with the plan of the work. Thus, if we wish to learn something about tobacco, we naturally turn at first to the letter T: yet there we find not a word, not even a cross-reference, to guide us. It is only when we remember that tobacco is a narcotic, and look under the general article "Nar-

cotics," that we get upon the right track. This method of arrangement, though probably regarded by the editor as a merit, strikes us as a great defect in the work. It is only fair, however, to add that an excellent index considerably relieves the reader. Partly in consequence of this principle of arrangement, some amount of repetition has crept into the work. Suppose we wish to refer to carbolic acid: it is useless to look under the letter C, and therefore we turn to the general article "Acids," where we find a very good account of the substance in question. But then, a few pages further on, under the head of "Coal-tar Products," we light upon another description of the very same body. Notwithstanding inconveniences of this kind, which might have been greatly diminished by a judicious system of cross-references, we are able to pronounce a highly favourable opinion of the work as a whole. The cyclopædia consists of more than 2,000 pages, excellently printed, and illustrated by some 1,500 figures. Most of the articles have evidently been written with great care; some may be said to be almost exhaustive; and all bear evidence of a desire on the part of the writers to give the latest and best information at their command.

MR. F. M. BALFOUR.

THE flourishing school of science which has of late years sprung into existence at Cambridge has sustained a severe loss by the death of its ablest member. Mr. F. M. Balfour lost his life on Mont Blanc last week. At the time of our going to press no particulars of the catastrophe had come to hand, although it was announced that the bodies of Mr. Balfour and a guide had been recovered.

Though only thirty-one years of age, Mr. Balfour had, in his own line of work, taken the first place among English men of science. It is an open secret that the chair of Sir Wyville Thomson at Edinburgh was offered to him and declined by him, and in order to utilize his services a Chair of Animal Morphology was instituted by his university last term. Mr. Balfour entered Cambridge in 1870, and, though only placed second in the Natural Sciences Tripos, was elected a Fellow of Trinity in the October after he took his degree, a compliment usually reserved for Senior Wranglers and Senior Classics. He speedily displayed singular ability as a teacher, and lent most efficient aid to Dr. M. Foster. Within five years of his degree he was elected a Fellow of the Royal Society, and in 1881 he was awarded a Royal Medal by the Society for his contributions to embryology. Notwithstanding the amount of time he devoted to teaching, he published a number of memoirs in the *Transactions* of the learned societies and the *Quarterly Journal of Microscopical Science*. He also occasionally contributed to this journal. His 'Elements of Embryology,' which he wrote in conjunction with Prof. Foster, speedily ran through two editions. He was also the author of a highly original 'Monograph upon the Development of Elasmobranch Fishes,' and of a 'Treatise on Embryology,' in reviewing the first volume of which we remarked, "No other man has ever produced so much valuable new knowledge in the special department of embryology." The value of this masterly work was shown by translations in French and German appearing almost immediately. An admirable monument of the fruitfulness of his teaching is to be found in the volume edited by him, entitled 'Studies from the Morphological Laboratory of the University of Cambridge,' which contains papers by him and his pupils.

Mr. Balfour some months ago suffered from a sharp attack of typhoid fever contracted at Naples, and to recruit his health, after the labours of the term, he started on the tour in Switzerland which has terminated in so tragic a manner. He will be sorely missed.

GEOGRAPHICAL NOTES.

THE following letter is from the pen of Mr. Flad, a German missionary, and one of the Abyssinian captives:—"King John of Abyssinia uses the present crisis in Egypt to take possession again of those provinces which Egypt had taken away from Abyssinia, *i.e.*, Mensa and Bogos. Lately his troops came very near Massawa and robbed the country. The Galla tribes, south of Abyssinia, he subdues, and converts them by baptism to the Abyssinian Church. As far as Guragué all the Gallas have submitted to Abyssinia. Four Coptic bishops from Cairo have arrived in Abyssinia, who, as *Abunas* (our fathers), will help him to convert all the Gallas and make them members of the Abyssinian Church. According to letters from the missionary Mr. Mayer, King Menelek of Shoa is having the Galla tribes of Dshaha, Gumro, Gieta, &c., beyond the river Hawash, conquered and baptized. He is preparing for an expedition to the Suai Lake in Guragué. On five islands descendants of the old Ethiopian dynasty have been living from the sixteenth century. They are Christians, have churches, and, as it is said by the Abyssinians, very valuable manuscripts. At Bali, five days' journey south of Ankober, MM. Mayer and Greiner have begun to teach the Gallas baptized by the Abyssinian priests, and to preach to them the gospel of Jesus Christ. They meet with much encouragement among these Galla tribes. The native missionaries in Western Abyssinia are without hindrance going on preaching Christ crucified to the Falashas (Jews) and the Abyssinian Christians, and distributing God's holy Word and tracts amongst them. Five adult Falashas have lately been baptized at Genda, one of their stations. Their schools are well attended by pupils. In some parts of Abyssinia the slave trade is abolished. Secretly, however, slave caravans are driven through Abyssinia at night by Egyptian slave dealers. Hundreds of slaves have of late been seen by European missionaries coming from the interior of the Galla countries, who were driven down towards Egypt along the Blue Nile. As long as the countries of the Nile are in the hands of the Mohammedans no stop can be put to the slave trade." It appears from this interesting letter that Protestant missionaries have once more taken possession of Shoa, whence the last Roman Catholic emissary departed only recently. As previously reported by us, the Marquis Antinori has joined the expedition to Lake Quai.

We are in receipt of the concluding parts of the new edition of *Stieler's Hand-Atlas*. They include the remaining sheets of the map of South America, a very beautiful map of the East India Islands, and a general map of the Chinese empire. The work, as now completed, consists of ninety-five maps, with no less than one hundred and seventy inset maps. It forms by far the most trustworthy atlas extant, and although some of the maps are perhaps too much crowded with names, good workmanship and distinct impressions reduce the inconvenience of this over-anxiety to be perfect to a minimum. The revision of the old plates has been effected with the most conscientious care, numerous new plates have been added, and the commendable practice of placing upon each map the names of compilers and engravers and the date has been retained. The atlas is one which we can thoroughly recommend. It is a monument of enterprise guided by an honest desire of producing the finest work possible, and we are glad to know that even in these days of trashy maps the sustained efforts of the firm of Perthes find their reward in the appreciation of the public.

MEETINGS FOR THE ENSUING WEEK.

WED. Entomological, 7.

Science Gossip.

DR. FRIEDRICH ESMARCH'S 'Erste Hülfe bei Plötzlichen Unglücksfällen,' a work which has proved of considerable value to those connected with ambulance work in Germany, is being translated into English by H.R.H. the Princess Christian of Schleswig-Holstein, and will shortly be published by Messrs. Smith, Elder & Co. The English edition will have the advantage of several woodcuts.

THE commission for the statue of Mr. Darwin, which is to be erected by public subscription as a memorial to the great naturalist, and is to be placed in the Natural History Galleries at South Kensington, has been given to Mr. Boehm.

THE volume of 'Greenwich Observations' for 1880, which, as was mentioned in the Astronomer-Royal's Report, was passed for press a few months ago, is now published. As Sir George Airy did not resign until August 15th, 1881, the whole of the observations contained in this volume was made and reduced under his superintendence, on the same system as was pursued during many previous years. We have already had occasion to remark that the results of the spectroscopic and photographic observations for 1880 (together with those for the motions of stars in the line of sight for several preceding years, from the time those investigations were commenced in the year 1875) were published in advance in a separate form some time ago; but, according to invariable custom in such cases, they are also included in the annual volume now before us. It has no appendix.

M. PAUL JABLOCHKOFF has exhibited to a scientific circle in London a new electric motor which is remarkable for its simplicity, giving results far superior to any at present known. In a few weeks full-sized machines are to be exhibited.

M. GEORGE FOURNIER, of Paris, has made an important discovery in the formation of a compound of glycerine and metallic oxides for primary and secondary batteries. He takes oxide of lead in powder and mixes it with glycerine in sufficient quantity to form a thick paste, which is run into moulds, and thus cast into any suitable form. The casting is allowed to rest for twenty-four hours, when it becomes hard and insoluble in water. The lead compound is, however, rapidly reducible if placed in a bath of dilute sulphuric acid in connexion with a plate of zinc, the metallic lead in fine powder being rapidly attached to the zinc plate. This property renders it eminently suited for the manufacture of galvanic batteries. Secondary batteries can be prepared directly by this preparation of lead and glycerine, without previous reduction to the metallic state.

MM. BERT AND REGNARD have been suggesting the advantages of using oxygenated water—hydrogen dioxide—in the treatment of wounds. Its action is twofold: it kills microbes (or small organisms) immediately, and furnishes a continuous supply of oxygen to the wound. There is no danger of poisoning, as with carbolic acid, and it has no objectionable smell.

MM. BOULEY AND GIBIER appear to have proved that trichinæ in meat are killed by being submitted to a temperature 20° below the zero of the centigrade thermometer.

THE 'Mineral Statistics of Victoria for the Year 1881' has been received. We learn from it that during the year 313,828 ounces of gold were obtained by alluvial mining, and by quartz mining 519,550 ounces. We find also that the quantity of gold exported and minted in the colony from the date of the first discovery of gold to the 31st of December, 1881, was 50,418,529 ounces, valued at 201,674,118*l*. The Reports of the Mining Surveyors and Registrars for the quarter ended 31st of March, 1882, show the alluviums yielded 82,497 ounces, and quartz mines 106,329 ounces.

FINE ARTS

ROYAL ACADEMY of ARTS.—The EXHIBITION will CLOSE on MONDAY, the 7th of August.—Admission from 8 A.M. to 7 P.M. One Shilling. Catalogues 1s; or bound, with pencil, 1s. 6d.

The GROSVENOR GALLERY.—SUMMER EXHIBITION.—NOW OPEN, from Nine till Seven.—Admission, 1s.; Season Tickets, 5s.

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

WILL CLOSE on MONDAY, August 7th.—EXHIBITION of ROSA BONHEUR'S great Picture, THE LION AT HOME.—This great Chef-d'œuvre is NOW ON EXHIBITION DAILY, at L. H. LEFÈVRE'S Gallery, 1A, King Street, St. James's, from Ten to Six. Unanimously acknowledged by the Press as being the finest work by this celebrated Artist ever shown since 'THE HORSE FAIR.' Has been visited by thousands during the Season.—Admission, 1s.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Ancient Scottish Weapons. Drawn by James Drummond. With an Introduction and Notes by Joseph Anderson. (Waterston & Sons.)

THE late Royal Scottish Academician, who made the drawings in this handsome volume, was a competent judge of the art merit of the specimens he selected and delineated with tact and care. The notes supplied by the Custodian of the Museum of Antiquities at Edinburgh are just Scotch enough to be racy and animated, while they show wide reading and study. When Mr. Anderson writes of the subjects of this volume as forming a group of relics which is "wholly unique," we need not construe the phrase strictly. The weapons of the Basques, Turks, and the Finns, to say nothing of the Hungarians and the Japanese, are equally national, and make it impossible to call the Scottish examples unique in an ethnographical and historical sense. Nevertheless, it is true that the weapons of the Scottish Celts form a remarkable group. The accoutrements of the Lowland Scotch are practically identical with those of the English and French.

Probably no small portion of these relics are not Scotch at all, but German, French, Italian, and English. The more ancient and ruder arms are no doubt Celtic. Some of the richer firearms may be of Scottish make, but they exhibit little or nothing of the much-prized and often-lauded national character. The famous Andrea Ferrara broadswords are doubtless Spanish or German imitations of the manufactures of Feraria in Bilbao. The carved musket-stocks on plate xxx. are, we think, German, and might have been procured in the Fatherland or brought across the North Sea by some of the successors of the hackbuteers of the previous century whom Scott described in 'The Lay of the Last Minstrel.' Some of the examples are questionable in their present state. For instance, No. 3 on plate xxix. is a flint-lock musket, inscribed on the barrel "Dominus Johannes Grant miles Wicecomes de Innernes me fecit in Germania Anno 1434." Flint locks were invented in France in the seventeenth century. The decoration of the stock of this weapon is almost identical with that of German works of the inscribed date. No doubt the old match fittings were removed and the flint lock was adopted long after the date was inscribed on the barrel.

Faithful adherence to antiquated weapons was a characteristic of the Highlands. Sir Walter Scott, with genial humour, dilated on the astonishment of Major Dugald Dalgetty when he found that he, a soldier of Gustavus Adolphus, was fighting alongside of bearers of bows and arrows. This was about 1645, and these pages contain ample evidence to prove the correctness of Sir Walter. What would have been the emotions of Dalgetty had he lived to see the "Highland Host"?—a body raised in 1678 to suppress the Presbyterian conventicles in Ayr and Galloway. A revengeful satirist of that day gives an amusing description (which is quoted here) of this "Host," and he notices the

"head-pieces and steel-bonnets raised like pyramids, targets, and shields of the most odde and antique forme, and powder-horns hung on strings and garnished with beaten nails and burnished brass."

Such adornments occur so frequently on Highland arms that they have been supposed to be characteristic; they are, of course, of the most primitive character, analogous to, and the representatives of, the embossed works on ancient Ionian and Etruscan implements of war. They are illustrated at their best by the beautiful target of bronze, No. 2, plate vii., on which concentric rings and rows of studs alternate from a central boss to the bolder moulding on the rim, and decorate a shield of perfect design, which is admirable for its scientific combination of strength, toughness, and lightness. We doubt the authority for appropriating to a Scottish owner this beautiful relic, which bears the character of the Bronze Age, and yet may have been in use in the seventeenth century. Such targets have been found in England, Ireland, Wales, Denmark, and France. A shield of bronze and almost identical in style with this one was in the Meyrick Collection. Sir S. Meyrick classed this kind of shield as the *tarian;* another, which was found at Harlech, is figured in the *Archæological Journal*, vol. vii. p. 77; one is in the museum at Cambridge. M. Demmin supposed these targets to have belonged to the Northmen, and to have been dropped by them in flight or buried with their corpses. They may be as old as the sixth century, if not much older. No. 2 above named was found with another in a piece of marshy ground at Yetholm, Roxburghshire. Both are now in the museum at Edinburgh, but there is no ground for styling them Scottish.

The satirist proceeded with his account of the Highland Host:—

"I doubt not but a man curious in our antiquities might in this host finde explications of the strange pieces of armour mentioned in our old lawes, such as basnets, iron-hats, gorgets, pesane, wambrassers and reerbrassers, pans, leg-splents, and the like, above what any occasion in the Lowlands would have afforded for several hundreds of years."

Highland targets were made in Edinburgh in 1745 at the rate of 30*l.* for six score. Boswell, in 1773, declared that there was hardly a target to be found in the Highlands; after the Disarming Act they were used to serve as covers for buttermilk barrels. What would Sir Dugald Dalgetty have said had he been spared to see the Highlanders of a century later than 1645 charge at Culloden with targets strengthened with studs, "beaten nails, and burnished brass," and interlacements of that which we call the Anglo-Saxon, *i. e.*, Romanesque, pattern, including possibly the very shields with which the bearers' ancestors faced the archers of King Stephen during the Battle of the Standard, August 22nd, 1138? On the Great Seal of Alexander I., 1107–1124, the mounted king appears clad like a Norman knight of the time, with a conical helmet, a nasal piece of the Bayeux tapestry fashion, and a kite-shaped shield. The shield is, however, studded exactly like many of the targets delineated by Mr. Drummond, some of which belonged to the periods of the Highland Host and Culloden. Four years before the conflict at Culloden a Scotchman, armed with a broadsword and wearing what Mr. Anderson delights to call his national garb, was not an uncommon object in the Strand. Benoist's large panoramic view of the great thoroughfare includes an elaborate satire on the Gormagons (see British Museum Satirical Prints, No. 2546), and contains a Scotch woman and man, both in plaids. The latter is the only armed man in the street (a noteworthy point in itself), and he is girt with a claymore as ponderous as those represented on several of these plates of swords. Many delineations of armed Scotchmen wearing the "garb of old Gaul" appear in engravings later than 1742; but, so far as we have been able to discover, not one more modern than this delineates the costume and peculiar weapon as ordinary appearances in a London street. In Hogarth's 'Four Prints of an Election' the Scotch and Jews alone exhibit peculiar dresses. A Scotchman appears in 'The Gate of Calais,' but he may be an exile or Highlander in the French service. No doubt the raid which ended at Derby disposed the Cockney populace to be intolerant of claymores and plaids. The Highlanders, however, displayed a strong attachment to their ancient weapons. Mr. Hewitt ('Ancient Armour,' 1860) has noticed that Grose remembered privates in the old Highland regiments in Flanders in 1747–48 "arm'd with targets, which, tho' no part of their uniform, they were permitted to carry." Such targets, banded with Romanesque interlacements, exist in nearly all large collections of armour.

These are the national weapons of the Highlanders; the bows Major Dalgetty saw in the hands of his allies were but feeble. The relative inferiority of the Scottish bow is well known. See Froissart's 'Chronicles,' ii. 308. No examples of that weapon are given in this book, but, as pp. 12 to 14 attest, the use of the bow was common enough from the fourteenth to the sixteenth century. In the muster-roll of Glenurchy, of one hundred and seventeen men in 1638, sixty-four were armed with swords and targets, thirty-seven with bows and arrows, thirty-one with hackbuts. The bow was thus shown not to be a leading weapon in Scotland. It was otherwise in Wales, Ireland, and England. In Ireland, where the natives always affected furtive modes of combat, a murderous knife was much used by the lower orders; and there are effective descriptions of the employment of this weapon by the natives, who, with the utmost agility, sprang up behind mounted enemies and slew them with stabs in the rear or cut their throats. See Froissart's 'Chronicles,' iii. 208. By far the most interesting record of Irish arms

XUM

and armour is afforded by Albert Dürer's drawing, lately in the possession of M. Hulot, of Paris, and now in the Print Room at Berlin—not in the British Museum, as Mr. Anderson says, p. 11. We described this invaluable record in 1870 (*Athen.* No. 2202, p. 69). On the preceding p. 29 an abstract of a German broadside will be found which will be worth the attention of our author as well as students of the manners of *c.* 1632. The men were pure savages Like the Irish, who doubtless derived that weapon from the Northmen, the Highlanders affected the axe. Dürer's drawing shows two of five Irish soldiers armed with axes exactly like some of those represented by Mr. Drummond. Two of the company carry tremendous two-hand swords of the kind delineated here, and such as were used in Germany and Switzerland; there are other drawings by Dürer, and some of the figures in Holbein's 'Dance of Death,' which show the terrible efficacy of the two-hand sword. The descriptions given by Giraldus Cambrensis of Irish axes, "which they borrowed from the Norwegians and Ostmen," and many references to the Scots of the twelfth century, would have been helpful to Mr. Anderson. So would a marvellous passage by Monstrelet, describing the wild Irish whom Henry V. led to the siege of Rouen in 1418, "un de leurs pieds chaussé et l'autre nud, sans avoir brayes, et pauvrement habillez, ayans chacun une targette et petits javelots, avec gros cousteaux d'estrange façon." The devilries performed by these men in Normandy were remembered for ages. Froissart wrote that the Scottish men-at-arms of his time were so ill provided that their French allies carried into Scotland for their use suits captured from the Maillotins of 1383 ('Chron.,' ii. 720, and Hewitt, as above, ii. 56), which had been stored in the Chastel de Beauté at Paris. The Scots were enchanted with these old-fashioned equiqments.

Many of the war axes, such as the older forms shown by figures 4, 5, 6, and 7, plate xxxiv., are exactly like similar weapons included in the Scandinavian Exhibition now open at South Kensington, and came from Norway. No. 5 was found in Ireland, and indicates the close resemblance between Irish, Scottish, and Norwegian arms of this class. Another analogy of this kind we shall notice below. In fact, we have been compelled to hesitate about accepting as Scottish, or at least peculiar to Scotland, a very large number of the fine weapons figured in this book. Mr. Anderson has suspicions of some of them about which there is little doubt; for instance, the iron target on a frame of wood, No. 4, plate i., formed *en repoussé*, with bosses riveted on a plate and connected by radial bands with a larger central boss, the interspaces beaten up in cones—a capital design and an admirable piece of construction. We see no reason for calling this relic German, as our author does. All the other targets, except that beautiful bronze one we have already admired as No. 2, plate vii., are unquestionably Scottish. So are nearly all the dirks; one of these bears the admonition, "Fear God and do not kill, 1680." As to the powder-horns, the beautifully inlaid example on plate xx., the original of which is in the museum at Edinburgh, is characteristically Scottish. We think the horn shown on plate xxi. is Italian—certainly it is not of Scottish make. Most of the horns on plates xxii. and xxiii., which are decorated with circles, woven work, and quasi-lacertine forms of much complication, are probably Norwegian. They bear a perfect resemblance to many carvings brought from Scandinavia and now exhibited at South Kensington. These enrichments have preserved Romanesque types until our own time and are highly curious; they exhibit the strap-work of the eleventh century and earlier dates. The fine horn, No. 2, plate xxv., with a thistle and the date 1672, if these are not, as they seem to us, additions, is probably Scottish. The greater number of the pistols are, we think, French or Italian. Very beautiful they are. The Lochaber axes, halberds, sporrans, and nearly all the lovely silver brooches, are either Scottish or Norwegian, probably either indifferently. The ball of rock crystal which forms the charm stone or Clach Dearg of the Stewarts of Ardvorlich is probably, like several other works of the same class, Chinese, enclosed with hoops of good design by a Scottish jeweller.

How it may have come about that so large a proportion of the arms here represented are foreign, may be explained by reference to the ordinance of the Scottish Parliament which, in the early part of the fifteenth century, enjoined merchants to bring home on each voyage harness, armour, spear shafts, and bow staves in proportion to their merchandise. This enactment was analogous to that English one which insisted on the importation of bow staves and lance handles. After the Revolution the importation of arms was chiefly from Holland. We have lingered over this book with pleasure because of its fascinating subject, clear text, and capital drawings.

Illustrations of Old Staffordshire Houses. By W. Niven. Twenty-one Etchings, with Descriptive Notes. (The Author.)

MR. NIVEN, whose 'Worcestershire Houses,' 'Warwickshire Houses,' and 'Aston Hall' we have already admired, continues, in the handsomely printed volume now before us, his delicate, firm, and solidly etched views of ancient castles and mansions in the south midland counties of England. Of all the divisions of this group, including Northamptonshire, Oxfordshire, and Gloucestershire, not one suggests itself to the ordinary observer as possessing so few remains of domestic and military architecture as that which is here represented in more than a score of capital views. On the other hand, Staffordshire can well boast of the plates which M. Burghers supplied to Dr. Plot's gossiping 'Natural History of Staffordshire,' which are not only laborious and good in themselves, but a perfect treasury of views of curious buildings as they existed in the third quarter of the seventeenth century. No county in England is more fortunate in this respect. The descriptions, which form an important portion of Mr. Niven's contributions to our knowledge, are far superior to those of Plot or Neale. Neale's 'Views' comprises mostly modern works. For the accuracy of some of Burghers's plates Mr. Niven is, by personal observation of the buildings as they now exist, able to vouch. To the views he has produced and the notes that accompany them Mr. Niven has added memoranda on buildings he did not delineate. These notes remind us that some picturesque subjects and historical remains deserved to be the subjects of his etching needle. It is difficult to guess why he did not produce a view of that charming gem in Beresford Dale where Cotton and Walton fished, which the former built in 1674 and decorated with a cipher of his own and his friend's initials. It is merely a fishing house, but perfect in type and excellent in taste.

Apart from this it is impossible to refuse warm praise to the zeal and good taste of our draughtsman. His work will raise Staffordshire to a high place among architecturally wealthy counties, and vindicate its ultra-manufacturing as well as its ultra-rural regions against the charge that they are devoid of archæological interest. It is time something was done to preserve Burghers's views, seeing that, as Mr. Niven tells us, of the houses he portrayed fully three-quarters have been either totally or in great part destroyed, and all remaining that are not ruinous have been more or less altered and modernized. Of the former class, Trentham Old Hall, with its numerous memories, has given way to Barry's palace. It comprised an open-work parapet to a courtyard in front, the pierced work of which, being shaped like letters, like those at Castle Ashby and Temple-Newsam, formed a legend and date. On the other hand, Broughton Hall, in Longdon, the largest half-timbered house in the county, built *c.* 1625, remains much as Burghers drew it. Not a few buildings of historic interest have been partially dismantled, and either left to ruin or turned into farmhouses. Eccleshall Castle, for instance, is now unoccupied; the Gate House at Tixhall, the largest work of its kind in the kingdom, is gutted, but the roof remains. It is a noble example of fine proportions and good character, and is in excellent preservation externally. The chimney-pieces of Longton Hall have been removed to the South Kensington Museum; they comprise charming plaques of Wedgwood ware. Biddulph Hall exists in a ruin, since sixty years after it was finished it was "slighted," as the Parliamentarians said, when Sir W. Brereton attacked it with cannon and left great rents in the beautiful towers as we see them in this etching, fine examples of late Perpendicular work, finer and older in style than the date 1580, which is over the entrance, vouches it to be. The race of the builder, Biddulph of Biddulph, is extinct. The wreck is now duly cared for by Mr. R. Bateman, the owner. The octangular belvederes at the corners of the square enclosing wall of Caverswall Castle show the survival of Gothic taste in a building which has been unfortunately attributed to Inigo Jones. Ingestre Hall has a striking—we cannot agree with Mr. Niven in calling it beautiful—front, with fine large bow windows to the wings and a well-proportioned roof line, with an objectionable cupola or bell-cote which is hideously inappropriate. The front of the porch (plate 6) is one of the most florid examples of debased but not inelegant Renaissance design on this side of

the Channel. We think it looks better in this book than in reality.

Very fine indeed in its way is the lofty mass of Wooton Hall, which is attributed to Inigo Jones and is quite worthy of his best taste. It is very pure and good, and, although in the Elizabethan manner, has something of Italian balance and propriety of parts and proportions. Blackladies, on the site of an ancient Benedictine convent, a very fine specimen of homely domestic work, *c.* 1500, lost its chapel ten years ago in favour of the existing two pigsties. We are told that well-worship has long prevailed in this neighbourhood, and wells are still decorated with flowers. At Chartly, the seat of the unhappy Earl Ferrers, the room where Mary of Scotland was confined is still shown. At Hamstal-Ridware remain a very curious and effective porch of early Jacobean style and an anomalous gateway. In the house a branks, or woman's tongue-bridle, is preserved. Dr. Plot ('Staffordshire,' p. 389) noticed similar implements at Newcastle-under-Lyme and Walsall; Brand's 'History of Newcastle-on-Tyne' describes another in that town. There is another at Walton-on-Thames. See Mr. Carrington's paper in the *Archæological Journal*, xiii. p. 256. At Whittington is an ivy-mantled house, much older than Elizabeth's time, with four gabled projections in front, the windows of which have obviously been modernized. It is extremely picturesque.

Generally speaking, the remains delineated in this book resemble those we have already noticed in the sister county, Worcestershire. Very few examples before us equal Westwood House, in the last-named district, with its noble flanking towers and good bay windows and stately façade with a most picturesque sky-line. No interior equals that bold one at Stanford Court, the library of which is distinguished by a noble arcade of panelling, each bay containing a life-size portrait. There is little or nothing in 'Staffordshire' equal to the characteristic Severn End, the seat of the Lechmeres, or that quaint gem the Gothic manor-house of Pershore Abbey at Broadway. The beautiful Italian garden pavilion, removed from Coleshill Park and re-erected at Lower Ettington Manor House (see 'Warwickshire,' plate 27), is a gem of chasteness compared with the overloaded porch at Ingestre Hall. On the whole, however, the subjects of 'Staffordshire,' as represented here, are quite as fine and valuable as those in either of the sister volumes. We trust Mr. Niven, who has greatly improved as a draughtsman, will go to work in Gloucestershire, a very wealthy county in remains such as these.

NEW PRINTS.

MR. LEFÈVRE has just published an etching, of which a remark proof is before us, by M. Victor Lhuillier, from a picture by Mr. W. R. Sadler, which is intended to serve as a companion to Mr. H. S. Marks's 'Jolly Post-Boys,' engraved by the same hands. The engraver has doubtless done his best with his original, but, as it is not, like Mr. Marks's work, solid, searching, and animated, the effort to produce a companion print of equal value is hardly successful. Mr. Sadler's picture is very prettily designed and deftly executed, and the title of it probably suggested parallelism to the production of the Royal Academician. It is called 'Disappointed Anglers,' and shows three crestfallen fishermen seated in a rustic inn, waiting for the food, not of their catching, which is brought to table by a waiting-woman. The etching is clear and brilliant, the tones tending, but not unpleasantly so, to blackness. The local colouring has been rendered with much tact and force. Why does so powerful and accomplished an engraver as M. Lhuillier not devote his time and skill to fine pictures? It is a great mistake to suppose there is no demand in this country or abroad for engravings of fine subjects. Let some enterprising publisher employ this engraver on such a picture as the great Botticelli just added to the National Gallery, or, to take a modern instance, on some of the best works of Mr. Alma Tadema, Mr. Ford M. Brown's 'Elijah with the Widow's Son' and 'The Entombment,' and other solid and thoughtful examples.

From Messrs. Mansell & Co. we have a copy of an etching called 'Dolce far Niente,' representing a Spanish or Italian gentleman leaning against a wall. It is by Mr. T. B. Kennington, and, although there is some needless blackness and defective clearness in the darker shadows, it is rich in tone, neatly drawn, and successful in suggesting colours and textures. It is somewhat over-wrought, and this may account for the defects we have noticed.

SALE.

MESSRS. CHRISTIE, MANSON & WOODS sold on the 22nd inst. the following, to which we have already lately referred as the property of Mr. Ruskin and other collectors:—Drawings: J. M. W. Turner, Fluelen, Lake Lucerne, 1,491*l.*; A Scene in Savoy, with castle in the distance, and cattle and figures in the foreground, 1,207*l.*; Village of Heysham, Lancaster Bay and Cumberland hills in the distance, 787*l.*; Eggleston Abbey, 787*l.*; Farnley, the seat of Mr. W. Fawkes, 682*l.*; Farnley Stream, and summer-house, 472*l.*; Farnley Avenue, 199*l.*; The Bridge, 126*l.*; The Bridge, evening, 157*l.*; Harlech Castle, North Wales, 325*l.*; Leeds, 346*l.* Pictures: J. Syer, Salmon Trap on the Lledr, 210*l.*; The River at Bettws-y-Coed, with figures, 204*l.* G. Romney, Miss Benedetta Ramus, afterwards Lady Day, wife of Sir John Day, 1,386*l.*; Miss Ramus, afterwards Baroness de Noailles, 420*l.* W. Müller, View of Tivoli, with peasants and sheep in the foreground, 420*l.* E. Hayes, Freshening Gale, Scarborough, fishing boats returning to harbour, 225*l.* R. Beavis, Autumn Ploughing, showery weather, 441*l.* So far as we know, no Romney has before been sold for such a price as the above.

Fine-Art Gossip.

MR. WATTS has nearly completed an admirable picture of the Duke of Devonshire for the University of Cambridge. The likeness is perfect.

THE Royal Academy Exhibition will be closed on Monday, August 7th, Bank Holiday. The Grosvenor Gallery Exhibition will be closed to-day (Saturday).

MR. WOOLNER'S monument of Sir Edwin Landseer, which we have already described, has been erected in the crypt of St. Paul's. We understand that Mrs. Mackenzie (born Emma Landseer), Sir Edwin's sole surviving relation in this country, has expressed complete satisfaction with the likeness.

MR. T. M'LEAN exhibits, at 7, Haymarket, a number of sketches made by Mr. J. Varley, a descendant of one of the fathers of English water-colour painting, during a lengthy sojourn in Alexandria, Cairo, and Upper and Lower Egypt.

THE exhibition in King Street, St. James's, of Mdlle. R. Bonheur's 'Lion at Home,' will be closed on the 7th prox. During next week it will be open free to students of the Academy and of other art schools on presentation of their cards of membership. From that date the picture will be shown at Messrs. Gladwell's, Gracechurch Street.

A SUCCESSFUL meeting was held at the Mansion House on Monday in support of Mr. J. T. Wood's proposal to complete the excavations at Ephesus. It was resolved to start a public subscription.

THE thirty-seventh annual meeting of the Cambrian Archæological Association will be held at Llanrwst next week. A public meeting will be held at the Grammar School on Monday evening, when Prof. Babington, the President, will deliver his inaugural address. On the four following days excursions will be made to various places of interest.

A CHURCH of high interest to artists has lately undergone "restoration," and no longer possesses historical, personal, or pictorial value. It is that of Aldenham, near Watford, which is associated with William Hunt, Byrne, Edridge, and Mulready. The nave roof of this once interesting building was enriched with paintings, *c.* Henry VI., of curious decorative character. These have been restored under the direction of Mr. A. W. Blomfield. New glass has been inserted in the windows, new tiles have been placed on the floor. The eminently picturesque church at Chipping Ongar, Essex, is to be enlarged by the addition of a south aisle and restored, the wooden spire repaired, the roof retiled, and the flint-work repointed.

THE following promotions and nominations to the Legion of Honour have been awarded to artists:—M. Bonnat has been made a Commander; M. L. Heuzey, Professor in the École des Beaux-Arts, M. J. Vaudremer, Member of the Institute, and M. Auguste Cain, the sculptor of animals, all formerly Knights, have been named Officers; MM. Cazin, H. Gervex, H. Pille, A. Lanson, J. A. M. Idrac, C. Waltner, Laguillermie, and Duthoit have been made Knights. M. Idrac's fine statues of 'Salammbô' and 'Amour Piqué' and M. Lanson's 'Age de Fer' are known to our readers. M. Gervex's 'Leçon d'Anatomie à l'Hôtel Dieu' and 'La Nymphe' and 'Le Faune' have been commended in these columns. M. Laguillermie engraved the 'Gulliver' of M. Vibert and the noble 'Marceau' of M. J. P. Laurens. M. Duthoit is an architect.

IT is an encouraging thing for Englishmen that much attention has of late been vouchsafed by French critics and journalists to British matters artistic. Not only has the French public been duly informed about the wonders of the Hamilton Palace sale, but obituary notices of English painters have appeared, and even the movements of some of our living artists have been chronicled with attention like that we are accustomed to give to the doings of illustrious Frenchmen. In fact, our brethren have discovered us at last.

THE death of the Danish painter Schleisner is announced.

WITH a view to securing a wider field for the sale of the different kinds of pottery manufactured at the Madras School of Industrial Arts, the superintendent of that institution has sent specimens of each kind of ware to this country for exhibition at the South Kensington Museum.

MUSIC

WAGNER'S 'PARSIFAL.'

Parsifal: ein Bühnenweihfestspiel. VonRichard Wagner. Vom Orchester für das Klavier übertragen von Joseph Rubinstein. (Mainz, B. Schott's Söhne.)

Parsifal: a Festival Drama. By Richard Wagner. Translated into English in Exact Accordance with the Original by H. L. and F. Corder. (Same publishers.)

To those who have carefully followed the gradual development of Wagner's genius

few things are more striking than his constant striving after some ideal which he never appears entirely to reach. With him there is evidently no such thing as finality in art. Each new work which he produces has features of its own distinguishing it from its predecessors. It might have been reasonably anticipated that with his 'Ring des Nibelungen,' produced six years ago at Bayreuth, Wagner had said his last word in relation to the "new art," and that his next music-drama would at all events have been constructed on the same lines as the trilogy. Yet in examining the poem and the music of 'Parsifal,' while many points of resemblance to the 'Ring' are noticeable, the critic finds the divergence in treatment so great as to strike him with astonishment. In the 'Ring' alliterative verse was exclusively employed, and it was understood to be Wagner's view that this was the only suitable form of poem for the musical drama. In 'Parsifal,' however, while alliteration is not excluded, rhymed verse is largely employed, and the form of the poem approaches more nearly to that of 'Tristan und Isolde.' Again, in the 'Ring' choral music is almost entirely absent, even in situations, such as that of Siegfried's death, where it might have been not unreasonably looked for. It will be remembered that the only chorus introduced throughout is in the second act of 'Götterdämmerung.' In 'Parsifal,' on the contrary, the choruses form a prominent feature in each of the three acts. The work certainly gains thereby in contrast and colour; but the question arises whether the poet-composer has not modified the views he held when writing the 'Ring des Nibelungen.' There is, of course, no reason why he should not retrace his steps if he finds himself to have been in error; but the new score is a curious rebuff to those thick-and-thin adherents of Wagner who after the Bayreuth performances maintained that only in the direction indicated by the 'Ring' was there any salvation for musical art. For ourselves, we think that in both the points we have mentioned 'Parsifal' has the advantage over the work which immediately preceded it.

Some discussion has taken place as to the exact meaning of the curious compound word "Bühnenweihfestspiel," by which Wagner has designated his new drama. The word "weihen" is used in German in two senses—to inaugurate and to consecrate. In the former we find it employed in the title of Beethoven's Overture in c, Op. 124, known as 'Die Weihe des Hauses,' written for the opening of the Josephstadt Theatre in Vienna in 1822. Here it plainly means "the inauguration of the house." But it is also used in a more sacred sense, as in the compounds "Weihnachten," Christmas; "Weihbrod," the wafer used in the mass; "Weihwasser," holy water. It is evident that here the "Weih-" implies consecration. It is in this second sense that Wagner uses the word with reference to 'Parsifal.' Obviously it is not a festival-play intended for the *inauguration* of a theatre, for that event took place at Bayreuth six years ago, and the composer has expressed his disinclination to have his drama given elsewhere. We must therefore take the word in its other sense; and an examination of the poem shows us that Wagner intends the work as a sacred drama. We believe that he has here ventured on the bold attempt to revive in a modern form the religious "mysteries" of the Middle Ages. That he will be successful is, we think, impossible; for, as will be seen presently, the subject and treatment of 'Parsifal' are such as to offer, in the present state of public opinion, almost insuperable obstacles to its frequent presentation on the stage. Probably Wagner does not intend to shock the religious prejudices of the majority of mankind, but rather believes that, with the daring so characteristic of him, he is here making a sincere, though desperate, attempt to unite religion and the stage. On no other theory is it possible charitably to explain such scenes as are found in the first and third acts of the present work.

The subject of 'Parsifal' is largely taken from Wolfram von Eschenbach's poem 'Parsival and Titurel'; but Wagner has, as in other cases, considerably altered the outline of the plot to suit his own purpose. The central point of interest in the work is the "Grail"—the holy cup which, according to the ancient legend, Christ used in the last supper with his disciples, which was preserved miraculously, and which gave superhuman power to the Knights of the Grail, who guarded it in the castle of Monsalvat, in the north of Spain. It is in a forest near this castle that the first act commences. Gurnemanz, an old Knight of the Grail, and two young squires are sleeping under the trees at daybreak. They are woke by the solemn sound of trombones coming from the castle of the Grail, which is near, though invisible. Gurnemanz tells the squires to prepare the bath for the sick king Amfortas, who is suffering from an incurable wound. A wild and mysterious woman, Kundry, enters hastily, with some rare balsam that she has brought for the king from Arabia. She declines all thanks, and retires to the background. Amfortas is carried past on a litter, and, after he is gone, Gurnemanz gives a long account of the nature and origin of his wound. It appears that the father of Amfortas, Titurel, had been the first holder of the Grail, and also of the sacred spear with which Christ's side was pierced. When he became old, his son succeeded to the throne. Not far from the castle of Monsalvat lived a magician, Klingsor by name, who was anxious, for his own purposes, to obtain possession of the Grail, and who endeavoured, by the aid of fair damsels, to seduce the Knights of the Grail. Amfortas one day went out alone to fight the sorcerer, but, being enticed by one of the maidens, lost the sacred spear, which was seized by Klingsor, the king receiving from it a wound which nothing could heal. It is part of the duty of Amfortas to preside at the feasts of the Grail, when the bread and wine by which alone the knights are sustained is shared; but whenever the king uncovers the Grail his wound bursts out afresh. The only consolation he has been able to obtain has been that in answer to his prayer a voice from the Grail itself has uttered these mysterious words:—

> By pity 'lightened
> A guileless Fool;—
> Wait for him,
> My chosen tool.

For the sake of those readers who do not understand German we quote from Mr. Corder's translation, which is most admirable, giving an excellent and, as far as possible, faithful idea of the original.

At this point Gurnemanz's narrative is interrupted by cries of horror coming from the lake. A wounded swan flutters feebly over the stage, and falls dead on the ground. Some knights enter, dragging in Parsifal, with a bow in his hand. Gurnemanz asks him if it is he who has shot the swan. He admits it, but in reply to the reproaches says he did not know it was wrong. Gurnemanz asks him his name and his parentage, but to all questions the youth answers, "I do not know." All the information he can give is that his mother's name is Herzeleide. Here Kundry breaks in with the explanation that his father, Gamuret, had perished in battle, and that, to save her son from a similar fate, the mother had reared him as a fool. Gurnemanz thinks it at least possible that Parsifal may be the "guileless Fool" promised as the deliverer of Amfortas, and therefore offers to take him to the Feast of the Grail, which is to be held the same day. The scene changes to the Hall of the Grail. Gurnemanz and Parsifal enter, and the feast is celebrated. It is very difficult to speak dispassionately of the scene which follows. The Feast of the Grail is, in fact, nothing else than the Lord's Supper. We have already said that we do not think that Wagner intends to outrage the religious feelings of the public—we rather think that his object is to raise the drama to the dignity of a religious ceremony. The whole scene is, it must be admitted, most reverently treated—quite as much so as in Bach's Passion Music; but we should be failing in our duty did we not protest earnestly against the singing in the theatre of such solemn words as, for instance, the Chorus of Boys:—

> Take and drink my blood;
> Thus be our love remembered!
> Take my body and eat:
> Do this, and think of me!

The introduction of the whole scene on the stage shows, to say the least of it, a lamentable want of judgment on the part of the composer; and it will prevent the work from ever becoming popular. Apart from the question of propriety, it would be unjust not to admit the great beauty, both poetically and musically, of this scene. If we could concede the possibility of a really sacred drama on the stage, and remove from our minds the feeling of incongruity, this splendid *finale* would deserve unqualified praise as one of Wagner's finest creations. The close of the act is very striking. Parsifal has been watching the ceremony in a vacant manner, and, after the knights have left the hall, Gurnemanz asks him if he understands what he has seen. Parsifal shakes his head, whereupon Gurnemanz contemptuously turns him out of the hall. But as the curtain closes a single voice from above is heard singing, "By pity 'lightened a guileless Fool," and an invisible chorus answers, "Blest in believing!"

The second act offers the strongest possible contrast to the first. The scene is Klingsor's castle, and the magician is working with his spells. He sees Parsifal approaching the castle, and he summons

Kundry to tempt the youth. In the course of the act we learn more concerning this mysterious woman. She is no other than Herodias, who, according to the old legend, was doomed to eternal wandering because she had laughed when she saw the head of John the Baptist brought in on a charger. Wagner, however, makes her crime that of having laughed at Christ bearing His cross. To expiate her offence, she endeavours to do good where she can; thus, in the first act, we have seen her bringing a rare balsam to relieve the sufferings of Amfortas; but whenever she sleeps she is brought under the spell of Klingsor, who employs her as his chief agent to seduce the knights of the Grail from their allegiance. Kundry appears, and is compelled to attempt the fascination of Parsifal, though much against her will. The youth appears on the ramparts, and the tower in which Klingsor is standing sinks into the earth, its place being taken by a luxuriant and beautiful garden. While Parsifal is gazing at it with astonishment, troops of beautiful damsels come forth from all sides, inviting him to play with them. His innocence is his protection, for he evidently does not understand the meaning of their advances. Kundry then appears, and exerts all her arts upon him, but in vain. At last, in despair, she calls on Klingsor for aid. The magician appears on the castle wall, brandishing at Parsifal the sacred spear which he had wrested from Amfortas. But when he throws it, it remains miraculously suspended in the air over Parsifal's head. The youth seizes it, and makes with it the sign of the cross, whereupon the castle falls to ruins, and the garden withers to a desert. Parsifal turns to Kundry, and saying to her, "Thou knowest where only we shall meet again," disappears, and the scene closes.

It is impossible within reasonable limits to give any adequate idea of this extraordinary act; much of the effect, moreover, must depend upon the manner in which it is put on the stage. The scene between Parsifal and the flower-maidens in the garden is one which may be made very beautiful or very offensive according to the way in which it is treated. The following scene, between Parsifal and Kundry, is a most curious mixture of thinly veiled sensuality and religious mysticism. Certainly nothing like it has been seen before on the stage. It would require long quotations from the poem to render this point intelligible; we must therefore refer our readers to the published libretto. If delicately handled by the actors, the scene will be most impressive to those who can overcome their repugnance to the juxtaposition of religion and the theatre; if coarsely treated, it may easily be made repulsive, if not disgusting. With regard to the music, it is so difficult to judge any of Wagner's scores from a pianoforte arrangement, that we prefer to reserve a final opinion till we have heard it at Bayreuth, simply saying now that while a few passages are unquestionably very beautiful, a great part of the music seems, at least on the piano, excruciatingly ugly.

In the third act we find ourselves once more in the domain of the Grail. A long period of time has elapsed since the first and second acts, for Gurnemanz now appears as an extremely aged man. During this time Parsifal, bearing the sacred spear, has been wandering in a vain quest for the Grail. At the commencement of the act Gurnemanz enters, and, hearing a low moaning among the bushes, he seeks for the cause, and discovers Kundry rigid and apparently lifeless. He restores her to consciousness, and is struck with the alteration in her manner, from which all the wildness has departed. While he is wondering at the change, a knight clad in black armour enters. It is Parsifal; and after a short time Gurnemanz and he recognize one another. He explains that he has brought back the holy spear. Gurnemanz welcomes him warmly, and tells how sorely his aid is needed. Amfortas, longing for death as the only release from his sufferings, has refused to uncover the Grail; the knights, therefore, have been denied the holy food by which their supernatural strength was maintained; Titurel, no more sustained by the sight of the Grail, has died, and his funeral rites are about to be celebrated. Gurnemanz will lead Parsifal to Amfortas, for at the obsequies of Titurel the Grail will once more be uncovered; but as none may be present but those who are absolutely pure, the stains of travel must be washed away from Parsifal. Kundry washes his feet while Gurnemanz sprinkles his head. Then follows an incident on which we leave our readers to make their own comments. Kundry anoints Parsifal's feet and dries them with her hair! Gurnemanz then anoints his head, and recognizes in him their future king. Parsifal fulfils his first duty by baptizing Kundry. The scene again changes to the Hall of the Grail, as in the first act. On one side, knights bring in Titurel's corpse in a coffin; on the other, Amfortas is carried in on a litter, preceded by the shrine of the Grail, which is covered. The knights call on him to uncover the Grail and fulfil his holy office; but in a paroxysm of despair and anguish he refuses, and, opening his dress, implores the knights to bury their sword-blades in his body, and to put an end to his misery. At this moment Parsifal, who with Gurnemanz and Kundry has entered unperceived, advances, and, touching the wound with his spear, says:—

> One weapon only serves:—
> The one that struck
> Can staunch thy wounded side.

A look of rapture irradiates the face of Amfortas, and Parsifal orders the Grail to be uncovered. The conclusion of the scene we quote from Mr. Corder's translation:—

"The boys open the shrine: Parsifal takes from it the Grail, and kneels, absorbed in its contemplation, silently praying. The Grail glows with light; a halo of glory pours down over all. Titurel, for the moment reanimated, raises himself in benediction, in his coffin. From the dome descends a white dove and hovers over Parsifal's head. He waves the Grail gently to and fro before the upgazing knights. Kundry, looking up at Parsifal, sinks slowly to the ground dead. Amfortas and Gurnemanz do homage on their knees to Parsifal.

"ALL (with voices from the middle and extreme heights, so soft as to be scarcely audible).

> Wondrous work of mercy;
> Salvation to the Saviour!"

Thus ends one of the most remarkable dramas that Wagner has yet produced. It is impossible not to regret deeply the gross offences against good taste, not to say outrages of religious feeling, by which the work is characterized, because apart from these it is unquestionably one of the most powerful and beautiful poems which its author has written. In the present article we have done most imperfect justice to it; many details needful to its appreciation as a work of art have been necessarily omitted, for it would require an essay rather than an article to deal with it fully. It has been said by some who have commented upon it to have a deep moral significance—to be, in fact, an allegory, the meaning of which readers of the poem will easily discern. We think it probable that this is the true theory; but we cannot admit that it justifies such treatment of sacred subjects as we find in this work. Whether the state of public opinion in Germany is such as to admit, without protest, on the stage such scenes as those of the first and third acts, is a question which will be solved in the immediate future; that 'Parsifal' will ever be performed in this country we think very improbable.

Reserving till after the performance any final opinion with regard to the music, a few words may be said as to its general features. Like all Wagner's later works, it is constructed on numerous "Leitmotive." Of these Hans von Wolzogen's 'Guide' gives in all twenty-five, and these are treated with the same masterly skill which we find in 'Tristan' and the 'Ring des Nibelungen.' Reminiscences of Wagner's preceding works are occasionally to be met with, while in the abundance of chromatic harmonies 'Parsifal' equals, if it does not surpass, 'Tristan.' Some of the combinations are astonishingly harsh, even positively ugly. In his endeavour to avoid the commonplace Wagner has more than once overstepped the line of musical beauty. But by the side of much to which we cannot reconcile ourselves, we find passages which are unsurpassed by anything that the composer has written. Such are the orchestral prelude which opens the work, the scene in the Hall of the Grail in the first act, and a great part of the scene of Parsifal's temptation by the maidens in the second. We are quite prepared, bearing in mind our previous experiences with Wagner's works, to find that many portions of the music which are unendurable on the piano prove most appropriate on the stage with their proper dramatic surroundings, and it is only by being submitted to the test of actual performance that such music can be fairly judged. Whatever may be the final verdict on Wagner's latest drama, no one will deny that it shows itself the work of a great genius.

Musical Gossip.

OUR musical correspondent telegraphs from Bayreuth, under the date July 27th: "'Parsifal' was produced last night in the Wagner Theatre, which was crowded by an appreciative and enthusiastic audience. Reserving till next week a full report, I can only say now that the performance was in every respect superb. The principal parts were sustained by Frau Materna as Kundry, and Herren Winkelmann, Reichmann, Kindermann, Scaria, and Hill, as Parsifal, Amfortas, Titurel, Gurnemanz, and Klingsor respectively. Chorus and orchestra, under the direction of Herr Levy, left nothing to desire;

while the *mise en scène* was of extraordinary beauty. Of the complete success of the first performance there can be no doubt."

SEVERAL members of the old Sacred Harmonic Society have placed themselves under the *bâton* of Mr. Willing, who was for many years organist to the Society. The new body, which will probably be called Mr. Willing's Choir, will give four concerts at St. James's Hall during the winter and spring. The first novelty will be Herr Gade's 'Psyche' (which is about to be produced at the Birmingham Festival), and the prospectus will likewise include 'Elijah,' 'Messiah,' and 'Acis and Galatea,' besides glees and madrigals.

THE promenade concerts will begin at Covent Garden on August 5th, again under the conductorship of Mr. G. Crowe. The orchestra will be led by Mr. Carrodus, the stage will be fitted up as a Spanish market-place, and both the theatre and the Floral Hall will be illuminated by electricity.

THE chief feature of the Royal Academy of Music prize list is the small number of awards for singing. The vocal examination was, it is understood, very severe, and no male student was deemed worthy of a silver medal. The gentlemen took three bronze, and the ladies three silver and four bronze, medals in the vocal department. On the other hand, the medals awarded to pianoforte players, &c., were very numerous.

IN the course of a series of operatic performances to be given at the Crystal Palace next month, the cantata 'Alfred,' by Messrs. Prout and Grist, will be placed for the first time on the stage. For the general series of representations, Mesdames Rose Hersee and Blanche Cole, and Messrs. Parkinson, Faulkner Leigh, Aynsley Cook, and Temple are engaged.

MR. CARL ROSA will commence his tour on August 7th next at Dublin. His conductor will be M. Goossens, who directed the French operatic performances at the Gaiety some years ago.

MISS OLIVE MAY, a young lady only nine years of age, gave her first public concert at the Beethoven Rooms on Friday afternoon.

THE Mdlle. Nordica who made a successful *début* at the Paris Opéra Comique last week as Marguerite in 'Faust' is an American lady, Miss Lilian Norton.

HERREN FÖRSTER AND NEUMANN having retired from the direction of the Leipzig Stadttheater, Herr Max Stägemann has taken a lease of the house for several years.

A MEMORIAL tablet has been placed on the house, No. 18, Galeriestrasse, in Dresden, to record the fact that it was Weber's residence during the last four years of his life.

DRAMA

THE WEEK.

ADELPHI.—'The Fool's Revenge,' in Three Acts. Adapted by Tom Taylor.
PRINCE OF WALES'S (Morning Performance).—'Merely Players,' a One-Act Drama. By Edward Rose.

TOM TAYLOR'S three-act drama of 'The Fool's Revenge' does not improve upon acquaintance. To compare with that grim original, the very title of which is a satire, this emasculated and sentimentalized adaptation, which is at once more extravagant and less moral than the work it seeks to replace, is preposterous. Much intelligence has, however, been wasted in the task of translation. Portions of the dialogue are capable, and the witticisms put in the mouth of Bertuccio are happy. It is singular that the absurdity of portions of the work never struck Taylor. Thus his duke, revelling among the courtiers and in presence of the woman he carries off, partakes with them of a flagon of wine and orders a second. Yet he alone is killed, although into the flagon a bottle of poison, supplied by the Borgias' physician, has been emptied; and his companions in the carouse escape without even a headache. With the piece, however, it is late to concern ourselves. Mr. Booth's rendering of Bertuccio has undergone no perceptible change. It is still most remarkable in its display of violent contrasts and in its swift and frequent transitions from passion or suffering to assumed calm. Grotesque and extravagant in appearance, Bertuccio moves along by a process that resembles spinning rather than walking, and sprawls at the feet of those he seeks to entertain with quip and gibe. Some of his movements are well chosen and significant, especially happy being the employment of his fingers to Malatesta in a derisive fashion common enough in Italy, but unknown this side of the Alps. His performance is marvellous as art, and is wanting only in intensity and in those flashes of ferocity which should lighten up his servile and cynical bearing. Mr. Booth's method appears to be limited, and to include the expression of none of the viler and more cruel passions. The support afforded Mr. Booth is indifferent. Mr. Samuel Fisher, who plays the Duke, fails to exhibit any distinction or habit of command, and is only distinguishable from his courtiers by his milder and more humble bearing. Miss Bella Pateman is satisfactory as Fiordelisa, and Mr. Pateman's clear elocution is of service as Torelli. Mr. Plympton's performance of Serafino dell' Aquila shows genuine capacity, and is picturesque, animated, and intelligent.

'Merely Players' is the title bestowed by Mr. Edward Rose upon a one-act drama founded upon the 'Tabarin' of M. Paul Ferrier, which has been given on one occasion only at the Prince of Wales's Theatre. The resemblance between 'Tabarin' and 'Merely Players' is rather stronger than the playbill indicates, but Mr. Rose has departed widely from his original. The chief alteration consists in the amelioration of the character of the hero. Tabarin in the play of M. Ferrier has few traits in common with the merry-andrew whose name he bears, the companion of Mondor, the predecessor of Gros Guillaume, and the father-in-law of Gualtier Garguille. He is, however, a slightly unceremonious gentleman who, when his wife ventures to dispute his orders, addresses her in the language of Sganarelle to Martine—"Doux objet de mes vœux, je vous frotterai les oreilles"—and, like that worthy, carries his threats into effect. When, accordingly, while acting before the public a scene in which he personates a man robbed of his wife, he finds that his veritable wife, his Francisquine, the recipient of such unmistakable marks of his affection, has indeed run off with a gallant who, in disguise, has joined his company, he has some cause for self-condemnation. It is otherwise with Bertoldo, the hero of 'Merely Players.' Misreading, as proof of a mercenary and grovelling spirit, the anxieties of her husband concerning money matters, Maddalena, his wife, listens to the wooing of Lelio, a disguised aristocrat, and promises to elope with him. While Bertoldo is acting the part of a miser whose wife is stolen, he comes upon a letter written by Maddalena informing him of her intention to fly with Lelio. In the translation, as in the original, the chief interest is derived from the assumption by the mock public upon the stage that the manifestations, fierce or sorrowful, drawn from the actor by his loss are assumed. In the English version, however, the lady does not fulfil her threat. She listens at the wing, and, discovering how much worthier is her husband than her lover, elects to stay. At this point the piece ends, leaving in the mind of the cynical spectator the speculation whether a slight administration of the form of conjugal correction affected by Tabarin might not prove effective in establishing upon a firmer basis the domestic happiness of his successor. Tabarin was written for M. Coquelin, whose performance of it galvanized into life a piece with little internal merit. The *rôle* of M. Coquelin is taken in English by Mr. Beerbohm Tree, who evinced much intelligence and rendered very touching the representation of the sorrows of the wronged husband. Mr. Tree was, however, impeded by extreme nervousness and by a general want of preparation, which made the entire performance halting and uncertain. Mr. E. Rose, the author of the piece, took a small *rôle* in his own work, and evinced in it distinct capacity for the stage.

Dramatic Gossip.

MR. BOUCICAULT'S address upon acting at the Lyceum Theatre dealt with few topics upon which criticism has not already spoken. His technical illustrations were amusing, and belonged, of course, to a province outside the domain of criticism. In what was of most importance, however, in the protest against the "vanity-sickness" that impedes an actor, against the indifference and inattention with which the spectators of a supposed action regard what should curdle their blood, and in other kindred matters, he lent the weight of his name and talent to views that have found constant advocacy in the *Athenæum*. For such support we are naturally thankful. It is possible that the conditions under which Mr. Boucicault spoke may lend weight to his words, and that the fact that a large portion of his audience was made up of actors may render his speech profitable. Mr. Boucicault's method is, at least, perfect, and his lecture was an artistic as well as an intellectual treat.

To the list of characters in which Mr. Booth has been seen will shortly be added Don Cæsar de Bazan, which is to be played at a morning performance.

DECIDED action is now being taken by the Metropolitan Board of Works in dealing with the theatres. The Prince of Wales's, the Royalty, and the Vaudeville are among the houses which for practical purposes are condemned, and important alterations will have to be made in other houses.

A NEW *lever de rideau*, by Mr. A. M. Seaton, entitled 'My Brave Little Wife,' produced at Toole's Theatre, enlivens by some satire against the militia a melo-dramatic plot. 'Rough and Ready,' a drama first produced eight years ago at the Adelphi, has been revived with Mr. Billington as the hero, a part in which he is seen to advantage. Mr. Blanchard's extravaganza 'The Artful Dodger' is also given.

TO CORRESPONDENTS.—H. O.—received.
H. J. R.—We cannot undertake to answer such questions. No notice can be taken of anonymous communications.

LITERATURE

The Last Punic War: Tunis Past and Present, with a Narrative of the French Conquest of the Regency. By A. M. Broadley. With Illustrations. 2 vols. (Blackwood & Sons.)

Mr. Broadley has perceived not only the historical and political value of recent events in Tunis, but also their dramatic significance and force; and if he is somewhat eager to show how consistent has been the "*Punica fides* displayed in the tortuous diplomacy which has practically put an end to Tunisian independence," the effect is to give more artistic finish to his work, though it may beget in some minds a suspicion of partisanship. Mr. Broadley himself says he has

"endeavoured to tell the story of recent events in Tunis essentially from an English point of view, and to mete out impartially the share of praise and blame ascribable to the different contending parties";

and though it is from the "English point of view" he judges French diplomacy in Tunis to have been only evil, and that continually, it must be conceded that the English point of view seems to be supported by a certain amount of evidence.

Mr. Broadley shows discretion in refusing to be tempted by the "unrivalled associations" of Tunis into an historical disquisition at the outset on the might of Carthage and the woes of Dido, the rise and fall of Roman power, the invasions of the Vandals and the Byzantines, the Moslem conquest, the Crusade of St. Louis, the expedition of the Emperor Charles V., and the exploits of the Knights of St. John. He has been compelled, however, to set aside to some extent his self-denying ordinance by the exigencies of the task he has set himself, and by the necessity he has somehow felt of introducing photographs of the paintings done by Jan Cornelis Vermeyen of the taking of Tunis by Charles V., and of quoting from certain manuscripts he has found in the archives of the Knights of St. John of Malta. The result of the compromise is to be regretted. We have a meagre and hurried *résumé* of the early history of Tunis, bristling with names and dates which are read only to be forgotten, instead of a clear and succinct exposition of the events and situations which led to the suzerainty of Turkey, for which the history of M. Alphonse Rousseau offers admirable material. Mr. Broadley, however, shows strength and purpose in his work as soon as he is able to avail himself of the archives of the British Consulate at Tunis. The first English consul was appointed somewhere about 1640, though our first known treaty with Tunis was not executed until after his death in 1662. The text of this curious document is given in an appendix. It arranges for a most guileless condition of amity with the piratical Deys—its seventh article even enacts that "neither Englishmen nor Tunisians shall speak rude words or use violence to each other"—and yet three years afterwards Admiral Black was sent to bombard Porto Farina and "empty the *bagne* of all the English and Dutch slaves." The reason of this appears to be that the treaty was conceded merely as a temporary device to win England's neutrality, if not aid, at a time when France was threatening to attack the regency. Soon afterwards the French took our place as the "favoured nation," and concluded with the Dey a highly advantageous treaty. In this seesaw fashion French and English influence worked in Tunis throughout the seventeenth and eighteenth centuries, now one being in the ascendant and now the other. When the French consul had a dominant influence he does not seem to have always exercised it very generously. About 1710

"the relations between the French consul-general and his English colleague became so strained that the former officially ordered the French laundress to refrain from washing Mr. Richard Lawrence's linen, and the French baker was forbidden to supply him with bread."

But this consul's Boycotting soon came to an end. The rule of the Deys having a few years before succumbed to that of the Beys—or, as Mr. Broadley puts it, "the piracy of the Deys" having become "the privateering of the Beys"—Hussein Ben Ali, the first of the supreme Beys and the founder of the present dynasty, showed a disposition to break with France. "His corsairs frequently pursued their prizes to the coast of Provence," and quarrel ensued, followed at first only by threat on the one side, and apology and reparation on the other. It was not till 1740 that matters came to an open rupture. The immediate *casus belli* is doubtful, but it may be admitted that war was brought about "by the want of tact of the French consul," since M. Desfontaines and other French writers say so:—

"This agent was ruled entirely by his mistress, who was jealous of a Maltese woman married to a Frenchman. She induced the consul to expel the Maltese from Tunis on a charge of bad behaviour. The latter sought the protection of the Khaznadar, but the consul insisted on arresting her. The Khaznadar rescued her by force, and his doing so being construed into an insult to the French flag, the war broke out."

From this point Mr. Broadley traces with acuteness and vivacity the rivalry in Tunis between France and England. From the time of the French Revolution until the descent upon Algiers, French influence fell off. This was doubtless mainly caused by England's naval supremacy during that period and by the brilliant achievement of Lord Exmouth in 1816, when he compelled the Bey to sign a treaty abolishing Christian slavery throughout his dominions. France, after her war with Algeria (at which the Bey of Tunis looked on without disapproval, because "he was not sorry to see the humiliation of an inveterate and almost hereditary enemy, and because he hoped that a successor to the Bey of Algiers would be selected from the descendants of Hussein Ben Ali, an idea which the French consul-general lost no opportunity of encouraging"), began again to assume her *prépondérance naturelle*. The first treaty concluded under these circumstances, that of 1830, is significant of the scope of French *prépondérance*. In one clause, for some time kept secret, it was agreed that a conspicuous spot on the site of the Carthaginian Byrsa should be ceded to France for the erection of a chapel in memory of Louis IX. (which spot was afterwards made a strongly entrenched position), and by another there was restored to France the coral fishery as far as Cape Négre. The history of Tunis for the last fifty years is the story of a triangular diplomatic duel between France, Tunis, and England (it was very late in the day when Italy took England's place and turned the duel into a wrangle), and Mr. Broadley has described it with remarkable skill and force.

Some of the episodes are as dramatic as any in history. The Tunisian troubles of 1863–4 will be in the recollection of many. M. de Beauval was playing a similar *rôle* to that played by M. Roustan recently, and was causing the Bey great anxiety. An insurrection in Southern Tunis came to an end in spite of M. de Beauval's efforts to keep it going. Its leader gave himself up to the Bey, and with himself "three extraordinary letters which he had received from M. de Beauval through Giovannino Mattei, the French Consul of Sfax." These letters are given in the text and clearly show the bad faith of M. de Beauval. Muhamed es Sadek is reported to have told the Commissioner Extraordinary who had been sent by the Porte to "inquire into the state of affairs at Tunis," that recent events had convinced him that the only chance of preserving the regency from his neighbours was to follow the advice of England and strengthen his connexion with the Porte. The conclusion of the intrigue is thus related by Mr. Broadley:—

"The Bey now resolved to send an envoy to Constantinople to thank the Sultan.....At the same time General Kheir-ed-Din had private instructions to bring about, if possible, a clear and definite understanding as to the future relations between the regency and the Porte. It was arranged that the embassy should leave Goletta on the 17th November. On the morning of the 12th M. de Beauval called unexpectedly at the palace. He no sooner entered than in an imperious manner he enjoined the Bey not to send an agent to Stamboul. The discussion waxed warm between them, and De Beauval at last told Muhamed es Sadek clearly that he would bar the passage of General Kheir-ed-Din by force. He refused to take the Bey's hand on leaving, and quitted the room with angry and significant gestures. A cabinet council was held immediately, and it was resolved to hasten the envoy's departure. Next evening General Kheir-ed-Din went on board the Tunisian steamer, the Beshir, at dusk. At that time the French ironclad Invincible was lying off Goletta. The commander at once sent a messenger on board [the Beshir], who intimated to the general the desire of M. de Beauval that he should put off his journey till instructions reached him from Paris. Kheir-ed-Din de-

murred to such a request, and the French officer left the ship. It grew dark, and the Invincible began to burn blue-fires and discharge rockets. Suddenly the Beshir started on her journey, and the Invincible followed in her wake. The two vessels approached the islet of Zembra at the entrance of the Gulf of Tunis. A dangerous channel between the rock and the mainland gives any vessel taking it an advantage of several miles. The Beshir unhesitatingly entered the passage at full speed and was lost in the darkness.....The Invincible returned during the night to her anchorage at Goletta.....While Muhamed es Sadek was awaiting with fear and trembling the result of his mission, he was agreeably surprised by the recall of M. de Beauval. The French could never forgive him the failure of his burlesque attempt to capture the Tunisian Envoy Extraordinary on the high seas, and he was summarily replaced by M. de Bellecourt."

Considering the earnestness with which Mr. Broadley describes the events and outside influences that have brought about the absorption of the Tunisian government in a French protectorate, we are surprised that he should not recognize how largely the catastrophe was due to the inherent weakness and corruption of a state that could permit itself to be lorded over by M. Roustan and his *entourage*. Mr. Broadley apparently wishes his readers to feel pity and respectful sympathy with Muhamed es Sadek; we can only feel impatience and contempt for a prince who is revealed to us in these annals, by many side-lights, as a good-natured, timid, and credulous imbecile, who wept over the rascal Mustapha, the barber's apprentice and his "adopted son," when he was asked to dismiss him from the vizierate, and who "gave way to almost childish transports of delight" when he knew of the recall of M. Roustan.

In spite, however, of these and similar proofs that Mr. Broadley fails to rise to the clear and unembarrassed view of the historian, a considerable part of his work has force, dignity, and proportion. Its truth, too, is undeniable, but one is constantly haunted by the suspicion that it is the truth of a brief held by "a leading counsel for the prosecution." Once, indeed, he lays his brief aside and indulges in an enthusiastic history and description of holy Kairwán, "the virgin Moslem town of Northern Africa." Founded by Okhbah the Victorious as a Moslem stronghold only fifty-five years after the flight of the Prophet, it was until the eleventh century "the metropolis of the Crescent" in Northern Africa. The power of its rulers has been since then merged in that of the Beys of Tunis, and in its wide sandy plain it has slumbered through the centuries till now, unprofaned by the tread of infidel feet and the touch of infidel hands. Now all the mosques and sacred places are overrun by curious Europeans. Mr. Broadley himself was the first to enter the most sacred shrine of all, that of Sidi Abdullah, "the Companion of the Prophet." He thus describes this holy of holies:—

"Here for nearly 1,200 years has slumbered a personal friend of the founder of the faith of Islam, who lived, died, and was buried, wearing always as a symbol of devotion a portion of the Prophet's beard on his breast.....The chamber is about twenty-one feet square and lofty. Its walls are covered with a geometrical pattern worked out in black and white marble. Four lengthy inscriptions are embedded in them, and the room is dimly lighted by four small windows of rose-coloured and blue glass. From the cupola of fretwork hangs a grand old chandelier of twisted Venetian glass. Below this is the tomb itself, surrounded by a high grating of bronze, shut in by four marble columns about seven feet high. From a rod, on a line with the grating, hang festoons of ostrich eggs and golden balls. The catafalque above the grave is covered by two elaborately embroidered palls: the first, of black and white velvet, adorned with Arabic inscriptions in silver, was the gift of the late Ahmed Bey; the second, of pink and blue brocade, was a votive offering from Muhamed es Sadek. Over these hung thirteen banners, rich in gold, silver, and needlework—the tribute of the successors of Hussein Ben Ali to the sanctuary of the Sidi Bou Awíb. Our visit was certainly unexpected, for at least a dozen fine Arabic MSS. rested on as many lecterns of mother-of-pearl and tortoiseshell in front of the screen. The guardian of the *zaouia* could hardly realize the fact of Christians desecrating by their presence such holy ground. Running his amber chaplet through his hands with feverish haste, he suddenly threw himself upon his face, and probably prayed to be forgiven. Some Algerian soldiers who had followed us prostrated themselves before the tomb, and eagerly kissed the edge of the palls through the metal lattice-work. Looking at the bright white marble pillars of the cloister, my eye fell on one remarkable capital: at either corner a bird supported a Greek cross in the centre. The spoils of some fair Byzantine church had evidently been brought to honour the resting-place of the 'Friend of the Prophet.'"

Mr. Broadley's narrative of the war itself, however, is too long and tedious. It sets forth an important phase of Tunisian history, no doubt, but not relatively so important as to require for its narration almost two-thirds of the whole work. In fact it would seem as if Mr. Broadley had been here bewildered by the extent of his special correspondence. It may be that the events of last year are too close at hand to be seen in proper historical relief, and it may be also that it is one thing to condense and adapt the archives of the British Consulate-General at Tunis, and another thing to cut down one's own letters to the *Times*.

The appendices of the work are of great value. The map is of little value, and the few illustrations are of less; one of them, however, has the interest of ghastliness.

Études sur la Littérature Contemporaine. Par Edmond Scherer. (Paris, Calmann Lévy.)

M. Scherer is the only living French critic who has attained anything like a general reputation in England, and this perhaps accounts for the tendency of some English critics to protest against him. He has been spoken of by such persons as "a French Principal Shairp." But there was probably some bravado in this. Certainly Principal Shairp might take it as a compliment if he were spoken of as an English M. Scherer, though it is not certain that he would do so. Such a sentiment as M. Scherer's very admirable sentiment that "les livres écrits sont les seuls qui survivent, j'allais dire les seuls qui existent," would make the Oxford professor shake his amiable head. But there are certainly points of contact between the two, despite M. Scherer's vastly greater knowledge of literature, and his immense advantage in possessing a solid theory of literary æsthetics instead of a shifting creed made up of moral and sentimental likings. Both have a remarkable inability to appreciate what they do not like, whereas the critic of the best kind never appreciates more fairly and keenly than when he does not like; both are wont to be half startled and half indignant at anything abnormal; and both have what may be called the prejudice of matter. Trained critic as he is, M. Scherer cannot speak of Massillon or Bourdaloue without some little flirt of the heel which speaks the Protestant; just as Mr. Shairp, with all his affection for Scotland and for poetry, cannot speak of Burns or Shelley without ejaculating, "Oh, fie!" when he comes to the 'Jolly Beggars' or the 'Witch of Atlas.' M. Scherer's present volume of collected studies, the seventh in number, contains not a few articles of interest. To wickedly disposed readers some papers on different academic receptions will be the most interesting, because of the obvious asperity of the writer's tone—an asperity as easily to be accounted for as it is obvious.

The really valuable papers of the volume, however (besides a short but excellent protest against newspaper *clichés*, a protest at least as much needed in England as in France), are those on Wordsworth, on M. Zola, and on M. Taine's book on the Revolution, especially the first and second. The essay on Wordsworth contains a neat sketch of the poetical history of England during the present century, some agreeable flattery of Mr. Matthew Arnold, and a series of observations on Wordsworth which are generally laudatory, often very judicious, but marked throughout with M. Scherer's mark—the mark of a reasonableness which is so extremely reasonable that it sometimes forgets to be anything else. Now it is impossible to criticize the truest poets, though you may criticize M. Scherer's favourite Racines and Lamartines, from the purely reasonable point of view. If you do the result is a second edition of Voltaire's commentary on Corneille. Thus M. Scherer makes the extraordinary comment on *the* ode, that, "fine as it is, it sounds a little false" to him. It is certain that there is nothing in Wordsworth, perhaps there is nothing in poetry, less "false" than this ode, and the only explanation of the difficulty is that its key is too high for M. Scherer. All critics, if they are honest, will acknowledge that there are keys which are too high for them. But they do not, if they are skilful as well as honest, conclude that the notes must be false for that reason. They say frankly, as Cowley did of Chaucer, "I cannot taste him"; but there they stop.

On the other hand, M. Scherer dealing with the author of 'Nana' is a thoroughly pleasing sight. There is no fear of his not taking the right view here, because his prejudices do not either shield or obscure the object. M. Scherer sees that object just as it is—a common but very unsavoury object—and proceeds to clear it away with critical broom and barrow in a singularly cool, workmanlike, and neat-handed manner. He is not in the least unjust to M. Zola, as he is to writers like Diderot and Baudelaire, who unite with much to which he justly objects much also to which he objects merely because he cannot understand it. He does not get excited with him, or lose his temper, or descend to strong language. He perceives that, in Mr. Carlyle's words, "to treat such a matter with lyric

fury is superfluous," so he takes M. Zola, both as critic and as novelist, quite seriously and politely, and points out to him that in the former capacity he is not only foolish, but inconsistent in his folly; and that in the latter he is not only dirty, but dull in his dirtiness. The thing could hardly be done better, and as one closes the book one feels that sheer common sense, if there are situations in which it is somewhat at fault, is a most excellent thing in situations where it is at home.

Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII., preserved in the Public Record Office, the British Museum, and elsewhere in England. Arranged and Catalogued by James Gairdner. Vol. VI. (Longmans & Co.)

The absorbing interest of that cycle of dramas with which the reign of Henry VIII. brings us in contact increases rather than diminishes as we become better acquainted with the actors and the parts they played. The series of calendars, the first of which appeared just twenty years ago, has now reached its ninth volume. The undertaking has been carried out with unusual industry and commendable rapidity; yet so vast was the scale on which Mr. Brewer's original plan was conceived and so exhaustive has been the method employed, that twenty years of the reign of Queen Victoria have been occupied in analyzing, arranging, and calendaring the documentary apparatus for the history of scarcely twenty-five years of the reign of the Tudor king. We may not look for another such a masterpiece as the celebrated introduction to the fourth volume—the taxpayers of the United Kingdom are too heavily burdened to endure such an expense; and perhaps it is as well, when the old leader is dead, that his disciples should be saved the temptation of measuring themselves against their master. Meanwhile his sagacity in choosing his subordinates becomes more evident with the appearance of every successive volume, and this, the newest product of Mr. Gairdner's energy and learning, will add to a reputation already well established.

When Mr. Gairdner last let fall the curtain the reader was left at a point in the history which must be regarded as eminently critical. The king's divorce had been the subject of nearly five years of the most strange diplomacy. Queen Catherine was still queen and her daughter still princess; the king had not dared to put away the one or to repudiate the legitimacy of the other; still less had he dared to marry the lady who continued to fascinate him. The Archbishop of Canterbury (Warham) was dead, and no successor had been appointed. Sir Thomas More had resigned the Great Seal, which had been committed to Audley, about whom the less said the better. The Act for abolishing the payment of annates had been passed, but had not yet been published. In Europe the two great parties, if we may use the expression, were those which were respectively headed by Francis I. and Henry, and by Charles V. and the Pope. How long were things to remain *in statu quo?* This volume shows the cause and method of the *dénoûment*. In less than a year Sir Thomas More had so far fallen in influence and power that he had actually to make use of Sir William Fitzwilliam to obtain the protection of Cromwell from a gentleman who "had treated him very ill." Cranmer had become Archbishop of Canterbury; the queen had been repudiated; the Princess Mary had been degraded to the condition of a waiting-maid; Henry had married Anne Boleyn, and her daughter Elizabeth had been born; yet the year 1533 closed with the excommunication of the king still unpronounced. Diplomacy had not even yet been exhausted. The Pope and the emperor still had some hopes, and an appeal from "the Bishop of Rome" to a general council embarrassed the friends of the Vatican; and already Anne Boleyn had begun to feel the pangs of jealousy, and it would appear not without cause.

To give anything approaching to a sufficient summary of the contents of such a volume as this would be obviously impossible; but as the mass of evidence that comes before him is sifted and analyzed, the reader cannot avoid being impressed one way or the other, for or against the characters with whom we are beginning to be so familiar. With regard to Henry VIII. himself, now that the weary proceedings for a divorce have come to an end, we have abundant means for arriving at an impartial verdict regarding him. We do not love the man better the more we know of him. The ideal set up by Mr. Froude is ridiculously unlike the real figure standing out before us from the converging rays of the many mirrors brought to bear upon him down to the close of this year 1533. But the great plunge has only just been made, and only the pressure of his little finger felt. Who could have dreamt of what was coming, and of that ghastly tyranny of his later years aptly characterized by Mr. Green in a single word—*the terror?*

Already he figures as one whose fierce will bears him along in heartless scorn of all persons and things in heaven and earth that stand in his way. But it was not only that Henry was resolved to have his way—other men have been as stubborn and as unscrupulous in the means resorted to and as pitiless to their opponents. Henry was not content with getting his own way, he was bent on making all the world believe it to be the right way. He had started by taking up the *rôle* of injured innocence, and, having posed in the character of a highly moral and conscientious king, nothing would satisfy him but that the laws of the realm, the sanction of religion, and the moral sentiment of mankind should unhesitatingly applaud his actions. Nero in his madness would have the whole human race acknowledge him as the first lyrist of his time. Henry was but Nero "writ large." Such a dangerous monomaniac was likely to develope into a monster indeed as time went on.

Nor does Cranmer's character shine out with added lustre. If he had not suffered at the stake even Protestants would have been slow to speak of him with respect. He probably (and, if his own statement may be accepted, he certainly) was not the clergyman who actually celebrated the marriage with Anne Boleyn—it is even possible that he did not know where, when, or by whom the ceremony was performed. These are some of the secrets which no amount of research is now ever likely to disclose. But his manner of dealing with the queen's case when it came before him judicially, and the letter which he wrote to Cromwell when it was feared that she would, after all, put in an appearance, and so complicate the proceedings and embarrass him, are beyond measure shocking and discreditable. On the other hand, every fresh piece of evidence goes to show that the attitude and conduct of the Pope were those of a judge of appeal actuated by a sense of duty. From the point of view of mere statecraft Clement VII. had everything to gain by compliance with a wicked despot's demand, everything to lose by standing up for right and justice. It was because the Pope was the one European potentate contending for a principle from which he would not recede that the politicians were foiled. What did he want, this unfathomable ecclesiastic, whose motives were so inscrutable?

As with the principal figures, so with the minor personages and events with which historians have attempted to deal on very imperfect evidence. We shall be compelled to reconsider our old verdicts and study the documents anew. It is plain that the story of Elizabeth Barton, the nun of Kent, has never yet been understood or its importance duly estimated. The papers in this volume, startling as they are, tell much that we knew not before, but much still remains to be told in the next Calendar.

The *religious* history of the time—meaning by that the history of the wranglings of orthodox and unorthodox—is abundantly illustrated by important papers in which the names of Latimer, Frith, and Tyndale are conspicuous; and the beginnings of the spoliation so soon coming are apparent in the attitude of the friars and the threatening language already used towards them. But the most important documents abstracted—and very fully abstracted—are the extremely able despatches of Chapuys to his master Charles V., now first given to the world from the Vienna archives. Chapuys must have been a man of extraordinary cleverness; and that he was so is evident from nothing else so much as from the fact that hitherto English historians have had no suspicion of the part he played in the politics of his time. Among the most noticeable of these despatches is that of the 10th of May, 1533, giving a detailed account of a meeting of the Council which Chapuys was summoned to attend. It was the very day on which Queen Catherine was summoned to appear at Dunstable before Cranmer, when the court was about to pronounce judgment finally upon the divorce. Chapuys's account of the meeting of the Council furnishes quite a new idea of the amenities of political discussion in so august an assembly. The representative of the emperor was treated as if he were a culprit. The Council assembled at Westminster at eight in the morning. "On Wiltshire arriving there," says Chapuys,

"he drew from his pouch the letter I had written to the king, asking me the meaning of it, and that I would show the power therein mentioned. To this I replied, that as to showing the power I had no great occasion, for, as I was ambassador, it was only of use to me for my discharge as against your majesty. Nevertheless, to show that I did not wish to stand upon cere-

XUM

mony, I was willing to satisfy the king, and I threw it upon the table."

Lord Wiltshire, "as one much grieved and astonished," adopted a somewhat lower tone, yet could not restrain a hint of menace:—

"On this I said he acted like the eels of Meaux, who cry before they are skinned.....As to the two forces of which he spoke, I did not yet know this art if he did not teach it me..... At last I told him he might lawfully enough excuse himself from speaking of this matter, as being an interested party, and moreover that it was a matter for learned men. At this he knew not what to say, except that he referred himself to others."

Invited to speak at last, "I asked," he says, "if it should be French or Latin. They thought it would be better in Latin, as they did not all understand French,"—and Latin it was accordingly. In what language the answers were made does not appear. From the ambassador's own version of the conference it is clear enough that he did more than hold his own. Except when he mentions "this accursed woman" (Anne Boleyn), he writes like a man in exuberant spirits who had had a very enjoyable morning's recreation—a master of fence amusing himself with a handful of bunglers, and every now and then treating them to some unexpected thrust or parry; as, for instance, when he told them "that heretofore the roses had troubled the kingdom, but now it seemed they desired to sharpen the thorns." But how significant is the list of those who were present at this meeting! Four peers are mentioned: Lord Wiltshire, Anne Boleyn's father; Lord Rochford, her brother; Henry Bourchier, Earl of Essex; and Thomas Howard, Duke of Norfolk; add to these the infamous Chancellor Audley. Only one of these men had a son who succeeded to his title and honours, and that son perished on the scaffold. The three others named are Cromwell, Coxe, and Sampson; they were all Wolsey's *protégés*, and all commenced their career under the guidance of the great cardinal. Cromwell's fate is known to all. Sampson, mean and truculent timeserver though he was, did not escape being thrown into the Tower. Only Dr. Coxe managed to live and die without once incurring the king's displeasure. If it be true that history repeats herself, may it be long before our annals have again recorded upon them such hideous tales as these!

The English Citizen.—The State in Relation to Labour. By W. Stanley Jevons, LL.D., F.R.S. (Macmillan & Co.)

In preparing this little treatise for Messrs. Macmillan's "English Citizen" series Prof. Jevons undertook a much needed work. It would be pleasant to be able to say that he has accomplished it satisfactorily. Unfortunately that cannot be said. A careful perusal leaves on the reader's mind the impression which the book appears to have made on the author when he came to review it at the termination of his labours—an impression expressed with much *naïveté* in his concluding chapter, "that the results obtained are hesitating and conflicting, if not positively contradictory." For this unwelcome attitude of mind Mr. Jevons supplies cogent reasons. "Ancient restrictive legislation such as that of the Statute of Apprentices was denounced," he says;

"and even the slight modern remnant, the practice of apprenticing youths for seven years, was described as slavery; the common law doctrine of non-restraint of trade was held up as wise in the highest degree; yet at the same time the modern Factory Acts were treated as admirable, and additional restrictions were advocated.....Anything approaching to a government superintendence of industry or official inspection of commodities was treated as out of the question; yet certain branches of trade, it was concluded, could be advantageously regulated by government.....The interference of trade societies in productive industry was, as a general rule, deprecated; yet the existence and proceedings of certain professional unions and newly created institutes of various sorts were defended."

And so on through almost every branch of the subject-matter. This is very disappointing. What the public expected from Mr. Jevons was an enunciation of principle on this difficult matter; what they receive is a mere recommendation to exercise "discrimination" with regard to it. The comprehension of the subject in its essentials is not one whit advanced by this contribution to its discussion from the hands of an eminent writer and publicist.

What those essentials are, and their great and increasing importance, was long since pointed out by the Duke of Argyll in the 'Reign of Law' (chap. vii. "Law in Politics"). "Two great discoveries have been made in the science of government [within the present century]," he says; "the one is the immense advantage of abolishing restrictions upon trade, the other the absolute necessity of imposing restrictions upon labour"; and he goes on to show that while the principles at the root of the former movement have always obtained full recognition, those which urge towards the latter have never yet been adequately treated. In the prolonged debates on the earlier Factory Acts, for instance, "not only were the supporters of restriction hampered by a desire to keep their conclusions within the scope of a very limited measure, not only were they anxious to repudiate consequences which did not legitimately follow from their premises, but they were themselves really ignorant of the fundamental principles which were at issue in the strife." Accordingly, while the free trade controversy has been fought out, of late years at all events, principally with weapons furnished by the scientific method, and but little reference to actual experience, that other controversy of the protection of labour has suffered from an almost exclusively empirical treatment. In spite of continual extensions of its sphere of operation, in spite of repeated "commissions" and "inquiries" again and again directed to the matter, the fundamental principles and sanctions of protective labour legislation remained, and still remain, generally unexplained. The Duke of Argyll concludes by pointing to this fertile and vacant field in popular jurisprudence as one offering a wide range of usefulness to the competent investigator.

It is much to be regretted that that competent investigator has not been found in Prof. Jevons, or at least that, however competent, he has preferred to adopt experimental legislation as a criterion of theoretical excellence, and to defend and even laud that course in action. Nothing whatever "emerges," to use a favourite expression of his, from such a mode of treatment of his subject. The relation of the State to labour is left just where it was before—that is to say, in a condition of unsatisfactory confusion. The principles that underlie that relation, and that consciously or unconsciously have swayed and ever must sway it; the formative energies and historical processes that have originated it and dictated its course throughout, these are left to underlie it still; they have not been brought to the surface and explained. Yet this is precisely what was wanted. Nor can it be supposed of a thinker of Mr. Jevons's calibre that the sources of those processes and energies were unknown to him. The gradual specialization of the individual from the mass as the first concern of law, and the deteriorating effects of unlimited human competition in labour, are processes in the history of jurisprudence and political economy which must be familiar to his mind. The more to be regretted is it, then, that he did not take this opportunity of tracing their development in connexion with, and their influence upon, the subject upon which he undertook to write. Until the scientific method is applied to this department of affairs, and it also is studied in its historical connexion and development, all practical dealing with it must be unsatisfactory.

For the rest this little book is a fairly interesting and accurate summary of certain modern aspects of, for the most part, old industrial problems. The legislation in connexion with trades unions and conspiracies among working men for industrial purposes is detailed and effectively commented on, and the remarks upon co-operation and industrial partnership are, if not novel, at least sound and pertinent. For his review of the history of English factory legislation previous to its latest developments, Mr. Jevons is indebted to Von Plener's work, 'The English Factory Legislation,' translated by Mr. Frederick L. Weinmann, and the debt is handsomely acknowledged. Of the last Factory Act, passed subsequently to the publication of that work, he expresses unqualified approval. It is, he says, "one of the brightest achievements of legislation in this or any other country." The pages of the *Athenæum* are not the place to discuss at length the propriety of this somewhat extravagant eulogy, but we may point out at least one error into which Mr. Jevons appears to have fallen with respect to that very Act. It is not the case that the Secretary of State has power under it to grant a change of hours, or any other modification of the general law, to employers in "each individual case" (p. 17). These modifications or extensions are granted only to whole classes of works together, never to separate individuals. Mr. Jevons is in favour of extending the principle of factory legislation to retail shops, and of excluding all mothers from every kind of industrial occupation. It is over these two suggestions, now rapidly coming to the front again, that the next great battle of the State's relation to labour will be fought.

Rough Recollections of Military Service and Society. By Lieut.-Col. Balcarres D. Wardlaw Ramsay. 2 vols. (Blackwood & Sons.)

If Col. Ramsay never saw active service, his long military career was not uneventful, while his social position and love of travelling brought him into contact with many people of note. Though necessarily egotistical, these rough notes are pleasantly written, and the chief fault which we have to find is that the author did not limit himself to one volume. The book, however, though somewhat crowded with personal details, which possess little interest for the general public, contains incidents and anecdotes which merit preservation.

Born in 1822, Col. Ramsay commenced his military career in the Scots Greys, but after a few years exchanged into the 14th Light Dragoons, then serving in India. He had been but a short time in India when he was appointed aide-de-camp to the Governor of Bombay, Sir George Arthur. At the first great dinner party his brother aide-de-camp was ill, and he had to pair off the guests, all strangers to him. To make matters worse, at the last moment many of the arrangements had to be altered:—

"I got on very well until I came to a large, imposing-looking officer, and I said, 'Col. D——, I believe?' He bowed assent. 'I see you are down on my list to take Miss A—— down to dinner.' Sternly and briefly he replied, 'No, sir, I will *not*.' I stared at him speechless; and he said, 'Ah, I forgot; you are new to the island. That fellow D'Arcy is, I suppose, amusing himself shooting in the jungles, so I may as well let you know I am a full colonel off pay and reckoning, and Commissary-General of the Bombay Army, and my position entitles me to a married woman. I will take no miss down to dinner.' I smiled sweetly, and said, 'Colonel, I have just come from a little place called England, and there we are very fond of taking young ladies down to dinner, and the older we get, the more we like it.' 'I know nothing about England,' he replied; and off he went again—the old refrain, full colonel, commissary-general, &c., &c. I was obliged to tell him that he had been originally marked off for a married lady, but, owing to the numerous apologies, there was now none available. The next officer I came to was standing by laughing. I said, 'Col. B——?' He bowed. I then told him how delighted I was to find that he had a married lady. He inquired her name. I told him. 'No, sir,' he said, hastily, 'I cannot; I have not spoken to her for twenty years.' I was in despair. However, the two great men went down good-naturedly together."

When at Dapoorie with the Governor the author witnessed a remarkable instance of self-command and presence of mind on the part of a native boy:—

"I remember a small Mussulman boy, one of our servants, lying in the verandah, apparently asleep, when, to our horror, we saw a cobra creep out of a lot of boots lying near, which the boy had been cleaning. The cobra passed over his face, and actually darted his fork in and out of his open mouth. The boy never stirred, and we remarked how providential it was that he was fast asleep. The snake after a time glided off, when the boy jumped up, seized a stick, and killed it. He had been awake all the time."

The following will amuse those who knew Mr. Montgomery Martin at the period of the close of the first China war. Sir George Arthur was just starting for his daily ride when a carriage approached. From it

"a man jumped out, ran up to Sir George, shouting out, 'Hong Kong must be abandoned—Chusan retained!' Sir George, rather nervous, reined in his famous Deccan pony, saying, 'What is the matter? Who is this person?'"

The person was Mr. Montgomery Martin—then somewhat of an authority on colonial matters—and the scene ended by his being invited to take up his residence at Government House.

When the first Sikh war broke out, young Ramsay, after some difficulty, obtained permission to join his regiment, the 14th Light Dragoons, then in the field. The permission came too late, the fighting was all over, and the author only arrived in time to witness the ceremonies connected with the Governor-General's entry into Lahore. At a great dinner-party given by Lord Hardinge the author was one of the guests. Another of them was the late Sir Herbert Edwardes, then a young subaltern. It is well known that he first attracted attention by some very severe articles on the doings of the Government, signed "Brahminee Bull," and published in the *Delhi Gazette*. With mingled generosity and shrewdness Lord Hardinge gave him an appointment, which had been announced that very day, and had naturally been much canvassed. At table the present Commander-in-chief at Bombay, then a young lieutenant serving on his father's staff,

"took advantage of a lull in the conversation, and asked Edwardes to drink a glass of wine. All eyes were turned upon the youthful hero. Sir C. Napier scanned him curiously, when Arthur Hardinge said, bowing to Edwardes, 'Your good health; I suppose you will *not* write any more Brahminee Bull articles now.' There was a roar of laughter, for that was exactly what everybody was thinking. No one was more amused than the Governor-General, who evidently thoroughly appreciated the joke."

Soon after Mr. Ramsay was appointed aide-de-camp to Lord Hardinge, and accompanied him to Simla. He writes of his chief with the greatest affection:—

"He was a short man, but had great dignity of manner, though at the same time he was most unaffected and simple. No one could look at him without being irresistibly attracted to him. When his clear blue eye fell upon you, you felt that you looked upon an honest, straightforward man, and one possessed of no ordinary strength of character. He treated his staff as members of his own family—chatted, laughed, and chaffed us without any ceremony; rather severe at times to pompous old courtiers."

The following is an instance of Lord Hardinge's kindness. One day at Simla it was the author's turn to dine with the Governor-General. He forgot all about it till a few minutes before the dinner hour, being then a mile from home. Galloping back at top speed,

"I dressed and went up to Government House in fear and trembling, as the Governor-General could lash out when he chose. I found him in the act of going in to dinner quite alone, having waited some time, the band playing 'God save the Queen.' I sat down opposite him. He took his soup in silence. I was all the while in a horrid fright, when suddenly he looked up, as if awaking from a dream, and said, 'Is that you, my boy? I thought I was going to dine in solitary state.' If such a thing had happened to the governor-general who succeeded him, the Earl of Dalhousie, the offending aide-de-camp would have been led out for instant execution."

In 1847, having been promoted to a company in the 3rd West India Regiment, the author spent a few months in British Guiana and Barbadoes, during which he had some strange experiences of the lax state of discipline which then prevailed in the West Indies. In 1853 he returned to India as a captain in the 75th, and was almost immediately appointed Brigade-Major of Queen's troops, Calcutta. In that capacity he had to perform most arduous and responsible duties during the Mutiny. Naturally he was brought a good deal into contact with Lord Clyde when the latter was organizing the operations which resulted in the relief of Lucknow.

"Sir Colin Campbell came like a whirlwind into the Fort, driving in a buggy with Major Alison, his military secretary. As he passed under my gateway he shouted out, 'Brigade-Major, follow me!' Fortunately my own buggy was, as usual, at the door, and I was able to obey the order at once. Suddenly he stopped, and sprang out like a boy, upon an unfortunate officer commanding a regiment in the Fort, saying, 'I know you, sir; I know you, sir. Your regiment is in bad order, sir. Have any of your men been instructed in the Minié rifle drill?' 'Yes, sir.'—'Have the officers?' The unfortunate major hesitated, and said, 'Some of them, sir.' Upon which Sir Colin turned round to the adjutant, a smart young fellow standing by, and said, 'How many, sir?' 'None!' replied the adjutant. 'I thought so,' said Sir Colin. 'One of you has lied, and it is not you'; and thereupon he placed the unfortunate officer under arrest. He then sent for the next in command, a jolly individual, who came down stairs in exuberant spirits, with his hat well on the back of his head. Not aware of Sir Colin's presence, and only seeing me, as the rest were a little way off, he shouted out, 'Well, old fellow, what is the row?' I said nothing, but took him up to Sir Colin, who said, 'Major E., I know nothing about you, good, bad, or indifferent; but this I know, if anything goes wrong under your command, I will try you, sir, by court-martial, as I intend to try your major.' And glaring fiercely at us all, he added, 'I will try everybody who is incapable.'"

We may add that the luckless major was not tried, but eventually treated with consideration. The author says that Sir Colin could not bear office work, and "detested the sight of a paper." For his own protection, however, Capt. Ramsay used to prepare a schedule of each day's business, but had great difficulty in inducing him to append his signature. "Many a pinch of the ear I got from him in consequence."

We could go on making extracts from this interesting book, for the author is one who has seen many countries and persons. We cordially recommend the perusal of 'Rough Recollections' to our readers, with the assurance that though there is a little chaff there is also a good deal of wheat.

NOVELS OF THE WEEK.

Faustine. By Rita. 3 vols. (Tinsley Brothers.)

Royal Angus. By Lord James Douglas. 2 vols. (Bentley & Son.)

Noel Vanstone. By Mrs. Frederick Wilton. 2 vols. (Remington & Co.)

Wild Rose. By John Hill. 3 vols. (Tinsley Brothers.)

Was Hers the Fault? By Lolo. 3 vols. (White & Co.)

Lucrezia, and other Tales. By Mrs. Comyns Carr. (Remington & Co.)

Faustine, in spite of her highly improper name, is really a virtuous kind of

person, misunderstood by a "censorious world." The reader is informed in the remarkable narrative of Rita that all the scandal Faustine causes, and the questionable line of art to which she devotes herself, are not the results of her own choice, but of the policy of a certain mysterious priest, who retains an influence over her life the absolute nature of which is quite unaccounted for. It is true he turns out to be her father, and grandfather of two charming "waifs," one of whom is found in a wood in France by a young man, who adopts her, while the other is sold into slavery in Italy to an outrageous kind of organ-man or *padrone*. Naturally the children are thrown together in later life, and both marry English peers. In the mean time Faustine, who is aunt of these innocents, marries a somewhat elderly and ill-conditioned Frenchman, in order to prevent herself from consenting to the suit of a man whom she really loves. When a duel at last takes place between the lover and the husband, she rushes in and receives the shot intended for Mr. Cecil Calverley. There is a murder as well as a duel, and a grand struggle in a railway train, when the priest and one of his villainous retainers fall out, in both senses, and get their deserts, the priest living long enough to explain, as far as any explanation is possible, the purposeless system of annoyance he has practised on all connected with him. The style of this work is not ill matched with the matter: there is a considerable affectation of morality and much shaking of the head over the shortcomings of the world. It is, perhaps, a sorry world, but not such a realm of nightmare and imbecility as Rita paints it. The average grammar of the world, too, attains a higher level than that of our author.

'Royal Angus' will be a godsend to the class of readers which feels a vicarious delight in reading of luxurious country mansions, bijou villas on the Thames, unlimited loo, equally unlimited horseflesh, and "lashings" of meat and drink. It may be admitted that those who wish to know how fashionable people spend their time when no public duties offer a counter attraction may obtain some very fair ideas from Lord James Douglas on the subject. His racing diction is beyond suspicion, and though there is a good deal of it, it will not pall on those who can read with interest the "tips" of sporting prophets in the daily papers. Apart from the lore of the stable there is little substance in the book; though "Royal Angus" has the merit of being a gentleman, and shows his quality not less in his self-restraint towards Maggie (though his notions of benefiting her are foolish enough) than in the final act of self-devotion which redeems his love for Lady Cranston from disgrace.

The plot in 'Noel Vanstone' turns upon a will by which the hero's uncle left his estates to him if he married a certain cousin, but if not, upon either of them marrying anybody else or dying unmarried, the estates were to go to a stranger. An extraordinary incident is introduced. The female cousin likes the arrangement, but the hero does not, and in fact falls desperately in love with a charming young widow. To avert this affection the girl, by the help of her French maid, contrives to convey the smallpox to the widow. The hero catches it too. Fortunately both come out of it quite well and unmarked. The hero has an independent fortune and marries the widow, and all comes right by the female cousin, after full repentance, marrying the stranger to whom the uncle's estates pass. The scene is laid at Tenby, a place with which the writer appears to be familiar, and the best part of the book consists of the lively descriptions of the small amusements—a fancy fair and so forth—with which the inhabitants contrive to pass their time. The fancy fair is described in a very amusing way. As to the unpleasant incident about the smallpox, one can hardly help remembering the more loathsome but not altogether dissimilar revenge described in 'La Cousine Bette.'

The readers of Mr. Hill's story may be content to make something like a compromise with the author on laying down the book, after reading so much of it as they have felt themselves moved to read. They may freely admit the cleverness, and even the originality, of 'Wild Rose' if the author on his part will allow it to be described as sensuous, occasionally coarse, and frequently absurd. If this seems to be a more merciful judgment than downright condemnation, Mr. Hill is entitled to it, for there is undoubtedly a good deal of spirit and discrimination in his romance. He sees his characters vividly and works out his situations with manifest relish, especially when the material predominates very decidedly over the spiritual. But his pages have all the extravagance of a first attempt, and it is impossible not to congratulate Mr. Hill on the fact that his extravagance goes far to counteract his ability. Without it 'Wild Rose' would be a mischievously attractive story, and would deserve much more serious treatment.

In 'Was Hers the Fault?' there is plenty of good description, but it is much too long. Lolo is like the writer whom Boileau laughs at for passing nothing by. If he comes across a palace he must describe it completely; not a window or ornament can be omitted. The author cannot discriminate between what is essential to the story and what only makes one skip. And what makes things worse is that when one does skip one finds oneself not much further on in the story. Lolo has a good deal of ability in describing persons as well as places, and it is to be regretted that the power has not been used with better judgment and more sense of proportion.

Mrs. Carr's are fairly interesting stories of their kind, brightened by pretty descriptions and colourings of the Italian lake and Engadine country and touches of Southern character. It is a matter of congratulation that the misunderstandings so common between man and woman in stories of this kind are not quite so frequently to be met with in real life. Especially, perhaps, Mrs. Comyns Carr is hardly giving a true description of peasant life when she attributes such keen and even morbid feelings to her heroes and heroines. The quick, vindictive nature that loves revenge is another and truer feature of the Southern blood. The title story is, perhaps, the best of the collection, while the last one is somewhat confused and hurried. The author, as is well known, is a close observer of the Italian peasantry and well able to describe the local manners, customs, and scenes. We would commend the following economical custom to many at home who find it a burden to wear mourning:—

"All the inhabitants of an Engadine village are supposed to attend the funeral of one of its members, and the black gowns are often obliged to do duty for every other festive [*sic*] occasion, growing thus to be judged the only safe badge of respectability."

Ladies who wish to acquire the reputation of good authors should keep clear of such slips as "smoothe," "majoram"; nor is it usual to run upstairs from an attic into the porch, even when the architecture is Italian.

RECENT VERSE.

A Garland from Greece. By G. F. Armstrong. (Longmans & Co.)

Leolyn, and other Verses. By Herbert Gardner. (Remington & Co.)

Paphus, and other Poems. By Ella Sharpe Youngs. (Kegan Paul, Trench & Co.)

Poems, Lyrics, and Sonnets. By L. S. Bevington. (Stock.)

Through Dark to Light; or, a Day at the Sea. (Remington & Co.)

Orpheus and the Sirens: a Drama in Lyrics. By Virginia Vaughan. (Chapman & Hall.)

Mr. G. F. Armstrong is not an unknown poet, but it is some years since he published anything. The poems comprised in his new volume purport to be, and, indeed, bear tolerably obvious marks of being, the outcome of a single experience—that of a visit to Greece. Considering all things, it may be thought rather odd that the easternmost of the three Mediterranean peninsulas figures so little in modern English verse. Mr. Armstrong has drawn enthusiasm from several sources. The actual scenery of Greece does not seem to impress him with the sense of desolation and degradation which it produces on some spectators; he is enthusiastically Philhellene as to the present inhabitants of the country; and he has the classical sympathies and associations which might be expected from a cultivated Englishman. These various motives find expression turn by turn in his verse. Here there is a piece of what may be called without malice diary in verse, the actual record of travel or the ideas excited by travel; there we have classical fancy pieces, such as 'The Satyr,' 'Orithyia,' 'Selemnos,' and 'The Death of Epicurus.' 'Selemnos,' the most ambitious, the longest, and not the worst poem in the volume, tells, in eight-line stanzas of a careful and well-executed type, a story borrowed from or suggested by Pausanias, and moralized afresh. A shepherd loves a nymph, but loses his love by indulgence in the grosser pleasures of the town. After in vain imploring her return, he prays in his misery for the help of Aphrodite, and the gracious goddess hears his prayer and appears. But she can do nothing for him except promise him, if he choose to take it, forgetfulness of his love. He rashly accepts the "want-begotten rest," and becomes as the beasts that perish. This theme is by no means badly worked out. The last of the classical group is 'The Closing of the Oracle,' a striking subject. After this there follows a group of poems the subjects of which are taken from incidents of the war of independence. 'The Chiote,' dealing with the great massacre, wants force; but 'The Brigand of Parnassus' is good. This is succeeded by a score or so of much shorter pieces of varying merit. Sometimes Mr. Armstrong is unfortunate in his metres, as in his poem on Navarino:—

Navarino! Navarino!
Every wave thy name repeats,
With a sweet prophetic music,
And my heart in rapture beats.

This trochaic dimeter, without the exercise of extraordinary cunning, is almost doomed in

English to be sing-song. 'Chæronea' again, a poem of some merit, has a five-line stanza which is overweighted with its final alexandrine. As a better sample of Mr. Armstrong's powers let us quote the following sonnet on Constantinople, which has unquestionable merit :—

O symbol of thine empire's long decay,
Sad city girdled by thy myriad waves,
A voice, amid the wind that slowly waves
The dark funereal cypresses away
Above thy dead—like his who calls to pray
At sunset from thy minarets—moans and raves
Prophetic sorrows. Fate awearied craves
To end thy lustful and luxurious day.
Thy limbs are stiff, thy heart hath drunk despair,
Poor empire, fallen from thy high estate;
While, prowling round the bed whereon thou liest,
The jackal and the tiger and the bear,
Eye flashed on eye with fear and jealous hate,
Would rend thee and each other ere thou diest.

The change of address from the city to the empire here is rather awkward, and some of the wording might be improved, but the total effect is good. 'At Colonus' may be mentioned in conclusion as a really fine poem (the best as a whole in the book). It is, unfortunately, indivisible and too long for quotation.

It is tolerably certain that if 'Maud' had never been written, 'Leolyn' would not have been called into existence. The influence of Mr. Tennyson on Mr. Gardner appears to be so overpowering as to destroy any claim of the latter to originality. But that under this influence Mr. Gardner can write forcibly and picturesquely a quotation will show :—

Up, up, my heart, and deck thy home
With all the splendour of a thousand springs,
Make glad with dexterous device thy bowers,
Of dainty chiselled loves with furled wings,
And strew the floors with wealth of flowers—
Heartsease, forget-me-not, and meadow-sweet—
To star the pathway of her feet:
For thy mistress—thy mistress is come.

Set forth, my soul, the golden throne
With triple crimson, hang it round for her
With broidery of regal diadems,
And drapery of stately miniver.
Encrust it with a myriad gems—
Sapphire and diamond and amethyst—
To mark the place her hand hath kissed:
For thy Queen has come unto her own.

Still most readers of poetry will prefer the Laureate at first hand.

If Miss Youngs's verses are the work of a very youthful writer, they show, with much that is commonplace and crude, sufficient grace of expression and metrical skill to make a critic hopeful of better things in the future. Miss Youngs displays at times a considerable amount of tender feeling; but she should remember that no amount of that quality, however genuine, can be a substitute for imagination, and that it is possible to write verse which may touch the emotions and yet be devoid of real poetic significance.

Readers of poetry who are acquainted with Miss Bevington's first volume of poems, entitled 'Key-Notes'—a remarkable if crude performance—will regard her second venture in verse with interest. That Miss Bevington is a poet there can be no doubt; her poetic gift is of that uncommon order to be met with in Blake's drawings and in the best of Dr. Garth Wilkinson's poems. There is in all three that sure power of inner vision which can clothe spiritual states with visible form; take, for instance, the following description from 'The Valley of Remorse,' perhaps the most important poem in the collection :—

There goes a wandering soul in desert places;
(Good Lord, deliver!)
About its way lie dumb, with livid faces,
Slain virtues and slain hopes in locked embraces;
(Good Lord, deliver!)
And drear black crags tower from unholy ground
Sheer upward in thick air,
Where breathes no prayer;
No wind is there,
Ne sound;
(Good Lord, deliver!)
And there is no way out, and round and round,
With haggard eye and dragged and staggering paces,
Through years that soul a ghastly circuit traces.
(Good Lord, deliver!)

The sun, all shorn of rays, with lurid fire
Blasts where it strikes: Doom's own red eye of ire:
And all night long is seen unhallowed shimmer,—
Half life, half mire,—
Of things made manifest that should be hid;
Yet Will is numb that should their play forbid;
And so they crowd and crawl in gloom and glimmer,
Loathed and unchid;
And lo! that soul among them, moving dimmer.
(Good Lord, deliver!)

At the soul's back behold a burden yonder,
A monstrous thing of slime;
Two paces forth,—no more,—that Doomed may wander
For all its time;
Two wretched paces from the accursèd weight
Bound on by linkèd fate
In glittering cynic chain two steps behind it;
(Good Lord, deliver!)
Such steely bond between
Forbids it breath, save only to remind it
The Past has been,
The Past of sin.
(Good Lord, deliver!)

Here is a picture not indeed to be viewed without a shudder. In the sequel the soul with its sin is passed by Youth, which, intent on its own joys, fails to heal or, indeed, even to perceive it. It is perceived and avoided by Wedded Love, symbolizing social concord and domestic ties. At length, what we take to be the Great Universal Love comes to its enfranchisement. Very intense and fraught with poetic instinct is the description of this Love's coming, the repetitions being very effective :—

Lo! Love comes wandering on the desert way.
Oh, watch! oh, pray!
Love with the rose-wreath red?
Ay, love rose-bound!
Ay, love thorn-crowned!
Crowned—bound—with cruel rose-thorns round his head!
(Good Lord, deliver!)

Love! love is here! that knoweth of all pain,
And of the linkèd chain,
And of the stain,
And of the whirling madness, dumb and dread;
Love! love is here that knoweth nought in vain!
Dead hope, dead will, oh! cry
Aloud! Love passeth by;
Love, that can love dead life to live again!
(Good Lord, deliver!)

New radiance hallows all the sickened air;
For love is here.
And right and left spring lilies at his nod,
Blessing the blighted sod;
For love is here.
And round the gaunt crags echo of deep prayer
Is sighing everywhere,—
Is sighing everywhere!
For love is here.
(Deliver! Lord, deliver!)

Kneels that worn soul, for all the place is holy;
Breaks that sore heart, in utterance lost and lowly;
"For Love's dear sake, great Powers, deliver me!
O Love, deliver me!"
* * * * *
A little bird sweet twitters in a tree;
A little breeze comes coolly from the sea;
And broad the dawn-light widens o'er the lea.

The sonnets in the book are all well put together and display better style than most of the long poems. The following is a fine example :—

LOVE'S DEPTH.

Love's height is easy scaling; skies allure;
Who feels the day-warmth needs must find it fair;
Strong eagles ride the lofty sunlit air,
Risking no rivals while their wings endure.
Yet is thy noblest still thy least secure,
And failing thee—shall then thy love despair?
Shall not thy heart more hollily prepare
Some depth unfathomable,—perfect-pure?

Say that to thee there come love's dreadful call
The downward swiftness of thy Best to see;
Say that he sin or sicken, what of thee?
Are thine arms deeper yet to stay his fall?
Scarcely love's utmost may in heaven be;
To hell it reacheth so 'tis love at all.

The book is in all respects a great advance upon 'Key-Notes,' many of the poems complying with the requirements of melody. On the other hand, there are some which prove that in this direction Miss Bevington has still more to learn. One poem, though it opens with genuine music, flags painfully at the end through inability to maintain the double rhyme. The book, however, spite of many crudities, shows power, thought, and originality.

'Through Dark to Light' is a poem in two parts, in which the author causes both the optimist and pessimist views of life to be expressed by a gentleman who would seem to be passing his holiday at the seaside, as allusions are made to the patient donkeys on the sands. The day is wet, so, all things being considered, it is not unnatural that the pessimist view should have the first turn. Such platitudes as the following are addressed by this poetic paterfamilias to his child, his dog, and his parrot :—

Ay, beat your tattoo as fast
On the pane, child, as you will;
The clouds loom vague in the vast
And the rain beats harder still.
A plague on the moaning glass!
It seems of a time to speak
When the years that now lightly pass
Will gnaw the bloom of your cheek;
When your locks no longer will stray
In curls that disarm the shears,
But be washed to a scanty grey
In the colder rain of tears;
When your eye no longer will send
Such fresh-lit gleams from its blue,
And the ashes of joy will lend
Your life a lacklustre hue.
You long to go out to-day
And dig a hole for the sea;
But the sea is too big for play
And life is too strong for me.

So far as we can make out, the child does not seem to have merited any special punishment. There are two lines in the poem, however, in the truth of which the reader will concur. They are addressed by the poet to his wife, who has missed some portion of his dissertations :—

And yet perchance 'twas best
That you were not listening near.

It would have been well if Miss Vaughan had chosen for the theme of her new poem one less familiar. The various *dramatis personæ* of the legend utter their different emotions in melodious verse. Unfortunately something more than good versification (and Miss Vaughan's versification is both skilful and vigorous), something more than a remarshalling of old poetic symbols, is needed to make a poem worthy of special regard. With the best essentials of poetry Miss Vaughan's well-executed verse can scarcely be credited.

OUR LIBRARY TABLE.

The Life and Letters of Berlioz, translated by Mr. H. Mainwaring Dunstan (Remington & Co.), fills two handsome volumes. The first contains a translation of the great Frenchman's 'Correspondance Inédite,' which was published some years ago, and of which a second edition, revised and enlarged, appeared in 1879, and of the poor and wordy biographical notice by M. Daniel Bernard, which was placed at the head of the collection. The second contains an English version of the 'Lettres Intimes' which were given to the public a little while back, and of the preface by M. Gounod which accompanied them. The publication unquestionably possesses considerable importance. The world has awakened to the fact that Berlioz is one of the greatest of modern artists and one of the most original and interesting of modern men. In France his apotheosis is complete: his books are standard publications; his music is heard everywhere; and M. Colonne has made a small fortune and a great reputation with that 'Damnation de Faust,' the production of which obliged the man who wrote it to go and give concerts in Russia to save himself from bankruptcy. In England the work of Berlioz is everywhere received with admiration. The translation and publication of his incomparable letters will no doubt do much to increase and maintain his popularity. It is not easy to know too much of him; he makes his readers his friends, he writes one into admiration and respect. In the letters as in the 'Mémoires'—which is surely one of the most vigorous and interesting books of modern times—he reveals himself for what he was, with all his imperfections and with all his merits: with his fiery temper, his indomitable will, his superb artistic honesty, his serene enthusiasm, his delight in success, his thirst for praise, his vanity, his egoism, his fierce contempt for his opposites and enemies, his passionate attachment to his friends; and the relation is one that, once perceived and apprehended, can never be forgotten. In the present translation a great deal of the wit, the daring, the brilliance of the original letters has disappeared; of the colour and charm, the irresistible vivacity and strength, of Berlioz's style it gives no sort of idea. It is an honest piece of journey work, however,

and will no doubt be popular with those who are unacquainted with French. The manner and diction are Franco-English; and occasionally the translator does not seem to have understood the matter he was translating. We shall add, too, that M. Gounod's preface and M. Bernard's biography seem entirely superfluous; that the names left blank should certainly have been filled in; and that well and carefully annotated the book would have been twice as useful as it is.

We have to acknowledge the receipt of the first two volumes of the elaborate edition of Wordsworth's poems edited by Prof. Knight, and published by Mr. Paterson, of Edinburgh. We must reserve our criticism of this handsome work till its completion.

The Wordsworth Society's publications, Nos. II. and III., have just been issued. These contain an account of the third annual meeting in London, on May 3rd, when Mr. Browning, and subsequently Lord Coleridge, presided; a paper, by Mr. Hutchinson, of Kimbolton, on 'The Structure of the Wordsworth Sonnet'; a letter from Prof. Bonamy Price on 'The Ode on Immortality'; two "notes" by Mr. Owen, one 'On the Seeming Triviality of some of Wordsworth's Subjects,' the other on 'Wordsworth's View of Death'; a memorandum, by Mr. Rawnsley, on 'The Memorial Stone at Grindale Tarn'; a paper, by Prof. Edward Dowden, on 'Wordsworth's Modernizations from Chaucer'; and one by Prof. Knight on 'The Portraits of Wordsworth.' Mr. R. H. Hutton's paper on 'The Two Styles' of Wordsworth was formerly printed and circulated amongst the members of the Society. The next publication will be the Society's portrait of Wordsworth.

We have on our table *Recollections of an Irish Journalist*, by R. Pigott (Dublin, Hodges, Figgis & Co.),—*A Memoir of Henry W. Longfellow*, by R. H. Stoddard (Warne),—*James Russell Lowell, a Biographical Sketch*, by F. H. Underwood (Trübner),—*Curiosities of Law and Lawyers*, by C. James (Low),—*The Historical Method in Ethics, Jurisprudence, and Political Economy*, by H. M. Posnett (Longmans),—*The Poems of Virgil*, translated by J. Conington (Longmans),—*Homer's Iliad*, Book VI., by H. Hailstone (Frowde),—*The Adelphoe of Terence*, by W. Wagner (Whittaker),—*The Phormio of Terence*, by W. Wagner (Whittaker),—*Solutions of Examples in Conic Sections*, by W. H. Besant (Bell),—*The School System of the Talmud*, by the Rev. B. Spiers (Trübner),—*Persia, an Essay in Greek*, by L. Dowdall (Cambridge, Jones & Piggott),—*Aristotle on the Parts of Animals*, translated by W. Ogle (Kegan Paul),—*The Gooseberry and Currant*, by D. T. Fish (Gill),—*The Raspberry and Strawberry*, by D. T. Fish (Gill),—*Handbook of Fen Skating*, by N. Goodman and A. Goodman (Low),—*The Folk-lore Record*, Vol. IV. (Nichols),—*Mother Shipton* (Manchester, A. Heywood),—*Holidays in Spain*, by F. R. McClintock (Stanford),—*Orient Sunbeams*, by S. S. Cox (New York, Putnam),—*Sweetheart and Wife*, 3 vols., by Lady Constance Howard (White & Co.),—*Dramatic Pieces*, by M. F. Tupper (Allen & Co.),—*The Children of the Throne* (Ridgway),—*Recaptured Rhymes*, by H. D. Traill (Blackwood),—*The Trial, Did Christ Rise?* (Houlston),—*The Faiths of the World: Religion of Ancient Greece*, by the Rev. W. Milligan, D.D. (Blackwood),—*Present Day Tracts*, by the Rev. Principal Cairns, D.D., Nos. I., II., and III. (R.T.S.),—*The Viking-Ship discovered at Gokstad in Norway*, by N. Nicolaysen (Christiania, Cammermeyer),—*Roma nella Memoria e nelle Immaginazioni del Medio Evo*, Vol. I., by A. Graf (Turin, Loescher),—*Le Droit de la Guerre et les Précurseurs de Grotius*, by E. Nys (Trübner),—*Studien zum Avesta*, Part I., by K. Geldner (Trübner),—*Goethe in Hauptzugen seines Lebens und Wirtens*, by A. Schöll (Williams & Norgate),—*Les Deux Masques Tragédie-Comédie*, Vol. II., by Paul de Saint-Victor (Paris, C. Lévy),—and *Quatre Ans au Pays des Boërs*, by E. de Weber (Paris, Hachette). Among New Editions we have *The Forester*, by J. Brown (Blackwood),—*An Elementary History of Art*, by N. D'Anvers (Low),—*A Laskari Dictionary*, by G. Small (Allen & Co.),—*Lancashire Legends*, by J. Harland and T. T. Wilkinson (Manchester, Heywood),—*The Empress Charlotte, Poems*, by P. S. Glubb (Hamilton),—*Catechism made Easy*, 2 vols., by the Rev. H. Gibson (Burns & Oates),—*A Treatise on Modern Instrumentation and Orchestration*, by H. Berlioz (Novello),—*Songs for Little Singers*, by H. K. Lewis (Hodder & Stoughton),—and *Tufts of Heather*, by E. Waugh (J. Heywood).

THE DAMSEL OF THE PLAIN.

When Rowland found the Damsel of the Plain,
Her daffodil crown lit all her shining head;
He kissed her mouth and through the world they sped,
The beauteous smiling world in sun and rain.
But, when long joys made love a golden chain,
He slew her by the sea; then, as he fled,
Voices of earth and air and ocean said:
"The maid was Truth: God bids you meet again."

Between the devil and the deep dark sea
He met a foe more soul-compelling still;
A feathered snake the monster seemed to be,
And wore a wreath o' the yellow daffodil.
Then spake the devil: "Rowland, fly to me;
When murdered Truth returns she comes to kill."

Theodore Watts.

MORE KARAITE MANUSCRIPTS.

Cannon Street Hotel, July 24, 1882.

Before further describing the Karaite MSS. I feel I must do justice to Rabbinical works on the same subject collected by me in my journeys in Yemen in 1877 and 1879–80, a great number of which are now in the British Museum, a few in the Bodleian Library, and many in my own library in Jerusalem.

First are the Arabic translations of nearly all the Bible by Saadia Gaon. How highly Gesenius spoke of the part that he possessed every Hebrew scholar knows. Some of the earliest of these MSS. are now in the British Museum, and a few in the Bodleian Library. Next come the Arabic commentaries to several parts of the Bible, the most valuable of which seems to be that of Abraham ben Solomon. He quotes the oldest Gaonim as well as the commentary of Saadia Gaon (whose originals are lost) on nearly every page. In order that the reader may clearly see the great use of these works, I will mention the comments on difficult passages of the Bible in a MS. upon Joshua, Judges, Samuel, and part of Kings, which since 1881 has been in the British Museum. Should the reader want more of such gems he must study the MS. itself. I quote only from memory, and have neither my old catalogue nor the MS. before me.

At 1 Sam. x. 2, "When thou art departed from me to-day, then thou shalt find two men by (עִם) Rachel's sepulchre in the border of Benjamin at Zelzah," our author translates the word עִם ("by") as מֵעִם ("from"), and thinks that "the tomb of Rachel" was the name of a town or village where Rachel may have been buried, and that Saul would meet at Zelzah, at the border of Benjamin, the two men coming from the "tomb of Rachel." Thus the difficulty of the verse—which seemed to say that the sepulchre of Rachel is in the borders of Benjamin instead of Ephrath in Judah, as in Gen. xxxv. 19, 20, and Gen. xlviii. 7—is dissipated by translating the word עִם as מֵעִם.

Again, at 1 Sam. xvii. 39, "And David girded his sword upon his armour, and he 'assayed' to go [in Hebrew וַיֹּאֶל לָלֶכֶת], "and he 'wanted' to go or liked to go"]; for he had not proved it. And David said unto Saul, I cannot go with these," &c., who does not know the difficulty of understanding our version, as it seems to say that David liked to go instead of disliked? But our author translates the word וַיֹּאֶל as וַיִּלָּא, "tired," "And David became 'tired' of walking with them, because he was not accustomed"; יִלָּא for יֹאל will be the same as כשב, כבש, &c.

Again, 1 Kings vii. 4, 5, "And there were windows in three rows, and light was against light [or, as in the marginal reference, "and sight against sight"] in three ranks [in Hebrew שלש פעמים, "three times"]. And all the doors and posts were square, with the windows [or, as in the marginal reference, "And all the

spaces and pillars were square in prospect"]: and light was against light in three ranks [in Hebrew, "three times"]." Only those who have studied closely the chapters of the Bible upon the Temple of Solomon are able to tell what a riddle these words, "and light against light" or "sight against sight," have often been to them. Neither does the original מחזה אל מחזה help much. Our author explains it by מזוזה אל מזוזה, "pillar against pillar," or "posts against posts." The letters זוֹ have come too near and formed a ח, so that the clear word מזוזה became corrupted to מחזה. What a relief!

But if such treasures are to be found in the works of those who, although masters in both Hebrew and Arabic, in which languages they wrote, and able interpreters, must nevertheless have been influenced by education in Rabbinical schools, whose tradition has to be obeyed even if the interpretations are against the rule of the Hebrew language, how much more likely are they to occur in works written by Karaites, who oppose every traditional interpretation when it does not agree with the words of the text! As an illustration I will take only one case—the well-known command, three times repeated, לא תבשל גדי בחלב אמו, "You shall not cook a kid ["seethe" in the A.V.] in his mother's milk." Tradition says it is as if it stood, "You shall not eat meat (any meat) with milk (any milk)," and no Rabbinical author has dared even to try to give another meaning to these words. Only Karaite writers tried to connect this commandment with the preceding words in Ex. xxiii. 19 and xxxiv. 26, which are as follows: "The first of the first-fruits of thy land thou shalt bring into the house of the Lord thy God." Then comes the above-mentioned commandment, which they translate: "Thou shalt not make ripe (or thou shalt not ripen) sweet fruits with the milk (juice) of the mother (tree)." (There is a common custom in Palestine till now of ripening figs and olives before their time by besmearing them with the juice of the tree; even the juice of the fig tree is called "milk," being very white.) The word גדי they compare with מגדנות מגד, "sweet fruit," and the Karaite authors think that the meaning of the text is that, although you are bidden to offer your firstfruits to the Lord, you are nevertheless forbidden to cause their unnatural ripeness before the time, because they think it may be unhealthy or will hurt the tree.

Well, the result of my researches this year is that over ninety volumes of Biblical translations and commentaries in Arabic-Hebrew by Karaites are now in the British Museum. Sixty-one volumes are written with Hebrew letters, and thirty with Arabic letters. Of the former division, called K a, the works of Abu Joseph Jacob Ebn Ishak Ebn Samahawja (סמעויה) el Karkasini, generally called only Sheik Abu Joseph or Sheik Abu Joseph Jacob, are very interesting. Besides the great value of his commentary in a grammatical point of view, his works are interesting as showing that even as early as the ninth century—the date of our author—arguments against the truth of the narrative of the Bible somewhat in the style of Bishop Colenso were advanced by some, but explained by our author.

For instance, he says the waters of the Flood rose fifteen cubits higher than the highest mountain; he gives the height of the waters as 22,415 cubits. He thinks that the evaporation of this amount of water must have made the atmosphere very moist, and that this must have been the cause of the rainbow when the rain ceased, which never occurred before the Flood when the atmosphere was dry. He also wonders at the great multiplication of the earlier generations in about two hundred years, from the Flood to the confusion of tongues. Only three human pairs (Noah and his wife were too old to be considered) increased to quite a great number, as it seems, which was not the case in the course of the 3,000 years which followed the Flood. If the human population could have increased so as to double itself in 100 years, mankind would have increased in 3,000 years to 6,379,086,134 persons, so that in the general course of the world the sons of Noah could only have multiplied to the number of twenty-four or twenty-six persons in the course of two hundred years. Our author answers this question by taking into consideration the length of their lives. The children of Noah may have had each one hundred children in the course of two hundred years, and so their descendants, although only some dynasties are mentioned.

I have already mentioned that the British Museum has also a book of the very interesting commentary of Sita, but it may be asked what proof I have that this fragment (No. 33 K a) is of this author. My reason is that I find in that commentator at Ex. xx. 26 (which are in our Bible, "Neither shalt thou go up by *steps* unto mine altar, that thy nakedness be not discovered thereon") the following remark: "The word במעלות could not be translated 'steps,' because we know that the altar had steps, as in Ezekiel xliii. 17, 'And his stairs shall look toward the east.' Besides, the priests, who alone may go up to the altar, all wore trousers, as is clearly mentioned in Ex. xxviii. 42, 'And thou shalt make them linen breeches to cover their nakedness.' But the word במעלות does not mean 'steps,' but 'trespasses,' as תמעל מעל. God forbids a priest who is an open sinner or who has committed sin to sacrifice, and the word 'nakedness' is 'shamefulness.'" Aben Ezra quotes this explanation in the name of Sita.

Another passage in this MS. is quoted by Aben Ezra as by Sita, upon the word שור, Ex. xxi. I must remark that Dr. J. First assigned the date of Ben Sita to the ninth century, and I by mistake followed him in the article "Karaite Manuscripts," in the *Athenæum* of July 15th; but I find that my manuscript not only mentions "Phajumi"—so they usually call Saadia Gaon—but also Ali ben Solomon, who certainly lived in the first half of the eleventh century. We never meet this name in the chronological books of the Karaites; only once with Rabbi Sita, who was a Prince of the Captivity before Anan, about A.D. 720, who, of course, cannot be our Sita. If I should venture an opinion I would say that the Ben Sita of Aben Ezra is no other than the well-known Jepht ben Zahir or, as some called him, Zagir, צעיר או צגיר; the first is Hebrew and the second Arabic for small, or short, or little. Sita—זיטא—is the Aramaic for little, and the nickname may be due to Abraham ben Ezra, who lived in the end of the twelfth or beginning of the thirteenth century—nearly about the same time as Aben Ezra. The British Museum has another book of his which is ascribed to Jepht ben Zahir.

The Karaite Biblical manuscripts will also be of great interest for the student of the topography of the Bible. Ramly is often mentioned by the great Jepht as the capital, and Jerusalem (called sometimes Koods el Sharif and sometimes Salem) as a little town. Ebn Jeruchem in the ninth century mentions the tomb of Absalom at Zelah ha Eleph. This passage is interesting. It shows that the tomb of Absalom already existed in the ninth century, and is not, as some assert, that of a Mohammedan Wali of the eleventh century. Next it follows that Zelah and Eleph are one place—not two, as in our English Bible (Joshua xviii. 28), which leaves out the Hebrew article *ha*. Of course in that case there will be only thirteen (not fourteen) cities mentioned. Thirdly, it gives the exact locality of Zelah ha Eleph, till now unknown.

There is also often mentioned in the manuscripts the tomb of the prophet Samuel, and the author complains that the house upon the tomb, which the Karaites had possessed for centuries as their synagogue, was taken away from them by the Moslem and was being used as a mosque. The Hebrew word Argob (ארגוב) is always translated Maujab; Gilead (גלעד) = Gerash; Ashur = Moozul; Cuth = Cuprus (Cyprus); Caphtor = Demjate, &c.

The interest of the division K b lies in thirty Biblical manuscripts in Arabic letters, already mentioned above as being among the oldest Arabic manuscripts. A few particulars will interest every Biblical scholar. We have here for the first time the Hebrew vowel-points transcribed into letters of a yet living language, so as to enable us to know exactly the real sound and pronunciation of some of the vowels. In order to give an idea of the variations from ours in this point I transcribe here from Arabic into Hebrew two verses. Ex. iii. 12:—

ויומר מושא אל האאלוהים הני
אאנוכי באאל בני ישראאיל ואמרתי
לאהאם אלוהי אבותכאם שאלאחאני
אליכאם ואאמרו לי מא שמו מא
אומאר אליהאם:

Again, Num. xxxii. 29:—

ויומר מושא אליהאם אם יעברו
בני נאד ובני ראובין אאת הירדין
כל חאלוץ למלחאמא לפני יי
ונכבשא האארץ לפניכאם ונתתאם
לאהאם אאת אארץ הגלעאד לאאחזה
״ ״

It is enough to show that they had vowels where we have none, and the reverse.

Of still higher importance is the text itself. I may mention here a few chapters in the book of Job. Chap. xxxiv. begins with verse 10 of our Bible; verses 16, 17, and 18 are omitted (they really seem to disturb the reading), and our verse 19 follows till the end of verse 30. Then follow verses 5 to 14 of chap. xxxv., immediately succeeded by verses 22 to 25 of chap. xxxvi. (only instead of our text הן אל ישגיב בכחו, which is somewhat difficult, is הן יישגיב כחו), and then comes verse 3 of the same chapter. Verse 4, which has nothing to do with the text, is omitted. Verses 5 to 21 succeed, and then follows verse 26. There is no further change till verse 14 of chap. xxxvii., which is omitted. The first three verses of chap. xxxviii. are omitted, the chapter beginning at verse 4; verse 12 follows verse 7.

I have not examined further, as the writing is old and difficult to read. I will only remark that verse 12 of chap. xxxviii. seems to be in its right place after verse 7, and verse 16 after verse 11. I have only time to add that there are in that division many unique and interesting manuscripts of Saal el Dustery (סהל הכהן), of Abu Said Ebn el Hasan Abu Ali el Bazri, of Ali ben Solomon, of Karkasini, of Jepht el Zagir, and probably also of David Hamkamez.

M. W. Shapira.

PIRACY AT THE ANTIPODES.

The 'World' Office, Melbourne, June 10, 1882.

I have read in the *Athenæum* of the 15th of April a letter signed "J. Henniker Heaton," charging me with plagiarism. Will you do me the justice to insert my reply to that charge?

1. Before Mr. Heaton's 'Dictionary of Dates'

appeared, I had compiled and rewritten from original sources the first extensive 'History of Australasia' given to the world. This work (published by a Glasgow house) has had a very large circulation in this part of the world. Naturally, my own 'History,' not Mr. Heaton's 'Dictionary,' formed the basis of my 'Cyclopædia of Australasia.' As I had made first use of the original sources, I might fairly claim them as my property. But Mr. Heaton made very free use of my 'History' in compiling his own date-book.

2. In compiling the 'Cyclopædia,' I followed, in some instances, biographical facts and dates given in Mr. Heaton's 'Men of the Time,' a work bound up with the 'Dictionary.' In these instances no original materials were accessible to me. But in numerous other instances Mr. Heaton had borrowed bodily, without acknowledgment, from a local publication entitled 'Victorian Men of the Time.' As we both drew from the same sources, I am hardly chargeable with pirating from Mr. Heaton.

3. Mr. H. F. Gurner (for many years Crown Solicitor of Victoria) wrote to me, upon perusing Mr. Heaton's letter, in these terms: "I see Mr. Heaton accuses you of plagiarism. I think those who live in glass houses should not throw stones. Mr. Heaton plagiarized my 'Chronicle of Port Phillip' in a wholesale manner without any acknowledgment." In the 'Cyclopædia' I quote largely from Mr. Gurner, but acknowledging my authority.

4. In the preface to the 'Cyclopædia' I state: "To enumerate the author's sources of information would be to transcribe the entire Australasian library. The essence of all that has ever been written about the Australasian colonies is enclosed within the covers of this volume. The expenditure of 1,000*l.* on books and years of research would scarcely be adequate to collect the information it contains. In some few cases of direct quotation the sources are acknowledged. But it may here be added that special use has been made of Wallace's 'Australasia,' Gordon & Gotch's 'Handbook' (for statistics and topographical details), the Government Handbooks of the various colonies, and the *Argus* newspaper." My obligations to Mr. Heaton's book, as to a thousand others, are acknowledged in this comprehensive confession. I may add that the 'Cyclopædia' has been to me a labour of love, during the scanty leisure of a hardworking journalist's life, over a period of thirty years.

5. The 'Cyclopædia' bears about the same relation to Mr. Heaton's 'Dictionary of Dates' that the Messrs. Chambers's well-known ten volumes bear to Haydn's popular manual. Of sheer necessity a cyclopædia is mainly a compilation, but it can scarcely be pieced together out of a date-book.

6. There can be no commercial rivalry between the two books, nor was any ever intended. The 'Cyclopædia' is published by subscription alone, and it might well stand beside the 'Dictionary' on the shelves of the reference library. I have had numerous and very gratifying testimonies to the utility and value of my book. I have laboured hard to make it indispensable to those who wish to have "all about Australia" within the covers of a single volume. The full title of the book is, 'Cyclopædia of Australasia; or, Dictionary of Facts, Events, Dates, Persons, and Places connected with the Discovery, Exploration, and Progress of the British Dominions in the South, from the Earliest Dawn of Discovery in the Southern Ocean to the Year 1881.'

7. Even where I followed Mr. Heaton, I had all the trouble of verification, revision, and condensation.

8. The Australian press did *not*, as Mr. Heaton asserts, fall mercilessly on the book. Not a single copy was sent for review to any journal; but two gratuitous, motived, and personal notices of it did appear, which were beneath my disdain. Even in remote Australia writing men have their little feuds at times.

9. Of Mr. Heaton personally I know absolutely nothing. To assert that I "abused him like a pickpocket" when noticing his 'Dictionary' is merely to use an inapplicable phrase of street slang. Such phrases I am not in the habit of using myself. The censure I passed on the book was grounded on the fact that it contains an immense mass of very trifling details (unworthy of record, in my opinion), and also a mass of criminal details, that ought to be, for the credit of these colonies, buried in oblivion.

10. As *pièces justificatives* of this letter, I enclose Mr. Gurner's note, and a printed reply to Mr. Heaton's charge, clipped from the columns of a Melbourne journal which reprinted his letter. DAVID BLAIR.

*** We cannot insert any more letters on this subject.

TALKS WITH TRELAWNY.

III.

April 29, 1873.—I called again on Trelawny. He wrote lately to Miss Clairmont, offering to give her 50*l.* for any Shelley letters, &c., in her possession, which he would then turn to such account as he might see fit. She, however, is not willing to close with this offer, and speaks of her ill health and other troubles. Trelawny thinks under the circumstances (and I concur) that it would be desirable to ascertain distinctly what are the Shelley documents in Miss Clairmont's possession; and assuming their value to be at all commensurate, then to see about getting up a subscription for their purchase. He would still produce his 50*l.*; I offered to contribute, and could probably get four or five other persons to join in the plan. Trelawny says that Shelley left Miss Clairmont by will no less a sum than 12,000*l.* He had left 6,000*l.* in the body of the will, and then (whether by inadvertence or otherwise) he bequeathed another 6,000*l.* in a codicil. Miss Clairmont, however, did not manage the money prudently—one unfortunate speculation being the purchase of a box or boxes in Lumley's Italian Opera-house, now burned down. She is still in Florence, Via Valfonda. I asked Trelawny whether he thought I might call on her if I am in Florence this year, but he considers she would not be pleased at my doing so. He and I continued talking about Shelley's will, which he says was regarded as a remarkable document in a legal sense. He has lately renewed his acquaintance with Leigh Hunt's book, 'Lord Byron and some of his Contemporaries'; and though his dislike of Hunt is strong, he says it gives a very good idea of Byron and Shelley, especially the former; any deficiency in this regard being solely due to the unfavourable conditions of intercourse subsisting between Byron and Hunt, showing to Hunt only a partial and unpleasant side of Byron's character. Shelley used to say that the best thing Hunt had done was a paper about a drunken charwoman (so Trelawny describes it) in the *Indicator;* this was not said with any intention of disparagement, I infer.

May 6.—I called again on Trelawny, and showed him one of the letters which have been lent to me, addressed by Shelley to Miss Hitchener. He is a decided depreciator of women, as regards both intellect and character (although, indeed, he always speaks up vigorously for giving them full social rights, &c.); and he says that Shelley in his later years found that his ideal notions about women were not correct. I reminded him of some evidence telling in the opposite direction, and he admitted its force so far as it goes. My own impression is that he overstates the matter generally. He spoke again about the excellence of Owen Jones as a designer, saying that one day he will rank next to Flaxman. He designs for various leading silversmiths, &c., but cares nothing for large money gains. Byron never read his own writings after once they were published. Trelawny himself has not read the 'Younger Son' these forty years.

May 8.—I called on Millais, to see his portrait of Trelawny in the picture of the Arctic veteran. It is truly excellent in character and likeness, though perhaps Trelawny is right in thinking the body rather too huddled with age, and not showing sufficient physique. Spent the evening again with Trelawny. He thinks he may reprint for private circulation his book about Shelley, &c., adding various anecdotes and details; also urges strongly that Byron's letters ought to be republished (especially extracting from the narrative those which appear in Moore's 'Life of Byron'), and that I would do well to undertake this work. I should have no objection to do it (if consistent with copyright claims, &c.), yet no extreme inclination either.

May 15.—I called again on Trelawny at his suggestion to see a letter from Miss Clairmont that he has just received. She gives some details as to letters &c. of Shelleyan interest in her possession; thinks she may own forty to fifty related to the subject. One is a letter from Shelley complaining of Byron's misrepresentations of him. Trelawny considers, however, that all that Miss Clairmont says on this subject is coloured by vindictiveness. She suffers much now in health, and can't look up the papers for the present. Trelawny proposes to give me a letter which I can present to her on my approaching stay (probably a very short one) in Florence. He recommends me to ascertain what papers she possesses, but not to lend myself to any move for damaging the reputation of Byron—and certainly I would of my own accord steer clear of anything of that sort. Trelawny leaves London to-morrow for his house at Sompting.

May 3, 1877.—I delivered to Dalziels, the wood engravers, the two wood-blocks illustrating Trelawny's book on Shelley and Byron, as he wishes them to be again printed off in the forthcoming enlarged reissue of the work.

June 3.—I visited Trelawny the first time this year. Miss T——r tells me that an old servant, on seeing him when he returned to town, thought he looked much aged; I don't see this particularly, and certainly his mind is bright, voice strong, &c. He was in very good humour. The enthusiasm which he quite recently conceived for Blake's poems continues unabated, or indeed increasing; and he pronounced in eloquent terms a most fervent eulogium on Mrs. Blake, replete with deep feeling. He was indignant with me for having said (in my memoir of Blake published in the Aldine edition) that Mrs. Blake lost her good looks comparatively early (in point of fact, he did not quite rightly remember what I really said); and he avers that neither Swinburne nor Gilchrist (he has looked through both their Blake books now) nor myself has treated Mrs. Blake with anything like the honour she deserves. This chivalrous feeling in the octogenarian woman-scorner is truly delightful; another instance of the like feeling is his championship of Harriet Shelley. He has written for his new edition a narrative vindication of her, which I heard, and which contains one or two details new to me; also an account—framed out of what he heard Mary Shelley say from time to time—of her own first interview with Shelley. He has made up his mind to republish the book—with Pickering if manageable—550 copies, and I engaged to see about this without delay. He renewed a subject he has mentioned to me before—that shortly after Byron's death various articles of costume, &c., really proper to Trelawny were sold, partly through the agency of Capt. Roberts, as being Byron's; he says that specimens of these relics are in a museum at Liverpool.

June 7.—I took round to Pickering Trelawny's book on Shelley and Byron, and explained to him Trelawny's wishes as to republication. I find he had already heard of the matter through another friend of Trelawny, and he appears quite willing to undertake the reissue.

July 2.—I went with my wife to Trelawny's. He showed me the two Byron swords and the Pisa dagger lately at the exhibition of Byron relics got up in connexion with the proposed statue of the poet; also some interesting documents which he has lately turned up:—1. His own narrative of Byron's last illness and death, written down upon paper placed on Byron's coffin from the statements of the valet Fletcher. 2. His own narrative of the exhuming and burning of Shelley's body, written at the time; here occurs a statement that Shelley's skull was of a peculiarly beautiful and delicate form—Byron wished to preserve it, but it crumbled to pieces. 3. Two letters from Shelley to Medwin, January and July, 1820: the first invites him to Pisa; the second speaks of 'Prometheus Unbound' and 'The Cenci,' and expresses a liking for the concluding two lines of 'The Cenci.' 4. A letter from Mrs. Shelley (not, if I remember right, addressed to Trelawny himself), written in July, 1822, between the death and cremation of Shelley—written as in great sorrow, but not uncontrolled agitation; she says she would like to settle in Rome, expecting the climate to end her days. 5. Part of a letter from Leigh Hunt to Byron, as to Byron's considerate conduct, &c., written before Hunt quitted England for Italy. 6. A copy of three letters addressed by Lady Byron to an American clergyman, chiefly about her daughter and the recent marriage of the latter to Lord King, who is spoken of as a very solid, estimable character. The daughter is said to speculate much on the destiny of the soul, &c., not with orthodoxy, but with confiding aspiration; and an extract is given from something she wrote on the subject, well felt and expressed. I saw also the recent article by Scherer on Shelley in the *Revue des Deux Mondes;* it shows intelligent study and interest.

August 27.—I called on Trelawny. He seems inclined to make the requisite final arrangements regarding his MSS., and to hand them over to me before he leaves town, so that the reprinting of his book can be safely proceeded with.

September 15.—I called at Pickering's to ask him to return to Trelawny the copy, now in his hands, of Trelawny's 'Shelley and Byron,' first edition, as Trelawny wants to look over the notes, by way of revision, which I pencilled in it long ago. Pickering was not in, but it is understood he will forward the volume on Monday.

September 16.—My wife and I lunched at Trelawny's. We there met the secretary of the Byron monument scheme, who says that a site for the statue has not yet been vouchsafed.

October 23 *to* 26.—I was with Trelawny at Sompting, to see about the details of his intended republication.

November 16.—Trelawny's book is now advancing rapidly through the press. The proofs all come to me for revision; Trelawny sees nothing of them.

April 17 *to* 30, 1878.—My wife and I visited Trelawny and Miss T——r at Sompting.

July 1.—I called on Trelawny, who looks very well and lively, though he has a slight cough. He has prepared a reply to certain statements in the Shelleyan article by Garnett recently published in the *Fortnightly Review;* he wants me to ascertain, before he sends it in, whether Mr. Arthur Moxon can lay hands on a letter which was written towards 1840 to Edward Moxon, with Trelawny's concurrence, urging him to republish the notes to 'Queen Mab.' He says that in 1822 he wished to introduce Col. De Bathe (who had a very pretty wife) to Shelley. Shelley took an opportunity of observing the colonel and his converse for a short while, and then declined the introduction, saying, "He seems to have had the mind drilled out of him."

August 21.—I called on Trelawny. He let me see a letter from Miss Clairmont, showing that she is suffering much from neuralgia of the digestive organs; also a letter from Barone Kirkup, whose daughter has died in a premature confinement following bronchitis. He is sending over the sofa which he possesses connected with Shelley, and Trelawny means to put me in immediate possession of it—to my no small joy. I had hitherto understood it to be a sofa that Shelley, not long before his death, ordered for Leigh Hunt. Trelawny, however, now speaks of it as the sofa on which Shelley himself used commonly to sleep at Pisa, Mrs. Shelley, as he says, ordinarily sleeping apart.

August 27.—I called on Trelawny. He gave me two cypress cones picked up by himself some thirty years ago from the tree which he had planted by Shelley's grave: these two are the remainder of a dozen or so of cypress cones which he caused to be planted on the estate he then had in Monmouthshire, and the cypresses which sprang up still flourish there excellently. He seems about as well as usual, but says he hardly expects to be able to do next year what he has been in the habit of doing—walk back from Regent Street to his house in Pelham Crescent, after having taken the omnibus—always the box seat—to Regent Street.

September 10.—The Shelley sofa was brought round to-day to a cabinet-maker's, and thence (in my absence) to our house in Euston Square; but its large size and the fact that it does not take to pieces make its admission in either place inconvenient and hardly practicable. It was therefore again taken away by the carrier.

September 24.—The Shelley sofa is now at an upholsterer's near Fitzroy Square. I went round to see it, and find it quite as well constructed an article, and as capable of being made to look well, as I had expected. I gave directions for some necessary repairs, but no alteration whatever in its structure.

October 16.—The Shelley sofa came home to me: complete except for external covering of cushions, &c.

October 29.—Trelawny sends me particulars of the Shelley sofa, showing to my full satisfaction that it really is the sofa-bed which Shelley ordinarily used in Pisa—not simply one which he purchased for Leigh Hunt. Trelawny says that Shelley slept on this sofa in Pisa immediately before starting in the Don Juan, when he was drowned. I think, therefore, it must certainly be the last couch Shelley ever slept on, which makes it extraordinarily interesting.

May 31 *to June* 7, 1879.—My wife and I were down with Trelawny and Miss T——r at Sompting.

August 15.—When I was with Trelawny in June, he asked me to inquire particulars about cremation, as he wishes his remains to be disposed of in that method when the time shall come. I have made various inquiries from time to time, and to-day wrote to the secretary of the Cremation Society at Gotha, asking for proper details.

August 31.—I acquainted myself with the purport of the German documents lately sent to me from Gotha about cremation for Trelawny.

September 2.—I sent off to Trelawny the Gotha papers about cremation with a translation.

May 21, 1880.—I went to see Trelawny, who has been in town now three weeks or so. He tells me that Barone Kirkup died not long ago—last year probably. He has received from a relative of Miss Clairmont a letter inviting him to purchase for 50*l.* Shelley's inkstand, a portion of his ashes, and some other items, including a number of Trelawny's own letters. This he is not at all inclined to do. He likes Blake more and more, and says he was a perfect realization of that abstract conception, "the bard." Trelawny seems to be in very good health and fair spirits, and little or not at all older in physique than when I last saw him about a year ago.

June 3.—I spent the evening with Trelawny. Conversation about Medora Leigh, whom he remembers: the Mr. Trevanion who figures so deplorably in relation to her had some pretensions as a verse-writer. Trelawny totally disbelieves that Medora was Byron's daughter; thinks the harsh treatment of her which her mother ultimately had recourse to was blamable and unaccountable. He has a high opinion of Lady Anne Blunt, Byron's granddaughter, and her book about Oriental travel. He has lately been looking at a copy of Whitman's 'Leaves of Grass,' which I left with him two or three years ago; says he finds in it the materials of poetry, but not poetry itself. An acquaintance has asked and obtained Trelawny's authority to bring out a new edition of the 'Younger Son.' Trelawny, in the course of the evening, spoke of this work as not only generally but in detail true.

June 9.—I went to Trelawny's, where I met a lady of advanced age, the daughter of the celebrated William Cobbett. Trelawny is well pleased with the selection from Shelley made by Stopford Brooke, recently published. He thinks that Mrs. Clermont, the governess or companion, was the person who put up Lady Byron to suppose—and who *alone* originated the idea—that Byron was intriguing with his half-sister Mrs. Leigh. I don't think, however, that Trelawny has any solid reason for saying this—only suspicion or the bias of the moment. He is now in the habit of taking a walk of two to three miles every evening—a walk for mere walking's sake, which he used till lately to eschew.

June 23.—I spent the evening with Trelawny; Miss Mathilde Blind there also. Trelawny is certainly, at his present very great age, more silent than he used to be. Some conversation about Bradlaugh, the excluded atheist M.P. now committed to custody; about the second part of Goethe's 'Faust,' &c. Trelawny says that the Byron statue recently set up near Apsley House is not at all like Byron; he regards the facial type as more like that of the Burdett family.

August 19.—My wife and I called at Trelawny's. We found with him one of his most intimate and valued friends, Mr. D. Trelawny has received from Forman a copy, as a present, of his new edition of Shelley's prose works. This pleases him, and, in reference to his not having shown greater attention to Forman on a previous occasion, he observed, "All old carnivorous animals are surly, such as an old lion or bear; an old dog is surly." Speaking of the etching in this book from Miss Curran's portrait of Shelley, he remarked that the forehead and head are made too large. He says that Byron's forehead also was sloping, and the ordinary portraits are untrue in this respect. He gave me a red-lacquered Japanese cigar-holder which he has owned for some—but not very many—years.

November 12.—Trelawny sends me a letter embodying one addressed to the custodian of the Protestant Cemetery in Rome, to the effect that his ashes are to be deposited in the grave which he holds next to Shelley's. He asks me to copy it out and send it off. I copied it and translated it into Italian, and forwarded both papers to Trelawny to be used as he prefers.

August 8, 1881.—While down at Littlehampton, which I left to-day, I proposed to call on Trelawny, whose house at Sompting is about ten miles distant. Was distressed to learn that he was then bedridden (this has now lasted for a month or so past), and not much expected to survive long. Went four times to his house without seeing him.

August 13.—I received from Miss T——r the telegram, "All is over."

W. M. Rossetti.

THE HALL OF PEMBROKE COLLEGE.

20, New Cavendish Street, Portland Place.

In answer to the concluding paragraph in the review of Mr. Gosse's 'Life of Gray,' will you allow me to point out that the writer erroneously supposes the present hall of Pembroke College to have immediately replaced that hallowed by the steps of Spenser and Gray? Such is not by any means the case.

The hall which was removed by the college to make way for the present greatly enlarged structure was neither in its floor, ceiling, windows, doors, fireplace, nor panelling, the hall of Gray. The fact is that the apartment had been recast—and very picturesquely recast—about twenty years ago; notwithstanding which, though it was entirely devoid of those historical and personal claims to our regard which your reviewer would give it credit for, having absolutely nothing in common with Gray's hall but the inner core of the walls, it would not have been removed in 1875 but from the imperative necessity for more space and on account of the dangerous condition of the walls themselves.

However much, therefore, the hall of seven years ago may be regretted, the Fellows of the college and their architect need not be accused of vandalism on the score mentioned by your reviewer; nor Mr. Gosse of insensibility to the claims of history and poetry for failing to abuse them for doing that of which they were altogether innocent. A. Waterhouse.

*** Mr. Waterhouse exaggerates the amount of harm done by the restorers of twenty years ago. The art of destruction had not then attained perfection. And were he correct, his plea for the destruction of the hall of Pembroke would justify his being employed to construct a new Westminster Hall, because of William Rufus's structure only the solid walls remain, and the hammer-beam roof (to say nothing of the doors, windows, floors, &c, which are of various subsequent dates) is an addition. If the hall was too small, why did he not lengthen it? It would, however, have been quite large enough if the Dons of Pembroke would have taken a lesson in management from Trinity. Mr. Waterhouse forgets to say that "the dangerous condition of the walls" was brought about by his own demolitions.

In conclusion we may quote the memorial to the Fellows, which was signed by the Bishop of Ely, Sir H. S. Maine, the Master of Charterhouse, Canon Venables, and other graduates of Pembroke, who, unlike Mr. Waterhouse, laboured under the delusion that the hall was an ancient structure. After speaking of the other buildings now levelled to the dust, they say:—

"We would also venture respectfully to call your attention to the fact that the hall, erected about 1360, is probably the earliest existing collegiate building in the University, the loss of which as an example of its age would be irreparable. We feel we need not allude to the historic memories of which the hall is so full, which would be all wiped out by its demolition and the substitution of a modern fabric, which, even if more beautiful, would entirely want the interest of the ancient building. We had heard with satisfaction that in all the various plans for the reconstruction of the college, the hall was regarded as sacred, and was only to be subjected to lengthening. The intelligence that it has been decided to destroy this time-honoured and beautiful relic, so dear to us all, has taken us completely by surprise, and filled us with dismay."

Literary Gossip.

Mr. Andrew Lang's poem, 'Helen of Troy,' will be published in October. It consists of six books of about 400 lines each. Messrs. Macmillan & Co. will publish in the course of the autumn a volume of lyrical poems by Mr. Alfred Austin, entitled 'Soliloquies in Song.'

Messrs. Houghton, Mifflin & Co., of Boston, U.S., have in the press a large number of books, which they will publish during the autumn. Of these we may mention the following as of interest to readers on this side of the Atlantic. The most important is a new edition of the works of Mr. Oliver Wendell Holmes, in six or eight volumes, carefully revised and edited by the author himself, who is giving special attention to 'The Autocrat of the Breakfast Table,' annotating and enlarging it from a great amount of material accumulating for years. Among the others are:—A new edition of

Hawthorne's works, in twelve volumes, with bibliographical introduction to each novel, by Mr. G. P. Lathrop, son-in-law of Hawthorne; a complete collected edition of the poems of Mr. Aldrich, with thirty illustrations (including a portrait of the author), designed and engraved by members of the "Paint and Clay Club" of Boston; 'The Letters of Mrs. Lydia Maria Child,' with biographical introduction by Mr. Whittier, and an appendix by Mr. Wendell Phillips (these letters cover a period of half a century, from 1830 to 1880); 'Wit and Humour of the South, from the various Southern Humourists of the last Half Century,' compiled and edited by Mr. Henry Watterston, the editor of a well-known newspaper at Louisville; 'The Life of Fenimore Cooper,' by Prof. T. R. Lounsbury, of Yale College, a volume in the "American Men of Letters" series; Lives of President Andrew Jackson, by Prof. W. G. Sumner; John Randolph of Roanoke, by Mr. Henry Adams; and President Thomas Jefferson, by Mr. J. T. Morse, Jun., these forming parts of the series of "American Statesmen"; 'Notes on Men and their Books,' by Mr. James T. Fields, edited by his widow; 'Dr. Zay,' a new novel by Miss Phelps, now running in the *Atlantic Monthly*; and 'The English and Scotch Ballads,' a complete variorum edition, collected and edited by Prof. Child, of Harvard College, parts i. and ii., to be completed, at short intervals, in eight parts in quarto.

The manuscripts left behind him by the late Col. Chester may, it seems, be divided into nine series:—I. The collection of extracts from parish registers from nearly all the counties in England, consisting of eighty-seven folio volumes, each containing about four hundred pages, closely written. Of these volumes seventy are full and are carefully indexed. They contain the entries of all the families of note in the parishes dealt with. II. A complete series of the matriculations at the University of Oxford, from the commencement in 1567 to 1869, contained in seven folio volumes, viz.:—Vol. i., A.D. 1567 to 1580, with index; vols. ii. to iv., A.D. 1581 to 1714; vols. v. to vii., A.D. 1715 to 1869. The entries are about 95,000 in number. III. A complete list of entrances at Gray's Inn, 1581 to 1781, arranged chronologically. IV. Five folio volumes of marriage licences of about four hundred pages each, indexed, from the following offices, viz.:—The Bishop of London's Office, 1521 to 1828, and the Dean and Chapter of Westminster's Office (all taken), 1559 to 1699, 3 vols.; Faculty Office of the Archbishop of Canterbury, 1543 to 1569, 1 vol.; Vicar-General's Office of the Archbishop of Canterbury, 1660 to 1679, 1 vol. V. Abstracts of wills and admons, filling 10 vols.; index to testators only. VI. Pedigrees, 2 vols. (one only partially filled), entitled 'Chaos'; Pedigrees, 2 vols. (one only partially filled), from Candler's Suffolk collection; Pedigrees, 1 vol. (only partially filled), relating to Westminster Abbey. VII. Pedigrees and miscellaneous matters (unindexed), 9 vols. folio, of which eight are devoted to the following families, viz., Adams, Chester, Hutchinson, Rogers, Taylor, Washington, Wentworth, Whitmore, the other being miscellaneous. VIII. Tabular pedigrees, printed and MS., arranged in boxes under the first letter of the principal pedigree. IX. Four volumes, full of miscellaneous collections as to the family of Rogers.

Dr. Scrivener has in the press a third edition of his 'Introduction to the New Testament,' the new features of which will be an account of all fresh materials for textual criticism to the present date, including the recent researches of the Dean of Chichester, and fresh information respecting the Egyptian versions, contributed by the Bishop of Durham. The chief alterations introduced into the received Greek text by the revisers of the New Testament will also be examined in their relation to the critical principles of Profs. Hort and Westcott.

We understand that Mr. S. Lane-Poole, whose brief description of Egypt for Messrs. Sampson Low & Co.'s series of "Foreign Countries" has proved serviceable to the journalists in the present imbroglio, has been engaged to write the Egyptian portion of the 'Picturesque Palestine,' &c., which Messrs. Virtue & Co. are bringing out with the collaboration of Col. Wilson, Lieut. Conder, Prof. Palmer, Miss Rogers, and others.

A rumour has obtained wide currency that Prof. Masson contemplates resigning his chair in the University of Edinburgh, and that an arrangement has been made for Prof. Minto, of Aberdeen, becoming his successor. The story is a sheer invention, and does not do any credit to its concocter.

The spelling reformers are gradually approaching unity. The "partial corrections" of the English Philological Society are being adopted in America, and the English Spelling Reform Association has adopted the American "five rules," which are substantially contained in the "partial corrections."

The Council of University College, London, have accepted the fund raised in memory of Miss Ellen Watson, a former student, of which we have before spoken. A memorial scholarship, consisting of the income of the fund, is open to students of either sex who display very marked merit in applied mathematics.

Mr. J. H. Greenstreet is about to publish, by subscription of only 100 copies, an autotype fac-simile of the Lincolnshire Survey, or list of landholders, in the time of Henry I., from the original MS. in the Cottonian Library.

The appeal made by the *Christian Leader*, a Scottish religious journal, on behalf of Mr. Gilbert Burns Begg, the octogenarian nephew of Burns, has been crowned with success. The old man has been removed from the city poorhouse, Glasgow, and placed in very comfortable quarters at Pollokshaws. His landlady is sister of Mr. Davis Wingate, the poet, husband of Margaret Thomson, granddaughter of Burns.

We hear through the *Manchester Guardian* that the Towneley Hall Library will shortly be dispersed by auction. The collection comprises, amongst other attractions, a large number of important books and MSS. illustrating the history of Lancashire.

The Advocates' Library, Edinburgh, will be closed during the month of August.

The first portion of Mr. R. H. Mason's 'History of Norfolk,' which we announced some months since as in preparation, will be ready in September, and will contain the general history of the county down to the end of the sixteenth century. The ancient coinage of East Anglia and the local prices in the Middle Ages are treated of under separate headings.

Mr. Whitley Stokes is preparing an edition of the 'Psalter na Rann' for the "Anecdota Oxoniensia."

Prof. Monier Williams has in the press a work with the title of 'Religious Thoughts in India.'

A history of Accrington and the district surrounding it, to be published by subscription, is in preparation, written by the Rev. J. R. Boyle, of Cottingham, near Hull, who has for several years been collecting materials for the work. Pedigrees of the chief local families will be given, and some woodcut illustrations. Mr. Henry Gray, of Manchester, will be the publisher.

A useful supplement to the well-known "Bibliothèque des Écrivains de la Compagnie de Jésus" has been placed in the hands of M. Maurice Tardieu for publication. This consists of a 'Dictionnaire des Ouvrages Anonymes et Pseudonymes publiés par des Religieux de la Compagnie de Jésus,' and has been compiled by Father Carlos Sommervogel, S.J.

M. R. Duval, of Paris, author of a Syriac grammar in French, is now copying in the British Museum the Massoretical treatises and notes on the Syriac translation of the Bible. They will, no doubt, throw much light on the history of the Hebrew Massorah, which may turn out to be an imitation of the Syriac. It seems that M. Halévy has found on Assyrian tablets traces of a Massorah amongst the Assyrians.

M. Maspero, according to the last accounts, is still at Cairo. His family is with him. M. Lefébure had left Egypt prior to the outbreak.

The recent death in Paris of the Polish poet and dramatist Ostrovsky is announced. Ostrovsky wrote in Polish and in French, his works being principally historical plays in prose and verse. He also translated Molière's 'L'Avare' into Polish verse. By his will he bequeaths 30,000 francs towards founding scholarships for Polish students in the Zurich Polytechnic School.

M. H. Weil recently brought before the Académie des Inscriptions a parchment fragment, found with many others at Medinet-el-Farés, apparently the remains of a monastic library in the neighbourhood. He dates it from the sixth century, and it contains part of the second parabasis of Aristophanes' 'Birds,' with almost illegible scholia. Let us hope that we may soon hear of more such precious fragments from the same source.

M. Ernest Leroux will add a new volume this autumn to his exquisite little "Bibliothèque Orientale Elzevirienne." It will be an essay on the Koran by Mr. Stanley Lane-Poole, the author of the 'Speeches and Table Talk of the Prophet Mohammed,' lately issued in Messrs. Macmillan's "Golden Treasury" series. The French volume will consist rather of an essay of classification

than a body of selections, and will reproduce much of what the author laid down in the article on the Koran in the *Edinburgh Review* of last October, the object of which was to show how little the sacred book of the Mohammedans is responsible for the present shape of Islamic dogma and ritual.

The fourth German Lehrertag was held last month at Cassel. The attendance was somewhat disappointing. The publication of the *Jahrbuch* of the Association is to be suspended for a time, and the *Kalender* enlarged and improved.

The Historical Society of the State of Maine has decided to publish a history of the state. It is now fifty years since Williamson's history was issued, and much new material has been discovered in recent days. One of the problems yet to be solved is whether the Spaniards occupied that region between 1575 and 1588, and a special search has been instituted in the Spanish archives to clear up the doubts on this head.

SCIENCE

BOOKS ON ELECTRICITY.

The Modern Applications of Electricity. By E. Hospitalier. Translated and Enlarged by Julius Meyer, Ph.D. (Kegan Paul, Trench & Co.)—*Electric Lighting.* Translated from the French of Le Comte Th. du Moncel by Robert Routledge, B.Sc. (Routledge & Sons.)—Electric invention is proceeding so fast that text-books become out of date a year after publication. Every new book has thus a decided advantage over its predecessors. The name of Count du Moncel is a sufficient guarantee for substantial accuracy and for fulness of information regarding recent progress. The above work of his on electric lighting contains a multitude of particulars, historical and descriptive, that will be interesting to practical electricians, and it has been well translated. Its weakest point is the coarseness of the illustrations, a defect which appears to be due to bad printing rather than to bad engraving. Fig. 73 especially, which occupies an entire page, would blemish a half-penny newspaper. Very different in this respect is the work of Hospitalier and Meyer. Large octavo pages, wide margins, excellent paper and type, with large and exceptionally clear illustrations—which are very important in a book descriptive of apparatus—will at once commend it to the general reader. The descriptions are short and clear, not entering into unnecessary details. Du Moncel's book divides its space about equally between electric lamps and electric generators. Hospitalier's includes the additional subjects of telephones and microphones, photophones, electro-motors, and the transmission of power by means of electricity, besides a few words on electric railways, fire alarms, and minor applications. There is a want at present of a single name to include what are technically distinguished as magneto-electric and dynamo-electric, or, more briefly, magneto and dynamo, machines. As far as etymology goes, both classes are magneto-electric, that is to say, they generate currents by magneto-electric induction, and they are both dynamo-electric, that is to say, they both generate electricity by the expenditure of mechanical work. The name "dynamo-electric" was originally introduced to designate a new type of machine, in which there was reciprocal action between the field magnets and the armature (the strength of the field magnets being due to currents generated in the armature by its motion in the field), and was not intended to apply to the earlier invention of Wild, in which the field magnets were electro-magnets with a separate exciter; but the custom now seems to be to include under the name all those machines which have electro-magnets as field magnets, while excluding those which have permanent steel magnets. The word "dynamo" is now being used as a noun in the place of "dynamo-electric machine," and from its convenience it will probably soon become the generic term—a consummation to be wished for. We cannot commend Hospitalier's attempt to introduce "electro-dynamic" as the general name for these machines. It reverses the order of cause and effect, and the term has besides a very definite and different meaning of its own, introduced by Ampère. While discussing words we cannot but note Mr. Routledge's use of "reversion" for *reversal*, a mistake which he could scarcely have made if he had ever studied the subject of annuities.

Magnetism and Electricity: an Elementary Text-book for Students. By Richard Wormell, D.Sc. (Murby.)—Thanks to obscurity in verbal explanations and carelessness in revision, Dr. Wormell has just failed to produce an excellent text-book. A little book of this kind was much needed—one that would take an intelligent boy or girl through an adequate school course in electricity and magnetism, giving not only the full advantage of the training in experimental and inductive work, but also imparting a considerable practical acquaintance with the "latest discoveries and applications of electricity." The first ten chapters of this manual are devoted to magnetism, the remaining twelve to electricity. In each subject theoretical teaching is followed by well-arranged and clear suggestions for laboratory practice, and the general plan of the two sides of instruction is thoroughly commendable. A perusal of the manual shows that Dr. Wormell has learnt by experience in the class-room and laboratory what difficulties present themselves most frequently to students and how they should be overcome; and, more than this, he has shown in many places—*e.g.*, in his clear explanatory description of electrical potential—that he can effectually overcome them. What is said of potential is singularly clear and intelligible; but in many other passages the wording is so hazy, and the reference lettering of the diagrams so careless, that any reader who is not already so far proficient as to be independent of the author's teaching will not easily, if at all, grasp the meaning; for instance, no learner will gain any definite notion—and none other is of the smallest educational or scientific value—of quadrantal deviation and Faure's accumulator from what Dr. Wormell says about them. Defects of this kind are doubly pernicious in educational works, for they perplex the learner and impede his progress, and at the same time inculcate the habit of writing inexact, nerveless English. The errors and omissions in the lettering of the diagrams are so frequent as seriously to impair the use of the explanatory paragraphs. These considerations prevent our recommending the text-book to students depending only, or mainly, on self-help; but it may be useful to classes where the defects will be pointed out and remedied by competent teachers or demonstrators.

MR. ROBERT WILSON.

Full of years, there passed away at Matlock on the 28th ult. Mr. Robert Wilson, C.E., F.R.S.E., a well-known name in connexion with the engineering history of the past thirty or forty years. He was born at Dunbar in 1803. He exhibited at an early age mechanical tendencies, and, fostered by true Scottish family instinct, was allowed to follow them up. A chance circumstance of another sort also aided. We may smile at the position claimed for "phrenology," but about this time its leading advocate in Edinburgh was a man of talent and penetration. He spoke to the evidence of mechanical faculty afforded by young Wilson's "bumps," his region of "ideality" being well developed, and, in fact, proving that he was a born engineer. But evidence already existed which might help to such a judgment, for amongst the lad's earliest amusements was the attempt to attach "sculls" to the stern of a boat as a means of propulsion. This idea became dominant in his mind, and it resulted in the discovery of the screw propeller while he was still young. His experiments and line of thought are detailed in his pamphlet on 'The Screw Propeller.' Suffice it to say that the Government of the day reported adversely on his contrivance and models in 1833, as a matter of principle even. Within twelve years the principle was adopted in the navy at the hands of another patentee. It was a singular coincidence that the experimental trials of Mr. Wilson's invention in the North were made with the first iron boat ever built. Our two most modern forms and means of navigation were thus placed together in their primitive forms.

After some experience in a large shipbuilding yard at Blackwall, Mr. Wilson became connected with Messrs. Nasmyth, Gaskell & Co. at their foundry at Patricroft, near Manchester. It was during this period that Mr. Nasmyth designed and invented his steam hammer, but there was a difficulty as to its regulated working powers which Mr. Wilson helped to remedy. This was in 1843. From 1843 to 1856 Mr. Wilson was manager of the Low Moor Ironworks, during which period he patented several improvements of the hammer, and particularly the "circular balanced valve" which displaced the "self-acting motion" which he had originally applied to the great tool. In 1856, upon Mr. Nasmyth's retirement—his 1842-3 patents expiring—Wilson returned to Patricroft as partner in the firm of "Nasmyth & Co.," and later on (1861) patented his "double-acting hand-gear motion," which vastly added to the resources of the hammer by giving a top steam pressure to the descending mass.

Mr. Wilson's mechanical genius covered a wide range. His cotton press was largely adopted in India, deriving its uniqueness and enormous power from the "double pressure" application. And, to pass over incidental matters of mechanical skill, one of his latest honours was an award of 500*l.*, for his "improvements of the fish torpedo," from the late Administration.

The traits of his character were well marked. He was genial and hospitable, and controversial withal. He was proud of having worked his way up. He was a successful manager and employer of labour, and only once, it is believed, had he ever any "strike" difficulties with his men. At the ripe old age of seventy-nine he goes to his long rest amid the respect and affectionate regard of a large circle. It is said he leaves an autobiography behind him.

ASTRONOMICAL NOTES.

The bicentenary of the discovery of Halley's comet at the appearance in 1682, from which its periodicity was determined and its return predicted, will occur this month. As many books on astronomy give an erroneous date for its first observation on that occasion, in consequence of the change of style having been adopted on the Continent but not in England, it may be worth while to notice that Cassini seems to have been the first to discover it at Paris on the 25th of August. Picard observed it on the 26th, when the head appeared as large as a star of the second magnitude. Flamsteed says that on the evening of the 15th (this was old style, and would correspond to the 25th on the Continent) it was seen by some neighbours; that his assistant saw it on the following evening; but that, in consequence of a succession of cloudy nights, he was not able to obtain an actual observation of it until about three o'clock on the morning of the 20th (corresponding to the 30th, new style). Flamsteed continued to observe it

at Greenwich until the evening of the 9th (19th) of September. The observations of Hevelius at Danzig commenced nearly at the same time as those of Picard at Paris. Those of the latter were the last observations he ever made, as he died in October of the same year. Cassini theorized on the probable regular return of comets, but, referring their motions to the earth, formed his conjectures with regard to them on totally wrong principles. To Newton belongs the glory of showing that they move in conic sections round the sun. The 'Principia' appeared in 1687, and in the third book of that immortal work he applied this principle to the orbit (treated as a parabola) of the great comet of 1680. The probability that the comet of 1682 was moving in an ellipse, and was identical with the comets of 1531 and 1607, was shown several years later, and after prodigious labour, by Halley, whose name has, as is well known, been ever since connected with it at its subsequent returns in 1758–9 and 1835–6.

The planet Saturn now rises about eleven o'clock in the evening, and Jupiter a little after midnight. Both are in the constellation Taurus; and Saturn, which is approaching a stationary point, will be for several weeks a few degrees to the south of the Pleiades.

In *Astronomische Nachrichten*, Nos. 2442–3, Prof. E. Weiss communicates a large number of observations of small planets and comets made first at the old, and afterwards at the new, observatory at Vienna, the latter commencing in the month of April, 1880, with some observations of Schäberle's comet (Comet II., 1880). There is also an observation of a new nebula in the constellation Virgo (R.A. 12^h 19^m 40^s, N.P.D. 88° 46′), made on March 23rd, 1881, which, after having been observed as a star by Herr Palisa at Pola, was recognized to be a nebula with the Alvan Clark refractor at Vienna. It is very faint, round, about 1′ in diameter, with a star-like condensation in the centre, equal in brightness to a star of the 12·7 magnitude.

GEOGRAPHICAL NOTES.

Messrs. Bacon write to us to explain that the map of the Mediterranean we noticed the other week was an old one sent by mistake. They have forwarded another in which the Greek frontier is correctly depicted.

Lieut. Hovgaard started last month on his exploring expedition to Franz Josef Land.

'On Duty under a Tropical Sun' is the title of a book which Messrs. Allen & Co. are publishing. This little work has been compiled with a view to offering practical suggestions as to the maintenance of health and bodily comfort to those whose duties may temporarily call upon them to "rough it" in a tropical country, under conditions where medical aid and the ordinary comforts of life may not be immediately obtainable. The treatment of diseases common to the tropics is explained in simple terms, and general remarks are offered as to diet, &c., while in the concluding chapter the subjects of clothing and equipment are fully discussed. Although the suggestions offered refer to tropical countries generally, the fact of one of the compilers of the book basing certain of his remarks on clothing and equipment on his experience of the climate of Egypt gained when on duty in that country in 1868 may be considered as enhancing the value of this little work at the present crisis.

SOCIETIES.

Quekett Microscopical.—*July 28.—Annual General Meeting*.—Mr. T. C. White, President, in the chair.—The Seventeenth Annual Report showed that the Club was in a fairly prosperous condition, though not so progressive in some respects as could be desired. The President's address treated principally of the early forms of the microscope and of still older optical appliances.—Dr. M. C. Cooke was elected President for the ensuing year.

MEETINGS FOR THE ENSUING WEEK.

Tues. Horticultural, 11.—Fruit and Floral Committee.
Thurs. Botanic, 1.—Annual Meeting.

Science Gossip.

Prof. Green, of the Yorkshire College, has, we understand, accepted an engagement from the Natal Government to proceed to Natal and examine and report on that coalfield. Mr. F. W. North's report on this coalfield has just been issued by the Department of Mines. He states that the coalfield contains 2,073,000,000 tons of coal.

The Congress of Hygiene announces its fourth international exhibition at Geneva from the 1st of September to the 15th. All nations are invited to contribute objects of any kind relating to hygiene and the statistics of population.

The Belgian Academy of Sciences offers a prize of 3,000 fr. for the best essay on the pollution of rivers and the destruction of fish. The essay should be sent to the Secretary before October 1st, 1884.

Drs. Gaudren and Hamy, who undertook the arrangement and classification of the Ethnological Museum, containing nearly 44,000 specimens, in the Trocadéro at Paris, are reported to have nearly completed their labours.

M. Michelson has brought before the French Physical Society a new form of thermometer capable of measuring the most delicate changes of temperature. The principle of the bimetallic thermometers is adopted, but ebonite is used instead of one of the metals. This hard india-rubber is ten times more dilatable than platinum, and a spring composed of platinum on one side and ebonite on the other will curve with the slightest addition of heat. At the extremity of the spring is fixed a glass stem, which touches a light mirror suspended by a silk fibre. By every change in the curve the mirror is moved, and a ray of light reflected from the surface moves up or down the divisions of a scale. M. Michelson hopes to be able to measure the thousandth of a centigrade degree.

The Botanical Society of Brandenburg is, it appears, to be greatly extended. A conference for the purpose of founding upon it a new society, to be called the German Botanical Society, is to meet at Eisenach on the 16th of September, at which the most distinguished botanists of Germany intend to be present. Prof. Haeckel will lecture before this association 'On the Interpretation of Nature by Darwin, Goethe, and Lamarck.'

FINE ARTS

The GROSVENOR GALLERY.—SUMMER EXHIBITION.—LAST WEEK.—WILL CLOSE August 7th.—Admission, 1s.

The GROSVENOR GALLERY.—SUMMER EXHIBITION.—BANK HOLIDAY, Monday, August 7th, LAST DAY.—Admission, 6d.; Catalogue, 6d.

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

WILL CLOSE on MONDAY NEXT, August 7th.—EXHIBITION of ROSA BONHEUR'S great Picture, THE LION AT HOME.—This great Chef-d'œuvre is NOW ON EXHIBITION DAILY, at L. H. LEFEVRE'S Gallery, 1a, King Street, St. James's, from Ten to Six. Unanimously acknowledged by the Press as being the finest work by this celebrated Artist ever shown since 'THE HORSE FAIR.' Has been visited by thousands during the Season.—Admission, 1s.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Vie et Ouvrages de L. F. Roubillac, Sculpteur Lyonnais. Par Le Roy de Sainte Croix. (Paris, Ollendorff.)

M. Sainte Croix discourses rapturously, if not very wisely, about the merits of Roubillac, or Roubiliac, as the able sculptor's British employers spelled it. It is evident that in England at least he wrote it so. The late Mr. E. B. Jupp had the sculptor's original design for the Duke of Argyll's monument at Westminster, dated May 25th, 1748, which is twice signed "Louis François Roubiliac," and is attached to the articles agreed upon between the sculptor and the duke's widow. M. Sainte Croix has not met with this important contract and design, but (p. 62) gives the date of this monument as 1743, which is that of the duke's death. Dean Stanley, 'Westminster Abbey,' p. 249, wrote that it was "erected by an admiring friend"; but although the name of Sir Henry Fermor is engraved on the monument as the contributor of five hundred pounds, the Dean did not quote it, nor indicate that more than one person paid Roubiliac, who, of course, did not produce this elaborate composition for five hundred pounds, when he had long before (1738) received three hundred pounds from Jonathan Tyers for the figure of Handel in Vauxhall Gardens. We suspect there is some confusion here; Cunningham, as below, p. 54, says three hundred pounds were paid by Garrick to Roubiliac for his 'Shakspeare' in 1758.

To show the want of a carefully written memoir of Roubiliac, it is enough to say that Allan Cunningham, 'British Sculptors,' p. 46, spoke of the Argyll monument as one of those which made our subject's reputation, and yet declares that Roubiliac came to London in 1720! M. Sainte Croix, although he does not correct this date, remarks on the lack of authority for it. He gives 1738 as the date of the Handel statue, and describes it as the work which gave the Lyons artist his first sight of fortune. Are we to understand that the present author believes Roubiliac worked with (Thomas) Carter, who is unfairly called a "maçon-ouvrier," and Louis Cheere, from 1720 till 1738? This can hardly be, for his summary tells us that Roubiliac won the Second Grand Prix de l'Académie at Paris—a fact which Cunningham did not know—in 1730. M. Sainte Croix need not have commented on the defective citation of authorities for dates in Roubiliac's history, seeing that he says nothing of his debt to Dussieux for the reference to the Second Grand Prix. Readers will discriminate between the Vauxhall 'Handel,' which now, after many vicissitudes, belongs to the Sacred Harmonic Society, and the Westminster 'Handel,' which is in the Abbey; these sculptures have been, incorrectly, said to be the first (1738) and last (1759) works of Roubiliac. Such immense blundering has occurred about Roubiliac that Cunningham, without hesitation, quotes Flaxman's statement that Roubiliac "laughed at the antique," "stayed three days in Rome, and laughed at the sublime remains of ancient sculpture." So far was this from being the truth that Northcote has told us that he was present when Roubiliac, on his return from Italy, called on Sir Joshua Reynolds, and "expressed himself in raptures on what he had seen on the Continent—on the exquisite beauty of the works of antiquity"; and he added, "I was infinitely impatient till I had taken a survey of my own performances in Westminster Abbey, after having seen such a variety of excellence, and, by G——, my own work looked to me meagre and starved, as if made of nothing but tobacco-pipes" (see 'Life of Reynolds,' 1819, i. 76). On the next page is another characteristic anecdote of Roubiliac. Our author defends him by quoting this anecdote, p. 24, but gives no reference

to Northcote, of whom he seems to know nothing, having obtained these and many other details at second hand.

It is rather amusing to find the biographer writing of a well-known popular compilation, one of his authorities, thus (p. 30): "Dans le grand ouvrage de Knight, intitulé 'London,' nous lisons," &c. It is still more amusing to find him in dire confusion about the first house of Roubiliac in London:—

"Il alla s'établir et installer son atelier, non loin de Trafalgar Square actuel, à la place où fut ensuite tenu le Meeting-house for Friends (Maison des Francs-Maçons [!]), vulgairement appelés Quakers, dans St. Peter's Court."

J. T. Smith's interesting account (see 'Nollekens,' 1828, ii. 98) of Roubiliac's funeral states that Reynolds, Hogarth, Wilton, Bartolozzi, Cipriani, Chambers, Ravenet, Grignon, and others attended the sculptor to his grave "in St. Martin's Churchyard, under the window of the Bell Bagnio." M. Sainte Croix translates Bell Bagnio into "Cloche du Bain." This is nothing to the blunder of Redgrave's 'Dictionary,' 1878, under "Roubiliac," that he was "buried in the French Church, St. Martin's-le-Grand." As he was a parishioner of the Westminster parish, we may well believe all the other authorities, including the burial book, that our sculptor found rest nearer home than the City. Timbs's 'Curiosities,' p. 180, says that Roubiliac's remains are in "the present church" at Westminster. If so, they must have been taken from "under the window of the Bell Bagnio."

M. Sainte Croix ha s gathered many anecdotes of Roubiliac, but has not given that of his mock contest with Goldsmith about playing the German flute, which Elmes, who never gave authorities, told in 'Art and Artists,' 1825, vol. i. p. 271. It is one of Sir John Hawkins's tales (see Prior's 'Life of Goldsmith,' i. 424), and it may not be true as to Goldsmith, but it throws a light upon Roubiliac. It is too long and too ill-natured to quote. Not so the compliment paid by Goldsmith to the six monuments Roubiliac had erected in the Abbey: "The names of the great men I absolutely forget, but I well remember that Roubiliac was the statuary who carved them. ...'Alas! alas!' cried I, 'such monuments as these confer honour not on the great men, but on little Roubiliac!'" M. Sainte Croix has overlooked this, but he has recovered an interesting record of the marriage of Roubiliac, who was formerly believed to have been unmarried. The *Gentleman's Magazine*, under the date January 6th, 1752, noted "Mr. Roubiliac, Statuaire, of St. Martin's Lane, to Miss Crosby, of Deptford, 10,000*l*." If there was no hoax in this, it becomes more than ever difficult to account for the poverty in which, despite his numerous large commissions, the sculptor died but ten years after his wedding, when his estate realized, says J. T. Smith ('Nollekens,' ii. 99), only one and sixpence in the pound. M. Sainte Croix, without giving his authority, follows those who declare that Roubiliac was born in 1695; other writers give the date as 1703.

Allan Cunningham's criticism on the sculptor's art is to be preferred to that of his enthusiastic countryman. French critics are excusably proud of their distinguished artist, but when they assert, as MM. Dussieux and Sainte Croix have done, that Roubiliac introduced monumental sculpture into England, they show some lack of knowledge, and have not seen the bronze statue of Edward VI. in the courtyard of St. Thomas's Hospital, which was executed by Scheemakers, to say nothing of the figure of James II. by Gibbons in bronze, which is behind Whitehall, and not a few more which owed nothing whatever to the exquisite executant and poor designer who is the subject of this memoir. It must be admitted that we owe much to Roubiliac because, unlike Bird, who carved to perfection Sir Cloudesley Shovel's wig in Westminster Abbey, he hated wigs, and, like Nollekens after him, always endeavoured to persuade his sitters to renounce them. The only decent wig that Roubiliac carved is that of Sir John Cass in St. Botolph's, Aldgate—it is, indeed, in M. Sainte Croix's words, "une fort belle perruque."

The South Kensington Museum. Vol. II. (Sampson Low & Co.)—This is the second and last volume of a serial publication of which we noticed the first issue about a year ago. It contains illustrations of a popular sort, which were mostly drawn by students of the South Kensington Art School from objects of art and decorated utensils selected from the Museum. The faults of the illustrations are twofold: they are elaborate without being exact and clear, and they are "picturesque" without being attractive. To artisans and artists their usefulness is likely to be small, because they are not drawn to scale and the details of the workmanship are not given at large. As illustrations to a popular magazine most of these cuts might be welcome if made attractive. The Lords of the Committee of Council on Education did not, we suppose, contemplate the publication of cuts of this class. Nevertheless the publication line of the volume attests that the Science and Art Department has sanctioned the use of its *imprimatur* for the book. The letter-press consists of brief historical notices of the examples represented.

The Hall Marking of Jewellery Practically Considered. By G. E. Gee. (Crosby Lockwood & Co.)—Mr. Gee is a hall-marker of silver chains at Birmingham, and he claims a large experience in the matters of which his book treats. He has obviously expended much time and pains on its compilation. It contains a great deal of matter useful to dealers, collectors, and antiquaries interested in British jewellery, including the Acts of Parliament which regulate, or leave open to fraud, the practice of hall-marking. Some of these Acts have become obsolete and are overridden by later ones, and yet they have not been repealed. Mr. Gee remarks with truth that nine out of ten spoon-owners could not discriminate a plated German silver spoon from a "hall-marked (solid silver) one by their knowledge of the marks"; the same number and similar marks are placed on each. The very dealers are said to be confused about marks. That such is the case needs no explanation to those who know that there are not fewer than nine assay towns in the United Kingdom, each of which employs its own stamps, and that duty-paying marks on gold articles may be six in number; five marks are placed on silver articles. Without marks it is impossible to tell from the appearance of articles whether they are of standard material or not. We agree with Mr. Gee that this fact disposes of the pleas of those who, in the interests of "business," would leave buyers to take their chance and commit makers to the workings of their own consciences Mr. Gee would make marking a voluntary act and leave the laws of supply and demand to do the rest for the public good; he desires one executive for the realm, and to dispense with the duty mark by the simple plan of abolishing the duty. He would reduce the marks to three and make dates intelligible to the meanest capacity. These and other suggestions may be recommended to those who, like ourselves, are satisfied that something ought to be done to render the jeweller's trade freer than it is. In the United States there is no hall-mark or guarantee of the goodness of articles sold as precious; but we do not know that these works are more esteemed on that account. No one possessed of Mr. Cripps's books on ancient plate should be without the work of Mr. Gee.

Elementary Decoration: a Guide to the Simpler Forms of Every-day Art. By J. W. Facey, Jun. (Crosby Lockwood & Co.)—This is one of "Weale's Elementary Series" of handbooks of practical advice, and it is illustrated with clear diagrams sufficient for the purpose. We object to the too copious use of stencil plates which the author recommends in the earlier portion of his book. Later on Mr. Facey shows that he appreciates the true qualities of free-hand decorations, and offers sound counsel about the employment of this mode of enrichment. It has often occurred to us that if Japanese decorators were brought to England they might furnish an invaluable standard for free-hand draughtsmanship, so as to render mechanical stupidities intolerable to our people. It was long ago proposed to import Chinese painters on porcelain, and this might be done with greater advantage now than a century since, although Japanese artisans would be preferable. We have been troubled by what Mr. Facey calls a design of "Celtic origin," engraved on p. 16. It is nondescript and bad, but may have been designed by an Irishman.

THE NEW PICTURES IN THE NATIONAL GALLERY.

Most of the pictures lately acquired from the Hamilton Palace Collection have been hung in places in the public gallery which, if not permanent, are appropriate. The superb Velazquez, a full-length, life-size portrait of Philip IV., is on our right on entering Gallery XVIII. It has simply been washed and delicately varnished. The care it has received, which in no particular amounts to repairs, of which it needed none, nor restoration, which was out of the question, has effected a marvellous improvement in the appearance of the work, so that it has gained in solidity as well as in brilliancy, and developed irresistible charms of tone and silvery colouring. The drawing of the legs is, however, questionable, and the execution of the dress is loose and rather mechanical. Opposite to this whole-length portrait is the bust of the same monarch painted about ten years later by the same hands. Being designed to be seen near the spectator, it was more exquisitely finished and endowed with perfect morbidezza, so that it displays the consummate art of the painter.

In Gallery XVI. are (1) Botticelli's large 'Assumption of the Virgin,' which we need not describe again (it has been lightly varnished, and repaired only where abrasions of the surface appeared); (2) the other Botticelli, representing the 'Adoration of the Magi,' which some authorities are now, as Dr. Waagen had already done, disposed to award to Fra F. Lippi; (3) the 'Venus and Adonis,' formerly said to represent 'The Story of Myrrha' and (by Dr. Waagen) 'Hippomenes and Atalanta.' The first title, which it will in future bear, is doubtless the right one. It will be more difficult to name the painter of this gem of art and poetic sentiment. It has been assigned to Titian and Giorgione, usually to the latter; but it is more like a Titian than a Giorgione, and yet it is difficult to class it with any group of Titian's works. We do not believe it is by either. There is no doubt that it is by the painter of the 'Concert Champêtre,' No. 39, one of the most renowned treasures of the Salon Carré in the Louvre, which is attributed to Barbarelli, and, unlike the nearly perfect example in the

National Gallery, is in a deplorable state, thanks to clumsy repair and to disrepair. Messrs. Crowe and Cavalcaselle declared off hand of the Louvre picture, "It suggests more than any other name that of an imitator of Del Piombo": a surprising assertion enough. It may serve to suggest the pervading vein of sentiment, or rather the idiosyncratic motive, of the painter of the 'Venus and Adonis,' if we quote Rossetti's sonnet on the sister picture, which was originally published in the *Germ*, 1850, again in 'Poems,' 1870, and lastly in the Tauchnitz edition of his poetry, 1873 :—

FOR A VENETIAN PASTORAL.
BY GIORGIONE.

Water, for anguish of the solstice :—nay,
But dip the vessel slowly,—nay, but lean
And hark how at its verge the wave sighs in
Reluctant. Hush! Beyond all depth away
The heat lies silent at the brink of day:
Now the hand trails upon the viol-string
That sobs, and the brown faces cease to sing,
Sad with the whole of pleasure. Whither stray
Her eyes now, from whose mouth the slim pipes creep
And leave it pouting, while the shadowed grass
Is cool against her naked side? Let be :—
Say nothing now unto her lest she weep,
Nor name this ever. Be it as it was,—
Life touching lips with Immortality.

Our readers will forgive us if, great pictures and Rossetti's sonnets being in question, we quote another sonnet on another picture which hangs in the same room with 'Venus and Adonis.' It is a still finer sonnet, and illustrates the deepest motive of a far profounder picture than the so-called Giorgione—'Our Lady of the Rocks,' by Leonardo, which Mr. Burton had the good fortune to secure for the nation from the Earl of Suffolk's gallery. Rossetti saw this masterpiece at the British Institution in 1858, and thus expounded its secret :—

FOR 'OUR LADY OF THE ROCKS.'
BY L. DA VINCI.

Mother, is this the darkness of the end,
The Shadow of Death? and is that outer sea
Infinite imminent Eternity?
And does the death-pang by man's seed sustain'd
In Time's each instant cause thy face to bend
In silent prayer upon the Son, while he
Blesses the dead with his hand silently
To his long day which hours no more offend?

Mother of grace, the pass is difficult,
Keen are these rocks, and the bewildered souls
Throng it like echoes, blindly shuddering through.
Thy name, O Lord, each spirit's voice extols,
Whose peace abides in the dark avenue
Amid the bitterness of things occult.

Pontormo's interesting, but clumsily conceived and slightly executed 'Allegory' hangs on the south wall of Gallery XVI. In Gallery XIII., and near the 'Triumph of Scipio' (No. 902), will be found Mantegna's beautiful upright panels, sometimes called 'The Seasons.' The five pictures by Gonzales Coques, which we have several times mentioned as lately bought in the Low Countries, are now on a screen in Gallery XII.

The so-called Francia, or Costa, which was recently bought in Italy from the Marquis M. Strozzi, and is now likely to be ascribed to Ercole di Giulio Cesare Grandi (or Grande), representing the "Madonna and Child enthroned, SS. Gulielmo and John the Baptist at the sides, and other subjects above," is not yet hung. It was formerly in the church of S. Cristoforo degli Esposti at Ferarra. There is a small predella picture in the Royal Institution at Liverpool called a Mantegna (!), which with great reasonableness Messrs. Crowe and Cavalcaselle ascribe to Ercole Roberti Grandi, a Mantegnesque artist. This fine panel would be desirable as a loan for a Royal Academy Winter Exhibition, if it were only to illustrate the difference between the moods and modes of the two Ercoles. The following, bought at the Hamilton Palace sale, remain to be hung :—The so-called L. da Vinci, 'Portrait of a Gentleman,' lot 344 ; Tintoret's 'Christ washing the Disciples' Feet,' lot 353 ; the so-called De Bles's 'St. Jerome,' lot 26 ; Il Greco's 'Portrait of L. Cornaro,' lot 748 ; 'The Last Supper,' attributed to Masaccio, lot 759 ; and the 'Interior of a House,' lot 1019, by Steenwyck and F. Francks.

ROYAL ARCHÆOLOGICAL INSTITUTE AT CARLISLE.

Carlisle, Aug. 1, 1882.

A QUARTER of a century ago the Archæological Institute held a meeting at Carlisle. Some few of the old faces which were here then may be observed to-day, but most of the visitors are new men, who know nothing of the former gathering except from tradition. It was one of the most successful meetings of the kind that had then been held ; but in point both of numbers and interest it is probable that the present one will cast it far into the shade. "Merry Carlisle" is an hospitable city, and its resources are taxed now much more than on the previous occasion. The railway system was then but partially developed, and from many parts of England it was a serious undertaking to visit Carlisle. Now the city is a great railway centre, possessing direct communication with almost every town in the island. It is believed that the present meeting of the Royal Archæological Institute will be the largest, in point of numbers, that has ever been held. The work sketched out by the Committee is great. If the visitors see all that they are bidden to see, they will, before the end of the proceedings, have travelled over a good part of the Border country. Kirkoswald church and castle, "Long Meg and her daughters," *i. e.*, a stone circle, Brougham Castle, Lowther Castle, Dalston Hall, Rose Castle, the Roman Wall, Dacre, Hexham, Willimotswick Castle, Melrose, Dryburgh, Abbotsford, and we know not how many Roman camps, are in the bill of fare. Mr. John Evans, Sir Henry Dryden, Dr. Taylor, Mr. S. J. Tucker (Somerset Herald), and Mr. Beresford Hope are among those who have promised to read papers.

The proceedings were opened by the presentation of addresses from the Mayor (Mr. R. S. Ferguson, F.S.A.) and Corporation of Carlisle and the Cumberland and Westmoreland Antiquarian Society to the President (Lord Talbot de Malahide) and Members of the Institute, after receiving which his lordship vacated the chair in favour of the Bishop of Carlisle, who is president of the meeting. The opening address of the Bishop was short and much to the purpose. Contrary to what is so often heard on these occasions, a general wish was expressed that it could have been longer. His lordship pointed out that all knowledge, even theology itself, might be looked upon as a department of archæology, and dwelt at length on the wisdom and usefulness of those pursuits which it was once fashionable to laugh at as mere learned trifling.

At 1.15 the members assembled in the market place around Carel Cross, an Ionic column surmounted by a lion holding the armorial shield of the city, and under the guidance of the Mayor proceeded to view the objects of interest near at hand. The market place is in no way striking. The old houses which once rendered it pleasant to look upon have now nearly all been replaced with less interesting if more convenient buildings. Many strange things were said and done there in the times of the old Border wars, but nothing more grotesque than that which happened one day in the June of 1688. The castle was garrisoned with Irish soldiers, who were devoted servants of King James II. When the news of the birth of an heir arrived at Carlisle the Irish officers made a great bonfire there, round which they drank wine. So transported did they at length become by the good news and the good liquor that they danced around the flame, and as they wheeled round they first threw their hats among the blazing logs, then their coats followed, then their waistcoats, and so on in natural succession until they were utterly naked. The exteriors of the Town Hall and the Guildhall, or Redness Hall, as it is properly called, were next inspected. They have been so modernized as to present little that is remarkable. The latter building, however, looked gay from the banners of the Carlisle guilds which were suspended from its roof. The castle stands on a headland or bluff, and is deeply moated. We should conjecture, but evidence seems to be wanting, that the moat is of earlier date than the castle, the earliest part of which was built by William Rufus. Henry II. added to it, and it is probably now quite impossible to separate one portion from the other. The keep is of the ordinary square Norman pattern, in general features like the Tower of London. It is, however, much smaller, and its exterior has been so far modernized by the insertion of modern windows that an unobservant stranger might not at once see in it any remains of great antiquity. The interior, we believe, is much more perfect; but as Carlisle is a military station it is filled with munitions of war, and an examination of its features is by no means easy. The enclosure walls and gatehouse are of various periods ; the latter presents some very good specimens of Edwardian work. Here many of the Jacobite prisoners were confined after the rebellion of 1745, and we were told that names and armorial symbols carved by them are yet to be seen on some of the walls of the keep. The city walls were next examined. A considerable portion remains entire, though masked in places by modern buildings. Whether any of it be the work of Rufus may be doubted. It is more probably a work of the time of Edward I. which has been repaired in later periods.

At 8 the Mayor gave a conversazione in the Assembly Rooms, which are used as a temporary museum. In an adjoining apartment Mr. E. A. Freeman read the opening address of the Historical Section, of which he is president. He traced the history of Carlisle from the Roman time, when it bore the name of Luguvallum, through Keltic and Teutonic times, down to the time of Rufus, who was the founder of the present city. He found it a waste place, but fortified it as an outpost against Scotland, transferring settlers from more southern places. The parallel and contrast drawn by the lecturer between Carlisle, the creation of the Red King, and Kingston-upon-Hull, the creation of Edward I., was very striking. In both we have a new town arising at the will of one man ; in the Cumbrian instance solely, as it would seem, for a military purpose. In the example on the bank of the Humber the end aimed at and achieved was one of commerce. Afterwards the Rev. John Collingwood Bruce delivered a lecture in the museum on 'The Songs of Northumberland,' which was illustrated by vocal and instrumental music.

The temporary museum was opened in the early part of the day. It contains a large gathering of objects of great local interest. The walls are pretty well covered with old portraits of local worthies. One chief object of interest is the very large collection of plate from the neighbourhood. The maces, sword of state, and other ornaments of the Corporations of Carlisle and Appleby are there, as well as many of the sacramental vessels from Cumbrian churches. Among them is a chalice, of pre-Reformation date, from Old Hutton. Its base is six-sided, with an engraving of the Crucifixion on one of the sides ; the bowl is circular. This very interesting cup owes its preservation to the fact that the custodians of the church thought it was pewter, and therefore not worth selling. There is also a large collection of apostle-spoons. Those of them which we had an opportunity of examining are of English make. Among the especially local objects is a pack-horse bell, which was hung at the head of the leader of the team which, at the end of the last century, was wont to cross the fells from Penrith to Aston. Its date is unknown, and the form of bells of this sort altered so little from age to age that no probable conclusion can be come to by comparing it with other examples. From Cartmel Fell comes a mutilated wooden crucifix, which, as we feel certain, once formed the centre figure of a "Rood, Mary and John" over the screen of the church. When we call to

mind the strict orders that were issued from time to time that roods should be destroyed, it is little short of a miracle that a solitary specimen should have been preserved. We have never heard of another example. This, it is said, was at one time used as a fire-poker. A very fine processional crucifix, of crystal and silver, of the sixteenth century, is exhibited. It is Italian work. The old standard measures of the city are there; they are of brass—that is, latten—of the time of Queen Elizabeth. The collection of arms and helmets is worth notice, and we must not forget to mention some highly curious satirical prints of the last century and a large and valuable collection of English and foreign Bibles. P.

SUBTERRANEAN VILLAGES IN CAPPADOCIA.

I have recently visited two subterranean villages in Kappadocia, and as, so far as I am aware, they have not been previously described, a few remarks on their character may be of interest to your readers. The district in which these villages occur is a high-lying plain, about fifteen miles wide and twenty-five long, a few hours to the north of Nigdeh, and on the line of the old Roman roads from Tyana to Angora and Tyana to Cæsarea. The villages on the plain contain a mixed Christian and Moslem population; the former element predominates, and some of the villages are purely Christian. The first village visited, Hassakeui, is, to all outward appearance, a collection of mud hovels on the bare level plain; but each hovel has beneath it a subterranean house, which has been excavated in the soft volcanic rock. On entering one of the hovels the visitor is first conducted through a winding passage, with mud walls, to a closed doorway; here the passage begins to descend, and when it has attained a depth sufficient to allow of a roof of solid rock, from three to four feet thick, it is closed by a circular stone, shaped like a cheese, which is run backwards and forwards at will. The arrangement is very similar to that of the well-known entrance to the Tombs of the Kings at Jerusalem, except that the stone can only be moved from the inside and not from the outside, as in the latter case. In ordinary times the stone is rolled back into the passage prepared to receive it, and is kept in position by a small stone beneath; in times of danger, when the family retires below ground, the small stone is removed and the great stone cheese rolls down across the passage into a slot prepared for it in the opposite wall. The underground houses are all on the same pattern: a large chamber for the horses, oxen, goats, and donkeys, with mangers and storeplaces for grain and chopped straw; two or three smaller chambers for the family, with recesses for bedding and cooking utensils; and a well or cistern supplied by rain and snow-water. When the family live above ground water is drawn up from the surface; when they are underground water is obtained through a small hole broken into the shaft of the well. The subterranean houses communicate with each other by small passages, which are usually closed with a dry stone wall; there is thus perfect circulation throughout, and if one house were forced by an enemy the inhabitants would retire to the next, closing the passage behind them. On the approach of danger the villagers drive in their live stock, close their passages, and remain underground until the storm has blown over. The last time they took refuge was during the campaign of Ibrahim Pacha, when the Turkish soldiers committed many irregularities on the approach of the Egyptian army. In the same village is a church dedicated to St. Macrina, sister of St. Basil, who is said to have come with ten virgins from Cæsarea and to have lived in one of the rock-hewn houses.

In the other village, Melegob, the houses are similarly closed, and the chambers are of the same character, except that, as Melegob lies nearer to the hills and possesses vineyards, each house contains a winepress and places for storing wine. There is, however, a curious difference in the arrangements for water supply. There are in the village a number of wells from 130 to 140 feet deep which always contain water, and each well belongs to a group of twelve to twenty houses. In ordinary times water is drawn from the surface, and the first work of the women every morning is to fill a series of stone tanks, one of which belongs to each house; these stone tanks are ranged round the mouth of the well and appear to be of great age. Each group of subterranean houses communicates with its well by means of a main passage, fifty or sixty feet below the surface, whence smaller branch passages lead to every house of the group. At Melegob there is also a small subterranean church, the passage to which is closed, like the houses, by a circular stone. Melegob is said to be connected with a village more than three miles distant by a long tunnel, in the centre of which there is a large bazaar.

I was told that similar subterranean dwellings existed at Misti, Inegi, and other villages on the plain; and I may add that it is on the northern edge of the same plain, where deep rocky ravines have been worn in the soft rock, that the curious rock excavations at Soghanli Deré, Urkub, &c., described by previous travellers, are to be found. The inhabitants of the plain are almost as interesting as their subterranean dwellings, for they are probably descended from the old Kappadocian peasantry, and the peculiarly-shaped nose of the figures on the Hittite monuments is by no means uncommon. They still speak what appears to be a barbarous dialect of Greek intermixed with many Turkish words, and they know the different villages round them by Greek names. Thus Hassakeui is Akso (Αξω), Melegob is Malecopia, Urkub is Prekop, Inegi is Anaku, Ninizi is Nazianzus, Turkhan is Trecho, &c. Whether these names are really ancient I have no means of ascertaining at present. The villagers undoubtedly owe the preservation of their language and religion to their subterranean dwellings.

The whole of the district between Nigdeh and Kaisuriyeh is full of interesting rock-hewn towns and villages; but this note is already too long, and I will only mention here that in the curious rock village of Gelvereh I was shown in a church the body of St. Gregory of Nazianzus and the head of John the Baptist lying side by side in a wooden box, and that near Nevshehr I visited a remarkable valley in which there are many hundred rock cones, containing tombs, dwelling-houses, and churches similar to, but on a more extensive scale than, those of Urkub. Unfortunately none of the dwellers in these rock towns have left inscriptions behind them. That most of the excavations are of Christian origin seems certain, but I am inclined to think that many of the houses, especially in the subterranean villages of the plain, are of much older date.

C. W. Wilson.

Fine-Art Gossip.

The picture of the conference of Spanish and English statesmen, formerly ascribed to Pantoja de la Crux, and now accepted as a M. Gheeraedts by Mr. Scharf, who bought it at the Hamilton Palace sale for the National Portrait Gallery, has been placed in the first division of the upper long gallery, Exhibition Road, South Kensington. The fine condition and clear painting of the work have been made more attractive by removal of dirt from the surface and the addition of light varnish. Nothing can surpass the charm of the portraiture. Near it hangs the newly acquired portrait of James II. by Kneller, dated 1684. It therefore belongs to the first two months of the king's reign and is certainly the earliest known regal portrait of James.

Mr. Algernon Graves has just finished his ten years' labour in preparing indexes to the pictures exhibited in London galleries, as recorded by the catalogues. All students will thank their energetic brother, whose labour in this direction will be duly valued by those who are indebted to him for courteously imparted information, or who may otherwise avail themselves of his toil. Mr. Graves contemplates an index to exhibited portraits, the usefulness of which can hardly be over-estimated by inquirers.

The *Journal*, No. 1, of the National Society for Preserving the Memorials of the Dead has been issued by Mr. Reeves, Fleet Street, and records the results of the inaugural meeting of the Society in May last. In addition it contains tidings of the destruction of numerous monuments by meddling clergymen, ignorant workmen, churchwardens, and still more mischievous "restoring" architects. These persons have united in producing a common ruin by interment, removal, fracture, neglect. Above the grave of King Athelstan at Malmesbury, writes one local secretary, "is now a bed of asparagus." At Chew Magna, says another, the late vicar paved his coach-house with tombstones. At Whitburn, Durham, an interesting table-monument of 1689 was, during the late restoration, turned out into the churchyard, where it is now perishing in the weather. The famous brass at Felbrigg, Norfolk, needs care; some pieces of the canopy are detached and in the rector's possession. The pier of the port of Menteith, Perthshire, comprises an upper layer made of gravestones. At St. Margaret's, Westminster, the stone memorials have been preserved by burying them under three feet of earth. In Dublin Cathedral all the tombstones were, we have heard, relegated to the crypt. Mr. W. J. Evelyn calls attention to the short-sighted conduct of the clergy of the Established Church, who in their wholesale "restorations" (the leading object of many of which is chancel-building) have abolished numerous monuments. He invokes Manning and Bray's 'History of Surrey,' published in 1809, to witness against the devastation which has occurred in that county, *e. g.*, at the churches of Betchworth and Long Ditton.

The *Art Journal* for September and October next will contain biographical notices of John Linnell by Mr. F. G. Stephens.

The model of the statue of C. Desmoulins has been experimentally placed in the Jardin du Palais Royal, Paris. It bears merely a name and date.

During the coming autumn it is intended to hold a Fine-Art and Industrial Exhibition in Manchester under the auspices of Lord Wilton, Lord Sefton, and other local notabilities.

Messrs. F. S. Nichols & Co. announce the issue shortly of the first of a set of etchings of Southwark Buildings, by Mr. Percy Thomas, whose 'Sir Paul Pindar's House' (R. A., No. 1259) we noticed in these columns a few weeks ago. The first subject chosen is, 'The Old White Hart Inn Yard, Southwark, 1882.' The fairly good preservation of some of the old historic buildings in the Borough, and the likelihood that before a decade is past most of them, like the Tabard, will be improved away, suggested the desirability of permanently depicting them as they now exist. A fly-leaf of descriptive matter accompanies each proof, from the pen of Mr. Wm. Rendle (author of 'Old Southwark and its People'), which will guarantee the work to be of some antiquarian value. 'The George Inn, Southwark,' and 'The Church of St. Saviour' will follow.

MUSIC

WAGNER'S 'PARSIFAL.'

Bayreuth, July 27, 1882.

It may be safely affirmed that no other great composer ever received during his lifetime such honour as has fallen to the lot of Richard Wagner. Not only have his friends and ad-

mirers contributed the funds for the erection on the grandest scale of a theatre for the special performance of his music-dramas, but whenever a new work from his pen is announced, his followers flock from all parts of Europe, and even from the other hemisphere, to witness the latest revelation of his genius. Such was the experience of 1876, when the 'Ring des Nibelungen' was produced; such is again the experience of 1882. It is only on very rare occasions that such an assemblage of musicians is to be met with as may be seen this week in the streets of Bayreuth and in Wagner's theatre. Much of this success is doubtless owing to the indomitable energy of the man; but it would be absurd to deny that still more is to be attributed to the fascination exercised by the composer's genius.

The preliminary article on 'Parsifal' will have sufficiently acquainted your readers with the outline of the drama, and will have given at least some idea of the general scope of the work. Wagner's art creations, however, are of so complex a character, and depend so entirely for their total effect on the blending of the various factors into a homogeneous whole, that any description founded merely on a study of the printed music must necessarily be most incomplete, and requires to be supplemented by a record of the impressions produced in performance if any adequate notion of the work in its entirety is to be conveyed to those who are unable themselves to witness its representation. In even more than an ordinary degree is this the case with 'Parsifal,' because it is totally unlike any of Wagner's preceding dramas, and we have, therefore, no other works with which it is possible to compare it.

'Parsifal' I have looked upon as a bold attempt to combine religion and the theatre. After witnessing the performance of last evening I can go even further, and add that Wagner has here undoubtedly given us in the first and third acts of the work a solemn and most impressive religious service on the stage. In judging of this matter fairly and impartially it is absolutely necessary to bear in mind that the state of public opinion on such questions in Germany is widely different from that in our own country. It will be hardly needful to remind your readers that the drama among the Greeks took its origin in the religious services of Dionysos. In the Middle Ages the "mysteries" were distinctly of a religious character, though the drama has in recent times taken an altogether different course, and the only trace of its old connexion with the Church is now to be found in the Passion Play of Ober-Ammergau. It is evident, however, that there is no necessary incongruity between the stage and religion; and I am quite of the opinion expressed after the performance by a well-known English musician, that Wagner has in 'Parsifal' provided a religious service for the benefit of the large number of his countrymen who never attend a church. I must add that the whole treatment of the subject is most reverent and devotional. I honestly confess that I had expected to be shocked by the presentation on the stage of the Feast of the Grail, which is virtually the Lord's Supper. It is the simple truth to say that, so far from this being the case, my feelings after the performance were rather those which one feels on leaving a church than on quitting a theatre. Wagner has given us in 'Parsifal' a symbolical drama of deep significance, illustrating the contest between the powers of good and evil, and the ultimate triumph of purity. That the work can be presented in London I do not for a moment believe; at Drury Lane or Her Majesty's Theatre it would be utterly out of place; and the whole conception is too widely at variance with English modes of thought to render it acceptable to our average theatre-goers if it were performed. Here no such feelings of incongruity are excited; the emotions produced are rather those of listening to a sublime sacred oratorio with the addition of appropriate and most reverent stage accessories.

It is difficult, though necessary, to speak separately of the different factors of which the work is composed, because each can only be justly estimated, according to Wagner's own theories, in connexion with all the others; but for the sake of such as have not the opportunity of forming their own opinions by hearing 'Parsifal' for themselves, some remarks must be made on each. In no other work of Wagner's is the music so singularly unequal in merit. While we find many passages of unsurpassable beauty and charm, there is also much that must be pronounced harsh, nay, even positively ugly. The composer's resolute avoidance of everything that is in the least commonplace leads him at times to overstep the line of musical beauty. Moreover, his persistent use of "Leitmotive" must inevitably hamper him occasionally in the musical treatment of his subject. It may safely be said that in no other hands than those of Wagner would such a method of composition be even tolerable. His themes are for the most part of such significance, and adapt themselves so readily to the exigencies of the drama, that by their means he obtains a wonderful unity of effect; but when, as in several cases in the present work, the "Leitmotive" themselves are positively ugly, it is self-evident that their frequent repetition under various forms cannot be productive of a pleasing impression.

In the music of 'Parsifal' I find but little which can be called absolutely new. Reminiscences of his preceding works—especially of 'Tannhäuser,' 'Tristan und Isolde,' and the 'Ring des Nibelungen,' and (in the Grail scenes) of the 'Liebesmahl der Apostel'—are not infrequent. The total impression produced is unquestionably novel; but it is to a considerable extent the result of bringing together more or less familiar material in fresh combinations. Of the three acts the first is, from a musical point of view, the finest. The orchestral prelude, in which the most important themes of the work are announced, is deeply impressive, and admirably fitted to prepare the hearer for the solemn scenes which are to follow. The music of the first part of the act interests more as a commentary on the dramatic situation than for its own sake; but in the whole scene of the Feast of the Grail Wagner rises to a height which he has never surpassed and seldom equalled. It must, however, be admitted that this first act suffers from want of contrast. Nearly all the movements are in slow time, and the act lasts for an hour and three quarters. Such duration, with music that makes such constant demands upon the attention and imposes so heavy a strain upon the intellect as that of Wagner, is more than can without inconvenience be borne.

The second act opens with a scene between Klingsor and Kundry, which, though dramatically very powerful, is absolutely destitute of anything which can by any stretch of language be called musical beauty. Here, according to Wagner's views, music takes a subordinate place. I grant that what we find here is appropriate to the situation; but I maintain that there is no reason why, because Klingsor is a repulsive personage, the music associated with him should therefore be unpleasing. The next scene, however, in which the maidens in Klingsor's magic garden, disguised as flowers, tempt Parsifal, is one of Wagner's most charming creations. Though recalling in parts the opening of the third act of 'Götterdämmerung,' it has a distinct character of its own. Exquisite melodies, set off by the most tasteful and delicate orchestration, combine to form a whole which, though totally different in character, may compare in effect with the famous scene of the Resurrection of the Nuns in the third act of 'Robert le Diable,' though perhaps Wagner will hardly thank us for the comparison. Nothing more bewitching, nothing more seductive, can be found in the whole range of dramatic music. This scene leads to the great duet between Kundry and Parsifal which forms the culminating point of the second act. Here again we find illustrations of the marked inequalities of style to which I have already referred. Side by side with passages of unsurpassable charm we meet with others to which, with all respect for Wagner's genius, it is impossible to reconcile ourselves. The ordinary harmonic combinations seem to be an abomination in the composer's eyes. He is particularly partial to chords containing an augmented instead of a perfect fifth; and in only too many places the musical effect must be pronounced the reverse of pleasing. I cannot but regret that in this place, of all others in the drama, Wagner should have thought it necessary to sacrifice the beautiful on the altar of dramatic appropriateness.

What has been said of the music of the second act will to a great extent apply to that of the third. Here also are to be found musical beauties of a very high order, as, for instance, in the scene of the baptism of Kundry, and in the dialogue which immediately follows between Parsifal and Gurnemanz—one of the most exquisite passages in the poem, beginning

Wie dünkt mich doch die Aue heut' so schön!

the musical setting of which has considerable similarity to the 'Siegfried Idyl'; the conclusion of the work is also very impressive. But, on the other hand, many passages sound, at least on a first hearing, needlessly harsh, the harmony seems forced and laboured, and in this third act more than in either of the others the inequality in the merit of the music, of which I have spoken above, makes itself felt. It must be remembered that, in the remarks I have made, I am speaking of the work from a purely musical point of view. Much of that which sounds ugly in itself undoubtedly heightens the effect of the whole. This is especially the case in the opening scene of the second act, between Klingsor and Kundry; and throughout the work it may be noticed that it is mostly in those parts where the music is subordinate to the dramatic effect that it is less interesting *per se;* the lyrical portions are in the large majority of cases of great beauty.

Of the scenery and the *mise en scène* it is absolutely impossible to give an adequate idea in words. Probably no other theatre in the world possesses such appliances for stage effect as that of Bayreuth. To the manner in which 'Parsifal' is placed on the stage might not inappropriately be applied the words of Goethe in 'Faust':—

Das Unbeschreibliche
Hier ist es gethan.

As a marvel of stage management may be especially mentioned the moving scene in the first act, in which Parsifal and Gurnemanz appear to be walking through the forest to the Hall of the Grail. The stage directions in the libretto will give your readers an idea of the difficulties to be overcome in the presentation of this scene:—

"Gradually, while Parsifal and Gurnemanz appear to walk, the scene changes imperceptibly from left to right. The forest disappears; a door opens in rocky cliffs and conceals the two; they are then seen again in sloping passages which they appear to ascend. Long sustained trombone notes softly swell, approaching peals of bells are heard. At last they arrive at a mighty hall, which loses itself overhead in a high vaulted dome, down from which alone the light streams in."

There is hardly another stage than that of the Wagner theatre on which such a scene could be represented; and when it is said that the directions quoted above are carried out to the letter it will be readily understood that no ordinary amount of ingenuity must have been exercised. The Hall of the Grail, again, is a truly splendid scene. On most stages the impression of an enormous building is produced by a carefully painted perspective. The immense depth of the

stage at Bayreuth allows the large hall itself to be presented as a reality; and it will be seen at once how much is gained by the long processions of knights and youths entering from the back and traversing the entire length of the hall. Wonderfully painted, down to the smallest detail, are the forest and meadow scenes of the first and third acts; while the magic garden of Klingsor in the second, with its luxuriance of tropical vegetation, is a most gorgeous stage picture.

If the scenery and decorations are admirable, the stage management deserves yet higher praise. The situations in 'Parsifal' are extremely risky, and demand the greatest care and tact if they are not to become repulsive. The scene between the Flower-maidens and Parsifal in the second act would, if coarsely performed, be most objectionable. One may imagine the effect in the hands of an ordinary opera chorus or a troop of ballet girls! Here, however, it is managed with such delicacy that the purest and most sensitive mind need receive no shock. Even more dangerous under ordinary conditions would be the scenes of the celebration of the Feast of the Grail. As it was, so deeply reverent was the spirit of all the performers that the remark was made by many who were present that the scene was the most impressive religious service they had ever attended.

In speaking of the performers, the place of honour is due to Frau Materna as Kundry, because the part is one of the most difficult to represent in the whole range of the drama. Whether as the ill-fated woman who, to expiate the crimes of the past, is laid under the spell of Klingsor, and compelled against her will to tempt the Knights of the Grail, or as the penitent in the third act, released from the long curse through the purity of Parsifal, and "sitting clothed and in her right mind," Frau Materna showed herself equally great. A finer rendering of the part could not be imagined. No less excellent was Herr Winkelmann as Parsifal. This great artist is so well known to our London audiences through his recent admirable performances at Drury Lane that any praise of him in these columns would be superfluous. It will suffice to say that he has never appeared to greater advantage than in his impersonation of last night. The Gurnemanz of Herr Scaria and the Amfortas of Herr Reichmann were most excellent, while the small part of Titurel was efficiently sung by Herr Kindermann. Herr Hill as Klingsor had one of the most difficult and ungrateful parts of the work to sustain; his performance was worthy of his great reputation. The elaborate choruses with which the work abounds were, without exception, admirably given; and the orchestra, under the direction of Herr Levy, discharged their very difficult task in an absolutely faultless manner. It will be remembered that in Wagner's theatre the orchestra is hidden beneath the stage. The advantage as regards dramatic illusion is enormous, the attention of the audience not being distracted from the stage by the sight of the instruments or the gestures of the conductor.

The reception of 'Parsifal' by the audience showed their full appreciation of the sacred character of the work. After the first act there was partial applause; but it was evident that a large number of those present felt that after such a scene as the Feast of the Grail the ordinary demonstrations would be altogether out of place. The second act created enthusiasm, which was only allayed by Wagner addressing the audience, and telling them that the artists did not wish to be called forward, as in such a work it would be inappropriate. The highest tribute to the composer and the truest recognition of the real nature of the drama were shown at the solemn close of the third act. All attempts at applause were immediately and vigorously suppressed; it was clearly the general sentiment that silence was the only fitting expression of the deep devotional feelings which the performance had produced. Such a result was probably unexpected by many; but 'Parsifal' is in all respects unique. Wagner has here solved a problem which might reasonably have been considered insoluble. He has shown how (I admit under altogether exceptional conditions) dramatic art may be made the handmaid of religion. I see now, as it was impossible to see before, the true meaning of the term "Bühnen*weih*festspiel"; for we have here a thoroughly devotional and religious drama. It is probable that some of Wagner's numerous and bitter enemies may accuse him of irreverence, even of blasphemy; for my part, I believe that he has set before himself a great and noble aim, and that he has carried it out with that directness of purpose and that force of genius which have enabled him to triumph over apparently insuperable obstacles.

July 29.

At the second performance of 'Parsifal' last evening important changes were made in the cast. The part of Kundry was sung by Fräulein Brandt, and that of Parsifal by Herr Gudehus, while Herr Siehr replaced Herr Scaria as Gurnemanz. Fräulein Brandt's impersonation of Kundry differed widely from that of Frau Materna; it was more restless and impulsive, and the lights and shades of the character were brought into stronger relief, occasionally almost verging upon exaggeration. Opinions will doubtless differ upon the question to which of the two readings the preference should be given; I think that Fräulein Brandt's intense dramatic instinct led her to a juster conception of the singularly complex character which Wagner has given to the heroine of his latest drama. Herr Gudehus, a young tenor from the Dresden Opera, gifted with a remarkably fine voice, gave an excellent rendering of the part of Parsifal. He has not had the experience of Herr Winkelman, but he showed so much intelligence and so much feeling, especially in the third act, as to leave little or no cause to regret the change of cast. Herr Siehr as Gurnemanz was admirable; the other characters were the same as before, and the entire performance was as highly finished as on the Wednesday.

A second hearing of the work not only brought its many beauties more clearly to view, but confirmed my first impressions as to its thoroughly religious character. That this was also felt by the whole audience may be judged from the fact that after the first act they rose, as if animated by one sentiment, and left the theatre in solemn silence, without an attempt at applause, precisely as if they were leaving a church. It is quite evident that, whatever might be the case in England, Wagner's own countrymen are prepared to accept the combination which he has offered them of religion with the highest art as a fitting and suitable thing. Nor, looking at the matter dispassionately, does there seem to be any valid reason why this should not be the case. Nobody finds any impropriety in looking at a painting of the Last Supper, nor in listening to the words of Christ as set to music by Bach in his 'Passion according to St. Matthew.' Wagner has in the first act of 'Parsifal' combined the two arts. He has given us a living picture, as truly devotional in character as any painting by the old masters, and he has combined with it music as sacred as that of Bach or Handel. It was remarked last night by some who were present that the feelings produced by the performance were nearly akin to those experienced in witnessing the Ober-Ammergau Passion Play. There is indeed much affinity between the two works, the difference between them being that at Ober-Ammergau the actual events of the Passion and the Crucifixion are set forth in a dramatic form, while in 'Parsifal' the great lesson taught by these events—the redeeming power of moral purity—is symbolically presented to us. None of the many thousands who have attended the Passion Play need fear any violence being done to their religious feelings by the performance of 'Parsifal.'

It will be seen that I have considerably modified my views since writing the preliminary notice of the work. I admit the fact at once. My first article was founded simply on the knowledge of the published score. I could not have believed it possible that so solemn, so devotional an impression could have been produced by a stage performance. As my object is not to take sides either with or against Wagner, but simply to arrive at the truth, I believe it to be my only honest and straightforward course to say candidly that I was altogether mistaken in my first estimate of the general character and tendency of the work.

To sum up my opinion of 'Parsifal' in a few words, I should say that musically it is by no means one of its composer's strongest works, though containing some of the finest things he has written. In this respect it must, as a whole, rank below 'Tristan' and the best parts of the 'Ring des Nibelungen.' Poetically and dramatically it is one of Wagner's finest creations, while, taken as a complete art work, it stands apart, by its elevation of tone and deep religious feeling, not only from all the other works of the author, but from everything else in the whole range of the musical drama. E. P.

Musical Gossip.

Difficulties having arisen with regard to the theatre, Herr Neumann has relinquished his intention of having an autumn season of German opera at Her Majesty's.

The Monday Popular Concerts will commence on October 16th, about three weeks earlier than usual.

The season of Promenade Concerts under Mr. Gwyllym Crowe will commence at Covent Garden this (Saturday) evening. Among the artists already engaged are Miss Ella Lemmens (a daughter of Madame Sherrington), Miss Marie Schumann, Mesdames Rose Hersee, Enriquez, Osborne Williams, and Patey, Mdlle. Warnots, Misses Albu, Royd, and Rosse; and Messrs. Vernon Rigby, Hollins, Beale, and Foli. Wednesday evenings will, as usual, be set apart for the performance of classical music, and the general arrangements are much the same as those of last year.

The London orchestral rehearsals for the Birmingham Musical Festival will commence at St. George's Hall on the 21st inst. Sir Michael Costa will be conductor in chief, but Sir Julius Benedict, M. Gounod, and Herr Gade will direct their own works. The vocal score of M. Gounod's 'The Redemption' is already engraved, and it will be published on the 21st inst.

Mr. Brinley Richards will act as principal adjudicator of the Abergavenny Musical Eisteddfod to be held on Bank Holiday. No less than nine choirs, none of less than 250 voices, will compete for the prize of 100*l.* for the best singing of a Handelian chorus.

Madame Adelina Patti, who has returned from the Continent to her Welsh castle, Craig y Nos, was on Monday presented with an address of welcome by the principal inhabitants of the district. The reply was made on behalf of the *prima donna* by Mr. Fitzwilliam Dick, who happened to be on a visit to the castle.

The Paris *Figaro* states that Fräulein Marianne Brandt has declined to accept any remuneration for her services in the performances of 'Parsifal' at Bayreuth, and that the other artists have agreed to take very low terms.

A series of articles on the history of the Glasgow Choral Union is now appearing in the *Glasgow Herald*. We understand they are from the pen of Mr. James Aitken, a very old member of the Union.

AMONG the posthumous compositions of Herr Raff are two operas, an oratorio, 'Dornröschen,' and the 'Winter' Symphony.

MR. ALFRED H. PEASE, a well-known American musician, dropped dead in a street of St. Louis on the 13th ult.

A NEW Spanish musical paper, entitled *Notas Musicales y Literarias*, has been commenced at Barcelona. The editor is Señor Pedrell.

DRAMA

Dramatic Gossip.

AT the latest dinner of the General Theatrical Fund the speeches of Mr. Sala, the chairman, of Mr. Irving, and of Mr. Toole dealt with the question of benefits. In itself the practice of taking a benefit, which has been in existence for two hundred years, is defensible. Like other things, it is liable to abuse. How far it contributes to, or detracts from, the dignity of the histrionic profession is a matter the decision of which may be left to actors.

SHAKSPEARE'S 'Comedy of Errors' will be revived at the Strand Theatre in October next, Mr. John S. Clarke making in it his first appearance in England as Dromio (assumably of Syracuse). With a view to the adequate rendering of the play important engagements are to be made.

No less than five West-End theatres have closed their doors within the last week, and the season, so far as such a thing exists, is practically at an end. The reopening this evening of Drury Lane (an event usually fixed for September), the reappearance of the Gaiety company on Monday, and the production on the same day of a new piece at the Olympic, with other changes, for which Bank Holiday may be held in part responsible, prove that a fair amount of theatrical novelty is obtainable even in the dead season.

ACCORDING to the speech with which, in obedience to a custom now established at the Lyceum, Mr. Irving closed his season, the only novelty speedily to be expected at that theatre is 'Much Ado about Nothing.' Against the selection nothing is to be said. The time has arrived when Miss Terry should be seen in Beatrice, and Mr. Irving has long been resolved to appear as Benedick. The majority of playgoers would elect to see Mr. Irving in Coriolanus or in Malvolio rather than in the character he now chooses. So firm a hold, however, has Mr. Irving obtained upon the public, one part seems to be as acceptable as another. Mr. Irving will, however, do wrong to his future fame if to the desire to play sentimental characters he sacrifices that capacity in eccentric comedy which is his most valuable gift. Men like Garrick and C. Kemble played Benedick as a means of showing their versatility. Neither of these nor Lewis nor Henderson did, however, as apparently Mr. Irving will, confine himself for one or two hundred nights to this one character.

ONCE more the Conservatoire has bestowed no first prize in tragedy. A second prize was given to Mdlle. Caristie-Martel, a student who has not yet attained her seventeenth year. In comedy, though no first prize was awarded in the female classes, a more encouraging state of affairs was exhibited. A first prize was accorded M. Duflos, or Duflaux (the name is spelt differently in different reports), and second prizes were granted unanimously to M. Hamel and M. Samary.

SAMPSON LOW, MARSTON & CO.'S
NEW BOOKS.

Now ready, royal 8vo. pp. 534, half-morocco, 2*l.* 2*s.*

VOLUME III. of the ENGLISH CATALOGUE of BOOKS.
An ALPHABETICAL LIST of WORKS PUBLISHED in the UNITED KINGDOM, and of the PRINCIPAL WORKS PUBLISHED in AMERICA. With the Dates of Publication, Indication of Size, Price, Edition, and Publisher's Name. Vol. III. January, 1872, to December, 1880. Compiled by SAMPSON LOW.

SIX MONTHS in PERSIA. By E. Stack. 2 vols. crown 8vo. cloth extra, 24*s.* [*Ready.*
This Work includes an account of some parts of Southern and Central Persia, hitherto marked "unexplored" on the Maps; also a description of the Persian system of Land Revenue Assessment.

Now ready, crown 8vo. cloth extra, price 12*s.* 6*d.*

EPISODES in the LIFE of an INDIAN CHAPLAIN. By a RETIRED CHAPLAIN. With numerous Illustrations.

The New Volume of the Series of ILLUSTRATED BIOGRAPHIES of the GREAT ARTISTS.

OVERBECK: a Memoir. By J. Beavington Atkinson. Com- prising his Early Years in Lübeck, Studies at Vienna, and Settlement at Rome. Illustrated with Engravings of Christ Blessing Little Children—Christ bearing the Cross—The Entombment—The Holy Family with the Lamb, &c. Price 3*s.* 6*d.*

The New Addition to the Series of "ENGLISH PHILOSOPHERS," crown 8vo. price 3*s.* 6*d.* each, is

SHAFTESBURY and HUTCHESON. By Thomas Fowler, M.A. LL.D. (Edinb.) F.S.A., President of Corpus Christi College, and Professor of Logic in the University of Oxford; late Fellow of Lincoln College.

SECOND EDITION now ready, cloth, red edges, price 3*s.* 6*d.*

SAINTS and their SYMBOLS. A Companion to the 'Churches and Picture Galleries of Europe.' By E. A. G.

"Will be found really useful to tourists."—*Literary Churchman.*
"A gem for taste and careful work."—*Scottish Guardian.*
"It supplies a real want.....Is well done and complete."—*Spectator.*
"Will be a useful, and probably henceforth an indispensable, guide and companion to the English visitor of the churches and picture galleries of Europe.....Minutely and faithfully accurate."—*Scotsman.*

Now ready,

ON LIFE AFTER DEATH. From the German of Gustav THEODOR FECHNER. By HUGO WERNEKKE, Head Master of Weimar Realschule. Printed on Dutch Hand-made Paper, in vellum cover, price 2*s.* 6*d.*

On August 21, crown 8vo. numerous Illustrations, half bound, 5*s.*

A SCHOOL COURSE on HEAT. By W. Larden, M.A., Assistant-Master in Cheltenham College, late Science Scholar, Merton College, Oxford.

EXCELLENT BOOKS FOR SUMMER READING,
AT ALL BOOKSELLERS' AND BOOKSTALLS.

LOW'S STANDARD NOVELS. Crown 8vo. 6s. each.

ALCOTT (LOUISA M.), WORK: a Story of Experience.

LITERATURE

Selections from the Writings of Walter Savage Landor. Arranged and edited by Sidney Colvin. (Macmillan & Co.)

SOME six years ago, in reviewing the 'Comedy of the Noctes Ambrosianæ,' we warned writers both of verse and prose that the "great squeezing of books" prophesied by a certain Indian prince had fairly begun. It has been going on apace since then. Scott has been abridged; every "man of letters" has been occupied in compressing into two hundred pages a monograph on every other man of letters. Anthology after anthology has issued from almost every publisher's shop in London; Wordsworth, Shelley, Byron, and Landor have passed already into selections. And assuredly this activity in "squeezing" was demanded by the pressure of a time like ours, which, having so much money to make and so little time to make it in, must content itself with hasty reading. That alongside this flood of abridgments for readers there runs another flood of gorgeous variorum editions for bookshelves shows that, in spite of all Mr. William Morris's declarations to the contrary, the decorative arts are more flourishing than ever.

It would be difficult to imagine a greater service to the reading world than Prof. Colvin has rendered in this volume. Yet there is something pathetic in the thought that within eighteen years of his death Landor, before he has been read in bulk, should have to be squeezed down to the dimensions of this beautiful little book. It was Landor, it will be remembered, who was to "dine late," but whose dining-room was to be well lighted, and whose guests were to be very brilliant and very select. He was to write, not for his contemporaries, but for posterity, that is to say for us, the more learned readers of a later generation. For us he devoted his immense gifts, physical and mental, to equipping his genius with all the splendours that could be inherited from all the great protagonists who had won glory in the lists of literary fame. For seventy years he went on writing, and now he has to speak to us, not in a well-thumbed library of many volumes, but in a little book of extracts compiled by another man. This certainly is pathetic. For dare we hope that the day will ever come when Landor will be read save in extract? If during his lifetime there was something repellent, not only to the general reader, but to general students, in Landor's literary methods, is that quality likely to be removed by the mere passage of years? In order to answer this question it would be necessary to inquire far more thoroughly than it is possible to do here what that quality is which chills student and general reader alike. Yet it seems necessary to glance at it for a moment. When Coleridge said that "Landor had not, after all, the power of expressing his thoughts in lucid and perspicuous English," he said what seems to Landorians a presumptuous thing. Yet it is always wise to ponder well what Coleridge says when he is once fairly out of his metaphysical balloon and safely landed in the home-close of pure literary criticism. Coleridge's parenthetical phrases (such as the words "after all" in the above sentence) mean a good deal always. Landor was a great and a noble master of English prose, but "after all" he had not "the power of expressing his thoughts in lucid and perspicuous English." Now De Quincey, between whom and Landor Prof. Colvin sets up a comparison, had this power. Prof. Colvin tacitly admits this, and is annoyed, being a Landorian, that he is compelled to admit it. Most people will agree with Prof. Colvin that Landor's was a simple and a great nature; but may it not have been on this very account partly that he had so little conception of those literary devices by means of which the literary artist is enabled to bring himself entirely *en rapport* with the reader?

Every one who has written in rhyme will in some measure share Wordsworth's sense of shame in thinking over the "shifts and tricks" of the rhymer's art; and so in prose it is no exaggeration to say that there are shifts and tricks which Landor could never learn, perhaps from this very simplicity of nature and single-mindedness for which Landorians justly admire him. Not that Landor ignored the fact that literature is as much a fine art as painting. But the truth is that every production of literary art has, like a piece of tapestry, its inner side (the writer's own) and its outer side (the reader's), and while the perfect master of literary weaving works so that his pattern is developed on the outside (the reader's side), the imperfect master works in the contrary way—works so that while he himself sees the pattern from within, the outer surface presents the reader with the tangles and knots of many-coloured worsted which should be seen by the weaver alone. That the weaver pleases himself hugely by thus keeping the picture for himself and presenting the knots and tangles to the spectators is obvious, and perhaps it is, after all, worth while to weave one's tapestry for one's own delectation. But then the literary weaver (the vainest and most ambitious of mortals) is never content with this. He weaves not, like the bower bird, for himself and his mate, but to be admired by all creation, and to surpass all other bower birds in the art of weaving.

To the perfect writer it is not a trouble, but a delight, to be continually transplanting himself to the reader's outer standpoint by a rapid kind of imaginative process, the effect of which is similar to that of the little mirrors which certain tapestry weavers hang before their work to show them how the pattern is being developed on the right side of the stuff. And De Quincey, notwithstanding all that eccentricity of orbit which vexes Prof. Colvin, notwithstanding his pedantry and knowingness and posture-making, rarely forgot those arts by means of which in literature mind grapples with mind. He had, for instance, the great gift of exciting in every sentence (either by its substance or by its mere rhythm) curiosity in the reader as to what is coming in the next sentence. Now it is this quality that always decides not only whether a writer shall be popular or not, but whether or not he shall in any true and comprehensive sense be accepted at all. And it is the same in life. It is not talent or knowledge—it is not genius even—which makes a man interesting; it is his way, natural or acquired, of presenting himself, it is a certain "je ne sais quoi" of gracefulness in the approach of soul to soul. And this gracefulness, though in most cases, perhaps, it is unconscious, is not necessarily so. It was not so in the case of De Quincey, either as a writer or a man. In England this indefinable charm is, perhaps, more irresistible than elsewhere; for in England, owing to the English lack of *esprit*, most talkers are in some degree bores, and most writers are more or less clumsy in presenting the matter (often rich and admirable in substance) which they have to express. In a word, De Quincey, in literature as in life, was free from the great social vice of modern Europe, oppressiveness—the vice which is mostly the characteristic of the man of power. We say the vice of modern Europe, for Victor Hugo would, from oppressiveness, have been as much out of place, we suspect, at the Hôtel de Rambouillet as Landor or Wordsworth would have been out of place at the Mermaid or the Apollo Saloon.

That in life Landor was, though fascinating to a few, oppressive to most people, his entire story shows plainly; and this is the fault which has kept his writings, and will keep them, down. He constantly forgot that his interlocutor and his reader had each a little *ego* of his own to be thinking about. The best listener and the best reader is, after all, the little centre of his own universe, from attending to which, in its various details and ramifications, he is willing to spare a few minutes or even an hour or two for the much less interesting universe of which the talker or writer is the hub. Landor constantly forgot this. Not that his egotism was greater than De Quincey's, but in writing De Quincey had the instinct, as we say, for keeping the "right side" of the tapestry outwards. He was master of that literary attractiveness the lack of which has made, and will make, Landor the least read of all great writers.

But in truth the self-deception of all artists, literary and other, as to their intelligibility to other minds is curious. All art is no doubt the outcome of that excessive yearning for expression which is peculiar to certain souls, and therefore no artist would, if he could avoid it, be obscure. It is with great difficulty, indeed, that any writer is brought to see that his expression is not so

XUM

intelligible to other minds as it is to his own. To see the look of bewilderment that comes over a poet's face when he is told that some extremely enigmatical line is not transparent as a dewdrop is both pathetic and humorous, and it is doubtful whether he is ever really convinced that the difficulty is not solely the birth of the critic's obtuseness.

But every writer has a desire to be easily and widely read. It is the yearning for a wider sympathy than his own immediate circle can give which impels every really good writer to write at all; and howsoever glibly an author may talk about dining late with a few guests, we suspect that in the case of most authors the larger the number of guests the more the host enjoys the dinner.

Another reason for the lack of moving life in Landor's work lies in the fact that his genius was stifled by an exotic literature. When Prof. Jebb said that Latin is "the expression of law," and that Greek is "the voice of life," he said the last word upon Greek and Roman poetry. And with regard to modern poetry, this certainly may be said, that the poetic art which studies διάθεσις rather than εὕρεσις (to use Plato's phrase), that which studies the art of collocation rather than original invention, can never, in any true sense, live; διάθεσις, in fact, is the dry-rot which, after a time, destroys all poetry. Even in those Northern literatures which are entirely indigenous and free from classic influence, when we find the limpid simplicity of the Eddaic poetry passing by an inevitable law into the secondary or skaldic stage of artifice, collocation, and finally of elaborate form, we know that the true poetry of that literature is doomed. Landor's 'Imaginary Conversations' have too much the air of historical exercises. With all their countless beauties, there is an air of pedagogue about many of them.

In making his selections Prof. Colvin has shown extraordinary care and judgment. Moreover, to do as he has done, to go through the vast mass of Landor's writings with the knowledge and insight of the scholar and the sure taste of the literary artist, and to select for the general reader the most beautiful things to be found there, is to show that he can perform a labour of love for which nothing can adequately reward him but the feeling of having done a good work in honour of a great but neglected name.

The prose selections are so good that it seems impossible to imagine them better; and although among the poetical pieces we miss some of our favourities, we should be loth to lose any of those which Prof. Colvin has selected. Should he be able in a future edition to enlarge the book, as we trust may be the case, we would suggest his adding the quatrain on Dirce; the dramatic scene between Beatrice Cenci and Pope Clement VIII.; the lovely poem beginning,

> Mother, I cannot mind my wheel;

the longer (but still short and manageable) poem beginning,

> Ye little household gods that make;

'To Corinth,' 'Cupid and Pan,' and 'Regeneration' (from the 'Hellenics,' 1847); the death of Cæsarion ('Antony and Octavius'); and from 'Count Julian' the passages beginning,

> All men with human feelings love their country. (I. iv.)
>
> Beaming with virtue inaccessible. (III. ii.)

We mention these poems and passages because in a large proportion of Landor's poetry, as in all George Eliot's, there is a certain sense of dissatisfaction which is not felt in the poems mentioned above—a feeling that what has come to the writer in prose movements has been deliberately transmuted into metrical waves. Now assuredly no poetry that has any chance of living can be thus produced. A poet may be ambidextrous, no doubt; he may be able to write with equal facility both verse and prose—indeed, Shakspeare's verse at its best does not more completely transcend the verse of all other poets than does his prose at its best transcend that of all other prose writers; but we have only to compare the magnificent prose peroration on man in 'Hamlet,' not with a metrical passage of such exalted movements as the invocation to Sleep in 'King Henry IV.,' but with a passage so comparatively level in movement as "To be or not to be," in order to see that while in the one case the thoughts came to the poet in the movements of prose, in the other they must have come in distinct metrical bars. Yet, besides the poems we have indicated above, there is one passage in Landor's poetry which does appear to have been written from a metrical and not from a non-metrical impulse: the famous passage in 'Count Julian' where Hernando compares Julian to an eagle:—

> No airy and light passion stirs abroad
> To ruffle or to soothe him; all are quelled
> Beneath a mightier sterner stress of mind.
> Wakeful he sits, and lonely, and unmoved,
> Beyond the arrows, shouts, and views of men;
> As oftentimes an eagle, ere the sun
> Throws o'er the varying earth his early ray,
> Stands solitary, stands immovable
> Upon some highest cliff, and rolls his eye,
> Clear, constant, unobservant, unabased,
> In the cold light, above the dews of morn.

Prof. Colvin quotes this in his introduction, and adds the following remarks:—

"'One change,' says De Quincey, in commenting on this passage, 'suggests itself to me as possibly for the better, viz., if the magnificent line,

> Beyond the arrows, shouts, and views of men,

were transferred to the secondary object, the eagle, and placed after what is now the last line, it would give a fuller rhythmus to the close of the entire passage; it would be more *literally* applicable to the majestic and solitary bird than to the majestic and solitary man'—at which point we may break off from De Quincey, whose suggestion, so far at least as concerns the rhythm of the passage, needs only to be tried to be accepted."

No other of De Quincey's brilliant and specious criticisms has met with such universal favour as this, and yet we must entirely dissent from it. That the "arrows, shouts, and views of men" are not "literally," but metaphorically, applicable to the majestic and solitary man, is surely a wonderful objection to a passage like this. It is this very quality in De Quincey, his love of the definite and the logical on all occasions, which prevented him (as we remarked when reviewing Prof. Masson's monograph on De Quincey) from producing poetry. Moreover, to give a complete picture of Julian's isolation, and to intensify the vividness of the magnificent comparison which is to follow, the line is absolutely needed where it now stands. Besides, is there no such thing as a bathos of sound as well as of sense? What poet would dream of letting "views of men," where the last vowel is close, follow "dews of morn," where the last vowel is not only open of itself, but is kept open by the liquid?—to say nothing of the bastard assonance running through half a line:—

> In the cold light, above the dews of morn,
> Beyond the arrows, shouts, and views of men.

It was De Quincey's love of prose climax that spoiled his ear for poetic climax, which, soaring above logic, ends with the indefinite and suggests the infinite.

A more just objection to the passage would perhaps have been that it is in the evening, just before sunset, that the eagle, having satisfied his hunger by the day's hunting, begins to think of the delights of the eyrie and of sleep, and

> stands immovable
> Upon some highest cliff, and rolls his eye,
> Clear, constant, unobservant, unabased.

In the morning he is too hungry to stand unobservant, but, restlessly preparing for the great business of the day, dinner-hunting, he stands with his wings a little raised from his side, his head a little "abased" in the eagerness of his watch before mounting, and his eyes as "observant" as a kite's.

With all their occasional eccentricities, the most remarkable qualities in Landor's writings are wisdom and lofty nobility of thought. It is this which makes a selection such as the one before us so precious. That the man who could write so wisely should throughout his entire career have acted so injudiciously, not to say so foolishly,—that the enunciator of such grand and deep thoughts should have wasted his life in quarrels as petty as those of a village housewife,—seems anomalous; and yet it is capable of explanation. The wisdom of reflection and the wisdom displayed in action are two very different things. Reason has rarely any power to curb our appetites, our passions, or the follies that are born of an exaggerated estimate of human opinion. No people are more sensitive to opinion than men like Landor, who have the habit of reflecting upon opinion as being childish and worthless; for it is not given to man to escape from his conditions. The philosopher may reflect upon the order of the universe until even so mighty a city as London seems to him like an overgrown ant-hill; yet will the opinion of every little ant which crosses his path make his heart flutter and his cheek flush as though he had not eyes to see its insignificance. Had Landor been a little less sensitive to the opinion he professed to scorn, his career would have been more pleasant to himself and to other people who came in contact with him; but then he would not have been Walter Savage Landor, the noblest and most picturesque, if the most eccentric, figure in the literature of the nineteenth century.

Uganda and the Egyptian Soudan. By the Rev. C. T. Wilson and R. W. Felkin. Maps and Illustrations. 2 vols. (Sampson Low & Co.)

From the moment Mr. Wilson and Mr. Felkin shook hands in the wilds of Unyoro

they became firm friends. They lived together in Uganda during three months, and when the time arrived for their return to Europe they performed the wearisome journey jointly in friendship and harmony. No wonder, therefore, that when it became a question of giving to the public a narrative of their adventures they should have determined that this narrative should be a joint production. Nor is there any reason to complain of this arrangement. Instead of two books of travel, going in a large measure over the same ground, we have a single work, and this not by any means a compromise between the views of the authors whose names appear upon the title-page, still less an enticing work prepared by an expert book-maker from materials placed at his disposal. On the contrary, the narrative virtually consists of two independent stories; for whilst Mr. Wilson describes the route from Zanzibar to the Victoria Nyanza and his five journeys across that lake, as well as Uganda, where he resided for many months, his fellow worker is content to deal with the regions to the north. And thus the authors of this record of travels have been able to preserve their individuality, and to impart a variety to it which otherwise would have been lacking.

Mr. Wilson is evidently a man of strong common sense, not at all addicted to the professional slang which so frequently disfigures books of travel written by missionaries. He is able to give an intelligible account of what he sees, and his judgment on most subjects may be trusted. At times, however, he is somewhat prosy. His narrative lacks fire. It calls up no vivid pictures of the scenes and the scenery he passed through, makes few appeals to the sympathies of his readers, and leaves them cold. In these respects his companion possesses an advantage over him. Quick of observation, as are most men trained to the medical profession, less reticent, occasionally even rash, and master of a tolerably picturesque style, he is more entertaining than his fellow worker. Nor must his merits as an explorer be passed over in silence. His map of the route connecting the Upper Nile with Darfur is a substantial addition to our geographical knowledge, whilst the fifty-nine anthropological measurements carried out by him on Prof. Virchow's method bespeak an unusual stock of patience and the possession of great powers of persuasion.

Mr. Wilson, on the other hand, deserves credit for his record of meteorological phenomena. His observations have been carefully summarized by Mr. Ravenstein, and, had a mercurial barometer been available instead of untrustworthy aneroids, they would have enabled us to compute very accurately the height of the lake above the sea level. One fact, however, they bring out very distinctly, viz., that the variation from the daily mean pressure is greater by the lake-side than at Rubaga, only some ten miles inland, and that at the latter it coincides with that observed at Calcutta, and is only 0·02 inch in excess of that at Zanzibar.

Mr. Wilson's description of the Victoria Nyanza is disappointing, and conveys but a feeble idea of the vastness of this great inland lake, which covers an area of some 25,000 square miles. He is at his best when dealing with Uganda; and his long residence in the country and knowledge of the language, of which he has written a grammar, give him a great advantage over travellers dependent upon interpreters. In the main he confirms all that Stanley has told us about Uganda and its "emperor," even to the conversion of the latter to Christianity. Events, however, march more quietly since the departure of the American explorer. Mtesa, wasted by disease, has given up harassing his neighbours, and is even unable to follow his accustomed out-door exercise. The sufferings of the emperor are, fortunately, not altogether unprofitable to the emperor's subjects, for they incline him to mercy. "If Mtesa were well," said one of his chiefs, "you would soon see some executions."

Mr. Felkin, as a physician, was naturally brought much into contact with the invalid, whose good will he won through his medical attentions. He describes Mtesa as

"a fine man, about six feet high, and of well-proportioned build. He has a well-formed oval face, the deeply marked lines and the expression of which show to the close observer that he is a great sufferer; while his large languid eyes, though usually dull, at times light up with a good deal of fire, as anger or pleasure causes him to express emotion."

Mr. Felkin always found the king to be kind and courteous, and personally continued on the most friendly terms with him.

Mtesa's vanity is one of the most amusing as it is one of the least offensive traits in his character. He looks upon himself and the Queen (the Queen of England, be it understood) as the "only monarchs in the world worth the slightest consideration," and is "anxious to know the state of public opinion in Europe with regard to himself and his realm." It was principally with a view of curing Mtesa from these inconvenient notions as to his importance that the missionaries suggested that ambassadors should be sent to England. The reports made by these royal messengers since their return appear not to have been without their influence upon the king's conduct towards his guests.

Mr. Felkin's duties as a royal physician were occasionally onerous, and had he been obliged to deal with a large number of patients on the same terms might have proved disastrous to himself:—

"I had always to take some of my medicine before I gave it to the king; a dose was also administered to three or four of the pages; if any of them should have happened to die within seven days, it would have been supposed that poison had been mixed with the medicine."

In the end, however, as the king gained confidence,

"he would not let the chiefs and pages drink so much physic. On one of my visits, according to custom, I was giving a dose to one of the pages, when a chief asked to be favoured with a little himself; but Mtesa turned round sharply, and said, 'No; that is for me! You know now that Doctori does not wish to harm me. It is only on account of your silly fancies that I let one of you drink the medicine.'"

Both travellers express themselves equally pleased with the Waganda. In many respects these people are superior to their neighbours. They are cleanly in their habits, and never anoint their persons with fat; neither do they tattoo or disfigure themselves by filing or extracting the teeth. They are, too, one of the few tribes who dress decently from head to foot, either in bark cloth or beautifully dressed skins of their own manufacture, or in cotton stuffs brought from Zanzibar. "It is death for a man or woman to be found in the public roads without proper clothing," although in the privacy of their windowless homes even the women cast off their garments, whilst the men on the war-path content themselves with a loin cloth. Yet this regard for what we consider decency is not incompatible with a low state of morals. Mr. Wilson very pertinently remarks that

"morality among negroes seems to be in an inverse ratio to the amount of clothing they wear, and the most naked tribes, when uncontaminated by external influence, are the most moral, and the best-clothed the most immoral."

The Waganda are a drunken race, but

"happily it cannot be said in their case that this vice has been acquired from their intercourse with Europeans."

They are gluttons, too, and a man was pointed out to Mr. Wilson who had eaten a whole goat at one sitting. They are, moreover, inveterate smokers, and as the king himself abhors tobacco, chiefs suddenly summoned to his presence will chew coffee berries to take away the smell. As to moral qualities,

"truth is held in very low estimation, and it is never considered wrong to tell lies; indeed, a successful liar is considered a smart, clever fellow, and rather admired!"

Theft and murder are very common, these being no crimes unless detected; but we can hardly bring ourselves to believe the following horrible "incident":—

"A young page of Mtesa's, son of a subordinate chief, was frequently employed to bring me messages from the palace, and one morning came down to my house, and informed me with great glee that he had just killed his father. I inquired why he had done this, and he said that he was tired of being merely a servant, and wished to become a chief, and said so to Mtesa, who replied, 'Oh, kill your father, and you will become a chief'; and the boy did so."

Fortunately there is a bright side to this picture of African iniquity. The Waganda are fond of music and have a great variety of musical instruments. In their cookery they exhibit considerable ingenuity, and some of the recipes given might with advantage be introduced into our own *cuisine*. They have constructed "roads," leading straight like arrows, over hill and dale, through forests, and across swamps, from village to village; they manufacture their hoes, axes, knives, and spears from the bog ore found in the country, are clever in basket-work, mat-making, and wood-carving and excel in the dressing of skins. They learn quickly. Mr. Wilson readily taught the boys in his school to read their native language in the Roman characters, and Mr. Litchfield's class, after two or three months of instruction, was able to sing any simple tune at sight according to the Tonic Sol-fa system. And, above all, notwithstanding their perpetual wars and bloody customs, they are by nature of a kindly disposition, and if properly treated become strongly attached to Europeans. Taking every circumstance into consideration, Mr. Felkin feels justified in stating that

"a people who have so much good sense and native politeness, and who preserve such a high state of order, will ultimately form a centre

where Christianity and civilization may be successfully planted, and from which these blessings will spread to the surrounding nations."

Mr. Wilson is of the same opinion, for he says:—

"A great future is before the people of Uganda, and from the physical advantages and central position of that country it is well fitted to be the centre of light and civilization to the surrounding nations."

These views evidently prevailed with the Council of the Church Missionary Society when it was determined to uphold the mission in Uganda, and to despatch another body of missionaries to reinforce the staff still out there.

Mr. Felkin's account of the home journey through the provinces annexed to Egypt since the days of Sir Samuel Baker will be read with interest just now. It abounds in reminiscences of the old days of slave-hunts, when bands of savage Dongolawi held the country at their mercy, and makes us acquainted with Gessi, whose heroic struggles with Suleiman Pasha are still fresh in the memory of the public. Col. Gordon really did put a stop to the slave trade, and, thanks to the vigilance of Emin Bey, the present governor of the equatorial provinces, it has not been revived. Mr. Felkin is no uncompromising opponent to the spread of Egyptian influence in Equatorial Africa, on condition, of course, of the government being conducted by honest officials, sincerely interested in the welfare of the people placed under their charge.

"Where government is conducted as it is by the present governor, the natives are in far better circumstances than under their own despotic and brutal kings."

The "great point" in any arrangement made with Egypt is to "insist on the appointment of European governors." But that even amongst the Arabs there could be found persons who would honestly co-operate with these Europeans is proved by the following account given of Saati Effendi:—

"He was a strict Mohammedan, but at the same time far more enlightened than the Arabs usually are, and he was the first I have met who, with apparent sincerity, admitted the evils of slavery.....He seemed anxious to live up to the highest standard indicated in the Koran. Although his father at his death left him several hundred slaves, he gave them all free papers, and this before the slave war had taken place."

It will be seen from our notice that the authors take the reader through the vast region extending from Zanzibar to Egypt, and he must indeed be satiated who cannot find in these two volumes and their scientific appendices something to instruct or amuse him.

Catholicon Anglicum: an English-Latin Wordbook, dated 1483. Edited with Introduction and Notes by Sidney J. H. Herrtage, with a Preface by Henry B. Wheatley. (Trübner & Co.)

The volume just edited by Mr. Herrtage is a fit successor to the 'Promptorium Parvulorum,' which the late Mr. Albert Way edited for the Camden Society between 1843 and 1865. But when that work was completed the Early English Text Society had hardly come into existence. Since 1864 the workers for that society have made accessible to the public a multitude of volumes which then existed only in MS., and which Mr. Way had no opportunity of consulting. He spent years of labour on his task, and therefore he gave to the world a volume of the highest value; and it is no slight praise for Mr. Herrtage that not only the English Text Society but also the Camden Society have deemed his book worthy to take a place beside the first-rate work of his predecessor in this large field. There exist unprinted still no small number of old English dictionaries, as may be seen from a notice of them which Mr. Wheatley printed among the *Transactions* of the Philological Society for 1865 (pp. 218–293), and it is very desirable that at any rate some of these should be edited with the same pains which Mr. Herrtage has bestowed on the volume before us. The MSS. from which he has edited his text are two: one in the library of Lord Monson, which his lordship most liberally placed at the disposal of the Early English Text Society; the other is among the Additional MSS. in the British Museum. The text of the first named is here printed; the second has been used mainly for collation and correcting or filling up blanks in the text where they occurred. The copying of the MSS. was made by that untiring labourer for the Society, Mr. Brock. The former possessor of Lord Monson's MS. was one "Thomas Flowre," a succentor of the Cathedral Church of Lincoln, whose name, with the date 1520, stands on the back of the last leaf. The MS. itself is specially valuable because it is dated, and thus we have a sure clue to the language as it existed in 1483, two years before the accession of the house of Tudor to the English throne.

The editor inclines to the opinion that the compiler of this volume was a native of one of the northern counties of England, and in the introduction (p. xx) has given some reasons for so doing. He might have added several others. The pronunciation of such words as *hate*=hot (p. 178) and *haly*=wholly (170) points in the same direction as the evidence which the editor has given, and so does the multitude of words that still exist in the various dialects of the North in the senses in which they were used in the early Tudor times, and that are not to be met with commonly elsewhere. Of these we may notice *stee*=a ladder (360); *thyvelle* (383)—more frequently now pronounced "thybell"—an instrument for stirring porridge or such like compositions when boiling on the fire; *addle* (3), as a verb, in the sense of "to earn wages"; *posnet* (288), a pan for cooking by boiling; *luvare* (224), originally applied to the apertures in the roofs of ancient halls by which the smoke from the open fires was allowed to escape, but which now remains as the name applied to the apertures in the towers of churches whence the sound of the bells may make its way to the air, the pieces of wood or stone by which such openings are constructed being constantly named "loover boards." Some words even carry us further north than the counties of England. Thus "a lufe of ye hande" (222) brings forward a word which is hardly now found except in Lowland Scotch. But many will remember the verse of the song which begins "Come lay thy *loof* in mine, lass," which shows that the countrymen of Robert Burns still have *loof* as a common word. Then *hede-warke* (180) for "headache" is especially a word of the Northern parts, and *wark* in this sense is also used of the teeth, as Mr. Herrtage has shown in his notes. Indeed, it is for the mass of information which the editor has collected (and with much judgment) in his notes that he deserves special praise. He has left hardly anything unsaid which could be said with certainty about the words on which he had to comment; and where he had nothing to say, and could find nothing said elsewhere, he has wisely told his readers so, and expressed a hope that those who have light which he had not will give him the benefit of it for further illustration where it is needed.

Among so much that might be selected for illustration of the character of Mr. Herrtage's notes it is difficult to know where to begin. But for an example may be taken a word probably familiar to very few. *Chaftmonde* (57), under the various forms of *shafman, shaftmet, shaftment*, &c., was formerly in common use. *Ell, nail, handbreadth*, still remain to us as measures, the names of which were taken from the hand and arm. The word *chaftmonde* was one of this class, and meant the measure across the hand when it was made into a fist and the thumb held erect. This was counted as equivalent to half a foot. The history of the word and examples of its use are given abundantly in the notes, the last instance being one which tells how the Dean of the Chapel Royal had as a perquisite the ends of the candles offered there on Candlemas Day, when the same were burnt down to a *shaftmount*.

Another point of interest in the notes is this: they often show to demonstration what is the true sense of a word in cases where some doubt has been expressed. For example, hesitation may be found among note-writers about the nature and use of a *wimple*. Some have thought the garment was for the shoulders, some for the head. Mr. Herrtage's illustrations (418) enable us to settle that the word was used (as it is in one of the translations which he quotes) for a veil worn upon the head. So, too, with *moot* (247) in the phrase "a moot point." Is it a matter about which men have to *meet* and hold discussion? And is a "moot hall" a place where such *meetings* are held? This explanation has been given, but the illustrations in the present volume point conclusively to the Latin *movere*, to move, as the root from which the word comes, and show that the signification is "something about which a *motion* may be made or an argument held," and which, therefore, cannot be taken as decided.

Perhaps at Christmas-tide some of us have thought over the meaning of the word *waits*. We now use it only for those singers who chant carols on the cold nights towards the close of every year; but its primary use, as Mr. Herrtage's note (406) shows, was for the watchmen in a fortress, whose duty it was in case of danger to raise an alarm by blowing their horns.

The reader of these notes will oft be reminded of the close alliance which exists between our own language and German. Thus the old word *tharme* (382) for the bowels is the same as the German *darm;* and in the last syllable of *swynsoghte* (375), a disease amongst swine,

we have the modern German *sucht*, which appears again in *gulsoghte* (168)=the yellow sickness or the jaundice, the first syllable also being represented by the modern English *yel* in "yellow," by an interchange of *g* and *y* which is very common in words which have passed from one language to the other, and an instance of which may be produced in *gayne* (148)=to yawn, which the German has preserved in its harder form of *gähnen*.

Another softening of *g* is into *w*, an example of which is in *wymbylle* (418)=an auger, the diminutive of which is seen in the form "gimlet"; and this letter-change finds its parallel in *guard*, *guerre*, *Gulielmus*, when these words appear as *ward*, *war*, *William*.

On p. 112 the reader will find that *nickname* is "an eke-name" or additional name, the agglutination of the *n* being of the same character as that which turns "uncle" into "nuncle," though the contrary change is more frequent in our language, as we have now "apron" for "napron," "umpire" for "numpire," "oaf" for "gnoaf," and many such like words.

A "vice" (401) is now known as the instrument which, by means of a screw, holds any object firm and tight, but this word more frequently signified in the older tongue a screw (or winding) staircase—a use of the word now altogether forgotten, but which Caxton employs when he writes, "An aungell came downe from the stage on hygh by a *vyce*."

From the note on "burde dormande" (47) it will be seen that a dormer window is so called because it rests on "dormants," or sleepers, which extend beyond the proper boundary of the room, and make the window an enlargement of the original building. And there is hardly a page in which may not be found some valuable hints for the understanding of our earlier speech. The editor has used very ably the books which now are ready to all hands, and of which he gives a copious list at the end of the volume. It was no part of his business to notice the Latin portion of the work, and he does so no more than is needful for his illustrations. But there is in this part also a large mine of unworked words, of which we learn from a note that Mr. Hessels intends to avail himself in his forthcoming edition of Du Cange.

In perusing the volume we have noticed that the sheets have been revised with much care, and misprints are rare, though on p. 340 *anabathrum* should no doubt be read, instead of "anabarathrum," in the first note. And here and there the editor has not availed himself of what he clearly knew in the place where it is exactly wanted. Thus on "þe Alde Testament," where *heptateuchus* is explained in the note, it might have been well to notice what is shown on p. li of the Additional Notes, that the part of the Old Testament which most frequently appeared in early days, and of which Ælfric issued a version, was the first seven books only. Such little matters throw light on what was known by our forefathers of the Scripture narrative, and belong to the story of the circulation of Holy Writ, a subject full of interest.

But where so much has been done, and so little left undone, we can only bid the editor farewell with an earnest wish that we may see some more such fruits of his labour, for which he is becoming daily more fitted by the share he is taking in the preparation of the English dictionary to be issued under the auspices of the Philological Society. In such an undertaking materials accumulate rapidly, and Mr. Herrtage has here shown that he knows how to make use of them.

The Scots Men-at-Arms and Lifeguards in France. By William Forbes-Leith, S.J., with Etched Plates by Major H. de Grandmaison. 2 vols. (Edinburgh, Paterson.)

The records of military history contain many curious instances of the strength of professional feeling, and of the influence of a small body of privileged soldiers who were animated solely by a spirit of personal loyalty. The Swiss Guard of the Pope is the only survival at present of a military system that dates from a period when nationalities were not yet firmly formed. But the most conspicuous instance of the long continuance of such a system, in spite of changing conditions, is to be found in the Scots men-at-arms in France. Even the French general Susanne writes, "Under the title of 'The Scots Men-at-Arms' one might write the history of the wars waged by France from the days of Joan of Arc to the Revolution."

Mr. Forbes-Leith does not, however, undertake the ambitious task of writing a military history of France. He is concerned only with the establishment of the Scots soldiers in France and their relation to the French court. He deals with his subject as an episode in the history of Scotland throwing much light on the history of Scottish families. The chief aim of his work is archæological. He publishes the "muster rolls" of the Scots men-at-arms in France, with an introductory sketch sufficient to show the importance of the part played by his countrymen.

It was not unnatural that in the darkest days of the French monarchy, Charles VII. should look for allies abroad. When France was distracted internally so that a national centre barely existed in the person of the king, help was acceptable from every quarter. The triumphant advance of the English arms in France naturally filled Scotland with alarm, and prompted her to aid the power that was opposed to her national enemy. In 1419 the Earl of Buchan landed at La Rochelle with a force variously computed at 7,000 or 10,000 troops. Though the Scots were looked upon at first with suspicion and contempt as "sacs à vin et mangeurs de mouton," their valour at the battle of Baugé won the first success for Charles VII. At Verneuil, in 1424, the English gained a bloody victory, but the Scots fought to the last with stubborn determination. The French were exhausted and terrified; the royal cause seemed almost hopeless. Charles VII. had few whom he could trust, and the personal loyalty of the Scottish mercenaries was the strongest support on which he could lean. The traditional account that the Scots guard was established after the battle of Verneuil is confirmed by Mr. Forbes-Leith's researches into the Registres de la Chambre des Comptes. On July 8th, 1425, the first mention is found of a body of men-at-arms and archers ordained to guard the person of the king, under the command of Christin Chambre, Esquire of Scotland.

When Joan of Arc began her heroic defence the Scots warmly devoted themselves to her service. One Scottish soldier returned to his native land after Joan's death, and became a monk at Dunfermline, where he continued Fordun's Chronicle, and commemorated the deeds of Joan, "whom I saw and knew, and in whose company I was present up to her life's end." In all the work of the recovery of France the Scots took a prominent part, till the throne of Charles VII. was secure. But when peace was re-established soldiers were a hindrance to the national security. Bands of freebooters ravaged the country, and the work of restoring internal order was as difficult as that of procuring peace. A happy chance gave Charles VII. the opportunity of sending 30,000 soldiers to help Frederick III. to prosecute the quarrel of the house of Austria against the Swiss. In this expedition they suffered greatly from the vengeance of the peasantry, which they awakened by their ravages. When the remnant returned to France Charles VII. was ready to strike a blow against military licence. Many were dismissed from service, and the rest were formed into fifteen *compagnies d'ordonnance*, which were the beginning of the French standing army. Two of these companies were formed from the Scots, "Les Gendarmes Écossais" and "La Compagnie Écossaise de la Garde du Corps du Roi." The fidelity of the Scots and their service rendered to the restoration of the French monarchy won for them an honourable and permanent position.

From this time forward the Scots became more and more remarkable for their personal loyalty to the king. Louis XI. as Dauphin tried in vain to bribe them to join a plot against his father. His experience of their faithfulness led him to find in them his chief support in the perilous intrigues by which he succeeded in reducing the French nobility to obedience to the Crown. In the French wars of Charles VIII., Louis XII., and Francis I. the Scots took a leading part. But the period of the Reformation witnessed the decay of the close alliance between France and Scotland. Fewer Scots took service in France, and those who did were suspected of Protestant leanings. Henry IV. reinstated them, and did all he could to secure the old alliance.

But with the secure foundation of the French monarchy the need of the Scots' services had come to an end. The company of men-at-arms and the lifeguards were looked upon with dislike by the French. Attempts were made to dispute their privileges and get rid of them altogether. There were many quarrels about precedence, till gradually French recruits forced their way into the Scottish companies, and after 1666 they were Scottish only in name and in traditions. The poorer French nobles and the descendants of old Scottish families settled in France composed these privileged companies. When the Jacobites came to France and offered their services to Louis XIV., they could not gain admission to the old companies, but had to form new companies of their own. Yet the Jacobites brought a reinforcement to the number of

XUM

Scottish families naturalized in France, and the military system of the French monarchy always retained a stamp of Scottish influence.

Mr. Forbes-Leith's introduction is clearly and pleasantly written, giving an interesting sketch of this episode of military history. But the great value of his book lies in the muster rolls of the companies of men-at-arms and lifeguards, which he has carefully collected. These will afford valuable material for the history of Scottish families, and for a large survey of the social, as apart from the political, connexion between France and Scotland. The work of editor has been well done, and the original spelling is carefully preserved. The identification of Scottish names with the French attempts to reproduce them is not always easy. The lists will supply ample materials for those who are interested in the study of linguistic transformations.

The book is printed on large paper and is enriched by a number of admirable etchings by Major H. de Grandmaison. They are the results of a study of the French school of etching, and consist for the most part of reproductions of figures of guardsmen and men-at-arms taken from old MSS. and engravings. Their fineness of execution, simplicity, and clearness are alike excellent. Only 312 copies of this *édition de luxe* have been printed. They will not fail to be in great demand amongst connoisseurs.

Les Origines de l'Histoire d'après la Bible. Par F. Lenormant. Vol. II. (Paris, Maisonneuve & Co.)

M. Lenormant is always interesting, learned, and suggestive. The first volume of his work on the earlier chapters of Genesis was fascinating alike to the scholar and the general reader; but we confess to a feeling of disappointment as regards the second, with which he has now followed it up. In spite of his efforts to be impartial, his theological prepossessions have unconsciously warped his critical and historical judgment. While admitting the existence of more than one document in Genesis and even the post-Mosaic date of the book, he will have nothing to do with the modern criticism of the Pentateuch, and strains the evidence in favour of its antiquity. His account of the Cimmerians is an illustration of this. The inscriptions of Assur-bani-pal have made it clear that the Cimmerians of classical geography are the Gimirrai of the Assyrian monuments and the Gomer of the Old Testament. In accordance with Herodotus, the texts of Esarhaddon represent them as first appearing on the stage of history about B.C. 675, when they were defeated by the Assyrian monarch on the northern frontiers of his kingdom and driven westward into Asia Minor. Their capture of Sinope and invasion of Lydia must, therefore, have been subsequent to this event. But it so happens that Gomer is named among the sons of Japheth in the tenth chapter of Genesis. As the name of Gomer is elsewhere found only in prophecies of the Babylonian period, modern criticism has seen in its occurrence in Genesis a proof of the comparatively late date which must be assigned to the so-called Ethnological Table. M. Lenormant, however, passes over the inferences to be drawn from the Assyrian inscriptions; states that "certain chronographers"—by which he means Orosius—"place towards 784 B.C. the first appearance of the Cimmerians in Asia Minor"; asserts that "the best authorities"—Eusebius and George Syncellus namely!—assign the foundation of Sinope to the year 756 B.C.; and concludes that "in any case it is certain that before the middle of the eighth century the neighbourhood of Sinope was occupied" by the Cimmerians. And all this only to gain an additional century or two for the antiquity of Genesis!

It is to the same theological prepossessions that we must ascribe M. Lenormant's reluctance to derive the legend of Paradise from the early population of Babylonia. He still clings to the theory which sees in the story of Paradise a tradition of the first home of the Aryan and Semitic races on the slopes of the Hindu Kush, though he allows that at a later time it may have been localized in Chaldæa. The appendix in which he controverts Prof. Friedrich Delitzsch's attempt to show that the plain of Babylonia was the Eden of Genesis seems to lack that breadth of view and sympathy with the views of others which usually characterizes his work. We are very far from endorsing all Prof. Delitzsch's arguments and identifications, but in saying that the Accadian *edin*, the Assyrian *çéru*, was "a high plateau, imperfectly watered," and therefore not the Eden of Scripture, M. Lenormant surely forgets that while the Babylonian account of the Creation calls the animals created by the gods "beasts of the *çéru*," Genesis tells us of the animals of Paradise that "the serpent was more subtil than any beast of the field which the Lord God had made." When it is remembered that the two chief rivers of the Biblical Eden are the Tigris and Euphrates, and that the account of the Fall hangs together with other Jehovistic passages, such as the sending out of the birds from the ark and the confusion of tongues at Babylon, it is difficult not to conclude that the legend of Paradise in Genesis is of Babylonian origin. At all events, M. Lenormant's attempt to derive it from an ancient tradition, common to both Aryans and Semites, fails to convince us for a simple reason. Had this tradition really existed, it would be found among Semitic peoples like the Arabs, who were not influenced by Babylonian culture, while among the Aryans it would not be confined just to that Iranian branch which alone came into close contact with Chaldæa. The Indian myth of Meru has little in common with it, and is, moreover, post-Vedic. We must not forget, too, that the age of the Parsi legends is a disputed question, and that most scholars are now disinclined to believe in the common origin of the Aryan and Semitic races.

Apart from theological prepossessions, however, M. Lenormant's last volume is quite as worthy of study as the one which has preceded it. It abounds with the learning and happy illustrations which distinguish all his works. But it contains no startling novelties, much of the matter in it is already to be found elsewhere, and it is only occasionally that the results of Assyrian and Egyptian research are introduced. When we say that the questions connected with the site of Ararat, with the second father of mankind, and with the sons of Japheth are sufficient to fill a book of more than five hundred pages, it will be seen that the treatment is thorough. It will be long before such a work can be superseded by another commentary on the subject with which it deals.

NOVELS OF THE WEEK.

Bevis: the Story of a Boy. By Richard Jefferies. 3 vols. (Sampson Low & Co.)
Daisy Beresford. By Catharine Childar. 3 vols. (Hurst & Blackett.)
New Arabian Nights. By R. L. Stevenson. 2 vols. (Chatto & Windus.)
The Merchant Prince. By John Berwick Harwood. 3 vols. (Hurst & Blackett.)
A Strange Journey. By the Author of 'Common-Place.' 3 vols. (Bentley & Son.)
The Way Thither. 2 vols. (Stock.)

Signs are not wanting that Mr. Jefferies's peculiar vein is rapidly becoming exhausted. He writes much, but he says little that is new. In 'Bevis: the Story of a Boy'—which is one of those books for young people which are supposed to be interesting to grown men and women as well—he shows a certain dexterity in adapting his knowledge of farm life and woodcraft to the requirements of a new public. Still, it is impossible not to see that he is merely repeating as romance what he has already related as experience. The stuff of 'Bevis' is substantially the same as that of 'The Gamekeeper' and the 'Great Estate.' The difference is that 'Bevis' is avowedly fiction, while the others are records of fact. But Mr. Jefferies the novelist is not nearly so impressive as Mr. Jefferies the chronicler and observer. His characters are practical, and his dialogue is not inappropriate. But his characters are mechanical—they do as they should, but they do so automatically; and his dialogue lacks life and point and individuality. The fact is that Mr. Jefferies is richer in experience than imagination; his materials are good, but his creative faculty is not strong enough to deal with them.

Miss Childar's second novel scarcely shows so great an advance as might have been expected from 'The Future Marquis,' which indicated a good deal of capability, and suggested that with experience the writer would improve very much. 'Daisy Beresford,' unfortunately, makes one think that Miss Childar is not equal to the strain of writing a story in three volumes. It breaks down lamentably, and shows an infirmity of purpose. The introduction of the gipsy stuff was a sad mistake. It leads to the very weak ending of the story, which the author can hardly have had in view at first. At all events, it is to be hoped that she expected to make a better use of it. As the story stands, it can only be supposed that Miss Childar was anxious to display her acquaintance with a few sentences of gipsy language. Several of the characters are cleverly drawn. Two old maiden aunts are very well done, and the heroine is also good. It may still be hoped that Miss Childar will write something much better than either of her two published novels; but she should be on her guard against a tendency to address moral reflections to the reader. Thackeray was

fond of doing so, no doubt, but there is nothing more dangerous for a young writer than to imitate the successful faults of a master.

Mr. Stevenson must suffer from the warmth of the praise of his critics. He has shown that he possesses a discriminating taste—over nice, perhaps, and a trifle fantastical—and a well-balanced sense of humour. It must amuse him to find himself spoken of as probably the first writer of fiction of the day. It is scarcely possible for a judicious critic to speak so enthusiastically. The 'New Arabian Nights' is undoubtedly a clever work, the attractiveness of which is not very easy to explain. The stories are not humorous, nor funny, nor witty, and yet they are amusing; and they have the great merit of holding the reader's attention. They are tantalizing and deceptive. The reader imagines that a point is being led up to, and puzzles himself in vain to guess what it will be; and then, after all, it does not appear, and he is left laughing at himself for having been so absurdly taken in. There is something fascinating in the quaint mixture of realism and extravagance about the people and places. Events which are quite possible are woven together with circumstances which are ridiculously impossible in the gravest manner, so that the reader hardly knows whether the author is slyly making fun of him, or whether the sole object has been to amuse an idle half-hour. The effect is partly produced by the abruptness with which the stories are brought to an end and the irrelevance of a good many of their details. If they are to be viewed as essays in fiction, the proper judgment upon them must undoubtedly be that they are not well constructed, that they are executed with carelessness, and that they show much want of perseverance. But in truth they should be judged less seriously, and it is idle to search for any motive underlying them. Having begun any one of the stories, it would be almost impossible not to read it to the end, and in that respect it may be admitted that they excel most of the fiction of the day. They show a good deal of power of description, but not much insight into character. The style is pleasant, though not always correct. It shows none of the laboured mannerism of Mr. Stevenson's other work. The stories have been likened to Poe's tales, which appears to be an unfortunate comparison. Poe never introduced details which were not as essential in his story as the bits of evidence in a criminal trial, and however improbable they seemed at first sight, they were always made to be parts of a puzzle which ultimately turned out to be minutely and absolutely realistic.

Mr. Harwood relates the adventures of a good boy and a steady man on his way upward from penury to princedom. Bertram Oakley is a jetsam, thrown up by the sea amidst the wreck of the vessel in which his parents had embarked, and kindly tended by the fishermen who had rescued him from drowning. Being a studious lad, with a mind above that of his village playmates, he attracts attention and makes friends; and eventually, after many mishaps hardly less disastrous than the wreck which had made him an orphan, he plants his feet in the path that leads him to fortune. The story is pleasantly told, and it smacks alternately of the romance of Dick Whittington and the more commonplace biography of a model of the "self-helpful" school. Mr. Harwood is strongest when he is telling a straightforward tale, but plays some very shrill notes when he inclines to a fine and fanciful style. Here, for instance, is a word-picture inspired by nothing more remote from the beaten track of existence than a window of a house in Kensington:—

"Just then the victorious sun had pierced, as knowledge breaches the crass ramparts of ignorance, a yawning chasm through the thick mantle of the clinging fog; and through the storied panes of old stained glass of which it was composed there rained down on the pale Tournay carpet a shower of rich tints, ruby here, topaz there, the pure sapphire, the soft turquoise, the tender amethyst, the steady emerald, changing, varying, as the mist without, golden now, changed and flickered in the sunshine."

There is a long distance between rapt eloquence of this kind and such a sentence as, "Bertram's frugal breakfast had been partaken hours ago." The author gives his reader plenty in both veins; but he might do well to consider whether his work would not be improved by eschewing both ambitious verbiage and negligent phraseology. 'The Merchant Prince' is good enough to make the reader wish it had been just a little better.

'A Strange Journey' is less mysterious than its title would induce one to believe. It is certainly strange that Capt. Fitzgerald should have been content that his children should grow up wild in an Irish village while he led an easy life in Egypt in the service of the Khedive; and his scheme, when the revolution breaks out, of going with his son and daughter across the desert in search of "Chinese" Gordon does not seem very hopeful; but in the characters and incidents there is little that is remarkable. The daily life in the wilderness seems to be truthfully described, and the present seems an auspicious time for the publication of anything about Egypt, and that is nearly all that is to be said for the story. It may be noted that the gruff traveller Etheridge and his plucky wife seem drawn from nature, and that the nationality of the leading personages is vindicated by the fate which so nearly befalls the hero on taking possession of his estate.

'The Way Thither' is a very nice book—the adjective is appropriate in all its senses. Subject and style, method and moral, are thoroughly good, and the reader must be hard to please who does not derive pleasure and satisfaction from this admirable story. Life in Ireland, life in France, life in London and in an English county; description, meditation, and dialogue; social gaieties, mental perplexities, religious vagaries—all these are handled by the author in a fresh and skilful manner, decidedly above the average achievement of beginners at the work of fiction. There is courage enough in the treatment of various matters which to ordinary writers would present insuperable difficulties, and, on the whole, the treatment is successful. Little is over done, and even the implied reproach against the Church of Rome in respect of her dealings with converts can scarcely be described as offensive in its tone. If the book has its objects and its morals, these are not pragmatically enforced, whilst the story itself is a pure and delightful romance from beginning to end. 'The Way Thither' may be warmly and unreservedly commended. The author has laid her (?) readers under a great obligation; and if this be her first attempt, and consequently an indication of her natural and half-developed powers, she is certainly fitted to take a distinct place in the domain of English fiction.

GUIDE-BOOKS.

The Peak District of Derbyshire and Neighbouring Counties. By M. J. B. Baddeley. (Dulau & Co.)—We are not at all thankful to Messrs. Dulau & Co. for having published this very full, handy, and comprehensive guide to a part of England where the wandering cad is hardly known, and, except on rare occasions, when Sheffield and Manchester disgorge their thousands, pastoral silence prevails; and where, except in certain popular places, the "bottle and sandwich excursionist" goes not. Still Mr. Baddeley shows a discretion which is rare among compilers of guide-books, and has written a capital handbook for bicyclists, tourists, and amateur tramps. The section maps of certain localities are very serviceable in their way, and the compiler proves himself in all respects a desirable companion, because he has a blessed faculty of holding his tongue when to talk of views and prate of history are unpleasing superfluities.

Handbook to the Cathedral of St. Paul. By G. Phillips Bevan and J. Stainer. (Sonnenschein & Co.)—This is a pocket volume containing general notices of the history of the ancient and existing metropolitan cathedrals. The book might have been compiled from Mr. Longman's useful work, which we reviewed not long ago. It gives special attention to the musical and campanological performances which are proper to the church. In describing the efforts made to complete the decorations of the interior, it was not quite correct to say that Mr. Burges was chosen as architect to carry out the proposals for the decoration of the cupola; and it would have been well to lay some stress on the scheme designed by that architect for the enrichment of other parts of the building, which was not, as a casual reference to the dome on p. 23 might lead us to infer, "after the Byzantine school," but a gorgeous arrangement of coloured marbles encrusted on the walls, of decidedly Renaissance order, and thus better fitted for Wren's ornate architecture than anything Byzantine, a style which it resembled only in the splendour of the colouring proposed. This book is silent about architectural details, except such as are of the most obvious sort.

SCHOOL-BOOKS.

Miscellaneous Sentences for Translation into French. By C. S. Jerram, M.A. (Longmans & Co.)—We do not understand why these exercises on French grammar should have been published as a separate work. It would be far more convenient to have them in the same volume with the accidence and syntax on which they are founded, and there is certainly no lack of French grammars with appropriate exercises. At the same time it must be confessed that these sentences are of a higher order than those usually found in grammars, and better adapted to form the habit of translating idiomatically from one language to the other.

Chambers's Historical Readers.—Book I. *Stories from English History.* Book II. *England to* 1327 A.D. (Chambers.)—In the first of these books, which is intended for Standard III., such passages and stories of English history

XUM

as fall within the range of children's comprehension are told with great simplicity, but in rather too colloquial a style. There is sometimes a want of connexion between the facts through the omission of intermediate matter. Of Mary Queen of Scots it is said: "Elizabeth refused to help her to get back her crown. So Mary was kept a prisoner in England." The connexion between Elizabeth's refusal and Mary's imprisonment is not obvious. Mary's execution, which forms the subject of the lesson, is not well related in the following sentence: "So one morning the head of a grey-haired woman, who was once the beautiful Queen of Scots, was struck off in the hall of Fotheringay Castle." The second book, which treats of the history of England to the death of Edward II., is very superior to the first, both in sufficiency of matter and style of narration. The history of the time before the Conquest occupies two-thirds of the volume, and includes not only all the main events of the period, but an adequate account both of distinguished persons and the manners of the people. The battle of Hastings is told in a lively, effective manner. Columns of spelling are appended to the several lessons, with explanatory notes when needed.

The British School Series: English Grammar. Parts I.–VI. for Standards II.–VII. By T. Morrison, LL.D. (Edinburgh, Gall & Inglis.)—*English Grammar.* For Standards II.–VII. By J. C. Wright. (J. Heywood.)—The Revised Code for the present year has occasioned the publication of these two sets of cheap little books adapted to the several standards. Those prepared by Dr. Morrison are to be recommended as containing just what is needful clearly stated and well arranged. One prominent and valuable feature is the great abundance of carefully graduated exercises, consisting of extracts from standard writers, by which means the young reader's mind is from the first familiarized with good English. Dr. Morrison says, "A verb always implies action"; which is hard to admit without qualification. Not to mention verbs denoting existence or state, what kind of action is implied by the verb in this very sentence? Another questionable statement is that participles "are always joined to some noun like an adjective," which comes strangely just after the conjugation of the verb, where the participle frequently occurs without any noun. The account of the formation of words is generally correct. We must, however, demur to the explanation of the English prefix *for*, which we are told "signifies *completely*; as *for*-give, *for*-swear." The interpretation of these words is unusual, and certainly *forbid* does not mean to bid completely, nor *forget* to get completely. Mr. Wright's books are far inferior in every respect. The phraseology, though for the most part simple, is loose and inaccurate. It is a poor explanation of grammar at the outset, that it "teaches us how to put words together." After defining a noun to be the name of a person or thing, Mr. Wright says, "An adjective is a word used with a noun to describe it," thus confounding the name with what it denotes. His derivation of the word "vowels" from "*vocalis*=voice," says little for his knowledge of Latin.

THE LITERATURE OF COOKERY.

366 *Menus and* 1,200 *Recipes of the Baron Brisse, in French and English.* Translated by Mrs. Matthew Clark. (Sampson Low & Co.)—The Baron Brisse's menus are too well known in the original to need more than a passing notice. To accomplished cooks who are not acquainted with the French language Mrs. Clark's translation will, no doubt, be very welcome; but as the menus contain many dishes not familiar in England, it may be doubted whether the recipes are given with sufficient definiteness for ordinary use in moderate households. In a brief preface Mrs. Clark gives one or two hints as to the mode of procuring materials not in common use in England, which will make many persons wish that she had done more than merely introduce the volume to the public. The menus themselves are given both in French and English—a great advantage to mistresses, who must often find that their servants, though very fair French cooks, are very indifferent French scholars.

Cookery and Housekeeping: a Manual of Domestic Economy for Large and Small Families. By Mrs. Henry Reeve. (Longmans & Co.)—If in the multitude of manuals of cookery and housekeeping there is room for yet another, Mrs. Reeve's book is very well qualified to occupy it. It is plainly written, sensible, and practical, and contains the information for which the inexperienced housewife looks in a very useful and accessible form. The inevitable illustrations are not less valuable than such as are to be found in other works of the kind.

OUR LIBRARY TABLE.

Archbishop Capecelatro's *Life of St. Philip Neri*, of which Messrs. Burns & Oates have published a translation, made by Mr. Pope of the Birmingham Oratory, is too lengthy to find many readers among Protestants; but the book may be recommended to readers outside the pale of the author's Church as the picture of the life of a man who possessed much nobility of character and of an interesting movement, the Roman Reformation, which attained its height in the later part of the sixteenth century. Considering that the writer is an Oratorian, his tone is moderate, though, like most modern Italian writing, his style is too gushing.—The *Life of St. Lewis Bertrand*, by Father Wilberforce, which the same publishers send us, is not written with much literary skill. It is very like, *mutatis mutandis*, many dull lives of Protestant missionaries. The efforts made by the Dominicans to protect the natives of America from oppression were worthy of all honour, and it is a pity Father Wilberforce has not known better how to make his narrative interesting. His excessive credulity is also annoying.

Mr. W. Westall's *Tales and Traditions of Switzerland* (Tinsley Brothers) are for the most part deeply romantic, and one of them, 'Lucky Sam Briggs,' is highly facetious. They are likely to prove suitable to that class of Swiss tourists which does not soar high. To the haunters of the upper regions of the country Mr. Westall's fiction will probably be less interesting than the curious historical facts which he has inserted in his volume. Here is one of them by way of specimen. On one occasion, in Appenzell, "a sentence of death was commuted into a sentence of imprisonment, because a peasant, who had a fine meadow full of grass near the place of execution, represented to the Council that the crowd would trample it down and cause him a heavy loss." Another time a man was condemned to penal servitude for life in a prison at St. Gall, there being no fitting accommodation for him in Appenzell. "But when it was found that the place destined for him had been bespoke, and that the St. Gall people could not take him in, the Great Council reconsidered the case, ordered the man to be beheaded—and beheaded he was."

From Messrs. Macmillan we have received a new edition of that clever novel *Christy Carew;* from Messrs. Ward & Lock a series of handbooks of *Cricket, Rowing, Lawn Tennis,* and *The Bicycle,* extracted, if we mistake not, from a larger work, the first of which is the best; and from Mr. A. Russell Smith an excellent *Catalogue of Rare, Curious, and Valuable Books.*

In the handsome volume recording the *Proceedings of the Third Annual Meeting* of the Library Association, the most interesting papers are the 'Notes on Early Printing in Scotland,' by Mr. Clark, and the 'Biographies of Eminent Edinburgh Librarians,' by Mr. Black, although the latter might have been shortened. There was no need to give several columns on the life of David Hume. The chief incidents of Hume's life are well known; besides, he was by no means an eminent librarian: he was too fond of reading and too lazy to do routine work. There is, by the way, a good paper by Mr. Mullins, of Birmingham, on 'The Librarian and his Work.' The notices of the libraries in the east of Scotland are worth looking at; so is the article by Mr. Mason on Scotch Free Libraries. A very interesting fac-simile of a plate used in Ged's 'Sallust,' the first instance of stereotype, is given in the appendix.

We have on our table *Robert Burns,* by J. Nichol, LL.D. (Edinburgh, Paterson),—*Mary, Queen of Scots: a Study,* by Anchor (New York, Ludwig),—*Eranus,* edited by F. W. Cornish (Kegan Paul),—*Logic for Children,* by A. J. Ellis (Hodgson),—*English Annals,* by A. J. de H. Bushnell (Stanford),—*On Imitative Art, its Principles and Progress,* by T. H. Dyer (Bell),—*The Great Diamonds of the World,* by E. W. Streeter (Bell),—*A Manual on the Preservation of the Larger Fungi and Wild Flowers,* by J. L. English (Epping, Davis),—*Household Boiler Explosions, their Cause and Prevention,* by W. Ingham (Lockwood),—*The Tricyclist's Vade-Mecum,* 1882 (Cordingley),—*Bees, Rabbits, and Pigeons* (Ward & Lock),—*Noble Influence,* by J. Copner (Wyman),—*Elements of Morality,* by Mrs. C. Bray (Longmans),—*A Question,* by G. Ebers (Trübner),—*Three-Cornered Essays,* by a Middle-Aged Englishman (Hogg),—"*Gentleman*" *Hamilton,* by H. Dunbar (Simpkin),—*The Crisis in Ireland,* by S. O'Grady (Dublin, Ponsonby),—*Eau-de-Nil,* by E. C. Hope-Edwardes (Bentley),—*Russians and Germans,* by V. Tissot, translated by S. L. Simeon (Remington),—*The Altus of St. Columba,* edited by John, Marquess of Bute (Blackwood),—*Priest and Poet,* by J. D. Lynch (Dublin, Duffy),—*Monaco Pazzo's Rhymes* (Bogue),—*Paradise Found,* by Lady Frances H. Cecil (Nisbet),—*Half-Hours with the Saints and Servants of God,* by C. Kenny (Burns & Oates),—*The Testimony of Conscience,* by W. Bellars (Kegan Paul),—*The Revisers and the Greek Text of the New Testament* (Macmillan),—*The Holiest Manhood,* by J. Ellerton (Macmillan),—*Etymologisches Wörterbuch der Deutschen-Sprache,* Parts I. and II., by Dr. F. Kluge (Strasbourg, Trübner),—*Eine Geschichte der Relativen Pronomina in der Englischen Sprache,* by P. Noack (Göttingen, Calvör),—*La Constitution de Carthage d'après Aristote et Polybe,* by M. L. Drapeyron (Paris, Delagrave),—*El Método Experimental aplicado al Estudio del Divorcio,* by E. Heriz (Barcelona, Ramirez),—and *Til Statsraadstaburetten,* by J. Norman (Copenhagen, Reitzel). Among New Editions we have *A Short History of England,* by the Rev. B. G. Johns (Lockwood),—*History of the Parishes of Sherburn and Cawood,* by W. Wheater (Longmans),—*History of Ralahine and Co-operative Farming,* by E. T. Craig (Trübner),—*Modern Physical Fatalism and the Doctrine of Evolution,* by T. R. Birks (Macmillan),—*What Science is Saying about Ireland* (Hamilton),—*New South Wales in* 1881, edited by T. Richards (Trübner),—*The Standard Needlework Book,* by H. P. T. (N.S.D.),—*Eternal Purpose,* by W. R. Hart (Lippincott),—*Plain Reasons against Joining the Church of Rome,* by R. F. Littledale (S.P.C.K.),—*Poetical Works of Sir W. Scott, Bart.* (Marcus Ward),—*Best for Her,* by Annie Thomas (Ward & Lock),—*Lays of Ancient Rome,* by Lord Macaulay (Longmans),—*Eugene Aram,* by Sir E. L. Bulwer (Dicks),—and *Oliver Twist,* by C. Dickens (Dicks). Also the following Pamphlets: *The Influence of the Organ in History,* by D. Buck (Reeves),—*The Germ Theory of Disease* (Pitman),—*The Attributes of the so-called "Family Doctor,"* by Dr. R. Fowler (Pardon),—*The Influence of Vivisection on Human Surgery,* by S. Gamgee (Churchill),—*Want,* by A. M. Smith (Ridgway),—and *Gold Mining in India,* by T. H. Thornton (Wilson).

LIST OF NEW BOOKS.

ENGLISH.

Fine Art and Archæology.

TRANSCRIPTS FROM NATURE.

AN ORANGE GROVE (VICTORIA).

THE short sweet purple twilight dreams
Of vanish'd day, of coming night;
And like gold moons in the soft light
Each scented drooping orange gleams
From out the glossy leaves black-green
That make through noon a cool dark screen.

The dusk is silence, save the thrill
That stirs it from cicalas shrill.

A CRYSTAL FOREST.*

THE air is blue and keen and cold,
With snow the roads and fields are white;
But here the forest 's clothed with light
And in a shining sheath enrolled.
Each branch, each twig, each blade of grass,
Seems clad miraculously with glass:

Above the ice-bound streamlet bends
Each frozen fern with crystal ends.

BLACK SWANS ON THE MURRAY LAGOONS.

THE long lagoons lie white and still
Beneath the great round Austral moon;
The sudden dawn will waken soon
With many a delicious thrill:
Between this death and life the cries
Of black swans ring through silent skies.

The slow wash of the sluggish stream
Moves as in sleep some bodeful dream.

*In Canada, Norway, Scotland, and other Northern countries this beautiful winter-transformation can frequently be seen. It is caused by intense frost setting in immediately upon a thaw, thus congealing the damp upon even the tiniest twigs and blades of grass and fern fronds into a sheath of thin transparent crystal. As the sun's power grows the crackling and dripping are incessant, and the change and beauty beyond description.

BREAKING BILLOWS AT SORRENTO, AUSTRALIA.

A SKY of whirling flakes of foam,
A rushing world of dazzling blue:—
One moment, the sky looms in view;
The next, a crash in its curv'd dome,
A tumult indescribable,
And eyes dazed with the miracle.

Here breaks by circling day and night
In thunder the sea's boundless might.

WILLIAM SHARP.

JOHN KEMBLE'S 'PETRARCH.'

30, Torrington Square, Aug. 5, 1882.

THE Rossetti Sale having been alluded to in your columns, perhaps you will permit me to add one more incident to the record—one of the few disappointing incidents which took place. When the books came to be put up, lot 518, a choice copy of Petrarca,—described not quite fully even in the catalogue, for it was printed on vellum or on vellum paper (I am not sure which),—was missing, nor has it since come to light. From family feeling the executor, W. M. Rossetti, had fixed a small reserve price on the volume, and the loss is more than a mere money loss to us. CHRISTINA G. ROSSETTI.

THE ANGLO-SAXON CHRONICLE.

Derby House, Eccles.

WHILE criticism of the Anglo-Saxon Chronicle has been singularly neglected in England in recent years, and popular historians have contented themselves with singing its praises without examining its authority, the venerable document has received some attention in Germany, and quite recently two scholars there, Theopald and Grubitz, have subjected certain aspects of it to searching analysis. The latter author has published an essay on it, entitled 'Kritische Untersuchung ueber die Angelsächsischen Annalen bis zum Jahre 893.' In this tract, which is written with singular insight, he has arrived at the conclusion, which has been reached independently by the author of these letters, that MS. A is not an original contemporary document, but a copy of a comparatively late date made by several scribes (vide *op. cit.*, 6–9). *Inter alia*, he quotes the remarkable fact that the so-called Asser (peudo-Asser, as I have shown in previous letters) copied his narrative, not from a codex like A, but from one like C, which may be tested in the genealogy heading his book, which is to be compared with that contained in the Chronicle in the year 855, and also in the entries under the years 853, 868, 885 (Asser 884), 886, and 887. As the pseudo-Asser was probably composed early in the eleventh century, this is *pro tanto* evidence that Codex C preserves an older text than Codex A.

The question is so important for the true appreciation of the Chronicle as an historical document, which means the appreciation of the very foundation stones of our earlier history, that I must be excused for accumulating proofs of it.

It is quite clear that if any part of A has claims to be considered the mother form of B, C, and D, this can only be the part ending with the year 915 according to the chronology of the three latter MSS., or 918 according to the perverse chronology of A, down to which point the matter in the several MSS. is virtually the same. Here there is a break, and A separates from B, C, and D. This complete gap and fissure in the matter is not marked, however, in A by any change of handwriting. Surely if A had been the original MS. from which B, C, and D were derived, we should have found this first break in the continuity of the matter marked by a corresponding break in the handwriting of the mother MS., but as a matter of fact there is no break at all till 924.

Again, as I have said, the events dated in 917 and 918 in A are respectively dated in 914 and 915 in the other copies as well as in Florence of Worcester, the latter dates being, no doubt, correct. It would assuredly have been impossible for a contemporary annalist to make a mistake of four years in two successive entries in his narrative, and it is quite clear that the mistake is due to a copying scribe, and not to a contemporary annalist. The mistake extends further, however. As is well known, MS. A dates the death of Æthelfled, the lady of the Mercians, in 922, while B, C, and D date it in 919, in this agreeing with Ethelward and with the corrected dates in the 'Annals of Ulster' and the 'Annales Cambriæ' (see 'Mon. Hist. Brit.,' 377, note *b*). It is, in fact, not improbable that the whole of the long paragraphs peculiar to A at this period are wrongly dated. These facts make it almost certain that this part of MS. A was not contemporary, and that the change of writing at the year 924 merely marks the intervention of a new copier.

Let us continue our analysis. In the years preceding 934 the entries in A are entirely different from those in B, C, and D—different in matter as well as form. The entry in the year 933 in A (934 of B, C, and D) is somewhat singular, for A, besides containing the sentence about Athelstane going to Scotland with a fleet in the same phraseology as B, C, and D, and evidently from a common source, adds a statement about the death of Byrnstan, Bishop of Winchester, not contained in any of those MSS., thus adding another proof to the many already cited that A was not the mother MS. of B, C, and D, even in those years where they contain common entries. On passing to 934 in A we find a record not contained in B, C, or D. Thence to 937 all are blank. But with 937 we have a long common entry in the first of the fragments of poetry, and the entries continue the same as in B and C till the end of the second piece of poetry in 958, exclusive of an entry in 951 in A of the death of Ælfheah, Bishop of Winchester, but including more than one prose annal. Therefore about the year 933 or 937 we have clearly a break in the composition, since at those points the divergent copies are again together. If A were an original MS. and not a copy we should assuredly have some break in the writing during one of those years, but nothing of the sort is to be found in it. Again, at the end of the first piece of poetry, while the other copies insert a fresh year and begin a new annal about the baptism of the Dane Anlaf, MS. A, as Mr. Petrie long ago pointed out, makes the latter notice follow the verses uninterruptedly, thus apparently confounding the transactions of different years ('Mon. Hist. Brit.,' 387, note). With the year 962 we again have a series of entries in A not in B, C, and D, and, strangely enough, there is another change of writing in A about this time; but not with the beginning of 962, where it breaks away from B, C, and D, and where there is, therefore, a distinct new departure in the sense, but in the year 963, where there is no such break, and where the change of writing is again a mere proof of change of scribe. The copies continue divergent till the year 971, where the entry of the death of Edmund Atheling, followed in 973 by the last of the inserted poems contained in the earlier codices, is common to A, B, C, and D. Here, then, at 971 we have another break in the composition, but no break in the writing. With the termination of the poem last cited the various copies finally part company, yet at this point also there is no change in the handwriting of A, which continues the same to the year 1001. The accumulation of evidence, therefore, is overwhelming that A is not a contemporary MS., but a late copy—a copy perhaps made for the library at Canterbury after the fire to which I referred in a previous letter, when it is very probable that A first found its way to Canterbury. This sweeps away all the arguments as to the date of the composition of the Chronicle founded on the breaks of the handwriting in this copy. I have recently examined Wheloc's printed text of the Chronicle, which, as Mr. Earle and others have shown, was certainly taken from G, collated by the editor, as

XUM

he tells us, with the Benet MS., *i.e.* MS. A. I have also examined the paper MS. in Trinity College, Dublin. This, as notes at the beginning and end show, was copied out by one William Lambarde. William Lambarde's name heads the MS., and the note at the end is as follows: "finis 9 Aprilis 1564, W. L. propria manu. These annals are extant in Sir Robert Cotton's librarye at the ende of Bede's histerye in ye Saxon tongue." This note and the orthography of the MS. prove indisputably that it was also a copy of G.

Both Wheloc's and Lambarde's copies seem to be faithful, and from a comparison of them with the text of A it is clear that the latter could not have been copied from G, as I suggested in a former letter; for while the spelling of the former to the year 877 is tolerably consistent and almost entirely Mercian, that of the latter is not consistent in the same way, but we have a mixture of forms, apparently pointing to its having been written by a copier who occasionally inserted his own idiosyncrasies. This view is rendered almost certain by another fact, overlooked by all editors of the Chronicle except Mr. Petrie and Mr. Thorpe. G has an entry not found in any other codex. This entry is under the year 969, where we read: "Her forthferde Eadmund Ætheling, his lic lith æt Rames-ige." These few words about his being buried at Ramsey occur only in this MS.; whether it occurred in the original text of the MS. or was a marginal gloss we have no means of verifying, as the MS. has been burnt. This curious entry, so near the termination of this codex, and found only in it, seems to point to the MS. having belonged to the great Abbey of Ramsey, whose situation within the borders of Mercia is also quite consistent with its dialectic forms. Putting one small entry aside, the two codices are identical, except in certain variations in their chronology, in the case of a few verbal forms, and in the absence from G of the formula, so often occurring in A immediately after the date, "Her on dyssum gere." G agrees with A in practically ending in 1001, in omitting the Mercian Chronicle contained in B, C, and D, and in containing the various long passages in the tenth century which are found in A and not in B, C, or D. It agrees with A, and differs from B, C, and D, in omitting the mention of Reading under the year 871, and in speaking of Wimburne and not of Wimborne Minster; in omitting the mention of the sending of the piece of the Cross from Pope Marinus to Alfred and the latter's sending his alms to Rome, which are mentioned in codices B, C, and D under the year 883; and, as Grubitz has noticed, in calling the Mercian king mentioned in 796 Ceolwulf, where B and C call him Cynulf, which was right as we know from charters published by Kemble ('Codex Diplomaticus,' vol. i. numbers 211, 212, and 215). It is curious that D agrees with A in this mistake.

MSS. A and G are, therefore, related in the closest possible manner; but it is clear that neither of them is a copy of the other, and we must postulate that both were copied from a common original, which ended in 1001, and which we may call *y*, as we called the mother MS. of B, C, and D *x*. HENRY H. HOWORTH.

MR. MOZLEY'S 'REMINISCENCES.'

Athenæum Club, Aug. 9, 1882.

As many of the statements in Mr. Mozley's 'Reminiscences' which may reasonably be doubted cannot at this distance of time be disproved, I think it right to give a contradiction on two points from contemporaneous letters.

Mr. Mozley refers to the election to the provostship of Oriel in 1828 in terms which are summed up in his expression "a provost who owed his election to him," *i.e.*, Mr. (now Cardinal) Newman. My late father was, what Mr. Mozley was not, then Fellow of Oriel, and among his papers are letters which show that Dr. Hawkins did not owe his election to Mr. Newman.

In chapter xxxvi. Mr. Mozley refers to the conflict between the provost and tutors of Oriel in 1830 and subsequent years; the details are almost entirely omitted, and the dates are not clearly given; but the statements made, particularly the unfavourable remarks on the provost, are not in accordance with the account I heard from my late father, who was then resident and acted as an intermediary in the dispute—an account which is borne out by letters on the points to which they refer. H. JENKYNS.

THE SUNDERLAND LIBRARY.

THE sale of the fourth portion of the Sunderland Library will commence at the rooms of Messrs. Puttick & Simpson on Monday, November 6th, and it will close on Thursday, November 16th. In its general features this instalment of the great library resembles its predecessors. Among the *editiones principes* are included the following:—Maximus Tyrius, Valerius Maximus, Musæus, Cornelius Nepos, Nonius Marcellus, Oppianus, Origen, Ovid, Panegyrici Veteres, Pausanias, Petrarch, Phædrus, the Epistles of Phalaris, Pindar, Plato, Plautus, the Elder Pliny, Plutarch, Polybius, Pompeius Festus, Pomponius Mela, Ptolemy, and Quintilian. The books printed upon vellum occurring in this portion are:—Valerius Maximus, printed at Mentz by P. Schoeffer in 1471; Ordonnances de l'Ordre de la Toison d'Or, with the arms of the Duke of Burgundy, *sans* notes (about 1511); Petrarca, Sonetti, Canzoni et Trionphi, *edizione prima*, printed by Vind. de Spira at Venice, 1470, and Le Cose Volgari, first Aldine edition, Venet., 1501; Il Petrarca da Dolce e G. Camillo, printed at Venice by G. Giolito, 1558; Picus Mirandola, Commentationes, printed at Bologna by Boned. Hector in 1496, and De Morte Christi, by the same printer in 1497; Plinius, Historia Naturalis, printed by Nic. Jenson in 1472 at Venice; Pontanus, De Bello Neapolitano, printed by P. Summontius at Naples in 1509; Quintilian's Institutions, printed at Rome in 1470; Sabellicus, De Vetustate Aquileiensis Patriæ, printed without date or name. Rare French works abound; the most important of these are:—La Mer des Histoires, printed by P. le Rouge at Paris, 1488; Mézeray's Histoire de France, original edition, large paper; Milles et Amys, Paris, Ant. Verard, *s.a.*; Jan. E. du Monin, Nouvelles Œuvres, Paris, Jean Parant, *s.a.*; Montaigne, Essais, the editions of 1588, 1595, &c.; Musæus, Hero et Leander, translated by C. Marot, Paris, C. l'Angelier, 1541; La Romance de Perceforest; and a valuable series of editions of Rabelais, including the most ancient edition with a date. There are numerous important works relating to America. The rare English books include Milles's Catalogue of Honour, James I.'s copy, 1610; Milton's Poems, Latin and English, original edition, 1645; Salisbury Missal, Paris, 1555; Sir Thos. More's Works, 1557, Sir William Rooper's copy; Sir I. Newton's Works by Horsley; Ochin's Tragœdie or Dialogue by Bishop Ponnet, 1549; O'Flaherty's Ogygia; O'Sullivan, Historia Catholica Iberniæ; Ovid in English, with fine plates by Picart; various works of Rob. Parsons; Leslie's Defence of Queen Mary of Scotland (under the name of Phil. Morgan), 1571, &c. The catalogue, as usual, contains also numerous other Latin, Spanish, Italian, French, and Portuguese works of great rarity, as well as many books with fine bindings, and arms of Anne of Austria, Louis le Dauphin, Jean Grolier, T. Maioli, and others; and rare English and foreign tracts.

EDUCATION IN SAXONY.

A RECENT number (No. 29, July 22nd) of the *Philologische Wochenschrift* reproduces an important missive of the Saxon Education Department calling upon the rectors of the Gymnasia, or grammar schools, to meet and consider the grave dangers which have arisen from the too rapid development of new ideas and the so-called reforms in higher education. The minister considers that the ever-growing criticism of classical studies as unpractical, and the desire to replace them by something more obviously useful, arise from the mismanagement of these studies: first, by over-burdening the pupils; secondly, by over-specializing the instruction. It is noted that with the rapid increase in numbers of the Gymnasia, and the necessary employment of many young and inexperienced teachers, the home tasks and preparation expected from children are such as to overburden their brains, and leave no time for wholesome exercise or recreation. This is the case not only in Saxony, but all over Germany, where the pernicious law which shortens military service to those who successfully pass an examination is in force. Every stupid boy is killing himself that he may escape the three years' service as a private (or whatever the amount is).

The manifesto does not, however, touch on the evil of over-multiplying *subjects*, which in England is no doubt more prevalent and poisonous than the over-multiplying of the hours of work; for even where the former does not, as a natural result, produce the latter, it does great and irreparable mischief. I need only point to the two hours a week in French or German at many schools, which fatigue the boy without any return save that of deceiving his parents, and, if he is very silly, even himself.

The second evil noted is the over-specializing of classical teaching, especially in the direction of theoretical syntax. The researches into the constructions of special authors, and the speculations on the logical use of particles, which have so deeply infected the modern grammars, encourage teachers of what they call at Cambridge "pure classics" (?) to set exercises which afford a mere series of syntactical problems, and no practice in turning the natural idioms of one tongue into those of another. The minute of the minister insists that no learning off by heart of syntactical rules will ever teach a pupil the free and actual handling of a foreign tongue. The present school is described as teaching "an abstract and subtle *dogmatik*," which destroys all the pupil's enjoyment in the great literature of the past.

But while the German state critic fears that each section of classical study may be driven too far by the specialists, and so rendered too minute and various for any ordinary pupil's comprehension, the danger of history or archæology being neglected does not strike him as pressing. In our schools we must rather watch that the exclusive teaching of grammar and composition does not extrude altogether the human and practical, nay even the æsthetic, side of classics; for we have frequent specimens of men who are formally elegant scholars, and who shudder at a false tense or a false quantity, but are at the same time mere children in questions of history or literary criticism, and borrow their opinions from the nearest authority.

The whole document is of great importance, and the meeting by the rectors to discuss it will no doubt be of the highest interest.

J. P. MAHAFFY.

MILTON'S BIBLE.

A BRISTOL bookseller recently catalogued a Bible which is assumed to have belonged to John Milton. It is a thick, rough calf quarto volume, being the Royal Version, Cambridge, 1637, and includes the Apocrypha. On the margin of the page containing the fourteenth chapter of 1 Maccabees is what appears to be an inscription of seventeenth century date: "Mr. Hartlibe to Mr. Milton sendeth the 12 booke of the Greeciane volumes, & is obliged to hime. Oct. the 17. 1640. London." Hartlibe's friendship with the poet is well known, the 'Tractate of Education,' 1644, being addressed to Master Samuel Hartlibe. On the opposite margin of

the same page, but in a different handwriting, and apparently that of the great poet, is the following :—

When that day of Death shall come,
then shall nightly shades prevaile—
soone shall Love and Music faile—
soone ye fresh turfes tender Blade
shall florish ore my sleeping shade.
J. Miltonius
M.A. C. Coll.

Under these lines is a pen-and-ink outline portrait in profile, and below is written "Myself, 1640."

On the margin of the opening page of 2 Maccabees is the following MS. note, beginning opposite the eighteenth verse: "London—perhaps ye reason why the Porsians worshipe fire to this day, 1639"; this inference being drawn from the purification of the Temple, as explained in that verse, being conjoined with a command to keep the feast of tabernacles "and of the fire."

On the title of the New Testament is "Johne Miltone, 16. A.M. 40."

This Bible in 1658 belonged to "Jane Bealby," in 1662 to "Wm. Lumley," in 1716 to "Dr. Todd," in 1744 to (General) "Loftice Todd," and then passed to the family of Gainford of Gainford. Lewis Gainford has written an account of the family on one of the fly-leaves, and sketched their arms. He joined the "True Christians" or Quakers in 1775, and died insane. A former owner has had the volume lettered on the back "Holy Bible, e Libris Johannis Milton."

THE RUSSIAN 'UNCLE TOM'S CABIN.'

3, Rue Rollin, Paris.

Several biographies attribute to me 'The Russian Uncle Tom,' in English and German. The French manuscript was bought by Messrs. Nelson & Sons, of Edinburgh, and was lost by their reader! They now say that after thirty years they have no damages to offer me. As the case is of interest to all authors, I would like to know your opinion. Mrs. Stowe gained 17,000*l*. by her 'Uncle Tom,' and thirty years ago the emancipation of the serfs was a most important question for Russia. My 'Russia under Nicholas I.' has had six translations and four *contrefactions*. An author's heirs may lose all property in his work some years after his death, but the greater the delay of its publication, the greater the damage caused to him. Fame and reputation are certainly difficult to be gained, but still where there is a will there is a way.

Very few of us make more than one copy of their writings, and it has never been my habit to do more. Ivan Golovin.

Literary Gossip.

Some verses have appeared in *London Society* for August which are signed "Thomas Hardy," and the newspapers have jumped to the conclusion that they are from the pen of the author of 'Far from the Madding Crowd.' We are in a position to state that this is a mistake, and that the well-known novelist is not the writer of the poem in question.

The *Standard* is represented at Alexandria by Capt. Cameron, who did good service for that journal in Afghanistan and Zululand; the *Daily News* by Mr. Skinner, a veteran war correspondent; while Mr. Drew Gay has ceased to represent the *Daily Telegraph*, and will be succeeded by Mr. L. Wingfield. Mr. Le Sage, of the last-named journal's editorial staff, is to proceed to Egypt in order to edit the news sent home.

Mr. Charles Marvin, who, by the way, was present at the burial of Skobeleff at Spasskoe Selo, in the province of Riazan, has returned to England, and is now preparing to bring out his history of Skobeleff's siege of Geok Tepe, on which he has been engaged for some months past. His volume on 'The Russian Advance towards India' has attracted attention in Russia owing to its description of the home surroundings and opinions of General Skobeleff. Translated successively in the *Novoe Vremya* and *Moscow Gazette*, his account of his conversation with the general was afterwards inserted in the special number of the Panslavist journal *Russ* devoted to the obituary of the hero. From this it was transferred to two popular pamphlet biographies of Skobeleff, which have since had a large sale throughout the empire.

Prof. Minto is preparing an article on John Stuart Mill for the *Encyclopædia Britannica*, which will contain some particulars hitherto unpublished concerning Mill's connexion with the *Reader* and his life at Avignon.

We have received a post-card from Mr. Henry Lansdell, the author of 'Through Siberia,' dated "On the Kama, near Perm, July 28th, 1882," in which he says that all has gone well with him so far on his journey towards Central Asia, and that the Russian Government has given him "every possible facility that black and white can convey." We may take this opportunity of observing how very superior the foreign post-cards are to the flimsy continental post-cards supplied by our own Post Office.

Messrs. Bickers & Son have in the press a new and revised edition of Sir Nathaniel Wraxall's 'Memoirs,' edited by Mr. H. B. Wheatley, F.S.A., from Sir N. Wraxall's own corrected copy, and from a copy annotated by the late Dr. Doran, in which are a large number of original MS. notes by Mrs. Piozzi (Dr. Johnson's Mrs. Thrale). The edition is to contain the posthumous memoirs, and will be in five volumes, uniform with Mr. Mynors Bright's edition of Pepys's 'Diary' by the same publishers.

Mr. J. Riddel, of 2, Gresham Buildings, Basinghall Street, E.C., is collecting materials for a life of his father-in-law, the late Mr. Edward Hodges Baily, R.A., F.R.S., and will be obliged for any new facts and material that can be supplied to him.

The University of Würzburg has, upon the occasion of the celebration of its tercentenary, conferred upon Mr. Fawcett the honorary degree of Doctor in Political Economy. A similar degree has also been conferred upon M. Émile de Laveleye.

Of the hundred subscribers at six pounds each required before the Hellenic Society can take in hand their contemplated reproduction in fac-simile of the Laurentian MS. of Sophocles, forty-three have already been found. The critical preface to be contributed by Prof. Jebb, and the palæographical notes promised by Mr. E. Maunde Thompson, ought to make the work one of interest and value. Intending subscribers, whether libraries or individuals, are requested to forward their names as soon as possible to Mr. George Macmillan, 29, Bedford Street, Covent Garden.

Mr. Saintsbury's 'Short History of French Literature' will be published next month by the Clarendon Press. The author aims at presenting a complete but succinct history, with full biographical and historical details, of the whole course of French literature, compiled from an examination of that literature itself, and not merely from previous accounts of it. Illustrative specimens are given only in book i., which deals with mediæval literature; the illustration by extract of the later literature, from Villon to Hugo, being reserved for a separate volume, which is now in preparation.

Mr. John Heywood, of Manchester, has in preparation, to be published by subscription, 'Historic Sites of Lancashire and Cheshire: a Wayfarer's Notes on the Palatine Counties,' by Mr. James Croston, F.S.A., which is intended to form a companion volume to Mr. Croston's 'Nooks and Corners of Lancashire and Cheshire,' which is now out of print. The forthcoming book will form a crown quarto volume of 450 to 500 pages, and will contain numerous woodcut illustrations.

Dr. Georg Bühler, of Vienna, will translate the Laws of Manu for the series of "Sacred Books of the East," edited by Prof. Max Müller.

The United States Congress, just before its adjournment, confirmed the purchase of the Franklin papers on behalf of the nation from Mr. Henry Stevens.

M. Maspero is expected in Paris. He has left Boulaq.

Next week we hope to publish an interesting letter by Mr. Blades on the newly discovered fragment of Caxton's 'Four Sons of Aymon.'

Mr. Marvin has sent us a letter regarding our review of his new work, 'The Russian Advance towards India,' the only important passage in which is :—

"The reviewer ridicules my charge against the Royal Geographical Society of indifference to Central Asian research, and speaks of the 'vast stores of information' derivable from the papers of Rawlinson, Yule, &c., and from the recent lectures of O'Donovan, Stewart, &c. But here again he ignores that I am dealing with the present, not with the past. The 'vast stores' referred to belong to a decade ago, when the mania for African and Arctic research, to the detriment of other fields of inquiry more important to the interests of our empire, had not developed itself. That the Society did its duty ten years ago or five years ago is no proof that it is doing its duty now. To speak of the Society as encouraging and promoting Central Asian research simply by allowing O'Donovan and Stewart, at their own trouble and expense, to read two lectures to the public, is to me an argument too ridiculous to be dealt with."

We have no hesitation in describing Mr. Marvin's charge as nonsense. There are various ways adopted by the Society of promoting geographical knowledge: by the institution of lectures, invitations to travellers to make known their experiences, grants of rewards to successful explorers, and by publication of researches, &c. It is simply impossible that Mr. Marvin can have taken the trouble to see how much encouragement of this sort has been vouchsafed in regard to Central Asian geography during the period he mentions, or he would never try to uphold such a silly accusation.

XUM

SCIENCE

Talks about Science. By the late Thomas Dunman. With a Biographical Sketch by Charles Welsh. (Griffith & Farran.)—A melancholy interest surrounds this little work. At the time of the author's death an obituary notice appeared in this journal, and a detailed sketch of his career is prefixed to the volume before us. Starting in life with the disadvantage of a very limited education, he worked his way into the scientific world by sheer industry and force of character, and ultimately made his mark as a lecturer. To present a scientific topic to a general audience in accurate yet attractive form is by no means an easy matter, and really good popular lecturers are so scarce that Mr. Dunman's death, at the early age of thirty-two, is a loss which can ill be borne. The thirteen lectures which are collected in this volume deal with various branches of zoology and geology, of physics and physiology, and thus offer sufficient evidence of the author's versatility. They have no pretence either to depth of thought or to originality of treatment; neither is there any attempt at rhetorical display. They are in fact precisely what their title indicates—'Talks about Science'; and as such they undoubtedly offer agreeable and instructive reading which will prove serviceable to those who, not caring to force their way into the temple of science, are yet anxious to get an occasional glimpse into its vestibule.

Occasional Papers of the Royal Engineer Institute. Vol. VI. 1881. (Stanford.)—In this annual collection of occasional papers are included two prize essays for which gold medals have been awarded—the last of their kind, as it has been decided (wisely we think) to discontinue the offer of prizes for the future. The last essay of all, for 1881, by Lieut. R. da Costa Porter, R.E., although ostensibly 'On Warfare with Uncivilized Races,' is in reality a workmanlike summary of the strategy and tactics employed by our forces who were engaged in the late Zulu campaign, in which the author comes to the conclusion, amongst other matters, that the *continuous* square formation adopted at Ulundi was faulty, and his highly pertinent arguments are urged with as much intelligence as modesty. The more important paper, however, is that of Lieut.-Col. R. Harrison, R.E., which has for the last five years been suppressed, apparently because it contained unpalatable strictures likely to wound the susceptibilities of the officials at the Horse Guards. Even as now published, the omission of offending paragraphs is marked by mysterious asterisks. A certain amount of reticence is permissible in a department, but such diplomacy is surely misplaced in a corps like the Royal Engineers. It has been whispered as an open secret at Chatham that one reason why the prizes have been discontinued was the *exposé* of confidential details in one of the papers submitted to the committee; but it is difficult for outsiders to appreciate in what manner Lieut.-Col. Harrison's able compendium of Engineer duties can offend, unless it is his temerity in claiming an ampler recognition of the officer commanding R.E. on the field. The suggestions for the better organization of the corps are practical and valuable in the extreme. Of the minor contributions, the most interesting is the account of the geographical operations in Afghanistan by General Walker, R.E., the Surveyor-General of India; and there is also a readable memoir on the boundary line between the Orange Free State and Griqualand West, which supplies full information about details not usually mentioned in ordinary works on surveying. This is by Major Charles Warren, so well known for his work in connexion with the Palestine Exploration Fund; and he has well earned his brevet lieutenant-colonelcy and C.M.G. in South Africa. Lieut. Cotter boldly criticizes the essays (of 1879) issued by the sister institution of the artillerymen at Woolwich; and Lieut. Codd also gives significant notes about the artillery defence of a fortress. Major Tovey would have added to the value of his remarks 'On Modern Rifles' had he included in his tables of comparative data of the various military small arms those of America. He gives ample data of the English Snider-Enfield and Martini-Henry, of the Austrian converted Wanzl and Werndl, of the German Mauser and the French Gras, of the Russian Krnka and Berdan II., of the Italian Vetterli, the Spanish Remington, and the Swiss Vetterli repeater; but no mention is made of the American Springfield. This omission is the more remarkable since in respect of velocity the Martini-Henry has been lately beaten by the Springfield, which, with a charge of seventy grains and a bullet of 405 grains, gave an average velocity of 1,367 f.s.; the trials for penetration showed the superiority of the greater sectional density of our bullets over the American ones. An official report by Capt. Larminie, R.E., demolishes that romantic imposture, the once famous and so-called impregnable fortress of Ghazni: "It consists of a ruined citadel, broken and useless parapets, cracked and tumble-down towers, crumbling curtain walls, and a silted-up ditch." Besides the above, there are translations of foreign professional articles; and altogether this year's volume of the R.E. Institute forms an important addition to current military bibliography.

Mr. Conder has made an interesting report on the *Comparative Cost of Transport by Railway and by Canal* (Spottiswoode). He justly lays stress on the economy of water carriage, and points to the efforts making in France to improve the canal system of that country. Why, however, does he style the well-known economist M. Le Roy de Beaulieu?

ASTRONOMICAL NOTES.

Messrs. Crosby Lockwood & Co. have in the press a third edition of the late Rev. R. Main's 'Rudimentary Astronomy,' revised and edited by Mr. Lynn.

Several comets have been computed to revolve round the sun in periods of a little more than seventy years. But of these the famous comet known as Halley's is the only one which has actually been observed at more than one return. Great interest, however, is now felt in another, because a second appearance is expected to take place in the course of either this or next year. The uncertainty of the exact length of the period renders the precise time of return to perihelion very doubtful, but MM. Schulhof and Bossert, of Paris, have recently published an approximate ephemeris to assist astronomers in searching for it during the coming autumn. The comet in question was first discovered by Pons at Marseilles on July 20th, 1812, and it was followed for about ten weeks. Encke was the first to show that it moved in an elliptic orbit, and calculated that its period amounted to about 70·68 years. The new discussion of MM. Schulhof and Bossert increases this to about 71·7 years; but in consequence of perturbations they think it most probable that another perihelion passage will take place towards the middle of next year. As, however, this is somewhat uncertain, it is desirable to commence a search at once. The ephemeris is adapted to several hypotheses as to the length of period.

Another small planet, No. 226, was discovered by Dr. J. Palisa at Vienna on July 19th, being the sixth planetary discovery of the present year, all by the same astronomer.

Dr. Julius Schmidt succeeded in observing Wells's comet at Athens on July 4th, 5th, and 6th, about a quarter before nine o'clock local time, and, notwithstanding the twilight and the position of the comet near the horizon, he found it easily visible. In the *Astronomische Nachrichten* (No. 2447) he describes the difficulty he experienced in observing the comet on the day of perihelion passage (June 10th), making the lower part of one of the shutters of the comet cover the upper part of the aperture of the telescope, so as to shade off as much as possible of the sun's rays, the comet being apparently just below the sun at less than 3° distance. This was about half-past three o'clock in the afternoon. Mr. Maunder saw the comet with the large equatorial at Greenwich at about eight o'clock on the morning of the same day; but it was lost in haze before any measures of its position could be obtained.

The *Berliner Astronomisches Jahrbuch* for 1884 has just been published under the editorship of Prof. Tietjen. The ephemerides of the small planets are for 1882, and were published in advance early this year. An appendix by Prof. Auwers contains an elaborate comparison of the fundamental star-places in the *Jahrbuch* with those given in the *Nautical Almanac*, the *Connaissance des Temps*, and the American *Ephemeris*.

All persons who are ever engaged in astronomical inquiries and investigations appreciate the great value of the Repertory of Astronomical Constants given by M. Houzeau, Director of the Royal Observatory at Brussels, in the first volume (new series) of the *Annales* of that observatory. A new edition, enlarged, improved, and extended, has just been published in the form of a separate book, under the title of 'Vade-Mecum de l'Astronome.' It has been prepared with great care, completed up to 1881, and its value to astronomical literature can scarcely be over-estimated.

We have received the *Memoirs* of the Italian Spectroscopical Society for June. Prof. Riccò has an important paper on the heliographical distribution of the solar spots and faculæ during the year 1881. A communication from Prof. Schiaparelli on some topographical observations of the planet Mars at the opposition of 1881–2, accompanied by a drawing, is reprinted from the *Transactions* of the Royal Lincean Academy. The number concludes with an interesting letter to the editor, Prof. Tacchini, from Dr. Bernard Hasselberg, of Pulkowa, on the spectrum of Wells's comet (*a*, 1882), and the remarkable appearance, about the beginning of June (to which attention has already been called by others), of a strong yellow band in its spectrum corresponding to the D or sodium band in the solar spectrum. Dr. Hasselberg remarks that although the mere appearance of the band may be explained by the increase of temperature in the cometary mass whilst approaching perihelion, this would not account for the simultaneous enfeeblement of the ordinary spectrum of the carburets of hydrogen. His explanation is that the phenomena observed are chiefly due to electric discharges in the interior of the comet's mass, brought into action under the solar influence, the evaporation of the sodium contained in the comet by the sun's heat causing the appearance at the same time of the yellow or sodium band in the spectrum.

A NEW DYNAMO-ELECTRIC MACHINE.

Notwithstanding the increase in the number of dynamo-electric machines, it is doubtful how far each new one embodies a substantial improvement. Nearly all of them are variations on the machines of Gramme and Siemens. It is possible that an apparently trifling change in the disposition of parts may constitute a real discovery. The last and best form of screw propeller or of paddle-wheel bears a close resemblance to the earliest. Yet a comparatively slight change in the blades has made the screw propellers in common use far more efficient than those first introduced, while feathering floats have so far revolutionized the paddle-wheel as to render it twice as effective as the wheels first employed for the propulsion of steamers. In like manner some readjustment of parts may render a

dynamo-electric machine practically a new and far more useful invention.

The dynamo-electric machine to which we now call attention is in principle a different one from any other yet produced. It is called the Elphinstone-Vincent, after its joint patentees, Lord Elphinstone and Mr. C. W. Vincent. Without the aid of diagrams it is difficult to give a clear notion of the machine; still we may furnish a general impression of its peculiarities. These were set forth in two papers communicated to the Royal Society in 1879 and 1880. In these papers the inventors of this machine explained the result of their investigations as to the best form of a dynamo-electric machine fitted for producing large quantities of electric currents of high intensity. As the result of exhaustive experiments they found that the nearer the approach to a closed magnetic circuit, the stronger is the field of force and the longer the masses of iron constituting the circuit retain their magnetism. By giving practical application to these principles a dynamo-electric machine has been constructed which, in the opinion of the inventors, possesses the following advantages over any other:—Firstly, it is less costly in construction; secondly, it absorbs less horse power in proportion to the current produced; thirdly, it is perfectly safe and remains cool whilst in operation; fourthly, the electro-motive force is sufficiently high to work six arc lamps in series, while the current can be transmitted to very great distances; fifthly, a very small portion of the current suffices to excite the magnets, which, as they increase in magnetic force with use, are kept charged with a trifling absorption of the power required to actuate the machine; sixthly, this machine can be approached with safety and its currents manipulated without loss, no matter how large it may be; lastly, it can furnish motive power and supply arc and incandescent lamps simultaneously. The Elphinstone-Vincent dynamo-electric machine can be made of any size by merely multiplying its several parts, so that a whole town could not only be lighted from one machine, but also supplied with motive power. Should all these anticipations be fulfilled, this machine will largely contribute to solve the problem of electric lighting. Experiments with it on a large scale are now going on.

GEOGRAPHICAL NOTES.

The number of the *Proceedings* of the Royal Geographical Society for this month contains a noteworthy article descriptive of M. P. M. Lessar's recent journey and survey of the route from Askabad to Sarakhs, an abstract of which, derived from the Russian *Invalid*, has already appeared in the last Blue-Book on Central Asia. M. Lessar in this preliminary survey evidently contemplates the prolongation of the trans-Caspian railway in this direction, for he frequently refers to it and states that the ground to be traversed is almost uniformly level, the only irregularities which would necessitate the construction of earthworks being found in the form of sandhills between Annau and Gawars. The particulars regarding Sarakhs are interesting. M. Lessar describes it as a large fortress garrisoned by 700 Persian infantry, but the garrison is so useless that a caravan has not unfrequently been pillaged by Tekkes within sight of the walls, and the six antiquated guns in the fort have never been discharged since its erection. The channel of the Tejend river, which flows past the walls, is dry most of the year, water only making its appearance after unusually heavy rains, or when the snow melts in the mountains. Nevertheless Sarakhs is well supplied with water from wells 20 ft. deep inside the fortress, and from a canal derived from a distant and perennially flowing part of the Tejend. Water is also found at the same depth (20 ft.) by digging to the north of Sarakhs, so, as M. Lessar significantly remarks, supposing it were necessary in making the railroad to circumvent the Persian fortress, want of water would be no obstacle. The levels taken for the railway demonstrate that there is no general rise from the Caspian eastward, thus M. Lessar contends that it was impossible ever for the Murghab and Tejend to flow into the Oxus, and that these rivers had an independent course to the Caspian when the sea was nearer to them. This, however, we think, is what most geographers contend, that the two rivers combined to form the ancient Ochus, which discharged its waters into the Caspian about the latitude of Balkhan Bay. M. Lessar's paper is very valuable though, for the route he has surveyed proves to offer physical advantages for the projected railroad which are too favourable to be overlooked.

Another contribution calling for notice in the same number is Sir Richard Temple's graphic and interesting disquisition on the cradle of the Mahratta empire—one of the most successful efforts we have seen to depict Oriental history in a style acceptable and intelligible to English readers.

The committee appointed by the French Government to examine into M. Roudaire's scheme of flooding a portion of the Sahara has reported adversely. Credit is given to M. Roudaire for his persevering efforts, but it is considered that the cost of carrying out his plans will be quite out of proportion to the advantages to be gained.

A committee, of which Capt. Baratieri is president, has been formed to promote the scheme of Signor Carlo Cesare Benzi and Lieut. U. Grifoni, who propose to explore Eastern Equatorial Africa. Signor C. Gregori intends to devote his energies to a thorough examination of the valley of the Hawash, and the African Society of Milan is about to despatch an agent to Harar.

Portugal is generous to her African explorers. Brito Capello, Serpa Pinto, and R. Ivens have been confirmed in the brevet rank conferred upon them in 1877, they are dispensed from all further services in the colonies, and in addition to their ordinary pay have been granted annuities of 120*l.* each.

An International Alpine Congress opened at Vienna on Friday. Its sittings continue till Tuesday.

A clear plan of Alexandria and its harbour has been sent to us by Mr. Wyld. It does not go much further east than the Rosetta Gate, so that it does not include Ramleh. Mr. Wyld has also sent us a map of the Isthmus of Suez.

"Philips' Handy Atlas of the Counties of Scotland, constructed by J. Bartholomew," forms a companion volume to the atlases of England, Wales, and Ireland published by the same firm. In addition to separate maps of each county, some of them unfortunately on a very small scale, there are enlarged maps of the environs of Edinburgh and Glasgow, extracted from Mr. Bartholomew's fine map of all Scotland. The maps are based on the Ordnance Survey, from which all the altitudes are taken; the parishes are distinctly coloured; and there is a consulting index.

Science Gossip.

Prof. Esmarch, the celebrated surgeon, has published a lecture which he delivered some months ago before the Physiological Society of Kiel on the treatment of President Garfield's wound. The wound he maintains was not mortal, and the injury to the vertebra could have been healed. The death of the patient was mainly caused by the loose way in which the antiseptic treatment was applied. A great mistake, too, was made in searching for the bullet. Had the American surgeons imitated Von Langenbeck's example, who did not attempt to extract any of the pellets when the German Emperor was wounded, and had the antiseptic treatment been rigorously applied, the President might, the professor maintains, be alive now.

The City and Guilds of London Institute for the Advancement of Technical Education has published its report. The fourth examination in technology was held on May 24th. The new regulations, in accordance with which this examination was conducted, differed from those of the previous year, but principally in the increased number of subjects of examination; in the substitution of two for three grades; in the permission accorded to candidates to be re-examined in the same grade for a certificate of a higher class; and in the reversion to the rule of examining candidates in one subject only. 1,972 candidates presented themselves at 147 centres in 37 subjects, of whom 1,222 passed. The provincial centres which this year sent up the largest number of successful candidates were Bolton with 124, Glasgow with 109, Manchester with 71, Bradford with 62, and Oldham with 50.

The *Times* obituary of Monday last contains the name of Prof. Leith Adams, F.R.S. He was originally a surgeon in the army. He was appointed Professor of Zoology in the Dublin College of Science about nine years ago, and obtained the Chair of Natural History at Cork in 1878. His best known works were 'Wanderings of a Naturalist in India' and 'Notes of a Naturalist in the Nile Valley and Malta.'

An extensive manuscript on the brain by Swedenborg has been translated into English by Prof. Tafel, and is now in course of publication, after lying in the library of the Royal Academy of Sciences of Stockholm for 140 years. It contains a copious summary of the literature of the brain down to Swedenborg's time, and then his analysis and theory of the facts. To this Prof. Tafel has added an exhaustive account of the science of the brain to this day, and in extensive notes has compared modern science with Swedenborg's views. The whole work will consist of four volumes and of about three thousand pages.

Prof. Emil du Bois-Reymond, Professor of Physiology and Director of the Physiological Institute in the University of Berlin, has been elected Rector of the University. He enters upon his duties in the middle of October.

M. Bouley has disproved the common prejudice that frozen meat putrefies immediately after thawing.

Herren Fischer and Rudolph have described to the Berlin Chemical Society a new class of colouring matters. Acetaniline acted on by chloride of lime at a temperature of 270° cent. produces a beautiful yellow, to which the name of flavaniline is given. On silk fibres the colour is especially brilliant, with a remarkable green fluorescence.

Mr. Clement L. Wragge and the Scottish Meteorological Society solicit the assistance of all visitors to Ben Nevis in endeavouring to prevent damage to the meteorological instruments on the mountain. On the 23rd of July wanton mischief was done to the thermometers at the Red Burn Crossing, about 2,700 feet above the sea level. We trust Mr. Wragge's appeal may prevent the wilful repetition of such an act.

M. Salet, through M. Wurtz, brought before the Académie des Sciences on July 24th a most interesting method for exhibiting the amplitude of telephonic vibrations. On the iron plate of a Bell telephone two small glass discs were fixed giving Newton's rings. On speaking loudly to the telephone at five or six miles distance the rings lose distinctness and disappear. To estimate the displacement by a continuous sound, a disc with slits was rotated before the instrument; with a certain velocity the rings return, and on then blowing through the disc the sound proves to be in unison with that of the telephone.

M. Demarçay at the same Séance communicated some results on the vaporization of metals *in vacuo*. This was effected at comparatively

low temperatures. The volatility of cadmium was proved at 160° C.; that of zinc at 184°; of antimony and bismuth at 292°; and of tin at 360° C.

M. F. Carré, in a note published in the *Comptes Rendus* of July 17th, entitled 'Sur les Conditions Industrielles d'une Application du Froid à la Destruction des Germes de Parasites dans les Viandes destinées à l'Alimentation,' says that the importance of giving raw meat to invalids is so well established as to render it important that the absence of trichinæ should be secured. It becomes, therefore, important to ascertain the economic conditions of availing ourselves of the influence of cold, by which the trichinæ are certainly killed. The ammonia machine of Carré in treating 1,000 kilos of meat costs 8 francs, or rather less than 0·01 franc per kilo.

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Lectures on Architecture delivered at the Royal Academy. By E. M. Barry, R.A. Edited by A. Barry, D.D. Illustrated. (Murray.)

Enough and more than enough discourses have been delivered at the Academy within the last decade, and it would have been well if fewer of them had been published. There have been good, bad, and indifferent lectures, and we could have spared most of them. The best issued during the last few years are Scott's, the worst we forbear to name. Mr. Barry's lectures promote repose. They do not irritate or challenge attention, like the discourses of James Barry, Opie, and Fuseli; and yet we have been able to read with pleasure considerable portions of them, which could not be said for Howard's, Phillips's, or Smirke's. Of Soane's we know nothing; but they are said to be elegant and instructive.

Unlike Reynolds, Fuseli, Flaxman, Leslie, Scott, Cockerell, and Street, E. M. Barry had little power of expression. His paragraphs, notwithstanding the attention bestowed on them by his brother and editor, are by no means so well arranged as they might have been; his sentences are sometimes slovenly, and their terms confused; therefore, despite the author's sincerity and accomplishments, many parts of this book are hard to read. Lectures on art, if they have any solidity, are rarely otherwise than hard reading. E. M. Barry lacked the power of putting before an audience his meaning in an attractive fashion. As an essayist or critic he would hardly have achieved the success he attained as an architect. Still it is unfortunate that these discourses were compiled and delivered after the author had been broken in spirit. The upshot of his contest with the First Commissioner of Works was nearly as ruinous to the architect as a similar dispute had been to Alfred Stevens, the sculptor of the Wellington Monument. Faithful, accomplished, and unfortunate, Edward Barry was wrecked by his disaster, or these lectures might have shown greater power and more life.

The accomplishments, the common sense, and the disappointments of Edward Barry are apparent in every lecture of this series. He who built the Endell Street Schools before he was thirty, in a style in which he had not been trained, must have been a remarkable man. He was but twenty-seven when he designed the Midland Institute at Birmingham and the Grammar School at Leeds. He built Covent Garden Theatre before he had completed his eight-and-twentieth year, and then met with his first disappointment, being thwarted in respect to the external design. Nevertheless he went on vigorously, and London received, as the *Athenæum* stated at the time, the Eleanor Cross at Charing Cross with surprise and thankfulness. There is no harm now in referring to the glee with which he replied to our own inquiries about the handsome *grille* before the hotel: "How did you persuade them (the railway company) to erect such a thing?" "Well," he said, "I hardly know myself; but I hope it will prevent them sticking bills all over the front of the hotel." All went well till 1867, when came a confusion of awards, cross-awards, and hap-hazard arrangements about the Law Courts, National Gallery, and Natural History Museum. The upshot of all this was that Edward Barry, who was first in two great competitions, got the least employment and but little honour. Mr. Ayrton next appeared on the scene, and Barry endured slight after slight, disappointment after disappointment. Ill fortune pursued him so closely in all his public commissions that it is difficult to believe that all the facts are known. His troubles, his brother in the introductory memoir before us says, told severely on a naturally sensitive disposition. He described himself as "worn out before his time." We trace the effects of this state of things even in the original conception of these discourses. His reverses destroyed the elasticity of his mind. He became willing to accept a popular, that is easy-going, if not superficial, view of his task, and generalized the opinions and conclusions he had previously arrived at. Occasionally, too, these lectures show lack of power to grasp the whole bearings of his subjects, and discursiveness.

On the other hand, as a series of essays on things architectural in general, dealing with many matters of high public interest from the architect's point of view, there is much that is good in this book and suited to tyros such as Barry assumed the students of the Royal Academy to be. He erred in this assumption, and erred still more in lecturing down to this imaginary level, instead of endeavouring to raise his audience. He was even indifferent to historical facts; for example, when speaking of the development of round-arched Gothic architecture in this country, he (p. 191) talks of the Normans "being cut off from continental associations" as among the causes of the special character of English design. Now and then, and doubtless intentionally, he states large principles incidentally, and conveys instruction without seeming to dictate. Thus, while speaking of corbels, he remarks:—

"The mediæval architects made their corbels, as indeed they made all their construction, beautiful, as we may see, for instance, at Ely; but to be beautiful architecturally there must be good reason for their use."

He proceeds to illustrate the same great principle in an unobtrusive manner by reference to the changes effected in the Corinthian capital by the Romans.

Had he taken closer views of some of his many subjects Barry might have added greatly to the value of his lectures. As it is, we turn with disappointment from many parts because the author did not search below the surface. For instance, what is said in the fifth lecture about the free towns founded by Edward I. in Guienne and Gascony, *e.g.*, Monpazier, and others which bear the name Villefranche or Villeneuve, and have English types in Hull and Winchelsea, is inconclusive. On this subject Barry might have found abundance of architectural, political, and social materials, which he does not seem to have sought. The ordinary guide-books tell as much as he does. Turning to architectural matters, we are compelled to differ from the author's opinions about the use of clustered shafts, as in the Presbytery at Lincoln, one of the finest instances, and shafts like those of the choir of Westminster Abbey, about which smaller pillars of a decorative character are grouped. He said (p. 270):—

"In some fine examples, as at Exeter Cathedral, the effect of the pier with its clustered shafts is that of one massive column, enriched by vertical mouldings; while in the choir at Westminster Abbey, on the other hand, we see separate shafts gathered round a central column, which is obviously the support relied on to sustain the superstructure. There is little doubt, I think, that the fourteenth century manner is that which is most consonant with sound principles. However beautiful the clusters of separate columns may be in themselves, there is an anomaly in dividing vertically a pier which has to support a great weight, and there is a further constructional disadvantage in building such a pier of different materials, as marble and stone, which vary in their hardness and power to support superincumbent weight."

If we understand the last sentence rightly, the difficulty need not occur if, as was the usual practice, the same material were employed for the column and its satellites. We do not think there is any difference in the architectural or the structural propriety of the respective arrangements, provided always that the central pillar is evidently strong enough to do its duty. The work at Exeter is an unfair example of the clustering of columns, these pillars being little more than reeded piers. The pillars at Dorchester, Oxon, are specimens of a better taste and quality. Barry might have enforced his own views better by directing his hearers to compare the pillars of the choir at Westminster, which have massive central elements surrounded by four slender detached shafts only, and are banded, with the later pillars of the nave of the same building, which are accompanied by eight engaged shafts, the very banding of which injures their proportions, while the treatment of the caps is not the best. Mere propriety would induce us to prefer to clustering shafts or pillars of any kind the continuous imposts of Antwerp, which carry on the arch-mouldings to the ground without a break and invariably suggest cast iron.

Geschichte der Griechischen Plastik. Von J. Overbeck. Parts III. and IV. (Leipzig, Hinrichs.)

Of the two former parts of this history of Greek sculpture which have already received notice in these columns (Nos. 2763 and 2814), the first embraced the period of crude and gradually refining archaism, the transition from which to a finished style was marked by the works of Myron; the second treated of the great epoch of the art when, under the administration of Pericles, the treasures of Athens were lavished without stint to enable Phidias — the greatest genius for sculpture that the world had ever, or has ever, produced—to give fixed form and local habitation to the ideal conceptions developed or inspired by Homeric poetry. The Peloponnesian war that followed gave as absolute a check to sculpture as the civil war and Commonwealth to the English drama. In both cases the arts recovered after their enforced suspension, but, brief as the interval had been, they reappeared with altered characteristics and restricted scope. The revivals were also transformations, but the great names of Scopas, Praxiteles, and Lysippus are sufficient to signalize a second period when sculpture was still a noble art. All the greatest contemporaries of Pericles and Phidias died out within twenty years of the conclusion of the war, and the rest of the century between 400 and 300 B.C. was divided politically between the careers of Epaminondas and Agesilaus and those of Philip of Macedon and Alexander the Great. The second great period of native Greek sculpture which is comprised within these limits forms the subject of the third part of Prof. Overbeck's work. The fourth part, which completes it, includes an account of the art under the successors of Alexander, and then of the important revival under the Roman Empire, with the decline of which sculpture declined until it ultimately predeceased it.

Though the conditions of the time forbade the execution of grand national monuments at Athens, the city continued to be a centre of art, and both Scopas and Praxiteles—the latter especially—are to be associated with the native city of Phidias. They both worked all but exclusively in marble; while Lysippus confined himself to bronze and worked somewhat later and with marked independence in the Argos of Polycletus. The sculpture of Greece passed in due order through the same stages as its tragic poetry did, and as other arts have often passed through since. How often, in spite of incidental reactions and revivals, has austerity of style developed into severity chastened by grace, and thence into grace combined with a tendency to dangerous elegance, or still more perilous extravagance! Every one of these stages of progression, if not of progress, may justify itself by productions of art which despite imperfections are still truly noble and refined. There is sufficient evidence that this was the case not only with the sculpture of the fourth century B.C., but also with the works of the artists whose lot it was to work for tyrants either Greek or Roman. The evidence by which our interest in Greek sculpture is thus maintained consists partly in the trustworthy accounts which are furnished by isolated or mutually confirmatory notices gleaned from literature, and then in the comparison of the original monuments, or copies of such, which these notices enable us to identify among the monumental remains of antiquity. The work of Prof. Overbeck bears witness on every page to the labour and ingenuity which Germany has persistently devoted to the collection and analysis of this evidence; and even when his readers are provoked by the heaviness and prolixity of his exposition, or distinctly disagree with his conclusions, they cannot but be thankful for assistance to materials indispensable for forming their own; they may even, for the sake of some diversion by the way, be lenient to an occasional invitation to attend to most curiously farfetched combinations or palpable misinterpretations of sculptural expression.

Literature furnishes a long list of secondary contemporaries of the great masters, their predecessors, pupils, and successors, but only now and then descriptive titles of some of their works or the barest hint of their distinctive character. It is painful to admit that we know nothing positively about so many connecting links of the detached fragments of a sadly injured historical chain; but it may be wiser to admit a necessary disappointment than to allow ourselves to be drawn into such extravagant expenditure of time and attention as our author thinks reasonable upon arguments of which the staple does not admit of being drawn out finely. Even in the case of Scopas we are destitute of notices of his life, of the leading characteristics of his style, or of any accepted copy of one of his numerous recorded works. But criticism—German criticism, at least—is not to be so baffled, and in these pages supplies the sculptor with a biography, at least in outline, by arranging the sites of his works in an order of easy geographical sequence with the assumption that so we recover his actual route about Greece during lifelong peregrinations.

With Praxiteles the case is happily different. We are in possession of the wonderfully preserved Hermes which was so recently discovered at Olympia on the very site where it was seen by Pausanias, and which is worthy to be the original work of the master. Indeed there is no cause to reject it. The assignment is as much confirmed by as it confirms the previous recognitions of the Apollo Sauroctonos, the youthful lizard slayer, and the young Satyr, both of which have come down to us in numerous repetitions. Prof. Overbeck engraves the Satyr of the Capitoline Museum; but our own impression is decidedly that, of the several ancient repetitions of the statue at Rome, that in the Lateran Museum is incomparably the finest both in pose and expression. We have then more than one representative—they are, indeed, usually versions or variations rather than copies—of the modest Cnidian Venus as she turns to let fall her drapery upon a vase before entering the bath. The palm must here be given to the Venus of the Vatican, of which the modesty is only affronted by an enveloping modern drapery of tin, that it would be indulgent to style merely prudish. In the case of Lysippus again we have within our own time witnessed the recovery of a marble copy—how far accurate it is impossible to say—of his bronze Apoxyomenos, a youthful athlete making use of the strigil. The proportions of this figure are interesting, but more puzzling than Prof. Overbeck seems to recognize in connexion with the variations which Lysippus is recorded to have introduced in proportions. He is said to have reduced the relative size of the head, and to have enhanced the length of the lower limbs, with a view to giving an impression of lightness and tallness. The statue bears out the record far more decidedly than would be inferred from the engraving of it given by Prof. Overbeck; but the vaunted happiness of the result may be demurred to. The harmony predicated of it does not commend itself at first sight, and only afterwards to those who are resolutely determined to discover the expected harmony; the figure, excellent as it is in so many respects, is, to use a phrase which is not unknown in the schools, "all to pieces."

It is in reading such works as the present and the history of Greek sculpture by Prof. Brunn that the English, and especially the untravelled, student feels the want of a museum of casts to supplement the unrivalled but necessarily incomplete collection of original antique sculpture in the British Museum; the warnings are many that implicit trust is not to be given to interpretations of sentiment and expression which are placed confidently before him by writers who are often stronger as scholars than as connoisseurs, and yet it is on correct appreciation of expressive intention that the worth of an historical deduction chiefly depends. Thus there is considerable and not unfair difference of opinion among the German critics cited at p. 39 as to what was the object held up in the lost right hand of the Hermes, that manifestly attracts the infant Dionysus supported on his left arm, who is reaching towards it; but in the presence of the cast which is accessible at the British Museum it is surprising indeed to find them strangely in accord that Hermes himself, whatever else he may be looking at, is certainly not attending to the child. One more example: the bas-relief of the *columna cælata* of the temple of Diana of the Ephesians, which our museum owes to the well-directed pertinacity of Mr. Wood, exhibits a scene of which the touching general drift might seem to be secure from mistake. A gracefully draped female figure is in the act of following Thanatos, the personification of Death, while Hermes Psychopompus, the conductor of souls, is close at her other side. Both direct their attention to her. Thanatos looks back, and the curve of his raised arm and hand is clearly a gesture of beckoning, and with equal significance the caduceus of Hermes is pointed downward to her path; but for the moment she pauses with one lingering foot, and, half turned, looks back, with composure but regret, to a group of feminine figures beyond the god. "Not so," says the interpreter approved by Prof. Overbeck; "the figure is Alcestis, who is not passing to the under world, but from it, and the gesture of Thanatos gives her permission [*durch einen Wink*] to pass by him and escape."

Considerable space is naturally devoted by the author to an account and criticism of the sculptures which have recently been recovered from the ruins of the great altar of

the kings of Pergamon in Asia Minor, and are now at Berlin. Like the sculptures from the Mausoleum, they have a certified date, in this case 200–150 B.C., and their value as historical documents is considerable compensation for shortcomings, or rather for extravagance, of style. This style may be judged of by some considerable casts from them now in the British Museum.

The value of this book would have been much increased for the serious students who alone can be expected to grapple with its massive paragraphs if the notes had contained detailed references to the classical passages relied upon for historical facts and textual citations of those which criticize or illustrate subjects and styles of art. These original testimonies are not voluminous, but they are all-important. The author's system of annotation is, indeed, confused and vexatious; the reader is constantly sent on an errand to the end of the book, only to be referred again to essays buried among periodicals and transactions of societies over the length and breadth of Germany; while other notes which are really important might have been embodied in a text which studies conciseness so little that even when best satisfied we find ourselves saying involuntarily with Christopher Sly, "'Tis an excellent piece of work; is there much more of it?" Still the work now completely revised is no unimportant contribution to the attempts made to recover a connected history and critical appreciation of the past glories of an art which seem preserved with just sufficient completeness to excite and to humiliate modern aspirations.

L'Art à travers les Mœurs. Par Henry Havard. Illustrations par C. Goutzwiller. (Paris, Quantin.)—M. Havard endeavours to prove much that has long been accepted by art historians and critics acquainted with ethnography. He has tried to carry still further principles already acknowledged, and to obtain for them wider currency. From the earliest ages the art instinct, as we call it, has reproduced itself. Men's first and latest artistic effort is self-decoration. The *bonnet à la fusée* (see p. 377), a monstrous headdress assumed by women of the reign of Louis XVI., differs in taste and degree, but not in principle, from the headdresses of some terra-cotta statuettes that Major di Cesnola found in Cyprus. These Greek tiaras were, doubtless, of gold, and comprised tiers of fillets and double bands of rosebuds, from which arise demi-eagles displayed, as heralds say, alternating with balls, while higher than the last rose originally ranks of honeysuckles (see 'Salaminia,' p. 223, fig. 213). In another specimen of the same Greek group are more lines of eagles combined with the well-known *anthemion* ornament. Such headdresses were not less than fourteen inches high, about the same height as the French headdresses of 1778, representing the rigging and hull of La Belle Poule. They had considerable resemblance to the "Cérés" of the Parisian *salons* and the headdress of Marie Antoinette, the adornments of which were so lofty that the wearers had to kneel in their carriages! Coronets not unlike those of the ladies of Salamis are still worn, says Major di Cesnola, by Turkish brides in Europe and Asia Minor. That things remain the same and that types tend to reproduce themselves might be proved by the intimate resemblance between the terra-cotta toys made for the children of prehistoric Cyprus and Hissarlik, which comprise chariots, and their warriors and drivers, and horses harnessed four abreast, and quaint soldier toys, as well as the figures of women, cocks, dogs, horses, and pigs, and the effigies in gilt gingerbread that our younger contemporaries devour at fairs. The archetypes of beads still made at Venice occur in Phœnician works dug from the soil of Britain, Central Africa, and Denmark. Man repeats himself in diverse applications of the same principles of art decoration. M. Havard has reproduced two sketches—one found in the House of the Faun at Pompeii, drawn by a child to represent a gladiator combating; the other by a Dutch infant of our time, a portrait of her mother: in these the principles of draughtsmanship are the same. We may add that everybody must have noticed a close likeness between any modern sketch of the same kind and the famous satirical representation, many times engraved, of the crucifixion of that unfortunate Roman Christian Alexamenos, discovered in 1857 among the *graffiti* on the wall of a house near the Palace of the Cæsars. Sir G. Wilkinson copied from a tomb at Thebes satirical pictures of a cat driving a flock of geese and of a fox playing the pipe, which hardly differ at all from carvings on mediæval misereres attacking monks and friars of the fourteenth and fifteenth centuries. M. Havard says an untaught child will decorate herself with field flowers, by way of carcanets, belts, bracelets, and girdles, exactly as from time immemorial women have been decorated with gold and silver ornaments. When art becomes self-conscious, according to writers like M. Havard, she is on the way to ruin. Millet said something like this (see p. 127 of this book), and the notion was one of the fundamental ideas of Pre-Raphaelitism. It is very carefully and very pleasantly displayed throughout this copiously illustrated book. Of the piquant allurements of the Theban women, as we see them preserved in the delightful figurines of Tanagra, our author writes: "Ces adorables Thébaines, coiffées du *petasos*, portant à leur main un éventail, ou tenant une fleur, bien campées, bien posées, coquettement costumées, nous révèlent une société féminine assez semblable à la nôtre." But while in these delicate relics of Greek antiquity there is, coquetry apart, no self-consciousness, the belles of Marie Antoinette's day, as their artists delineated them, were all too self-knowing. Their art of self-decoration was corrupted by the influences of their decadence, and reflected the inspiration of their manners exactly as the terra-cottas declare the ancient originals to have been of a very different strain. Art is a peculiar inheritance of man, and he uses it or misuses it according to his lights. Now he seeks the beautiful, now he is content with the hideous. It is the measure of his civilization if not of his virtues.

Messrs. Longman have sent us Part I. of *The New Testament*, with delicate and elaborate engravings on wood from designs by Fra Angelico, P. Perugino, Francia, L. di Credi, Fra Bartolommeo, Raphael, Titian, and other masters. This is a reissue, in parts at a shilling each, to be completed in eighteen parts, of a handsome, perhaps somewhat over "tasty" and delicate book, of which we reviewed the former issue many years ago. Having already admired the fineness and delicacy of the numerous illustrations, which comprise many pretty and very elaborate borders, we need only repeat that when complete the work is sure to be attractive and acceptable, fit for drawing-room tables of the better sort.

The Seals and Armorial Insignia of the University and Colleges of Cambridge. By W. H. St. J. Hope. Illustrated. (Satchell.)—The subject-matter of this publication, of which the first of twenty-five parts is before us, promises to be interesting, and will tempt antiquaries to wish that Mr. Hope will work it out with care. Every collection of seals and armorials, signets and symbols, offers treasures of historical and anecdotic matter to which diligence alone can do justice. At present we are able only to say of the text of this serial that it comprises much detail, and shows that the author has exercised considerable industry in gathering notes. The illustrations, although some of them represent fine late mediæval works of art, are only diagrams of a primitive order, good enough for explanatory purposes, but insufficient to display the artistic merit of the seals. Photographs would be desirable additions to these diagrams. We hope to be able to praise more warmly the future parts of this work.

Glossaire Archéologique du Moyen Age et de la Renaissance. Par Victor Gay. Premier Fascicule, A—Bli. (Paris, Librairie de la Société Bibliographique.)—This compactly printed and convenient fasciculus is exactly what we desire in English, a carefully compiled and copiously illustrated glossary of ancient terms, with sufficient literary exposition of the nature and history of the innumerable out-of-the-way names and things mentioned in archæological books and records of all sorts—a condensed and yet more comprehensive 'Ducange,' a cyclopædia of mediæval and Renaissance terms, with elucidatory extracts from records showing the varied employment of the articles described, such as we find here under "Autel," which comprises a woodcut of an antique cippus, transformed by mere addition of the monogram of Christ on its front, incised over the more ancient "*D.M.*,"&c., of the Roman owner of the monument. This entry continues to deal with the subject by means of excerpts of various dates, none of which embraces the period of the Renaissance. At this time altar building was, in a fine architectural sense, an exploded practice, but it was by no means so in a religious sense, so that room ought to have been found for cuts of some of the debased *autels* of wood, carved or uncarved, draped or undraped, as the wealth or poverty of churches dictated. Among the best articles in this very convenient and useful book are the following: *Acier*, *Affiche*, *Agneau*, *Aiguière*, *Ambre*, the last a subject the more ancient aspect of which was excluded by the limits of the 'Glossaire' itself, which confined M. Gay to the mediæval employment of this very interesting material, which deserves a monumental monograph. Under *Ambre* we do not find the modern term *ambre brut*; but we have the equivalent in *ambre crud*, besides *ambre noir*, *ambre gris*, *ambre jaune*, and several illustrations of the use of each variety in past times. We find copious notices of *Ampoule*, *Arbalète*, *Armes et Armures*, *Armet* and other subjects associated with military costume, *Bacin*, *Bacinet*, *Bain*, *Banc*, *Bâton*, *Baudequin*, *Berceau*, *Bézoard*, and *Blanchet*. Innumerable curiosities are embodied in these entries—*e.g.*, *Blanchissage* tells us of a custom of the rich Creoles of Bordeaux, *c.* 1782, to send their linen to be washed at San Domingo; but there is conspicuous omission of the avoidance to wash linen in pursuance of vows, such as that famous instance which gave a name to the *couleur Isabelle*. We consider the following entries insufficient:—*Anneau*, *Architecture privée*, *Bague*, *Bannière*, and *Basset*. The last is without references to *bassette*, the game of cards of that name, and the queer short-legged dogs much affected by French nobles—dogs whose ignoble descendants were employed as turnspits, and are now, we understand, almost extinct. *Ambo*, *Avoue*, *Bâtarde*, and *Bastide* are absent. Apart from all this the 'Glossaire' of M. Victor Gay will be abundantly useful. When complete we trust to notice it again, and to find a consensus of terms in German, Latin, French, Italian, and English, analogous to the 'Archäologisches Wörterbuch' of Herr Heinrich Otte, which we reviewed in 1877 (*Athen.* No. 2593, p. 22).

A Practical Treatise on Handrailing. By G. Collings. Illustrated. (Crosby Lockwood & Co.)—Mr. Collings has been for many years employed in setting out and setting up handrails, a very difficult part of the joiner's craft, and he has, he tells us, experienced difficulty in applying the methods recommended in various books on

the subject. Practical men say that while they have been compelled to overcome greater difficulties than those which embarrassed Mr. Collings, they would be thankful to any one who would lead them along an easier road than the old one. The subject, even when treated in the comparatively simple way adopted in this book, is much too intricate, if not too abstruse, for explanation without diagrams. Mr. Collings's methods have the merit of simplicity; they avoid the tedium of the old system of using ordinates, and include a clever mode of finding the direction of that major axis for the curves which is the terror of beginners. Mr. Collings has constantly applied his own methods in practice. As we cannot undertake to set out a staircase with its attendant railing in order to test the new method, our readers must be content with the assurance that the author's statements look correct on paper. Any opinion without experiment would be fallacious.

The Royal Institution of Great Britain has printed, with diagrams, the discourse delivered on March 13th last in the theatre in Albemarle Street, by Mr. E. Muybridge, *On the Attitudes of Animals in Motion*. Of this address, as delivered at the Royal Academy on the 14th of that month, we gave an abstract on the 18th following (see *Athen.* No. 2838). Undoubtedly students will be able to master the extraordinarily interesting essay of Mr. Muybridge by means of this *brochure* and its clear illustrations. Without these diagrams, and in less space than the lecturer's text occupies, it would be impossible profitably to add to the comments we have already made on what are really inestimable studies in one of the most complicated subjects in animal mechanics, and in sculpture even more than in painting.

ROYAL ARCHÆOLOGICAL INSTITUTE AT CARLISLE.

Carlisle, Aug. 9, 1882.

Upwards of two hundred visitors joined in the excursion on Wednesday last, which was partly accomplished by special train and partly by carriages. The first place visited was Kirkoswald Church. There is a vague report that a church existed here in Saxon times. If this be true all trace of it has perished. The present building consists of nave, north and south aisles, and chancel. The northern arcade is late Norman, the southern Early English, of massive and plain character. The chancel windows contain much modern heraldic stained glass commemorative of the families of Musgrave and Featherstonehaugh. A sepulchral slab within the altar rails is interesting. It bears upon it a cross standing upon a dragon, on one side of the stem of which is a sword and on the other a book. Each of these symbols is not uncommonly met with, but I do not remember to have ever before seen them combined. Perhaps they imply that the dead man ended his life as a religious recluse, perhaps only that he was singular from the fact of being able to read as well as fight. In the churchyard there is a coffin lid which is probably of the Norman time; it is covered with a double row of chevron ornaments. Another large slab has two floreated crosses on it; it is probably a memorial of a man and his wife, as the sword and the shears are used as symbols. Kirkoswald Castle stands near. It was a great Border stronghold, held successively by the Engaynes, the Morvilles, the Multons, and the Dacres, but has been so completely ruined that little of interest is now remaining above ground.

Long Meg and her Daughters was next visited. This is a prehistoric antiquity of great interest. It ranks, I believe, fourth among the stone circles of England. I doubt if there be any other so well preserved. The number of stones above ground—there are, perhaps, some concealed by the turf—is sixty-seven. Long Meg herself is a huge upright block twelve feet high. She stands outside the circle; one of her sides is decorated with cup markings and rings. Prof. Stephens, of Copenhagen, who took his station near Long Meg, gave a short but most interesting address. The party then proceeded in carriages to Brougham Castle, which was explained by Mr. G. T. Clark. Though a ruin very much still remains. The late Norman keep is fairly perfect, and there are many portions of the surrounding buildings. The chapel, a Decorated building, has stood over a substructure not vaulted. The corbels by which the wooden floor was supported are yet in their places. The sedilia and piscina have been preserved seemingly without injury. The gatehouse bears an inscription in fifteenth century characters: "Thys made Roger." Who the Roger was is, I believe, a matter of controversy among the antiquaries of the North. The large chimney in the thickness of the wall of the keep is worthy of notice, especially by those persons who still hold the odd notion that chimneys were unknown to our ancestors in the Middle Ages, and that whenever the word is used we must interpret it to mean fire-hearth or fire-grate. Not far from Brougham Castle is Brougham Hall, near to which is a chapel said to contain some remains of antiquity. It has been so altered and profusely decorated that any remains of old building that there may be escaped notice.

At Mayborough is a circular embankment, about a hundred yards in diameter, surrounded by a deep ditch. In the centre is a very massive monolith, twelve feet high. It is said there were once two others which have perished. Yanwath Hall, the seat successively of the families of Threlkeld, Dudley, and Lowther, is one of the finest examples of a fortified Border house that exist. It is in excellent preservation, and is evidently well cared for. The original Border peel tower is probably of the time of Edward I. or his son, but has been improved in later times by the insertion of larger windows. The rest of the house seems about a century later than the tower, and there are a few Elizabethan additions, but nothing of later date. Some highly curious stables, yet in use, seem to be as old as any part of the building except the tower.

The annual meeting of the Institute, attended by members only, was the first business of Thursday; afterwards a reception was held by the Dean and Chapter in the fratry of the cathedral. The cathedral was visited under the guidance of Mr. E. A. Freeman, who remarked that if a person properly instructed in the history of architecture could be suddenly dropped from the clouds into the cathedral garth he would find out, without any man or book to guide him, very much concerning the place. He would know at once that he was in England, for he would see about him windows of Perpendicular character which are not to be found elsewhere. He would see also that it was a monastic church, for there are the domestic buildings near; and he would know by the arrangement of those buildings that it was not a Cistercian abbey. He might, perhaps, come to the conclusion that it was a Benedictine church. As a matter of fact it was not Benedictine, but a church of Austin canons. The original church was Norman, some of which exists in the fragment of the nave that remains, and elsewhere. The Decorated choir is remarkably beautiful, and Mr. Freeman drew special attention to the great east window, which he said was the grandest window of its kind in England, and, as he thought, in the world, the next to it being that of Selby; but Selby has only seven, whereas Carlisle has nine, bays. The Mayor of Carlisle (Mr. Ferguson) next explained the old stained glass that still remains in the upper part of the great east window. It seems to be in remarkably perfect condition, but its elevated position renders it difficult to interpret the subjects from the ground. Our Lord, with his feet on the rainbow, is in the centre; around are the dead rising from their graves, and heaven and hell. I believe that there is a full description of it in one of the volumes of the local Antiquarian Society's *Transactions*. The Rev. J. T. Fowler next described the carvings on the capitals of the columns in the choir, which represent symbolically the twelve months of the year, a head with three faces drinking out of a bowl standing for January. They are of very unequal merit as works of art, but all of them are highly curious. Prof. George Stephens, of Copenhagen, interpreted a Runic inscription which has been discovered on a stone in the south transept. To the uninitiated the stone seems to have nothing on it remarkable, except some scratches. These signify "Dolfin wrote these runes." It was, Prof. Stephens said, simply a scribble; such scribbles are common in Scandinavia. The Carlisle example is of the tenth century.

The party afterwards drove to Dalston Hall, the seat of the old family of Dalston, now, I believe, extinct. It consists of a Border peel tower, built in the reign of Henry IV., to which have been added other buildings in the sixteenth and seventeenth centuries, the whole forming a most picturesque group. In one of the rooms is a plaster ceiling of much beauty, and there is some good and simple oak panelling.

Rose Castle was the next place visited. It is the episcopal palace of the diocese of Carlisle, and stands amid lovely scenery. It may be said to have grown from a mere peel tower to be one of the most stately mansions on the Borders, but it has been so often ruined and rebuilt that in the modern house it is not very easy to tell the old work from the new. The Strickland tower is certainly old, but its date is uncertain, as alterations took place from time to time before the great restoration under Bishop Percy, over which Rickman, the restorer of Gothic architecture, presided. Rose Castle was destroyed by Robert Bruce in 1322. In 1645 one of the Lowthers held it for King Charles, but it was taken for the Parliament by troops under the command of Col. Heveningham. The Royalists were once more in possession in 1648, when it was stormed by Col. Cholmley (one of the Cholmleys of Whitby, I believe, but am not certain), who ordered it to be burnt. Fuller quaintly says of it that "the rose therein is withered, and the prickles in the ruins thereof only remain."

Among the papers read were 'Anne, Countess of Pembroke,' by Mr. Jackson, of Fleatham House; 'The Guilds of Carlisle,' by the Mayor; 'Carlisle Cullery Tenure,' by Mr. William Nanson; and 'Church Ales,' by Mr. Peacock.

On Friday the party went by railway to Gilsland, where carriages were in waiting to take them to the Roman camp at Birdoswald, the Amboglanna of the Itineraries. The camp at Birdoswald is the largest on the Roman Wall. It includes an area of rather more than five acres and a half. Two of its gates are in a fair state of preservation. Several inscriptions relating to the first cohort of the Dacians have been found here, as well as a rude but highly interesting Roman seated figure. The camp was most lucidly explained by Dr. Bruce, of Newcastle, who has made the Roman antiquities of the north of England a special object of study.

Lanercost Priory was the next place visited. It was commented on by Mr. C. J. Ferguson. It was founded by Robert de Vallibus, otherwise de Vaux, in 1169, as a house of Austin canons. Its history has been strangely neglected, and very little is to be found about it in the ordinary books of reference. Edward I. and his queen stayed here for a time in 1280. Sixteen years after some of the conventual buildings were burnt by the Scotch under the Earl of Buchan. Soon after this it was visited in no friendly fashion by Robert Bruce. In 1346 David of Scotland was here with his army, and, as the Chronicon de Lanercost says, reduced the place "in nihilum." After the dissolution Henry VIII. granted it to Thomas Dacre, called the Bastard, who lived in the conventual build-

ings. The church is perfect, but only a part of it is roofed in and used for service. The choir and transepts are open to the winds of heaven, though now well cared for. Until quite modern times it has been subjected to almost every indignity that human stupidity could devise. At one period even the burial vaults were unclosed, and we were told that the corpses of the dead were exposed to view. At the end of the last century the local volunteers were accustomed to use the noble west front as a target for ball practice.

The greater part of the building is First Pointed of a refined and stately character. Some of the doorways display not a little survival of Norman feeling. Many of the windows were in the first instance, as it would seem, without glass; there are grooves where wooden shutters or frames have been fastened. In the crypt several Roman altars are preserved, some mediæval tombstones of interest, and the shaft of the cross whose base is still *in situ* on the north of the church. It has on one of its sides a Latin inscription relating to the interdict in the time of King John. Over the head of a doorway in the south transept of the church a covering stone may be seen which has once been a tombstone. It has a simple thirteenth century cross upon it and bears also a sword and a book.

Naworth Castle, one of the noblest fortresses in the North, was before the fire of 1843 a perfect museum of antiquities. Very much perished then, but the building was carefully rebuilt, and in external features the restored parts are fairly representative of the old. The castle stands on a triangular point of land formed by two little streams which flow down deep gullies into the river Irthing. Across the neck a moat has been cut, now nearly obliterated. Before the invention of gunpowder such a place must have been nearly impregnable. Like almost every other place of strength on the Borders, it has grown up around a peel tower. The Carlisle or old tower at Naworth is believed to have been this peel. It is almost identical with one of the towers of Rose Castle, the lower part of which was built about 1300. The Dacre tower is very early sixteenth century work. It has a peculiarity very rare in England. It does not stand on its own foundation—that is, the walls and stairs which form its bottom—but is carried by an arch, so that if everything below were removed it would be as firm as it is now. This, we have been told, was actually done after the great fire of 1843.

On Saturday the visitors went by railway to Hexham, where, of course, the church was the principal attraction. They were conducted over it by Mr. C. C. Hodges, a gentleman who has devoted himself with much zeal to the investigation of the ecclesiastical and feudal antiquities of the town. St. Wilfrid built a church here, which, according to the ideas of the time, was exceedingly magnificent. All traces of it are gone except the crypt. All memory of this vault had passed away. It was accidentally discovered in 1726 in digging the foundation of a buttress to support an angle of the tower. It is very similar to the crypt at Ripon called St. Wilfrid's Needle. The Hexham example is, however, larger. It seems to be entirely built of stones taken from Roman buildings. Several fragments of Roman inscriptions may yet be read. I believe they have all been published by the Newcastle Society of Antiquaries. Two large Roman altars are preserved in the church, and a large Roman monumental slab was discovered within the last year. It commemorates a standard-bearer who is on horseback riding over a very ill-looking Briton or Caledonian. At the first glance the group seem so much like St. George and the Dragon as represented in early sculpture, that it was not easy to convince some of the party that the relic was not a Christian one. The present church was founded as an Augustinian canonry by Thomas, the second of that name, Archbishop of York. It seems to have been begun about 1185. The choir with the triforium and clearstory is the oldest part of the existing church. The transepts are somewhat later; the northern one, which is the most modern, is thought to have been built about 1230. I am not aware that any documentary evidence exists by which the exact date can be fixed. In the north transept several interesting fragments are kept which have been found in the church; among them is a "hogback" stone which has been frequently engraved, and which I have been assured, perhaps on no very sufficient authority, is an early Saxon gravestone. There are also two fragments of Saxon crosses, a cross-legged effigy the arms of which are on a fess three garbs, and a much mutilated figure of a lady wearing a wimple. Probably the only undisturbed tomb in the church is in the angle formed by the aisles of the choir and the north transept. It is canopied, of thirteenth century work; on it lies an incised slab with a stem of vine springing from two human heads. It is one of the most beautiful things of the kind I ever remember to have seen. The rood-screen is late work, perhaps after 1500; it is very elaborate in detail and worth careful study. The chantry of Rowland Leschman, who was prior from 1480 to 1491, has been removed from some other place, reduced in size, as we were told, and set up in the south transept. It is of rude work, but very curious from the quaint details with which it abounds. One of the sculptures shows us a man playing on the bagpipes; another is a head with three faces, one of which is a skull; a third is thought to represent a woman curling her hair. There are also some examples of knot-work, a survival of the same patterns which we find on Saxon and early Norman crosses and door-heads. The sanctuary seat, called the fridstool, is on the north side of the choir. Hexham was a great place of refuge in the Middle Ages, only second in fame—if, indeed, it was second—to Durham. The unhappy folk flying for sanctuary were, it is reported, not actually safe until they had seated themselves in this chair. It is probably the throne of the Saxon bishops of Hexham. The nave has perished; it seems to have been a work of the latter part of the fourteenth century. Mr. Hodges, whose acquaintance with every minute detail of the building left nothing to be desired, spoke with deep feeling of the work of destruction done under pretence of restoration upwards of twenty years ago. Up to that time many of the choir arrangements were undisturbed; these have perished. The Ogle chantry has gone utterly, and, perhaps worse than all, the beautiful range of fourteenth century chapels which formed the eastern termination of the building has been entirely swept away. Mr. Peacock made some remarks on this barbarous spoliation, saying that religious enthusiasm might form a valid excuse for the destructive deeds of the Reformers of the sixteenth century and the Puritans of the seventeenth, but that it was hard to find any palliation whatever for the vulgar ignorance that had obliterated so much that was beautiful in itself and interesting from historical associations to all thoughtful men.

The Moot Hall was also visited. It is a castellated building of early fifteenth century work. It has evidently been intended for purposes of defence. The Manor Office, which is believed to have been the prison of the liberty of Tynedale, is an interesting building of uncertain date. The visitors were told that there are dungeons which are closed up.

A long journey by railway and in carriages was taken on Monday to Housesteads. On the way a distant view was had of Willemountswick Castle, the birthplace of Bishop Ridley, the martyr. The camp of Chesterholm (Vindolana) was also seen, but not examined. Close by stands a Roman milestone, the only one in Britain in its original position. It is a cylinder of stone without inscription. Housesteads (Borcovicus) is the best preserved camp on the line of the Roman Wall. The four gates of the camp present a singular feature, which perhaps marks the decline of the Roman power in Britain. They have originally been made wide, but have at some later period been much contracted. Some of the masonry is fine. The southern gate is said to have been turned into the hut of a mosstrooper. Near Housesteads is a well-preserved mile castle in the wall. This portion of the wall is the best preserved part which can be seen in its whole length. Some parts of it seemed to me to be eight feet high. Near Housesteads is Sewingshields Castle, where, according to Border legend, King Arthur and his queen still live enchanted by magic spells.

On Tuesday another long journey by railway was undertaken for the purpose of visiting Melrose, Dryburgh, and Abbotsford. The proceedings of the meeting terminate to-day. P.

Fine-Art Gossip.

In addition to the pictures we mentioned last week as having been hung in the National Gallery, Luca Signorelli's great 'Circumcision of Christ' has been placed on a screen under the central dome, a by no means fortunate position, necessitated for the present by the crowded state of the galleries. Before these lines are read other novelties will probably be displayed in Trafalgar Square, including F. Francks and Steenwyck's most brilliant 'Interior of a House,' and the 'Portrait of a Gentleman' from the Hamilton Palace collection, absurdly attributed to Da Vinci, which, the dirty oil having been removed from its surface, turns out to be even more precious than Mr. Burton expected—a gem, probably of the school of Bellini, in perfect condition and admirable for its draughtsmanship.

The South Kensington Museum has contributed liberally to the loan collection at the Musée des Arts Décoratifs, to be held in the Palais de l'Industrie, Paris. It is to be vast enough to occupy the nave of that building and all its abutting lines of galleries on both stages, including the series of rooms annually devoted to the *Salon*. Several isolated pavilions in the nave will be appropriated to distinct gatherings of examples. Five grand *salles* are to be furnished by the Administration de Mobilier National, renowned for its collection of objects of decorative art once belonging to the French Crown, including all sorts of works of the best known makers, such as Boulle, Riesener, Beneman, and Gouthière, and acres of tapestries of the most laborious looms. To these remarkable and seldom seen examples it is expected that the pieces of Boulle and Riesener furniture sold for stupendous prices at the Hamilton Palace sale will be added. The collection of ancient tissues and other woven fabrics, which comprises antique, mediæval, renaissance, baroque, and all degraded orders of production, will be unparalleled. M. Brossard, the learned Conservateur du Musée de l'Art et de l'Industrie de Lyon, has been on the alert, and such a gathering of their beloved masterpieces is anticipated as might well disturb the repose of Drs. Bock and Rock, because they died too soon to study it. Even by these learned masters the magazine of the Administration du Mobilier National had never been exhaustively rummaged. It was not to be expected that Viollet-le-Duc, suspected of rebellion against officialism as he was, ever saw all there is to be seen in those crowded storehouses. If everything goes right, this tremendous aggregate of works of decorative art—a term of very elastic application, and designed to include masterpieces of fine art of far higher value than the mere *bric-à-brac* to which we apply it—will be opened to the world very shortly.

Mr. Edward Brooke writes from 1, West Avenue, Walthamstow:—"From time to time

you have taken up the subject of 'the fading of modern pictures.' I have spent the greater part of my life in experiments in grounds for painting, but, knowing that oil grounds were faulty, I have devoted my attention to tempera, and after some years I discovered, or invented, a ground which those competent to judge pronounce unexcelled, and which answers every purpose. On this ground I can paint in either oil or water colours, and the colours will retain their freshness for a practically unlimited period: from my own experience I know they have stood without the slightest change for more than forty-five years. I have every reason to think that this is the identical ground used by the old masters, and if we want our pictures to stand as theirs do we must use their means to obtain that end."

The late M. Camille Benoît bequeathed to the Musée de Lille a number of interesting pictures, including the 'Virgin, Jesus, and SS. Peter and Paul' of the Bolognese School; 'An Odalisque,' by M. Gervex; 'Portrait of a Child,' by M. Thirion; 'The Castle of St. Angelo at Rome,' by Corot; 'The Repose,' by Courbet; 'An Eruption of Vesuvius,' by M. Genillon; 'Italian Landscape,' by Roqueplan; and a copy of a destroyed 'Holy Family' by Andrea del Sarto.

Official announcements with regard to the *Salon* of next year have already been published in France. We have failed to discover among these somewhat numerous *règlements* anything definitive about the correctness and sufficiency of the catalogue. Since the *Salon* passed into the hands of the Association des Artistes Français the *livrets* have been remarkably incorrect. This year matters were even worse managed than last. Many pictures, including some that were *hors concours*, had no numbers, some had two numbers; not a few names and descriptive titles were misspelt; and the temporary white labels were allowed to remain some time after the opening of the exhibition.

It may be worth noticing that recent inquiries at the Royal Academy have shown how very early in their lives two of the most distinguished draughtsmen of the English School were sufficiently advanced to enter the school. Mulready was admitted a student October 23rd, 1800, and stated his age to be fourteen years; John Linnell was admitted November 28th, 1805, and was only thirteen years of age. He gained a silver medal in 1807 for an Academy figure, and in 1810 another silver medal for a model executed in the School of Sculpture in competition with one of the Wyons. In 1809 he defeated John James Chalon, a noble antagonist landscape painter, in a competition for the prize of 50*l.* offered by the Directors of the British Institution for the best landscape. Wilkie wrote in his 'Diary,' January 8th, 1809, that "*Master* Linnell" had thus distinguished himself. The distinctive title seems to have been awarded by Wilkie in a supercilious mood. Mr. Millais was admitted a student in the Academy in 1840, when he was twelve years of age. He gained no end of silver medals, and in 1847 the gold medal for painting; in 1853 he was elected an A.R.A., being, we believe, the youngest artist, except Lawrence, who has obtained this distinction.

The medals awarded at the Vienna International Kunstausstellung are announced as follows. Thirty gold medals were given: — Belgium — H. de Braekeleer, painter; L. Gallait, painter; Jahn Verhas, painter. Denmark — Thorwald Niss, painter. Germany—Reinhold Begas, sculptor; Franz Defregger, painter; Robert Diez, sculptor; Eduard von Gebhardt, painter; Peter Janssen, painter; L. Knaus, painter; Franz von Lenbach, painter. England—J. E. Boehm, sculptor. France—P. J. Baudry, painter; W. A. Bouguereau, painter; L. C. Bruyerre, architect; Jules Clément Chaplain, medalist; Paul Dubois, sculptor; Henri Harpignies, painter; Adolphe Joseph Huot, engraver; Jean Antoine Marie Idrac, sculptor. Holland—Johann A. B. Stroebel, painter. Italy—Emilio Marfili, sculptor. Austro-Hungary—Hans Makart, painter; Michael von Munkácsy, painter; Joseph Tautenhayn, medalist; Otto von Thoren, painter; Victor Tilgner, sculptor. Sweden and Norway—K. G. Hellquist, painter. Spain—José Casado del Alisal, painter; Francisco Pradilla, painter. Many distinguished artists, such as MM. Bonnat, Guillaume, and Lefebvre, being on the jury, were not qualified to compete for medals.

The Royal Academy of Arts at Berlin has published its annual report. During the year it lost a president, one honorary member, and six ordinary members. Five new members were admitted. The general Academie für die Bildenden Künste, superintended by Prof. A. V. Werner, counted in winter 222 pupils and 30 *hospitanten*, and in the summer session 189 pupils and 8 *hospitanten*. The Kunst- und Gewerbeschule, directed by Prof. Ewald, had 495 students in winter, among them 73 women; 408 in summer, among them 60 women. At the exhibition of last year 854 oil paintings, 136 works of plastic art, 100 water colours and drawings, and 29 architectural sketches were exhibited. The sales amounted to nearly 160,000 marks.

The death of the landscape painter M. Alexandre Desgoffe is announced. He was a pupil of Ingres, and in 1868 executed decorative works in the Salle des Études de la Bibliothèque Nationale.

Mr. Hyde Clarke remarks, with regard to Sir Charles Wilson's letter about the subterranean villages, that on the road to Ephesus is a niche cut in a rock, which, according to legend, is the entrance to a large subterranean city, as related by him in Murray's 'Asia Minor.' The flat slab had no appearance of a common door, hinge, or keyhole, but it might answer for a sliding door such as Sir Charles describes, though Mr. Clarke did not, on examination, find that the slab was anything else than a part of the niche. Near Ephesus there are several caves (as that of the Seven Sleepers) and underground vaults, and from a knowledge of underground villages elsewhere the local legend may have been manufactured. It shows how widely such legends extend in Asia Minor.

A museum is to be formed at Aberdeen by subscription.

The Municipal Council of Paris has invited sculptors to compete for the execution of an equestrian statue of Étienne Marcel, to be placed in the Square de l'Hôtel de Ville.

A cast of the famous sculpture in the portal of the cathedral of Bourges, representing the Last Judgment, which is a fine type of a characteristic class, has been received by the Musée de Sculpture Comparée, Paris.

It has lately been proposed to occupy the *foyers* of the Parisian theatres as galleries of works of art, the contents to be changed every three months. This was attempted at the St. James's Theatre a few years ago.

The Premier Grand Prix de Rome in the section of painting has been awarded to M. Popelin, the Second Premier Grand Prix to M. Pinta, the Second Grand Prix to M. Leroy. In the section of sculpture the Premier Grand Prix has fallen to M. Ferrari, the Premier Second Grand Prix to M. Pépin, the Second Second Grand Prix to M. Lombard. In engraving the Premier Grand Prix has not been awarded. The Premier Second Prix goes to M. Sulpis, the Second Second Grand Prix to M. Barbotin. The architectural Prix have not been announced.

The museum at Bucharest having been found insufficient to contain its constantly increasing treasures, among which those of Roman origin are eminent, a million of francs has been voted by the Roumanian Chamber for the enlargement of the building.

MUSIC

Joseph Haydn. Von C. F. Pohl. Zweiter Band. (Leipzig, Breitkopf & Härtel.)

When in 1875 Herr Pohl published the first volume of his great work on Haydn, he stated in his preface that the whole of the materials for the remainder of the work had already been collected, and that he hoped to complete the publication of the biography by the year 1878. After the lapse of seven years the second volume makes its appearance; so that the third and concluding volume may probably be looked for about the year 1889. The author gives no preface to his second volume, we are therefore left in doubt as to the causes of the delay; it is probable that the pressure of Herr Pohl's other duties has rendered it impossible for him to devote the needful time to his great work. In any case, the second instalment of his monograph on Haydn will be cordially welcomed, and by none more than by those who are already acquainted with the first volume.

It may be remembered that Herr Pohl in his first volume dealt with Haydn's life from his birth in 1732 down to his appointment as Capellmeister at Esterház in 1766 as the successor of G. J. Werner. The present volume treats of Haydn's residence in Esterház down to the death of Prince Nicolaus Esterházy in 1790, which caused the composer to resign his appointment and remove to Vienna. A more uneventful life than that of Haydn during these twenty-four years it would be difficult to imagine. His salary was very small, but it was sufficient for his wants; and his position left him abundant leisure for composition, as is proved by the large number of works written at Esterház. It must not, however, be therefore imagined that his position was a sinecure. Herr Pohl gives us the following summary of his duties:—

"The uniformity of life in general was interrupted by numerous visits from high or even the highest quarters, which gave occasion for entertainments on a smaller scale, or sometimes for brilliant festivities. Here, as also on the birthdays of the members of the prince's family, music always played the chief part, for which Haydn had to arrange and manage everything. Besides this, he had to hold rehearsals with the opera and with the orchestra, to study their parts with the singers, to fill up the vacancies arising among the artists, to smooth over all differences, to oppose undue pretensions, to act as intercessor with the prince on behalf of the needy, nay, even to trouble himself with the duties of prompter."

It will be readily inferred that the record of Haydn's life at Esterház is mainly a catalogue of his works; and the most important part of the present volume is that which is devoted to a criticism of the various compositions produced during the twenty-four years between 1766 and 1790. Some idea of Haydn's industry will be formed when it is said that during this period he wrote eleven operas, five "Marionette" pieces (*i.e.*, music to accompany the performances in the prince's Marionette theatre), sixty-three symphonies, eleven overtures, twenty-one *divertimenti*, forty-four string quartets, sixteen concertos for various instruments, twenty-eight sonatas for piano solo, five sonatas for piano and violin, thirteen piano-

forte trios, three pianoforte concertos, five masses, two oratorios, a 'Stabat Mater,' twenty-one shorter pieces of church music, and eleven cantatas and airs with orchestral accompaniment, besides short pianoforte pieces and songs. Such astonishing fecundity of production is probably only to be paralleled in the case of Mozart.

As a critic Herr Pohl possesses the special qualification that his enthusiam for Haydn does not, as in the case of many enthusiasts, blind his judgment. In proof of this, we may refer to his admirable notices of the composer's operas, and to the general opinion which he expresses of his powers as a dramatic composer. The passage is too long to quote in its entirety, but the concluding remarks may be given :—

"On the whole we may be thankful in the interests of the development of German music that Haydn only lightly touched [literally, only *grazed*] the Italian opera, and that his wish to visit Italy remained, as already said, unfulfilled; for there under favourable circumstances he would have become a successful imitator, but hardly a pioneer; there were wanting to him in the higher sense the dramatic conception, power of vivid characterization, and objectivity which are indispensable to the composer for the stage. Nevertheless his occupation with the opera was beneficial to him, for it gave fluency to his technique, and heightened his feeling for melodic beauty."

It would be easy to select many other extracts in which the author's critical acumen is shown in no less a favourable light than in the above; but it will, perhaps, be of more general interest to give some account of the history of the 'Seven Last Words.' This work is at present only known in the form of an oratorio, though most musicians are aware that it was originally written for instruments only. It was commissioned by some monks at Cadiz, the seven adagios for orchestra being designed for performance during service on Good Friday. The bishop in the cathedral read the seven last words of the Saviour, giving a short discourse upon each. After each sermon Haydn's musical commentary on the text was played by the orchestra. In this form the work was first performed, and was published first in Vienna in 1787, and shortly afterwards in Berlin, Paris, London, and Naples. The arrangement of the seven movements as string quartets under the designation of "Sonatas" was made by the composer himself. This much of the history of the work is tolerably well known; but the careful researches of Herr Pohl with regard to the subsequent transformation of the work into an oratorio have brought to light much that is new to us, and will probably be so to our readers. We learn on the authority of the Chevalier Neukomm that Haydn on his second visit to England passed through Passau on an evening when his work was to be given, and learning that a local musician had added voice-parts to his adagios, he went to hear them. He expressed himself pleased with the performance, but simply added in his modest manner, "I think I could have done the voice-parts better." Immediately on his return to Vienna Haydn wrote the voice-parts himself to German words by the Baron von Swieten, of which an Italian translation was added by Carpani. Herr Pohl says that this account is probably substantially correct, though he points out one or two inaccuracies of detail. It was for this later version of the work that Haydn added the short choral sentences preceding each number, in which the words of Christ are sung, and also the very fine interlude for wind instruments occurring between the fourth and fifth numbers—a movement which Herr Pohl fitly compares with the exquisite Masonic Funeral Music of Mozart.

It is impossible to notice with any completeness a book so full of interesting material as the present, especially as the author has accomplished his task in an almost exhaustive manner. Some idea of the amount of labour involved in the compilation of the volume may be formed from an examination of the appendices. The first of these is a complete list of all the operas, concerts, marionette performances, and plays given at Esterház during the year 1778. The second gives a complete catalogue of all the members of Prince Esterházy's chorus and orchestra, as well as of the soloists of his opera troupe between the years 1761 and 1790, with the dates of their entering and leaving his service. In the third we find a catalogue, most useful to the musical historian, of all the first performances of operas and "Singspiele" (plays with incidental songs, &c.) at the Burgtheater and the Kärnthnerthortheater in Vienna and at Schönbrunn between the years 1767 and 1790.

In addition to these appendices, Herr Pohl has supplied a thematic catalogue of the works which Haydn wrote during the period treated of in this volume. The interest of such a catalogue to the musician can hardly be over-estimated; but we cannot help complaining that having done so much Herr Pohl did not do a little more. In the first place, one important portion of Haydn's works is omitted altogether—not a single opera is included in the catalogue, nor is the marionette music mentioned. In the second place, those lists which are given are not all arranged on the same plan. For instance, in the pianoforte sonatas, Herr Pohl has gone back to the beginning of the series, and given the themes of those which had been already mentioned in his first volume. This is most useful, for we have before us the entire collection of the sonatas (excepting a few written later than 1790) in chronological order. The same thing is done with the pianoforte trios; but in most other sections of the catalogue, notably in the symphonies and quartets, the themes of the works written before 1766 are not given at all. Hence the anomaly that the catalogue embraces in some portions the whole and in others only a part of Haydn's compositions down to the period of his leaving Esterház. We regret also that no dates are given in the catalogue, neither is any reference made to the pages on which the various works are spoken of. In consequence, if while reading the volume the reader meets with an account of any work, he can, by turning to the catalogue, identify it at once; but if the converse process be adopted, and he wishes to ascertain the facts regarding a particular symphony or quartet of which he sees the opening bars in the catalogue, he can only obtain the information by turning over the pages until by good luck he comes to the page where the work is mentioned. We have no doubt that so laborious and painstaking an author as Herr Pohl will give copious indexes in his third and concluding volume; meanwhile the absence of any cross-references in the present catalogue is a great disadvantage.

In the preface to his first volume Herr Pohl speaks of his intention to prepare a complete chronological and thematic catalogue of the whole of Haydn's works. We earnestly hope that he still entertains such a purpose. There is no other man living so fit to undertake the work, which if adequately carried out would be no less valuable to musicians than the catalogues of the works of Mozart by Köchel, and Weber by Jähns. That Herr Pohl may be enabled to bring his labours to a speedy and successful conclusion will be the wish of all who read this second instalment of his work.

MISCELLANEOUS PUBLICATIONS.

The most important of the publications to be noticed in the present article is unquestionably *Die Geschichte der Bogeninstrumente, insbesondere Derjenigen des Heutigen Streichquartettes, von den Frühesten Anfängen an bis auf die Heutige Zeit*, by Julius Rühlmann (Brunswick, Vieweg und Sohn). The author of this work, who was a professor at the Dresden Conservatorium, and president of the Tonkünstler-Verein in that city, died before he was able to publish his work, the preparation of which had engaged his attention during a period of twenty years. It is now issued under the supervision of his son, Dr. Richard Rühlmann, and is one of the most valuable contributions to musical history which have appeared for many years. It was the original intention of the author to have compiled a complete history of musical instruments of all kinds; but finding that the labour imposed by such a task was beyond his powers, he preferred to treat exhaustively of one class of instruments rather than to deal in an imperfect manner with the whole. Herr Rühlmann's work differs in one material respect from the important publications of Mr. George Hart ('The Violin: its Famous Makers and their Imitators,' London, 1875) and M. Vidal ('Les Instruments à Archet: les Faiseurs, les Joueurs d'Instruments, leur Histoire sur le Continent Européen,' 3 vols., Paris, 1876–78). While the English and French authors treat principally of the violin and other stringed instruments as we find them at the present time, Herr Rühlmann confines his attention chiefly to the earlier and now obsolete forms of bow instruments. After dealing in his first chapter with the various kinds of instruments used by the ancients, he gives us in the second an account of the "Trummscheidt," the instrument formerly known in this country as the "trompette marine." This had one or at most two strings, and was played with a bow. It derived its name from a fancied resemblance in tone to that of the trumpet, and to the fact that it was formerly used in the English navy for giving signals. A description of it is given in Rees's 'Encyclopædia' (1820); and Herr Rühlmann mentions the interesting fact that under the name of "Trompetengeige" this primitive instrument is still in use in a monastery at Marienthal, Saxony. The rebec ("Rubebe") and lyre are next described; and the fourth chapter contains an account of the "Radleier," *i. e.*, the lyre with a wheel, the predecessor of the modern hurdy-gurdy, while the fifth is occupied with the Welsh "crwth." In the "Fidel," treated of in chap. vi., we find an important approximation to the modern forms of stringed instruments, inasmuch as here the neck is for the first time a separate portion. This alteration, while having but little effect upon the tone, greatly facilitated execution. The history of the bridge and the bow follows, the numerous illustrations of the older forms of

both adding much to the interest as well as to the intelligibility of the text. To many readers the succeeding chapters on the different kinds of viols will be among the most interesting parts of the volume. Here will be found full descriptions of the various instruments, now no longer in use, for which parts are to be met with in the scores of Bach and Handel. Such are the *viola d'amore*, the *violetta marina*, the *viola da gamba*, the *violino piccolo*, and others. The account of the baritone, the instrument to which Prince Esterházy was so partial, and for which Joseph Haydn composed so much, is very complete. Coming down to our own times, Herr Rühlmann shows how the obsolete instruments named above were gradually superseded by the violin, viola, and violoncello; and he concludes his work with an appendix on recent experiments in the invention of new forms for bow instruments. Besides the almost countless diagrams which illustrate the volume, an atlas of thirteen plates is given, containing some hundreds of figures of nearly all the instruments described in the course of the book. We cordially welcome Herr Rühlmann's work as a most valuable addition to musical history.

Of three volumes of national airs, published by Messrs. Boosey & Co. under the titles of *Songs of Italy*, *Songs of Scandinavia and Northern Europe*, and *Songs of Eastern Europe*, the first named is the least remarkable from a musical point of view, though it by no means follows that it will be the least popular of the three. Italy is pre-eminently the land of melody pure and simple; and in the collection of Florentine, Neapolitan, Milanese, and Venetian songs now before us will be found a perfect mine of "pretty tunes." The harmonies are for the most part of extreme simplicity, and the melodies have frequently a considerable family likeness. The volume will be certainly acceptable to lovers of Italian music, but it presents no features on which it is necessary to dwell.

The 'Songs of Scandinavia and Northern Europe' are more interesting, not only because the contents are more varied, including specimens of Russian, Polish, Lithuanian, Finnish, Swedish, Norwegian, Danish, and Dutch songs, but also because many of the melodies are of pronounced originality. Of the Russian songs, the old national melodies please us the most from their quaintness; the compositions of Warlamoff, Alibieff, and other Russian composers of whom examples are given are mostly in the style of German song-writers, and possess but little of the true Slavonic character. One of the most distinguished Russian musicians, Rubinstein, is not represented in the volume, his songs being published separately; but we are rather suprised at the omission of the name of the truly representative composer Michael Glinka. Among others whose names we do not find in the collection are Seroff, Borodin, Rimski-Korsakow, and Tschaïkowsky. The few specimens given of Polish airs are very interesting; and we may notice here that, apparently by inadvertence, a number of other Polish melodies are found in the volume of 'Songs of Eastern Europe,' which we shall notice immediately, where they are classed under the Austrian songs. It is possible that the national melodies may be indigenous to Austria-Poland; but the same can certainly not be said of the specimens of Chopin's songs which are given with them. But to return: a very singular example of a national air is met with in the 'Finnish Rune' (p. 63), which is in the unusual time of five crotchets in the bar: the effect is exceedingly strange. The Swedish national airs are mostly charming; in this department of the work we also find some excellent examples of the style of Lindblad, the great Swedish song composer. The Norwegian songs are also very good; those of Denmark and Holland, to judge from the specimens before us, have less marked character. An interesting feature of the national airs of nearly all the Northern countries is the decided prevalence of minor keys. It is a curious subject for speculation whether the influence of natural surroundings is the cause of this peculiarity, whether the long and dark winters of the North impart a certain gloom to the national character, which shows itself in the music of the countries. Assuredly the climate of Italy is not more different from that of Sweden than is the music of the one nation from that of the other.

The 'Songs of Eastern Europe,' one hundred in number, are fully as interesting as those of the North. We have first a collection of Austrian and Tyrolese *Volkslieder*, the latter being distinguished by the characteristic *jodel*. The Hungarian airs which follow are among the most valuable in the volume. The peculiarities of rhythm and of melodic construction which distinguish Hungarian music are generally known; the selections given illustrate them fully. One of the most original numbers is the song "None of all the many stars" (p. 87), by Erkel Elek, a composer whose name is not mentioned in any of the musical dictionaries to which we have access. A Dalmatian air (p. 89) is curious from its ending on the second degree of the scale instead of on the key-note. In the Bosnian and Slavonian songs (pp. 91, 92, and 95) some very singular alternations of triple and duple time will be found; but certainly the greatest curiosities in the volume are the specimens of Turkish songs, which are so peculiar as to defy description. They are constructed on scales not used in Western Europe; and in at least one case ('A Song of Sorrow,' p. 175) we confess ourselves quite unable to determine in what key, if any, the piece is intended to be. The Greek songs at the end of the volume are not very remarkable; but to the student of national music the whole volume will be of great interest.

A Day in a Child's Life, illustrated by Kate Greenaway, music by Myles B. Foster (Routledge & Sons), is a collection of nine little pieces for children, one of which, 'A Romp,' is for the piano, while the rest are songs. The music, though extremely simple, is not trashy. Mr. Foster possesses both knowledge and taste. The book is charmingly got up, and may be cordially recommended.

Schumann's *Mignon's Requiem* has been more than once given in London, and deservedly ranks among its composer's best works. Messrs. Novello, Ewer & Co. have issued a new edition, of which it is only needful to say that the English translation of the words by the Rev. J. Troutbeck is so incomparably superior to that of the old edition that we hope, in justice to the music, that it will always be used in future performances of the work.

We have also received *The Pianoforte Teacher's Guide*, by L. Plaidy, translated by Fanny Raymond Ritter (W. Reeves), a small work containing various hints which will be found useful to young teachers.

Musical Gossip.

M. Gounod will arrive in Birmingham on the 14th to conduct the final rehearsal of 'The Redemption.' In a note appended to the preface to that work the composer says: "It was during the autumn of the year 1867 that the idea of composing a musical work on the subject of the Redemption came into my mind. I wrote the libretto at Rome, where I passed two months of the winter 1867–68 at the house of my friend Hébert, the celebrated painter, then director of the French Academy. As regards the music, I composed no part of it at that time, except two fragments—first, the whole of 'The March to Calvary'; second, the opening portion of the first number of the third part, 'The Pentecost.' It was only twelve years later that I finished the work so long interrupted, and destined it for the Birmingham Festival of 1882."

Mr. Brinley Richards adjudicated at an Eisteddfod at Abergavenny on Monday. The principal item of the programme was the competition for a prize of 100*l.* for the best performance of a Handelian chorus by choirs of not less than one hundred and fifty nor more than three hundred voices. Seven choirs competed, and the prize was won by the Dowlais Harmonic Society.

The well-known novelist Florence Marryat (Mrs. Francis Lean) made her first appearance at Southampton last Monday, as Lady Jane in Messrs. Sullivan and Gilbert's opera 'Patience.'

Sir Julius Benedict, who has just put the finishing touches to his cantata 'Graziella,' written for the Birmingham Festival, directed the choir rehearsals at Birmingham on Tuesday and Wednesday last.

The death is announced at the age of seventy-two of William Hutchins Callcott, youngest son of the celebrated Dr. John Wall Callcott, and himself well known for his pianoforte arrangements of classical works. The deceased gentleman was buried at Kensal Green Cemetery on Wednesday.

The Promenade Concert season began at Covent Garden on Saturday night under the direction of Mr. Gwyllym Crowe. The orchestra, led by Mr. Carrodus, is practically identical with that of last season. Saturday's programme comprised a movement from the Piano Concerto in G minor of Mendelssohn; a movement from Beethoven's Violin Concerto, played by Mr. Carrodus; and a movement from Beethoven's Symphony in C minor. On Wednesday the first classical programme included the 'Jupiter' Symphony of Mozart.

As a proof of the wide-spread interest evoked by the production of Wagner's 'Parsifal,' it may be mentioned that on the 26th of July, during and after the first performance, 44,000 words were telegraphed from Bayreuth to the various English and continental journals concerning the event.

The third festival of the German Sängerbund was celebrated on a large scale at Hamburg on Thursday and Friday last.

Méhul's 'Joseph,' a fine but neglected opera so far as this country is concerned, has just been revived with much success at Kroll's Theatre, Berlin, Herr Max Alvary sustaining the principal character.

DRAMA

THE WEEK.

Drury Lane.—'Pluck,' a "Sensational and Domestic" Drama in Seven Tableaux. By Henry Pettitt and Augustus Harris.

Her Majesty's.—'Uncle Tom's Cabin,' a Drama in Three Acts.

Olympic.—'Fun on the Bristol; or, a Night at Sea,' a Musical Comedy-Oddity in Three Acts.

Little in the dramatic novelty of the past week has any claim to serious consideration. The opinion seems generally entertained by managers that a holiday public requires the strongest and coarsest fare. While, accordingly, at the Adelphi 'Drink,' the grimmest and most melo-dramatic piece of modern days, is revived, Drury Lane supplies a play the interest of which is purely "sensational" and spectacular, the Olympic gives an exhibition of the broadest farce, and Her Majesty's furnishes a version of 'Uncle Tom's Cabin' in which the effort to amuse is subordinated to the desire to edify.

It is impossible to treat seriously a play like 'Pluck.' The aim of the authors has been to depict the crimes which lend themselves to scenic illustration rather than those which spring out of human passions or are even the results of circumstances. It is easy to believe that the first notion has been to write up to a railway accident, which

has been selected as furnishing a scene likely to provide a startling "sensation." The most probable motive for wrecking a train is the desire to hurt some one who is carried by it. At best a clumsy and circuitous device, this process in the present instance is wholly abortive. One train goes full speed (it is no fault of the management that the rate of progress is about a mile an hour) upon an obstacle placed purposely upon the lines. The engine rears up and falls over on its side. Then from the opposite direction comes a second train, which charges into the first. But nobody seems much the worse for all this. A pair of handcuffs is slipped from the wrists of a man who, having brought about the calamity, finds himself compelled, by what seems at one time likely to be retributive justice, to travel in the very train the destruction of which he has prepared. Then comes a murder of a banker by his son-in-law—a piece of brutality so gratuitous that it should almost be sufficient to establish the insanity of the perpetrator. Other crimes of violence follow. A respectable Jew is mobbed and all but killed on account of his religion in an English country town, and two women and a child are locked up in a house which is set on fire. With the rescue of these the piece ends. Its solitary merit is that its action does not flag. What is the link of connexion between the separate scenes is not always easy to say, but the scenes themselves please the majority of playgoers, and the piece, though its dramatic claims are as insignificant as its literary pretensions, seems likely to be a success. Actors as a rule are without the slightest sense of humour. This startling proposition must be true, since, had they in their composition a grain of this desirable quality, they could not be induced to present such models of superhuman virtue or turpitude as they are called upon to exhibit. Mr. Barnes has to set before the public a character so villainous that crime seems the very breath of his nostrils. A managing clerk to a banker, he is plausible enough to have secured the good opinion of his master, whose name he forges—a proceeding which his position in the bank renders assumably gratuitous. Once detected in wrongdoing, he takes to crime in such downright earnest that his proceedings put to shame anything chronicled in De Quincey's famous essay. To this miscreant, meanwhile, is opposed the hero of the piece, played by Mr. Harris with a resoluteness, coolness, and convincedness altogether admirable. So soon as this young gentleman appears ladies resign their hearts without a struggle, villainy cowers and slinks off to its hiding-place, oppressed virtue raises its drooping head, and the atmosphere receives a sensible infusion of moral ozone. Deed after deed of dauntless heroism is performed, and the only wonder in the mind of the spectator is how, in a world in which such triumphant goodness exists, sorrow and evil and crime can obtain for a moment the ascendency. As of one character, so of all. Black with Messrs. Pettitt and Harris is the blackest possible, and white is so dazzling that mortal gaze can with difficulty be fixed upon it.

'Uncle Tom's Cabin' is a poor piece indifferently played. The attempt to obtain a dramatic story has not been made, and the adapters, whoever they be, are content with supplying a few detached scenes and situations which they think calculated to stir an audience. As is almost always the case with a piece that has been played many times, characters are so accentuated that all truth to nature and all probability are lost. When characters are impossible action becomes uninteresting. The extravagances of Marks, a comic lawyer, are thus destructive of the effect produced by Mrs. Rial as Eliza; and the preposterous accent of Miss Lewis as Aunt Ophelia detracts from the sense of enjoyment that might be produced by Miss Lingard's moderately successful presentation of Topsy. Another disadvantage from which the play suffers is that the authors are more anxious to enforce a moral than to amuse. After all, a play, in modern times at least, is seldom a religious ceremony, a fact of which at Her Majesty's the actors appear to lose sight.

'Fun on the Bristol' is one of the maddest, most extravagant, and most indescribable pieces ever included within that comprehensive term "a theatrical entertainment." Americans apply to a work of this class the name "varieties entertainment." To criticize and to describe are tasks equally difficult and futile. All that needs be said is that in a performance which is partly pantomime, partly negro minstrelsy, some capable actors are engaged, and that the whole, though marred by a few efforts at serious vocalization, is, for those who love nonsense, inspiriting and amusing.

Mr. Mowbray Morris's *Essays in Theatrical Criticism* (Remington & Co.) are disappointing. Fairly sound and judicious in view, they differ only from the more scholarly articles on the same subject contributed to the press in being at times halting and inaccurate in style. Something more than is supplied is expected from a writer who is at so much pains as is Mr. Morris to dissociate himself from his fellows. Two quotations upon the title-page suggest what the author takes to be his attitude with regard to other critics. "Such open flattery is beastly," quoted from Pepys, indicates what is in Mr. Morris's opinion the present state of theatrical criticism; while the two concluding lines of an extract from 'L'Art Poétique' of Boileau show what he modestly assumes to be his own function:—

> Censeur un peu fâcheux, mais souvent nécessaire,
> Plus enclin à blamer que savant à bien faire.

When to these extracts is added a preface in which the author owns to "no little trepidation" with regard to the results that will follow the publication of his opuscule, and speaks of "the slings and arrows of what I have sometimes with such pain heard styled my 'outrageous' criticism," it is a little perplexing to find nothing stronger than the assertion that Mr. Irving is a bad Romeo and Mr. Augustus Harris an incompetent Icilius. A protest is uttered against the terms said to have been accorded Mrs. Langtry upon her first appearance on the stage; but "even Mrs. Langtry"—in this "even" is the whole sting—is said "to move among her fellows as one to the manner born of Robertsonian comedy." Like Bottom, Mr. Morris seems afraid of frightening the ladies, and endeavours to "aggravate" his voice so as to "roar you as gently as any sucking dove." Rather, perhaps, like Starveling he feels, "I believe we must leave the killing out when all is done." A student, as it appears, of eighteenth century literature, or of literature subsequent to the Restoration, Mr. Morris writes freshly and agreeably, and introduces happily enough quotations from his favourite authors. Against certain works with which it is scarcely ungenerous to suppose him imperfectly acquainted he is prejudiced, and he speaks of the "strange conception of poetry" which "can rank the author of such works as 'Hernani' and 'Lucrezia Borgia' with the authors of 'Agamemnon' and 'Macbeth.'" The one apparent slip in matters of fact we trace in his essays occurs when, in reference to 'George Barnwell,' Mr. Morris says that "it is to be examined with reference to the age in which he (Lillo) lived and the condition of the stage for which he wrote," and then proceeds to compare his work with that of Dryden, Otway, Lee, and Davenant. Now 'George Barnwell' dates from 1731; Dryden mean time died in 1700, Otway in 1685, Lee in 1691, and Davenant in 1668. Mr. Morris, to be just to him, does not openly aver that these men were contemporaries of Lillo or belonged to a similar school. When these names follow immediately upon the invitation to examine Lillo's work with reference to the age in which he lived, it is natural to assume that some relationship between them is supposed to exist. In fact, however, Davenant has no more resemblance to Lillo than Sheil has to T. W. Robertson. Such errors as the '*Pain* Dealer' of Wycherley and the frequent omission of the accent in words from the French may be attributed to negligence. Mr. Morris's style will be greatly improved when he goes through his writings, cutting out the redundant words, which, intended to fortify the meaning, hint to the initiated of weakness. Mr. Morris thus writes: "*Really*, if this is the editorial idea of criticism, one hardly sees why Davy's successors should not do as Davy did, in that respect at any rate. For this is *plainly* to make of criticism only another and gratuitous form of theatrical advertisement; and seeing how large a space is already given in our daily papers to these interesting and ingenious documents, this is *surely* a little superfluous." Mr. Morris cannot fail to see how signal a gain to clearness and precision of utterance would accrue from the excision of the words we have printed in italics.

Herman Waldgrave: a Life Drama. By the Author of 'Ginevra.' (Kegan Paul, Trench & Co.)—For the reason, perhaps, that it fits the theological turn of English thought, the legend of Faust has taken deeper root in England than elsewhere. Marlowe was, of course, the first to assign it immortality; for such, on the strength of his famous drama, it must have enjoyed had the value and significance of the story never presented themselves to Goethe. During the last half century, while speculations on the relation between good and evil have been divested of their theological aspects, the facilities offered by the legend of Faust for the exposition of theory have commended it to general attention. Mr. Bailey's 'Festus,' the very name of which denotes its origin, was the first and the most successful attempt since Goethe to turn it to speculative account. Subsequent writers, of whom Dr. Kenealy is not the most incompetent, have sought to modernize the application. Twice, indeed, within a few years an altered version has found its way on to the stage. A serious adaptation by the late William Bayle Bernard, erroneously described in 'The Reader's Handbook' as an independent work on the subject, was produced at Drury Lane in 1866; and another version by Mr. Wills is, it is said, at present in the possession of Mr. Irving, for whom it was executed. Among variations upon the familiar and attractive theme 'Herman Waldgrave' departs furthest from the original. No obligation to Faust is avowed; the names assigned the principal characters are altered. Faust knows no magical restoration of youth, and no absolute employment is seen of diabolical agency. Yet the story practically is that of Faust. Herman Waldgrave represents at once

Faust and the human mind subject to conflicting agencies of good and evil, and yielding to the latter. In place of Mephistopheles we have a man whose sole motive to wickedness arises from base birth, from his having a bar sinister (*sic*) upon his shield. This worthy—Lupus Vidal he is named—may by a slight stretch be regarded as the spirit of modern scepticism or materialism. Like another Mephistopheles, he attends closely as his shadow upon the new Faust. In a quarrel with the students, when Vidal draws his sword, his adversary refuses to fight with him, declaring :—

> By Heaven! I am no coward!
> I will encounter thee by light of day,
> But not now. The moon strange shadows casts
> Upon the pallid floor. By the mixed light
> Of her wan glory and the lamp's dim ray,
> Thou look'st a fiend just started from below,
> To do hell's ministry.

Waldgrave himself demands concerning him :—

> Is he a man or fiend, this Lupus Vidal?
> I have been warned against him; my own instincts
> Warn me against him, yet I seek in vain
> To throw him off; he folds himself around me,
> By the strong force of habit. Man or demon,
> A pleasant comrade, honest too, I think,
> No honey on his lips to sweeten words,
> That sting with a wasp's venom.

In the number of his conquests the latest Faust recalls the hero of the corresponding legend, Don Juan. When quitting his territorial castle of Waldgrave in Savoy he leaves behind him a maiden called Esperanza, to whom he is betrothed. On the Wolfsbrunnen he meets with, seduces, and deserts Marguerite, otherwise Gisella, the daughter of an old crone who keeps an inn frequented by students. Her former lover he wounds and spares in a duel, while Vidal slays the youth's companion. On the Wolfsbrunnen, Waldgrave makes acquaintance with a species of double of himself, assumably his conscience, who reveals himself under the name of Adam and gives much good advice. To dwell at length upon the following adventures of Waldgrave is needless. He makes love to Erminia, a noble lady, and finds favour in her eyes, but is scornfully rejected when Gisella appears to interrupt his wooing and commits suicide in his presence. He then contracts an illicit intrigue with a superb Italian duchess, to whom he is introduced by Vidal, her stepson. The duke takes his wife, like a second Madonna Pia, to his feudal castle of Malaspina, for the purpose of killing her at his leisure, and is followed there by Waldgrave, whom, in the belief he is unarmed, he attacks with his sword. In the scuffle which follows the duke is slain. Waldgrave then makes his way to a convent in which his mother is interred, and claims to see her grave. In the abbess he recognizes Erminia; he sees a funeral procession and learns it is that of Esperanza, who has died heartbroken at his faithlessness. The Duchess Malaspina he finds has entered the convent, but after a brief experience of its privations has quitted it. After fighting in the war for the regeneration of Italy, Waldgrave comes to Rome and accepts an invitation from a mask to meet her at midnight in the Coliseum. He goes there, witnesses a species of Masque of Martyrs and Saints, and expires, slain by his own conscience.

If we have dwelt upon the story of 'Herman Waldgrave' rather than the execution, it is because in the story dwells all its significance. The literary treatment is intelligent, but the verse is rugged and unequal, the lyrical portions scarcely rising above prose. So far as the intention of the author can be traced, it appears to be by means of a tortured version of 'Faust' to extol the influence and power of the Roman Church, and to show Mephistopheles as the spirit of rationalism. There is a good deal of supernatural machinery in the drama. As this is cumbrous and does not greatly assist the action, it may be dismissed without further mention.

Dramatic Gossip.

After a suspension of performance for one week only, the Vaudeville has reopened with 'Money,' the piece previously given. One or two changes have been made in the cast.

The regular company has returned to the Gaiety, and reappeared on Monday in the extravaganza of 'Aladdin.'

Previous to his departure Mr. Edwin Booth appeared as Don Cæsar de Bazan in the play of the same name, adapted from the French of Dumanoir and Dennery by Mark Lemon and Gilbert Abbot A'Beckett. His performance was excellent, and revealed genuine power in comedy.

Mr. Warner's performance of Coupeau in the revival at the Adelphi of 'Drink,' Mr. Charles Reade's rendering of 'L'Assommoir,' retains all its old power. Though deficient in the last scene in the light and shade for which opportunity is offered, it is a remarkable piece of acting. Miss Amy Roselle as Gervaise is also excellent, as is Mr. Beck as Lantier. Mr. F. Thorne's Mes Bottes is not wanting in character. A new farce, entitled 'Families Supplied,' is the opening piece.

At the close of the competitions at the Conservatoire, M. Duflos, who took, as was stated in the *Athenæum* of last week, the first prize in comedy, and Mdlle. Muller, who carried off the second prize, were engaged at the Comédie Française.

M. Train, who has acted in London, has been compelled to quit temporarily his profession, and to retire into an asylum.

MISCELLANEA

Shakspeareana.—I do not believe it a crime to give the seventy-first emendatory reading of a passage where seventy already have been given by others. But I must confess that among those seventy sinners I have been twice sinning myself. Well, let it be thrice. There is so much incredible nonsense among those seventy, that even my two—now by myself rejected readings—count perhaps among the better ones, without deriving therefrom any great claim to immortality. It is the old editor-crux, 'Hamlet,' I. iv. 36 (Globe ed.):—

> The dram of eale
> Doth all the noble substance of a doubt
> To his own scandal.

My former readings were :—

> The dram of vile
> Turns all the noble substance of a draught;

and

> The dram of vile
> Daubs all the noble substance of a man.

But now I should like to read :—

> The dram of fil
> Doth all the noble substance oft addict
> To his own scandal.

There is no great change necessary, and the new word "addict" is found in 'Hamlet,' II. i. 19, in a sense not too distant from the meaning here required, but written with one *d* in the quarto of 1604, and with two *d*'s in the folio of 1623.

Julius Cæsar (Globe ed.), IV. i. 43, 44.—First folio :—

> Therefore let our Alliance be combin'd,
> Our best Friends made, our meanes stretcht.

The readings of the different folios, of Malone, Steevens, and Staunton, are known to the scholar, but all these emendations tend only to the endeavour to make the metre of the verse according to the rule, none of them tries to make the sense intelligible. I believe that we here again meet with a compositor's error, who caught with one look the words of two lines, and made the mischief by intermingling them. I believe we ought to read :—

> Therefore let our alliance be made,
> Our best friends all combin'd and our means stretch'd,

with "alliance" taken as a quadrisyllable.

Royal 8vo. pp. 564, half-morocco, 21. 2s.

VOLUME III. of the

ENGLISH CATALOGUE

OF

BOOKS.

Comprising particulars of the Works published between

January, 1872, and December, 1880,

NUMBERING IN ALL

OVER SIXTY THOUSAND TITLES.

With Size, Price, Edition, and Publisher's Name arranged in Alphabetical Order.

COMPILED BY

SAMPSON LOW.

This is a Work of Reference which every Librarian, Publisher, and Bookseller will find of use, inasmuch as it is the only List of the Books of the period in existence.

N.B.—Vol. I. is out of print and very scarce, fetching double its published price.

Vol. II. is nearly out of print.

London:
Sampson Low, Marston, Searle & Rivington,
Crown Buildings, 188, Fleet-street.

"LEARNED, CHATTY, USEFUL."—*Athenæum.*

"THAT DELIGHTFUL REPOSITORY OF FORGOTTEN LORE, 'NOTES AND QUERIES.'"
Edinburgh Review, October, 1880.

Now ready, price 10*s.* 6*d.* each, cloth boards, with very Copious Index,

NOTES AND QUERIES.

Vols. I., II., III., IV., and V.

SIXTH SERIES.

NOTES AND QUERIES contains, in addition to a great variety of similar Notes and Replies, Articles of Interest on the following Subjects :—

ENGLISH, IRISH, and SCOTTISH HISTORY.

The Dream and Death of Thomas, Lord Lyttelton—The Elective and Deposing Power of Parliament—Anne Boleyn—Scottish Titles—Burial-Place of Edmund, Duke of Somerset—Elizabeth, Queen of Robert Bruce—Bondmen in England—Serfdom in Scotland—Grahame, Viscount Dundee—A Jacobite Letter—Abbotsford in 1825—Compurgators—Bishop of Ross, Scotland, 1417—Knox's 'History of the Reformation'—Good Friday and Easter Sunday, *temp.* Charles II.—The Jews in England in the Thirteenth Century—Warrants for the Execution of Charles I.—The Fitzalans and Stewarts.

BIOGRAPHY.

T. Allington—William Roy—Caspar Hauser—Charles Owen of Warrington—Paolo Sarpi—The Descent of William Penn—William, Abbot of Ramsey—A. H. Rowan—George Cromer, Archbishop of Armagh—Matthew Smith, the first Principal of Brasenose College, Oxford—James Sayers, the Caricaturist—Jeremiah Horrox.

BIBLIOGRAPHY and LITERARY HISTORY.

Shakspeariana—The Authorship of Anonymous Works—Milton's 'L'Allegro'—Unpublished Letters of Macaulay—'Histoire des Médecins Juifs Anciens et Moderne'—Earle's 'Philology of the English Tongue'—Unpublished Poems by Burns—Dr. Johnson and Mrs. Turton—'From Greenland's Icy Mountains'—Chap-Books—Lord Byron in Scotland—Welsh Language—Unpublished Letter of John Wesley—The Works of Thomas Fuller—The Welsh Testament—Burns's Ode on the American Civil War—Opus Questionum divi Augustini—Letter of Smollett—'The Pilgrim's Progress'—Development of the Press, 1824-1874—Books written by Mrs. Olivia Serres: 'The Book.'

POPULAR ANTIQUITIES and FOLK-LORE.

Ague Charms—Birds of Ill Omen—Candlemas Gills—Eggs and Drunkenness—Evil Eye—Jewish Superstitions—Hydrophobia prevented—Handkerchief thrown on Suicide's Coffin—Ladies and Lionesses—The Seven Whistlers.

POETRY, BALLADS, and DRAMA.

The real Richelieu and Bulwer's Richelieu—"The Irish Brigade"—Thomas Decker—Mrs. Siddons a Sculptor—Barham's Lines on Dean Ireland—Browning's "Lost Leader"—The Lord Chamberlain's Inspection of Plays—Emma Isola—A Poem by W. M. Praed—Goethe—Shelley—Henry VIII. as a Poet—The Australian Drama—Charles I. as a Poet—Sheridan and Sir John Suckling—Oxfordshire Christmas Miracle-Play—Christmas Mummers in Dorsetshire—Dante and his Translators—The Christian Year.

POPULAR and PROVERBIAL SAYINGS.

"You know who the Critics are"—"You may put it in your eye and see none the worse for it"—Called Home—God's Church and the Devil's Chapel—Unaccustomed as I am to public speaking—Tout vient à point—Wise after the event—La Parole a été donnée à l'homme—Robbing Peter to Pay Paul—The End justifies the Means—The English seemes a Foole and is a Foole.

PHILOLOGY.

Carr = Carse—Heel Taps—"Bloody"—Spurring—Nor for Than—Vagaries of Spelling—Spelling Reforms—Surrey Provincialisms—Quadragesimalis—S. *v.* Z.—English Words compared with the Icelandic—Gingham—The Termination Y in Place-Names—Calomel—Yeux—Cameo—Hall, Wych, and Salt Works—Shaddongate—Shakspeare's Name.

GENEALOGY and HERALDRY.

The Insignia of the Knights of the Garter—Arms of Hungary—Dering Roll of Arms—Unsettled Baronetcies—The Arms of Sir Francis Drake—The Arms of English Sees—Bar Sinister—Strawberry Leaves on Coronets—Byron Arms—F. E. R. T. in the Savoy Arms—Seal of Prince of Livonia—The Templars and Hospitallers.

FINE ARTS.

Portraits of Dr. Johnson—Marks on Porcelain—Italian Works of Art at Paris in 1815—Sir Joshua Reynolds: Miss Day: Mrs. Day—Portrait of Barbor—Church Plate—Various Paintings and Engravings.

ECCLESIASTICAL MATTERS.

Altar Rails, Covered—Liddell *v.* Westerton—Ecclesiastical Vestments—Funeral Garlands—The Cistercians—"Prester John" and the Arms of the See of Chichester—Penance in the Church of England—Laud's Service Buik—Epitaph of Cardinal Howard at Rome—St. Cuthbert's Burial-place—Old Northern English MS. Psalter—Bere Regis Church—Sacred Vessels—A Roman Catholic Visitation in 1709—Episcopal Titles—St. George's Lofte—Registrum Sacrum Batavianum—Communion Tokens—Fasting Communion in the Church of England—The Title of Reverend—Consecration of Church Plate—"Defender of the Faith"—The "Breeches" Bible.

CLASSICAL SUBJECTS.

The Latin Version of Bacon's Essays—Greek Anthology—Martial's Epigram xiii. 75—Lucretian Notelets—Mediæval and Modern Latin and Greek Verse—Mittitur in disco—Catullus: "Hoc ut dixit"—"Sandon" (Horace)—Cicero—Lucus a non Lucendo.

TOPOGRAPHY.

Sandwich Islands—Origin of the Names of the American States—Arthur's Oven on the Carron—Scottish History—The Yardley Oak—Hart Hall, Oxford—Old Kensington—Travelling in Italy Forty Years Ago—The Equestrian Statue in Hyde Park—Arthurian Localities: Scotland—The Sacred Lotus—St. John's Chapel, Bedford-row.

MISCELLANEOUS.

Christian Names—Pillar Posts—Hanging in Chains and Irons—George III. and the Pig—The Kilkenny Cats—The Waterloo and Peninsular Medals—The Clerical a Healthy Profession—Unlawful Games of the Middle Ages—Itinerant Empirics—Sunday Newspapers—Gipsies—The Wordsworth—Double Returns in Parliamentary Elections—Curiosities of Corporation Records—Spiritual Apparitions—The "Dial" System of Telegraphy—Professor Becker's "Gallus"—Skating Literature—Cricket—London Companies, or Guilds—A Travelling Tutor of the Olden Time—Gunpowder Plot—Baths in the Middle Ages—The Little Summer—Whitsuntide—Michaelmas—Christmas Contrasts.

LITERATURE

The British Association for the Advancement of Science at Southampton. 1882.

The fiftieth anniversary of the British Association for the Advancement of Science was held last year at York. This year the venue is changed from north to south, and the Association is to meet at Southampton, the Roman Clausentum, the "pagus qui dicitur Hamtun" of Edward the Elder. The contrast between the two towns is as great as the most ardent lover of change can wish for, and although in some respects the wealthy northern capital must bear the palm, yet in many others no fitter place for the gathering of the distinguished visitors could have been selected than the charming town, half watering-place, half seaport, which is this month to have the honour of receiving them. It is unnecessary to go into any learned discussion as to the origin of Southampton, whether it really is on the site of the old Roman station or not. The question will probably receive sufficient attention during the meeting. It will be more to the point to mention those features which will invest the town with interest for its guests.

First among these will probably be the stately remains of the old wall, the line of which can still be fairly well traced from the Bar Gate, round by the western shore, the site of the castle (of which the keep was still standing almost within the memory of living man), Simnel Street, Blue Anchor Lane, the West Gate, Bugle Street (called in ancient local deeds "La Bole Strete"; in the New Forest the bull is still called the *bugle*), the East Quay and Water Gate (which was pulled down in 1504), God's House Tower, the South Gate Tower (now buried in ivy, and perhaps the most picturesque point in old Southampton), Canal Walk, the Ditches, Back o' the Walls, and to the Bar Gate again. Besides these above-ground relics of old days, Southampton is full of curious underground reminiscences of the past in the shape of old crypts with groined roofs and columns, some of them of large size and great beauty. Outside the walls, north-east of the Bar Gate, were the Hounds' Well, where the royal hounds were watered on hunting days, and the Friar's Spring, which about a hundred years ago was much frequented and supposed to possess great virtues. There was another chalybeate spring, west of the Bar Gate going down to the water, of even greater repute. None of them remains. At the Bar Gate in former days lurked a municipal official, called in contemporary registers the "Brocarius Bigarum," whose duty it was to collect the petty customs and tolls of the town from carts passing through for the country. He, too, is gone, and so have the time-honoured presentments of Sir Bevis and his squire Ascupart which used till quite lately to adorn the north front of the Bar. The Bar Gate was, of course, one of the principal points of defence of the town walls, and among the munitions registered in an inventory taken on the 10th of September, 1602, is the "greate murthering piece of yron standing at the Bar Gate, serviceable wyth hys chambers to yt."

The earliest notice of Southampton in Florence of Worcester and the Saxon Chronicle is connected with the victory of the Ealdorman Wulfhard over the Danish invading fleet of thirty-four ships in 837; and there is a charter granted by Æthelwulf of Wessex, and dated in "Villa Regali quæ appellatur Hamtun" in 840. The first mention of Southamptonshire is in a charter of Edward the Confessor to the monks of Westminster. It also appears in the will of Ælfgifu the Lady in or about 1053. In the ninth and tenth centuries Southampton came in for its share of the ravages committed by the Northmen, especially in 980, when the town was harried by a squadron and most of the inhabitants put to the sword. A hundred years or so later Olaf Trygvason of Norway, with Suein of Denmark, laid the county waste, and, after receiving tribute from Æthelred, wintered in the town. Thence he was led "with much worship" by the royal envoys, Ælfheh, Bishop of Winchester, and the Ealdorman Æthelward, to the king at Andover, where he was confirmed by the bishop and adopted by the king, forswearing in return all hostile visits to England, a promise which we are told he faithfully kept. Cnut's connexion with Southampton is too well known to need reference; the story of his rebuke of his courtiers is there, at any rate, religiously believed to be true. The entry concerning the borough of Hampton in Domesday Book contains this curious notice: "After King William came into England there were lodging in Hantone LXV. foreigners and XXXI. Englishmen." It is a curious evidence of the peculiar character of the town and its population that there exists among its records a portion of a list of all the foreigners living in it at the time, with their addresses. It is unfortunately fragmentary and undated.

For many years after the Conquest Southampton was the port of departure and return for the constant succession of expeditions of all kinds between King William's new domain and his lordship of Normandy, and there it was that the meeting took place between the envoy of William Rufus and his brother Robert. The death of Rufus in the New Forest almost belongs to the history of Southampton. The Priory of St. Denys was founded by Henry I. In 1154 Baldwin de Rivers submitted himself to Stephen at Southampton. Henry II. landed there in 1174 after his absolution by the Council of Avranches. He either gave or confirmed an incorporation to the town. A few years later he landed there a second time with Queen Eleanor. In 1194 Richard I. kept Christmas there, and during his reign or about that time the old church of St. Michael appears to have been built. In King John the town found a warm friend and admirer. On the west side of the town there still existed not many years ago "King John's Pond," where the royal horses were watered; and the arcade at the bottom of Blue Anchor Lane—now a common lodging-house—is the reputed site of his palace. He granted the town the earliest of its charters now extant, though an inspeximus of Edward III. in the muniment room goes back, by implication at least, to Henry I. Many of John's writs are dated from his Southampton palace and from "Frigidum Mantellum" (Freemantle), and it is not improbable that many an interview took place and many a plot was formed there between the king and his two villainous Brabançon retainers—Martin Algais and Lupescaire. He spent the Christmas of 1211–12 there. The Close Rolls of the period are full of precepts to the Keepers of the King's Wines at Southampton for the sending of wines either to other royal residences in England—Lyndhurst among the number—or to some recipient of the royal favour; among whom many an abbot, and not unfrequently an abbess, figure conspicuously. But in King John's reign not only was there much wine in Southampton, but a good supply of an incentive to make use of it—red herrings—of which an order for 100,000 is recorded to have been sent by the king to Bishop Grey of Norwich, Yarmouth then, as now, being a great centre of the herring fishery. Although King John appears to have been by far the greatest patron of Southampton, his successor—Henry III.—conferred many benefits upon the town, notably in his support of its privileges against the encroachments of the Barons of the Cinque Ports and his charter for exemption of the burgesses from arrest and other civil processes not authorized by their own officers. Southampton was one of the seven towns of Hampshire which sent burgesses to the Parliaments of Edward I., and is one of the three which never lost the right of representation, the two others being Portsmouth and Winchester.

During the reign of Edward III. the town suffered much from foreign invasion. In 1338 it was attacked by a French fleet and suffered great loss both in men and property, the assailants, among whom was the son of the King of Sicily, being eventually, however, beaten off with great slaughter, the prince being one of the slain. In St. Julian's Chapel were buried the remains of the Earl of Cambridge, Lord Scrope, and Sir Thomas Grey after their execution at the Bar Gate, to which they were drawn from the Water Gate at the bottom of English Street, now called High Street. Henry V. was a good deal at Southampton, both for defence against the French fleet and to take measures for invading France. On the banks of the Itchen, where Payne and Fay now turn out their masterpieces of the craft of yacht-building, Harry le Roy caused to be constructed certain ships called Dromonds, which were as much the wonder of his time as the Alexandras and Inflexibles are of ours.

Henry the Fifth what was his purposing
When at Hampton he made the great Dromons,
Which passed other great ships of all the cannons,
The Trinity, the Grace de Dieu, the Holy Ghost,
And others more which as now be lost?

In 1432 another alarm of invasion, happily averted, fell upon Southampton. During the Wars of the Roses, King Edward is reported to have come to Southampton to sit in judgment on certain gentlemen taken in a skirmish, and to have ordered them to be hanged and impaled. Edward VI. writing to Barnaby Fitzpatrick describes Southampton as a handsome town, with as fine houses comparatively as London. In anticipation of his coming the citizens had spent much money on painting, repairing, and rebuilding of their walls. They made great cheer, and many of them kept costly tables.

On the 20th of May, 1554, all Southampton was *en fête* to receive Philip of Spain, who came over to marry Queen Mary, and he was invested with the insignia of the order of the Garter on board his ship before landing. Going to mass and drinking ale seem to have formed his principal occupations during his stay in the town. Queen Elizabeth is said to have paid Southampton two or three visits, the cost of one of which in 1591 is thus recorded in the Corporation accounts:—

The acompte of the laynge oute of the 98*l.*, *per contra*, *sithence the fyrste of September*, 1591.

Some £98 19	2	0	0

At the very commencement of his reign the town had the honour of receiving King James I. and his Queen, on which occasion the then Mayor is said to have been so struck with his sovereign's appearance that he concluded his speech abruptly with, "But the majesty of your royal presence astonishing me, I am forced sodaynly to breake off my speach," a termination no doubt very much to his Majesty's satisfaction. King Charles I. was at Southampton in 1625 on the occasion of his reception of the ambassadors of the United Provinces, and this seems to have been the last royal visit of importance to the town, though James II. is said to have passed through it in 1686, till her present most gracious Majesty's visit some few years ago.

In old days many curious regulations were in force as to the different trades exercised in Southampton. The brewers, whose great place of resort was in St. Mary's, were forbidden to dig in the marsh land for clay for stopping up their barrels; and they were also ordered not to use iron-bound carts for the conveyance of their wares, as they spoiled the roads and converted the beer by their jolting into froth, to the great disappointment of their customers. The vintners were ordered to sell Gascon wine, both white and red, at 1*s.* 6*d.* the quart. The barbers were forbidden to trim beards on the Sabbath day, and oysters were ordered to be sold to the inhabitants for three halfpence a hundred. Up to a very recent period two fairs were held in Southampton, one in May, the other in Trinity week. The May or St. Mark's Fair used to be held in Above Bar Street, and was more picturesque than convenient, at least in later days. It was then removed to the West Marlands, and is now abolished. Trinity or Chapel Fair still goes on. It was granted in 1433, and its opening is even now of some solemnity. The royal proclamation is read and a gigantic black wooden effigy of a glove is raised on the top of a pole, whereby the fair is opened under the authority of the senior bailiff, which used to last for four days, but now endures for only one, when the glove is taken down and the bailiff's jurisdiction is at an end.

Few towns have greater natural advantages. Its two principal approaches are almost unrivalled. The whole drive from Winchester is through delightful scenery, and its beauty culminates at the top of Basset Hill, from which the view is most attractive. The traveller looks through the long avenue of elms, that stretches for above a mile, and the prospect is intersected by the hills of the Isle of Wight in the distance, while on each side of him lies the common, a large unreclaimed piece of true old forest land, undulating and well timbered. The other chief approach, that by the Southampton Water, is equally striking when the tide is in and the river is covered with the numerous yachts which have their headquarters in these waters. A finer and more cheerful street is not often to be met with than the High Street, nearly a mile long and running about north and south. Its profile is broken up into very picturesque irregularity by the various shapes of its shop-fronts, and nearly every house sports a flagstaff, on which it is the delight of each true townsman to fly his bunting on every possible occasion that can be made to furnish an excuse for the display.

For the gratification of visitors of other tastes there are the docks, still the port of some of the finest ocean steamers afloat, although their interest is considerably diminished by the departure of the P. and O. steamers to the Thames. These docks must have been the scene of much that is moving and much that is pathetic. When the Indian steamers used to arrive and depart every week, the extremity of joy and grief was often to be witnessed there, as the inevitable accompaniment of each homeward and each outward bound vessel. The docks have never, perhaps, been the stage of a more striking scene than they were a few days ago, when the Queen saw the troopships off to Egypt, and in her little yacht Alberta accompanied each huge steamer a short distance out of the creek and then backed in again, to pay the same graceful compliment to the next amidst the tumultuous cheering of the men on board. Then there are the ruins of the two abbeys of Netley, of old called Lætus Locus and Beaulieu (nearly the same name in different tongues; the latter used to be called Bellus Locus), both within a short distance; and the to most people novel, to every one delightful, "Forest," at this time of the year to be seen to its greatest advantage, with its breast-high growth of luxuriant bracken under the magnificent trees; its "Queen's Bower"; "Twelve Apostles," the ruins of as many mighty oaks; "Moyle's Court," with its memories of Alice Lisle; "Rufus' Stone"; "Castle Malwood"; its herds of wild ponies and droves of wilder pigs thriving on the pannage; the glorious beeches of "Mark Ash" and "Knight Wood," with the "Queen of the Forest" for its central figure—not literally so, however, for this splendid oak stands on the border of the wood; and its great expanses of rough waste, across which one may ride in spring over acres and acres of bluebells and primroses, and which, later on in the year, are covered with almost as luxuriant a growth of orchids. To a stranger, especially a Londoner, a day in the wilds of the New Forest must be a charming holiday indeed when all the sights and sounds of woodland life are fresh to his eyes and ears.

Et cuculi cuculant et rauca cicada fritinnit.
Bombilat ore ferens munera mellis apes.

A good deal of excellent honey is made in the Forest, and a small quantity of execrable cider; and what many people would give a good deal for, truffles, could not long ago be bought of the "hunters" for eighteenpence a pound. The sight of these truffle hunters, with their clever little cur dogs scenting out the delicate tuber, used to be one of those peculiar to the Forest. Still more striking was it to the wanderer to come suddenly upon a "charcoal camp," with its canvas screens and singular inhabitants as black as the charcoal they burned. The unexpected apparition of one of these carbonized savages, hidden up to the waist in the fern—their attire was of the most primæval proportions—was sufficiently startling to one well versed in the ways of the place: in the stranger, even if gifted with the nerves of a member of the British Association, it would probably

raise a fervent wish that he was safe back again in the less romantic but more protected purlieus of Piccadilly.

Any notice of modern Southampton would be incomplete without mention of the Ordnance Survey Office—the old Ordnance Map Office—which was removed down there from the Tower of London after the great fire in 1840; but a detailed account of the organization and of the work performed in that fine establishment would far exceed the limits of the present article. The calculations for the primary triangulation of Great Britain were made at that office by Col. Alexander Ross Clarke, R.E., by whom the comparisons of the standards of length of England, France, Belgium, Prussia, Russia, India, and Australia were also made. The secondary and minor triangulations are by Major J. Fellowes, R.E. The calculations for the initial levelling of the whole country were also made there. The plans drawn upon the ground are examined and published there, reductions from the original scales being made by photography. The art of photozincography was invented in that office, and has been utilized not only for superseding the engraving of maps, but for the reproduction of a large series of the national manuscripts of England, Scotland, and Ireland, under the successive directorates of Sir Henry James, General Cameron, and the present Director-General, Major-General Cooke. The whole Survey establishment, of which the Southampton office is the headquarters, employs two thousand eight hundred men, including four companies of the Royal Engineers with thirty-two officers.

The service of the South-Western Railway is good, and many additional trains will, no doubt, be provided to accommodate the expected influx of visitors. As at York, there is a refreshment room at the terminus—not on quite so grand a scale, perhaps—and hotels abound in the town. The hospitality of the inhabitants is proverbial—we have seen what Edward VI. himself said of it; and altogether the lines of the British Association for the Advancement of Science might well have fallen in less pleasant places than have been marked out for them in 1882.

A Selection of Cases from the State Trials. By J. W. Willis-Bund. 2 vols. (Cambridge, University Press.)

To constitutional lawyers the law of treason must necessarily be of special importance, while as the index and instrument of the growth of the royal power it possesses a wide historical interest. The materials for its history lie buried in collections of State trials or the statutes of the realm, and their ponderous bulk renders them either inaccessible or repellent. To a large class of readers Mr. Willis-Bund's compilation will thus be of great assistance, for he presents in a convenient form a judicious selection of the principal statutes and the leading cases bearing on the crime of treason. The first volume deals with the development of the law between the years 1327 and 1660; the second, which is in two parts, treats of the application of the law by the judges in the first twenty-one years of the reign of Charles II.

Mr. Willis-Bund has taken his reports of the State trials from the collection of Howell, and has wisely left them to tell their own tale, supplying only sufficient introductory matter to render each case intelligible. In two useful prefaces, prefixed to the first and second volumes, he has summarized the growth of the theory of treason within the three centuries and a half of which he treats.

During the early stages of development he shows that the expansion or restriction of the legal definition of the offence was one of the issues in the struggle between the Crown and the feudal aristocracy. The baronial opposition was stimulated by no large-hearted enthusiasm in the cause of liberty, but by the more prosaic dread of the forfeiture of their property. Forfeiture was affixed as a penalty to breaches of allegiance in consonance with the idea of feudalism, and it is for this reason that Mr. Willis-Bund selects the Oath of Sarum in 1086 as "the starting-point of the law of treason." It may well be that the relation then created between the Crown and its subjects supplied the motives for expansion of the law on the one side and its limitation on the other; but the expression is misleading and only partially true.

In dealing with the period of development Mr. Willis-Bund shows that the Crown at first extended the law by legislation, but that after the reign of Henry VI. the more subtle contrivance was adopted of extension by means of judicial interpretation. In this manner the doctrine of constructive treason was rendered capable of almost indefinite operation, and the judges at the Restoration found themselves possessed of an instrument of repression with which they could strike at all offenders who had become obnoxious to the Government.

Mr. Willis-Bund has thrown a new light on the administration of the law after the Restoration. He maintains that "the trials under Charles II. were fairer, and the law in favour of prisoners better administered, than at any previous period of our history." The statement is not a little startling; for Hallam, Macaulay, and Lord Campbell agree in severe condemnation of the characters of the judges and of the strain which they put on the law they were appointed to administer. Even closer inquiry appears at first sight to justify the stern verdict of historians, for the language used from the Bench certainly confirms the truth of part of Hallam's charge that the courts of law were "disgraced by the brutal manners and iniquitous partiality of the Bench." It cannot be disputed that the behaviour of the judges towards the prisoners was often violent and brutal, but in spite of this we think Mr. Willis-Bund has made out his case, that the judicial bark was worse than its bite, and that a State trial after 1660 was no longer a legal formality preliminary to the execution of the accused, but a judicial investigation which might result in an acquittal.

Even Chief Justice Scroggs finds in Mr. Willis-Bund a champion, though his name has been long associated with that of Jeffreys as a byword for the worst vices which can sully the purity of the judicial ermine. Here, too, Mr. Willis-Bund has proved many points in favour of the man whom his biographer and successor in office has styled "a base and bloody-minded villain." In the height of the panic about the Popish Plot, Scroggs excluded evidence proffered by the Crown against the prisoners; directed juries to acquit on the ground of the insufficiency of the evidence; postponed the trial of one prisoner to enable him to collect witnesses on his behalf, and of another on the plea of ill health; and compelled the Crown witnesses to answer all questions asked of them in cross-examination, even though reasons of State were alleged for refusal. Such a judge cannot have been altogether without good qualities, and cannot have entirely deserved the wholesale denunciation with which he has been assailed.

For all classes of readers these volumes possess an indirect interest, arising from the nature of the cases themselves, from the men who were actors in them, and from the numerous points of social life which are incidentally illustrated in the course of the trials. On these features we have not dwelt, but have preferred to show that the book is a valuable contribution to the study of the subject with which it professes to deal, namely, the history of the law of treason.

Memoir of Daniel Macmillan. By Thomas Hughes, Q.C. (Macmillan & Co.)

Whatever be the cause, whether it be the secular feud between author and publisher or the uneventful character of their lives, few booksellers have found biographers. Mr. Hughes has, however, been well advised in bringing out this memorial. "Many young Scotchmen," he rightly remarks,

"have come south, and made fortunes, and founded great houses of business, in the book trade and in other trades, to whom no special interest attaches outside their family circle and personal friends. Besides, in our day, the self-made man has been somewhat too much glorified, and we are tired of worshipping the mere power of getting on. It needs some quality of a finer and higher kind than usual in the man himself, or something peculiar in his surroundings, or dramatic in his life, to make the world he has left desirous of hearing more of him than that he lies safely in such a cemetery or churchyard, and has left so many thousand pounds behind him. In the present instance, however, the fact stands, that after a quarter of a century, those who knew Daniel Macmillan best are not contented with what they know, and do desire something more. Now this desire cannot be accounted for by his surroundings, which were just like those of thousands of other Scotchmen of the same class; nor of anything dramatic in his life, which was singularly free from incident. So we must fall back on the qualities of the man himself to account for it.....Whoever glances at these pages cannot fail, I think, to admit that there was something in this man's personal qualities and character,.....a touch...of the rare quality which we call heroism."

That Mr. Hughes is right in his verdict no one who knew the man or even reads this memoir will doubt. Daniel Macmillan was the tenth child of a poor peasant in Arran. He lost his father when he was only ten years of age, and the education he received was of the most limited description. But he seems to have early shown a taste for reading, and instead of being trained to a handicraft he was apprenticed to a bookseller. The energy which distinguished him through life brought him at the age of twenty to London, eager to find employment in some of the great houses in the Row. This he was not able to obtain, but he was

XUM

engaged by Mr. Johnson, the well-known bookseller in Trinity Street, Cambridge. The stock of books in Johnson's shop was mainly classical; but though young Macmillan knew neither Latin nor Greek, he soon attracted attention.

"He had made many friends amongst the reading men who frequented the shop; indeed, there are slight indications of jealousy on the part of his employer on this account. The rising men in the university often passed Mr. Johnson's desk to consult the Scotch shopman as to their purchases, or to talk over books with him."

His taste in literature was surprisingly good, and the judgments on books scattered through this volume are excellent. It may especially be noted that he showed a right appreciation of Landor, a thing hardly to be expected from a self-taught man. Of course he made mistakes. He fancied that he had outgrown Byron, and he thought that the 'Excursion' would do. On the other hand, the following remarks, made in 1843, show great penetration:—

"Newman has just sent out another volume of sermons, preached before the university. It is a very curious specimen of the sceptical turn of his mind. He very much reminds me of our great Scotch sceptic, David Hume. The same analytical power, the same carelessness about consequences. He is quite a logician, and a most powerful one. He holds fast by Christianity as developed in 'the Church,' *because the balance of probabilities seems in its favour.* If he had not been a Christian and a churchman, he would have been one of the powerfulest sceptical logic-mills we have had set a-going in this country for many years."

Much of his attention was given to theology. He was naturally religious, and the Calvinism he had learnt in his boyhood long adhered to him; but gradually his opinions altered, and when he came under the influence of Archdeacon Hare and Maurice he adopted the tenets of the Broad Church school. Hare's attention he attracted by a letter regarding the 'Guesses at Truth'—a letter which procured him an invitation to Hurstmonceaux. At the time the following was written Macmillan was a shopman in the employment of Messrs. Seeley in Fleet Street:—

"The house is a large, well-built, commodious-looking mansion, but does not display much architectural taste. When one goes into it, it looks more like a library than a dwelling-house. It is literally crammed with books—and such books—collected with such wisdom and care. Mr. Maurice says that he thinks it the best private library in England; contains the largest number of really valuable books, selected with the widest and most catholic judgment and taste. Carlyle says he never saw so large a collection of really first-rate German books; and Carlyle is an authority on such matters. But besides German he has Greek, Latin, Italian, Spanish, French, and English of course.....He has not merely a large library, for though the room specially so-called is a large one, and quite full of books, it contains only a small part of his books. The dining and drawing rooms look more like libraries than dining and drawing rooms; for the sides that are not shelved from bottom to top and filled with books, are covered with pictures, some of the very noblest pieces of art. Then the hall is shelved and filled with books in the same way, and so are the staircases and the lobby of the first floor, and so are some of the bedrooms. It is really quite wonderful; I was surprised. But all this money could do with some good advice in the selection. However, when I began to look through the books I saw that Hare was something very different from a mere book-collector. All the most valuable books had marginal notes, or notes at the end—generally pointing out where was a good criticism on it, or where the same subject was discussed—never mere marks of admiration, or any pedantry of that kind.....The foremost figure is, of course, the Archdeacon himself. He is about six feet, not at all stout, not very slender. Something like Mr. Binney as to height, not at all like him otherwise. His eye is large, soft, swimming, not dark-blue, nor gray, nor hazel, but a sort of mixture of these. His hair was dark, but is now copiously sprinkled with gray. His complexion is rather sallow; his forehead broad and rather, but not very, high. He takes no care to show his forehead, as his grizzled hair lies carelessly about his temples. His expression is that of a very thoughtful, kind-hearted, simple-minded man, quite free from all self-consciousness. I never met so humble-minded a man. He stoops a little, the result of too much reading I should think."

To the Hares was due Macmillan's success in life. A loan from Julius Hare and Marcus of 500*l.* enabled him and his younger brother to start in business at Cambridge. Commencing as booksellers, they in a few years began to venture on publishing, and they drew round them many of the best Cambridge men of the day. "I do not in the least remember," says Prof. Hort,

"how I first got into conversation with him, but it must have been very soon, before the end of my first term. I was reading away at Maurice, of whom I had heard from John Ellerton, the present Rector of Barnes, and this as a matter of course led to frequent conversations as time went on. The Cambridge habit of standing and turning over books made it easy for him to begin talking to men, and he used the opportunity freely, with books for a starting point. His talk was at once so interesting and so high in tone that it could not fail to do good, but I know little of its actual effect."

Success, however, did not come easily, as the capital of the brothers was all borrowed, and the struggle was made severer for Daniel Macmillan by the constant pressure of disease. Again and again he was compelled to pause, but his indomitable energy brought him back to work the moment he had in some slight degree rallied. The steady, methodical manner in which he managed his business is shown in the following letter:—

"It will be needful to come to work punctually at seven o'clock every morning. This is a point we lay great stress on. From seven till nine we expect you to put all things in nice order: to see that the boys clean windows and so forth. We expect you not only to dust and arrange things, but to see that these errand-boys do their work thoroughly—see that they work separately, that is, if one is working downstairs let the other work upstairs or in the back-shop or in a different part of the front-shop.....We shall expect you always to do the day's work in the day—that is, to see all the orders executed, all the letters answered, all the books that come in daily cleared away in the day, and all the books posted daily.....We shut up at eight in the winter and are anxious that the work should be pressed forward in the day so as to leave as soon after the shop shuts as possible. We may as well explain that we attend to the shop mostly ourselves, and make our assistants attend to most of the details, such as writing orders, keeping books, looking after accounts, and most of the ordinary correspondence, sending out orders, and making the boys sign for the books they take out. So that our posting may be done daily we have two day-books, one in use in the entering room and the other getting posted in the counting-house.....Our assistants see every part of our business, so it is a good place for learning how a trade is managed, how books are bought, and how accounts are kept. But of course, as nothing is kept secret from our assistants, we expect them to be honourable and trustworthy, and not to gossip to any one about what they see or hear relating to business."

For a long time his income was extremely small. Ten years after he had started at Cambridge he was obliged to ask his father-in-law to pay off 36*l.* of debt which had accumulated in his household expenses. The bitterness of the struggle was enhanced by the fact that till within a few months of his decease he had only a life share in the business. This state of things he managed to remedy at the beginning of the last year of his life, and it is pleasant to record that his son has inherited the position that the father won. He died, in fact, just when success had been achieved.

"The balance sheet of 1856 was the best the firm had ever known, and the prospect brighter. Their business had taken root, and the steady demand for their books, and the growing popularity of the writers with whom they were connected, above all of Mr. Kingsley, inspired confidence in their future."

But, as has been already said, the attraction of Macmillan's life lay not in the success he achieved, but the way in which he achieved it. "No man," Mr. Hughes remarks,

"who ever sold books for a livelihood was more conscious of a vocation; more impressed with the dignity of his craft, and of its value to humanity; more anxious that it should suffer no shame or diminution through him. And his ideal did not abide in talk, a fair image to be brought out and worshipped when the shop was not full of customers. He strove faithfully to realize it amid difficulties which would have daunted any but a strong and brave man. The chief of these was life-long illness of the most trying kind. The disease of which he died a quarter of a century later struck him before he was twenty, and he was never a really sound man from that day. Of all men I have known personally he was the one who lived most constantly and consciously eye to eye with death. He became aware when a young man that, at any time, in a few hours, some carelessness—a chill, wet feet, an incautious meal—might prove fatal to him; and yet through it all, with blisters, setons, caustic always going, he was as full of interest up to the last in the books he was publishing and dealing in as the authors and buyers themselves, and retained to the last a joyousness and playfulness in his intercourse with his family and friends, which made it almost impossible to realize upon how frail a thread his life hung."

Mr. Hughes has done his work admirably. The details given are sufficient, the extracts from letters and journals are wisely chosen and not too numerous. On the whole, we have seldom seen a more satisfactory biography. An excellent index adds to the value of the book.

Coleccion de Cantes Flamencos. Por Demófilo. (Seville, Office of the 'Porvenir.')

The gipsies still remain a race apart, given to plunder, and showing singular contempt for the laws of *meum* and *tuum*. It is, however, says Mr. Borrow, with the women that "the whole poetry, sorcery, and devilry lie." This may well be said of the Spanish gipsies of Seville and Granada. From the time of their arrival in Andalusia in the fifteenth century, probably in the train of the Flemings

(hence the contemptuous term Flamencos used by the Spaniards), they eluded the strong arm of the law and the more sure and secret grip of the Inquisition. True, some were hanged and many imprisoned; but they still spread and flourished, the men prosecuting their callings of tinkers, cattle stealers, horse doctors, and donkey barbers. Even now they shave and trim donkeys to such an extent that Sancho himself would not have recognized his own *rucio* had a child of the Germania or Flamenco, instead of Ginés de Pasamonte, appropriated him. When most sorely pressed by Crown and Church it seems strange that the gipsies should have escaped through the meshes of both nets. The men were probably found useful emissaries. Nomadic in their habits, they were brought into contact with all classes in city, town, and sierra, and picked up information useful to both king and clergy; while the women, practising their "sorcery and devilry," palmistry and love potions, penetrated within the noble's castle as well as the peasant's hut, removing rivals quietly, and collecting fact and gossip saleable and useful to the authorities when locomotion was difficult and it was hard to get information that could be relied upon. Ticknor remarks: "Encouraged by the expulsion of the Jews in 1492 and by that of the Moors in 1609–11, Don Sancho de Moncada, a professor in the University of Toledo, addressed Philip III. in a discourse published in 1619, urging that monarch to drive out the gipsies; but he failed." Salazar de Mendoza, at the end of his 'Dignidades de Castilla,' published in 1618, says he had himself prepared a memorial to the same effect, and he adds, "It is being over-nice to tolerate such a pernicious and perverse race." Notwithstanding the pernicious and perverse race flourished in Andalusia and Granada, settling in transpontine Seville (Triana) and the Albaicin (Granada), where, according to Ford, "these picturesque vagabonds play a first fiddle." The collector of 'Cantes Flamencos' gives us only a phonetic Andaluz, the language used by the gitanos of Andalusia when performing in public. Amongst themselves, according to Borrow in his 'Zincali; or, an Account of the Gipsies of Spain,' they use Romany when dealing at fairs, thus "conversing with each other in a language unintelligible to the Spaniards." He also quotes 'El Estudioso Cortesáno,' by one Lorenzo Palmiréno, Alcalá, 1587:—

"Who are the gitanos? I answer, These vile people first began to show themselves in Germany in the year 1417, where they call them Tartars or Gentiles; in Italy they are termed Ciani. They pretend that they came from Lower Egypt, and that they wander about as a penance, and to prove this they show letters from the King of Poland. They lie, however, for they do not lead the life of penitents, but of dogs and thieves."

And

"the language which they use is a feigned one, got up by thieves for the purpose of concealing their robberies, like the jargon of blind beggars."

Cervántes' "exemplary novel" 'La Gitanilla' evidently illustrates to some extent the gipsy life of his time, and, although much romance is judiciously mixed with the narrative, enough remains to indicate that the author of 'Don Quixote' was familiar with the daily life of the gitano, most probably that of the Seville gipsy. Solis dramatized Cervántes' story, utilizing also an earlier drama of Montalván upon the same subject. 'The Spanish Gipsy' of Rowley and Middleton is from the same source. "Tobin, the author of 'The Honeymoon,' who was a lover of Spanish literature, prepared an analysis of this play, intending to adapt it to the English stage." In our day George Eliot found amongst the gipsies of Granada a model and subject-matter for a dramatic poem which has hardly received the appreciation its lyrical beauties merit.

Some of these 'Cantes Flamencos' so industriously collected by Demófilo, chanted at the fairs, in the *ventas*, the streets and coffee-houses of Seville, date back a century at least. The gitana, whose power of voice and limb formed her fortune, soon found her profit in singing and dancing to the lively Andaluz; and, although the poetry is weak, the sentiment is strong and touching. The collection is divided into *soleares* of three and four lines each, followed by "Seguiriyas Jitanas," "Polos y Cañas," "Martinetes," "Tonás y Livianas," "Deblas," and concluding with "Peteneras"; many of these simply apply to the names of the "minstrels." In an appendix is given the biography of a tailor of Moron, by name Silverio Franconetti y Aguilar, and some of his productions are added. These couplets are not of necessity the exclusive property of the gitana songstress or gitano, but are sung by many a tailor and many a barber who have not a drop of gipsy blood in their veins; some are chanted without musical accompaniment, others again combine both guitar and castanet. The collector gives a list of many of the singers of "Cantes," but under pseudonyms like Maria Borrico (Maria Donkey). Borrow furnishes some translations of gitano chants; unlike those in the present collection, they are in Romany and not phonetic Andaluz. Of the origin of the Romany songs there can be no doubt; but those collected by Demófilo may be used by the gitano although not his own composition. How far these "Cantes" may be accepted as genuine gipsy work the present little volume does not assist us much to determine; evidently the gitana felt the popular pulse of the Sevillano of a past age, and supplied him with sympathetic song and dance, which are appreciated to this day by his descendants, but whether they were original or adapted the facts are not sufficient to warrant us in deciding.

It is difficult to make a choice for quotation out of the vast number of these "Cantes." We therefore avail ourselves of the compiler's selection in his prologue. The first example is supposed to illustrate "the constancy of sincere affection":—

Fragua, yunque, y martiyo
Rompen los metales;
El juramento que yo á ti t' he jecho
No lo rompe naide.

Our translation is of necessity somewhat free, but preserves the sense of the original:

Hammer, forge, and anvil
Mould the shapeless mass;
But the oath I've sworn to thee
Shall never broken be
Whatever comes to pass.

We may add translations of two or three more "Cantes":—

By the cathedral's porch
I dare not pass to-day;
I see my mother's face
And tears fall apace;
I go some other way.

"If you come not to me in life I will come to you in death, and every graveyard ransack until I find you."

Come not to my prison window,
Come not with grief and tears,
But come with money in your hand
To calm my grief and fears.

To the prison window come not
With weeping and with prayer,
For you place my head like wheat
Between two millstones bare.

Texts in the Babylonian Wedge-writing. By Theo. G. Pinches. (Society of Biblical Archæology.)

Assyrian and Egyptian research already owes a good deal to the Society of Biblical Archæology; the debt is increased by the last work which has been published under its auspices. This is the first part of a collection of texts in Babylonian cuneiform characters, a list of which occupies the first five pages of the book. When we say that Mr. Pinches is the author of the work, its value will be recognized by all Assyrian scholars. Mr. Pinches's accuracy of eye in reading a cuneiform text is unequalled, and he possesses a unique knowledge of the peculiar forms assumed by the cuneiform characters in Babylonia from the tenth century B.C. downward.

One of the first difficulties against which a young Assyrian student has to contend is the variation of form undergone by the cuneiform characters as used in Assyria and Babylonia at different periods. The forms found in the earliest texts, those, namely, of the pre-Semitic or Accadian epoch, are relatively not far removed from the primitive pictures out of which the cuneiform characters developed; they exhibit a complexity and a superfluity of wedges which are quite bewildering at first sight. In Babylonia these early forms were gradually simplified, and at each successive stage of simplification were adapted to the needs of a cursive writing. Consequently the monuments present us with several different forms of the cuneiform syllabary, each of which is accompanied by a corresponding cursive script. The latest of these cursive scripts is the one with which Mr. Pinches has sought to familiarize the student, and since it is in it that most of the numerous texts sent to England by Mr. Rassam during the last three years are written, its importance need not be pointed out.

In Assyria the syllabary underwent no such troublesome series of changes as it did in Babylonia. The Assyrians were a nation of warriors, not of writers and readers like their Babylonian neighbours. Early in their national history they adopted a clear and simple cursive hand, and henceforth employed it indifferently for private or monumental purposes. It was only now and then that they ventured upon a more ornamental mode of writing, partly imitating the old Babylonian forms of the characters, partly exaggerating their peculiarities and the number of wedges with which they were written. But a few texts only are inscribed in this Assyrian black-letter.

The texts published by Mr. Pinches consist of observatory reports; letters and despatches; lists of omens; a curious allite-

rative hymn, each stanza of which contains five lines beginning with the same syllable; an account given by Assur-bani-pal of his restoration of the Temple of Istar at Arbela, in which he mentions his three brothers; and extracts from some bilingual lists of words. The letters are somewhat hard to translate, as they are written in the current language of the day, not in the stereotyped and semi-obsolete literary dialect to which the Assyrian scholar is accustomed. They will be useful in helping us to construct the grammar of the Assyrian which was actually spoken by the contemporaries of Sennacherib. The omens are chiefly concerned with house building. The compiler of them gains our sympathy by stating that "if the gates of a house face north, the bricks of that house will be bad"; whereas, on the other hand, a house with a southern aspect is a "good" one. "In laying the foundations" of a house the owner had to beware of "black beetles"; if these are seen, "the master of the house will die before his time."

Mr. Pinches's work is admirably suited for the purpose for which it is intended. For the first time the Assyrian student has been put in possession of a fairly complete list of cuneiform characters in their later Babylonian forms, copied exactly from the original documents; while the texts which follow not only contain new and interesting matter, but will serve to familiarize the reader's eye with the characters in their Babylonian dress. But what does the author mean by speaking of them as "in the Babylonian wedge-writing"? Surely he does not intend to assert that the Babylonians used wedges instead of pens.

Œuvres Inédites de Bossuet: Cours Royal Complet sur Juvénal. Vol. I. Découvertes et publiées par A. L. Ménard. (Paris, Firmin-Didot.)

The French feeling for Bossuet is very similar to our feeling for Milton, only their sentiment is stronger and more passionate. Large portions of the English public have never pardoned Milton either his religion or his politics. And although the splendour of his genius has for the most part silenced opposition or criticism, he has never been the universal favourite he would have been if more in unison with the general sentiment. Bossuet has experienced no such hindrance to his fame, and admiration for him, as Sainte-Beuve said, is one of the religions of France. Foreigners might be tempted to think that the reverence went beyond legitimate worship and partook somewhat of superstition. But this is one of those points on which foreigners are hardly entitled to have an opinion. A people must be allowed to be the best judge of its own authors in matter of style, and it is as a master of style that Bossuet is unanimously pronounced to be unequalled. But he has never been received outside France with the welcome which is ever ready for his great rival Fénelon or with a tithe of the sympathy and interest which are excited by the name of Pascal.

This new publication of a work supposed to be his is hardly of a kind to correct the general impression of Bossuet current among Europeans who are not Frenchmen. Whether the volume before us be really an authentic production of the "eagle of Meaux" is a question we shall not seriously discuss. M. Ménard appears to have convinced such scholars as MM. Edmond About and Francisque Sarcey that it is. The decision of this point may well be left to home critics. But we may be permitted to say that nothing less cogent can well be conceived than the preface in which M. Ménard lays his evidence of the authorship before his readers. He writes in a tone of excitement, almost of passion, on a subject that needed the calmest statement of the facts which can be alleged in support of his conclusion.

By his own account, as soon as he had bought the manuscript he lost his self-possession: "I devoured a few passages; the style of the great age seized me. I perceived the date 1684. An antiquarian thrill shot through my heart . . . A thought flashed through my mind: this is an unpublished work of Bossuet!" M. Ménard adds: "Or, à cette époque Bossuet était précepteur du fils de Louis XIV." We feel reluctant to contradict a French man of letters on such a point, but we are forced to say that at that date Bossuet was nothing of the kind. He had ceased instructing the Dauphin *seven* years before, as a letter dated 1677 clearly shows: "Me voici quasi à la fin de mon travail. Monseigneur le dauphin est si grand qu'il ne peut pas être longtemps sous notre conduite" (see 'Vie de Bossuet,' by Cardinal Bausset). After a blunder of such magnitude it is needless to follow M. Ménard in his disquisition on the watermark of the paper, which bears the royal arms, and the momentous fact (on which he lays great stress) that the Delphin edition of Juvenal was published also in 1684. How that proves that the present work is by Bossuet we cannot conceive. But the subject need not be pursued. M. Ménard does not seem to have a notion of what literary evidence means.

However, supposing the book to be Bossuet's, if the French will have it so, it is abundantly strange that any one should think that its publication will prove an addition to his fame. The work consists of a rambling, most unscholarlike commentary on Juvenal, followed by what are called "applications" to the manners of the age—a few obvious moralizings founded on a text here and there of Juvenal. We shall refer shortly to both parts.

M. Ménard pronounces the commentary an "admirable interpretation of Juvenal." His competence to form a judgment on such a point is not so clear as could be wished. He says he has compared the renderings in his manuscript with those of other translators, and especially with "the best among them," the "erudite Abbé de Marolles." We should have thought that every tyro in the history of French literature was aware that the Abbé de Marolles was the laughing-stock of his age on account of the vileness of his translations from the classics. But leaving M. Ménard and turning to the "admirable interpretation" itself, we have to say that it is as bad, inaccurate, and valueless as it well can be, and the issue of such a publication from so illustrious a press as that of Messrs. Firmin-Didot may well excite surprise. Not one in fifty of the difficulties which Juvenal presents to the student is explained or even referred to. On the other hand, there is a lavish supply of knowledge utterly useless for the elucidation of the text. For forty lines together not a remark is made: obscurities which arrest schoolboys and real difficulties which puzzle scholars are impartially passed over by this "admirable interpreter." But when a proper name occurs, especially one belonging to the Greek mythology, then he unlocks the stores of his erudition in this fashion:—

Satire I. v. 4, *Ingens Telephus.*—"C'est une tragedie de Telephe qui feut fils d'Hercule et d'Augès. Il feut fort aymé de Teutrante roy de Mysie qui le choisit pour son successeur a l'empire. Durant la guerre de Troye il voulut eloigner les Grecs de la Mysie, ce qui lui attira une blessure par Achylle: il feut consulter l'oracle sur la playe, et l'oracle luy dit qu'il ne guerirait jamais s'il n'était frappé une 2de fois par le même qui l'avait blessé, il s'en feut trouver Achylle qui le guerit en effet par les mêmes armes qui lui avaient causé la playe, il en tira un peu de raclure, dont il fit un emplatre qu'il lui appliqua a la cuisse, ainsy il receut le mal et la guerison du même endroit, c'est sur ce Telephe qu'on a fait une comedie intitulée Telephe."

In the very next line the word Orestes gives occasion for a note as long again, equally distinguished by profound learning. In Satire vii., line 129, at the name Pedo, we are informed that he was an "avocat"; on Matho, "autre avocat"; but the word "conturbat," which comes between the two proper names and was well worthy of attention, is passed over without the slightest notice. But sometimes our commentator plucks up his courage and makes an effort to explain a word; with what success may be judged by two examples:—

Sat. I. v. 4, *Elegos.*—"Ce sont des vers inegaux, un de six mesures ou hexametre, l'autre de cinq ou pentametre.....ces vers n'ayant toujours que la tristesse pour objet, ils retinrent le nom que la compassion leur avait doné λετὸ [*sic*] j'ai compassion, c'est a cause de cela que Sapho l'apele *elegi flebile carmen.*"

Sat. XIV. v. 4, *Puer bullatus.*—"Un jeune enfant, qui porte encore la robe de l'enfance qu'on apelait *bulla* ou *prætexta.*"

It has been necessary to enter into these details at the risk of wearying our readers with their hardly credible ineptitude. But the book has been introduced with such a flourish of trumpets that its utterly worthless character deserved to be exposed. How any one can believe that this twaddling trash is the work of Bossuet, who was a scholar of no common attainments, considering his age, we are at a loss to understand.

As regards the applications, to which we have already referred, they appear to be, it is fair to say, by a different hand, and are not without traces of the impetuous style peculiar to Bossuet. M. Ménard in his peremptory way "defies" any one to doubt it. A free translation of the well-known passage on Hannibal in the tenth satire he pronounces the "most perfect piece" of French prose with which he is acquainted. He may be right; but we should like to know whether M. Renan agrees with him. Here is a specimen:—

"Hannibal vole au dela des Pyrenées, il surmonte les Alpes et les neiges dont elles sont couvertes, il separe les rochers, il renverse les montaignes par le secours *du vinaigre et du feu*"; and a little further on, "que le portrait en aurait été beau, *bien qu'il n'eut plus*

qu'un œil." This may be sublime, but it is uncommonly near to the ridiculous. One word about the spelling, a few eccentric specimens of which have been given. M. Ménard informs us that he has published his manuscript "diplomatically," without the slightest change in the orthography, which is regulated, we are told, on etymological principles. This we take leave to doubt. "Neagmoints" (for *néanmoins*), "segond," and "phylosophes" may have their merit as modes of spelling, but it cannot be on etymological grounds.

In Memoriam: Ralph Waldo Emerson. By Alexander Ireland. (Simpkin & Marshall.)

No Englishman has a better claim than Mr. Ireland to write a memoir of Emerson. He made Emerson's acquaintance as long ago as 1833, when "the lonely, wayfaring man," as Carlyle called him, visited Edinburgh in the course of his first visit to Europe. It was, too, mainly at Mr. Ireland's instance that Emerson returned to England in 1847 and delivered lectures in various parts of England; and when Emerson was quitting this country in 1873 his last resting-place in England was Mr. Ireland's house in Cheshire.

The volume consists of four parts: a memoir (reprinted with many additions from the *Manchester Examiner and Times*), recollections, letters of Emerson, and miscellanies relating to him. Among the letters many are interesting, especially those addressed to Carlyle, in which there is a notable passage regarding the Civil War. The letter is dated 1864:—

"I have in these last years lamented that you had not made the visit to America, which in earlier years you projected or favoured. It would have made it impossible that your name should be cited for one moment on the side of the enemies of mankind. Ten days' residence in this country would have made you the organ of the sanity of England and Europe to us and to them, and have shown you the necessities and aspirations which struggle up in our free states, which, as yet, have no organ to others and are all or unsteadily articulated here. In our to-day's division of Republican and Democrat it is certain that the American nationality lies in the Republican party (mixed and multiform though that party be), and I hold it not less certain that, viewing all the nationalities of the world, the battle of Humanity is at this hour in America. A few days here would show you the disgusting composition of the other party which within the Union resists the national action. Take from it the wild Irish element, imported in the last twenty-five years into this country, and led by Romish priests, who sympathise of course with despotism, and you would bereave it of all its numerical strength. A man intelligent and virtuous is not to be found on that side. Ah! how gladly I would enlist you with your thunderbolt on our part! How gladly enlist the wise, thoughtful, efficient pens and voices of England! We want England and Europe to hold our people staunch to their best tendency. Are English of this day incapable of a great sentiment? Can they not leave cavilling at petty failures and bad manners, and at the dunce part (always the largest part in human affairs), and leap to the suggestions and finger-pointing of the gods, which, above the understanding, feed the hopes and guide the wills of men? This war has been conducted over the heads of all the actors in it, and the foolish terrors,—'What shall we do with the negro?' 'the entire black population is coming North to be fed,' &c., have strangely ended in the fact that the black refuses to leave his climate; gets his living and the living of his employer there, as he has always done; is the natural ally and soldier of the Republic in that climate; now takes the place of 200,000 white soldiers; and will be, as the conquest of the country proceeds, its garrison, till Peace without Slavery returns. Slaveholders in London have filled English ears with their wishes and perhaps beliefs; and our people, generals and politicians, have carried the like, at first, to the war, until corrected by irresistible experience. I shall always respect War hereafter. The cost of life, the dreary havoc of comfort and time, are overpaid by the vistas it opens of eternal life, eternal law, reconstructing and uplifting Society,—breaks up the old horizon, and we see through the rifts a wider."

By the side of this the following quotation from Mr. Holyoake should be read:—

"Englishmen told me with pride that in the dark days of the war, when American audiences were indignant at England, Emerson would put in his lectures some generous passage concerning this country, and raising himself erect, pronounce it in a defiant tone, as though he threw the words at his audience."

Emerson's tone with regard to 'Friedrich' is more enthusiastic than one might expect:

"Here has come into the country, three or four months ago, another volume of your 'History of Friedrich,' infinitely the wittiest book that ever was written;—a book that one would think the English people would rise up in mass and thank the author for by cordial acclamation, and signify, by crowning him with oak leaves, their joy that such a head existed among them, and sympathising and much-reading America would make a new treaty, or send a Minister Extraordinary to offer congratulation of honouring delight to England in acknowledgment of this donation;—a book holding so many memorable and heroic facts, working directly on practice, with new heroes, things unnoticed before—the German Plutarch (now that we have exhausted the Greek and Roman and the British Plutarchs),—with a range, too, of thought and wisdom, so large and so elastic, not so much applying as inculcating to every need and sensibility of man,—that we do not read a stereotype page,—rather we see the eyes of the writer looking into ours; mark his behaviour, humming, chuckling,—with under tones and trumpet tones, and long commanding glances, stereoscoping every figure that passes, and every hill, river, road, hammock, and pebble in the long perspective—with its wonderful system of mnemonics, whereby great and insignificant men are marked and modelled in memory by what they were, had, and did.....And, withal, a book that is a Judgment Day for its moral verdict on the men and nations and manners of modern times. And this book makes no noise. I have hardly seen a notice of it in any newspaper or journal, and you would think there was no such book. I am not aware that Mr. Buchanan has sent a special messenger to Cheyne Row, Chelsea, or that Mr. Dallas had been instructed to assure Mr. Carlyle of his distinguished consideration."

An amusing anecdote is told by Mr. Ireland of Emerson:—

"Some twenty years ago Emerson addressed a literary society, during Commencement, at Middlebury, Vermont, and when he ended, the President called upon a clergyman to conclude the service with prayer. Then arose a Massachusetts minister, who stepped into the pulpit Mr. Emerson had just left, and uttered a remarkable prayer, of which this was one sentence: 'We beseech Thee, O Lord, to deliver us from ever hearing any more such transcendental nonsense as we have just listened to from this sacred desk.' After the benediction, Mr. Emerson asked his next neighbour the name of the officiating clergyman, and when falteringly answered, with gentle simplicity remarked: 'He seemed a very conscientious, plain-spoken man,' and went on his peaceful way."

The minister, a correspondent of the New York *Nation* says, was the

"Rev. Stephen Martindale, the Congregationalist minister of Wallingford, Vt. By two or three witnesses let every word be established. My wife and I were both there, heard the prayer, knew the maker of it, and agree in our testimony."

Ancient India as described by Ktesias the Knidian, &c. By J. W. McCrindle, M.A. Reprinted, with Additions, from the 'Indian Antiquary.' (Trübner & Co.)

This is the third of the little series of kindred works which the author has first contributed to the *Indian Antiquary* and then issued separately. Its predecessors were 'Ancient India as described by Megasthenes and Arrian' (1877) and 'The Commerce and Navigation of the Erythræan Sea' with 'Arrian's Account of the Voyage of Nearkhos' (1879). They are handy little volumes, and we are glad to recognize this praiseworthy endeavour to collect in such a form the fragmentary notices of ancient knowledge of India, especially as their original issue in the East has probably tended to limit their circulation in this country.

The second volume is essentially the more valuable, from the more substantial character of the two works translated. Both are rendered from C. Müller's edition of the 'Géographi Græci Minores,' and very fairly annotated, in the main after Müller and Vincent, but with some additions from recent sources. In some instances the commentators named have been followed when their guidance had better have been cast aside, as when (after Vincent) *μαλαβάθρον* is rendered in the translation by "betel." The preface shows that Mr. McCrindle is aware of the true meaning of *tamálapattra* or *malabathrum*, but he assumes that there was a confusion in ancient times between this and betel (or *pán*) leaf (the Skt. *támbúl*), of which we do not see sufficient evidence. Also in one of the most interesting commercial notices of the 'Periplus,' which tells how even at that early date teak logs and spars of *shisham* (or *sisú*, *Dalbergia sisoo*, Rox.) and ebony were imported into Persia from the Indian coast (.... *ξύλων σαγαλίνων .... καὶ φαλάγγων σασαμίνων καὶ ἐβενίνων*), he has been led to accept the presumptuous correction by Salmasius of *σαγαλίνων* into *σανταλίνων* (sandalwood), whilst *σησαμίνων* is left unexplained or conjectured to be "red-sanders." The meaning of the first name is clear from the Skt. *śáka*, Hind. and Mahr. *ság* and *ságún*, and the form may be illustrated by the Mahr. adj. *ságalí*, "made of or belonging to teakwood." (We note, by the way, with amazement that a modern Hindustani dictionary of no small pretensions derives *ságún* "from *Saigon* in Cambodia"!) The *sisú* or *shisham* is akin to, and probably included, the trees that supply the famous Bombay blackwood. Its export from Kalliana is also mentioned (*σησάμινα ξύλα*) by Cosmas (*c.* 545), and by an Arabic poet quoted in Gildemeister's extracts from Kazwíní, who names among the products of India "the plant of Zinj [ginger?], and *al-sásim*, and pepper" (Gild., 218).

Though the fragments of Ctesias form a necessary part of such a series, they are, from their character, also necessarily the least satisfactory part of it. Probably we must make considerable allowances for the unfair impression conveyed by the extracts or abstracts given by Photius, which afford the bulk of what we possess of Ctesias; for when (as in one or two instances) the same story happens to be cited by Ælian it appears in by no means so absurd a guise as in Photius. But the mass is of so little worth that we cannot doubt that the author must have been worse than indiscriminate in his reception of travellers' tales, giving, like the famous old woman of Capt. Marryat's story, the preference to false over real wonders. Even when a kernel of truth exists in the tale, it usually lies deep within such a husk of fable that it is difficult to extract. We do not succeed in finding any element of truth in such fables as that of the vast worm called *skōlēx* found in the Indus; or that of the fountain of liquid gold which also produced steel, or of that other fountain the waters of which coagulated and caused intoxication; or in the allegation that the sun appeared ten times larger in India than in other regions; or that bamboos on the Indus were so big that two men stretching their arms could not span one; or the absurd description of the beast *martichōras* or man-eater, &c.

An example of the blundering or carelessness of Photius may be seen in his extract stating that the pigmies of India "hunt hares and foxes not with dogs, but with ravens and kites and crows and vultures" (p. 16). The fuller quotation given from Ælian (p. 44) says nothing of crows and vultures, though it does mention *ravens* along with eagles and kites as trained for sport; and in fact it gives a fair account of the process of hawking.

Then we may quote one or two examples of misconception, more or less, of facts. Thus it is said that the Indian reeds (bamboos) are distinguished by sex, male and female. The male reed has no pith (ἐντερώνην) and is exceedingly strong, whilst the female has a pith (p. 10). The attribution of sex to the bamboo is still popular and general in India. Species which are nearly solid, and are much used for spears and bludgeons, are called *male;* the commoner hollow species *female.* At p. 23 we have a curiously muddled account of lac and lac dye (not of cochineal, as the editor seems to think); and at p. 30 a still more transformed history, perhaps, of the preparation of otto of roses: "Its smell is the sweetest in the world, and is said to diffuse itself to a distance of five stadia." The account from Ælian of the splendid Indian cock with variegated crest and broad tail evidently and correctly applies to the *mundl* (*Lophophorus Impeyanus*), as was pointed out in Col. Yule's 'Marco Polo,' and before him by Cuvier. But we are not aware that there is any ground for attributing this passage to Ctesias.

NOVELS OF THE WEEK.

A Western Wildflower. By Katharine Lee. 3 vols. (Bentley & Son.)

A Mother's Idol. By Lydia Hope. 3 vols. (Tinsley Brothers.)

Fetters of Memory. By Alfred Leigh. 2 vols. (Remington & Co.)

Angeline, and other Stories. By A. M. Y. (Chapman & Hall.)

The Jews of Barnow. By Karl Emil Franzos. Translated by M. W. Macdowall. (Blackwood & Sons.)

'A Western Wildflower' is a very good novel of the sentimental kind. The main idea, which is not altogether original, has been happily imagined. A wild, high-spirited girl, whose manners would be fast if they were not perfectly natural and innocent, comes from the Far West to live with her cousins in a Kentish rectory. She had been brought up by her father alone in the Rocky Mountains and at San Francisco until, upon his death, she made her way to England, according to his wishes. He was a man of good family who had gone off to America with a damaging suspicion against him. Upon this the action of the story is made to depend. Before the girl has been long at the rectory four young men fall in love with her, and her female cousins of course dislike her extremely. An ill-natured busybody repeats to her the story which was current about her father. She feels sure that it is untrue; but when she learns that her uncle and aunt believe it, she can no longer bear to live with them and runs away. The author has happily had the good sense not to turn the story into a tragedy. Up to the time of the heroine's running away events happen naturally and a picture of real life is presented, but afterwards it becomes necessary to resort to those marvellous coincidences which are the story-teller's stock-in-trade. Every novelist is entitled to make use of them, and it cannot be said that in the present case they are made to appear unusually startling and improbable. The author's style is easy and unobtrusive, but in her narrative she is given to exaggeration. For instance, she makes a man (in great excitement, no doubt) walk over hedges and ditches without noticing them, and says that the heroine's footstep was so light that it made hardly any mark on newly fallen snow. This is almost the language of Eastern poetry. The book is remarkable for the tearfulness of the characters. Nearly all of them weep. On one occasion, by the way, the girls were too frightened to cry, but they soon got over the fright sufficiently for the purpose. The heroine contrives to weep in the streets of London—not a convenient place, as the author regretfully remarks, for a good cry. But in spite of superfluous tears, there are really affecting passages in the story. The hero is not a satisfactory creation, but that is so common a failing in books written by women as to be hardly worth mentioning.

The mother's idol in Miss Hope's story is a Capt. Horace Davenel, who falls in love with the governess of his little niece, very much to his mother's annoyance. Mrs. Davenel, the wife of a worthy magistrate, keeps her house, and all that it contains, in exemplary order; she is, in fact, a commander-in-chief of the sternest type, whom no one can thwart or disobey, unless it be the object of her maternal adoration. The heroine says of her, quaintly enough, that "one always had a sort of apologetic, guilty feeling in Mrs. Davenel's presence, as if one were an uncompleted effort." It is certainly much to the credit of the little governess that she is able to conquer the whole house of Davenel, captain and commander-in-chief included, which she eventually does. How her engagement to the idol prospered, and what end she made to her chequered career, may be learnt from the pages in which Miss Hope has related her experiences. The relation is simple and pleasant, though there is no attempt to soar much above the level of straightforward narrative.

Mr. Alfred Leigh tells a commonplace love story in a not too commonplace manner, and relates in rather stilted language, but with a fair perception of the motives that commonly actuate men and women, the mutual love of two young people bound together by the fetters of early association. Here and there the style is somewhat too grandiose for such a theme, even when the author's aim is to enforce the eternal character of marital love. For instance:—

"Once before they had kissed each other, but it had been in the pathetic retrospect of a concluded past, and the bitterness of a farewell believed to be eternal. Now he again clasped her in his arms and pressed his lips to hers; but this time it was as the mute avowal of an undying constancy—of a love that should be a deep and strong reality, when the world should have disappeared like a vapour—when the light of sun, and moon, and stars should have been quenched; and the great sea with its boundless expanse of impetuous waters should have become a forgotten thing."

This is the climax—as well it might be—of the courtship of Mr. Leigh's hero and heroine. He leaves them to get married at their leisure; and for their sake it is to be hoped that the world does not prematurely vanish, and that the great sea is held in careful remembrance.

'Angeline' is a book of a very artless kind, suitable for almost grown-up young ladies who have been carefully reared and are docile. Unfortunately even the simplest minds must see in each of these stories that the moral intended to be conveyed is only too obvious. The author seems to have been of a different opinion, and has taken pains to state what she meant each story to teach in plain words at the end. This sort of composition is like the painting of the ancients, who, according to the Greek Delectus, indicated in writing the names of the objects represented.

We are glad to welcome an English rendering of the powerful stories of K. E. Franzos, which have already been translated into almost every other European language and even into Hebrew. Herr Franzos writes about Jews as a Jew; he describes the kind of life with which he is best acquainted; and as his characters are Galician and Polish Jews, who have not merged into the nations among whom they dwell, he has much that is new, suggestive, and instructive to relate of his co-religionists. His tales of the strange kind of existence led in the Ghetto are faithful pictures, full of deep pathos and poetical intuition. Never losing sight of the fact that he is writing for a Western public to whom the circumstances to which he refers cannot be familiar, Herr Franzos has succeeded in conveying a clear idea of the kind of life led by these social outcasts. He shows very forcibly that it is not the fault of the Polish Jews that they are less civilized than their brethren in the faith in England and France, quoting

the *bon mot* "Every country has the Jews it deserves." Though the book is to a certain extent polemical and the stories are written with an object, their artistic character is not thereby injured. Herr Franzos happily combines the historical with the inventive faculty. The tales are all pitched in a minor key; sadness is their distinctive feature. The history of Israel "deep-worn with suffering" cannot be gay, but Herr Franzos has not over-coloured, and the picture is not allowed to become too black. Mr. Macdowall has done his work satisfactorily; it is not his fault that the stories lose some of their characteristic colour in translation. The peculiar Hebrew-German dialect of the Polish Jews, which at once marks them out as foreigners, cannot be reproduced, nor, unfortunately, can it be wholly dispensed with.

THEOLOGICAL BOOKS.

The Latin Prayer Book of Charles II.; or, an Account of the Liturgia of Dean Durel. By Charles Marshall, M.A., and William W. Marshall, B.A. (Oxford, Thornton.)—The Convocation of 1662, about two months after the approval of the revised Book of Common Prayer, ordered a translation of the book to be made in Latin, in accordance with the clause of the Act of Uniformity of that year which presupposed its existence. The persons to whom this translation was at first entrusted did not execute the commission, and the task fell into the hands of Dr. Durel, Dean of Windsor. His translation does not appear to have been ever submitted to Convocation, and most certainly was never approved or sanctioned by it. It carries with it no more authority than the translations of King Edward's Book by Aless, or of Elizabeth's by (as it is said) Walter Haddon, or the recent version by Dr. Bright and Mr. Medd. The whole value or importance of any one or other of these consists solely in the accuracy and honesty of the translation. The present authors, therefore, might have spared themselves the pains of attempting to claim "authority" for Dr. Durel's version. Nor are the reasons which they suggest worth the slightest consideration. They bring forward as proofs the fact of the order of Convocation already spoken of; Dr. Durel's own dedication of his book to the king; and, thirdly, the series of promotions which were conferred upon him. Whether the authors are brothers does not appear, but one of them is a clergyman and was a Lord Mayor's chaplain thirty years ago; the other is "of the Inner Temple." Surely they might, between them, have avoided perpetrating such an extraordinary blunder as attributing "authority" to this translation. But the purpose of the attempt itself is not far to seek. The authors seem to be of the Evangelical school. Their publication is of no value whatever except for some bibliographical information about a book scarcely worth the trouble of inquiry; but it has served as a peg on which to hang two long disquisitions—the one to prove that the word "priest" in the Common Prayer Book means "presbyter" in the sense used by Presbyterians; and the other, that "alms and oblations" do not mean any oblation of the bread and wine. Their volume contains more than 200 pages, and more than half the book is made up of Dr. Durel's Latin version of the Catechism, together with their own translation in parallel columns, and a quantity of foot-notes. This 'Account of the Liturgia of Dean Durel' rests upon such an absurd and ridiculous foundation that it is beneath criticism. Not only is the dean's translation wanting in the requisite sanction of the proper authorities, but it is not even a fair translation—it is rather a paraphrase by a controversialist, except where the language of earlier translations has been adopted. Indeed, the description which the Messrs. Marshall themselves give is nearly sufficiently correct:—Durel "neglects literal translation in order to bring out more clearly, by a periphrasis, the actual meaning and intention [as understood by himself] of the compilers of our revised English Prayer Book."

After an interval of three years the Cambridge University Press has issued Fasciculus I. of the *Breviarium ad Usum Sarum*, edited by Mr. Procter and Mr. Wordsworth. This first portion is a much thicker volume than the second—in fact, it runs to more than 1,500 pages, and includes the Temporale, or "Proper of Seasons," preceded by the Kalendar. The editors still "defer their main preface or introduction," which will, therefore, be given with the third and concluding part; and in like manner we must again put off any critical examination and account of their work. It must suffice to say now that the same care and attention as before are clearly evident, and we shall gladly congratulate them on the conclusion of an undertaking so laborious. A few notes are sparsely scattered over the pages of the Temporale; and a brief preface to the Kalendar explains that some additions have been made, filling up days which have been left vacant in the folio (from which the editors print) of 1531, by Chevallon. Of these additions, which are extremely valuable, Mr. Wordsworth says: "Quædam ex ejusdem Sanctorali includenda curavi: perpauca ex aliis breviariis: plura insuper litteris minusculis mandavi; quæ pleraque ex Enchiridio Maskelliano 1530 deprompsi; cetera ex kalendariis missalium 1514, 1521, 1533, et Orarii 1546, commemoravi."

The Semitic Series of the "Anecdota Oxoniensia" has made its appearance with a Rabbinical *Commentary on Ezra and Nehemiah*, edited from MSS. in the Bodleian Library and the Ambrosian at Milan by Mr. H. J. Mathews, of Exeter College, Oxford. The editor is no stranger to Rabbinical scholars; he is favourably known by his editions of Abraham ibn Ezra's short commentaries on Canticles and Daniel, as well as by anonymous glosses, signed "Zeeb," on some Biblical books. There is no need, therefore, to speak of his ability to make good use of MSS. for his editions of Rabbinical authors. We shall only give a brief summary of his learned disquisition on the authorship of this almost anonymous commentary, which is found in thirteen MSS. In most of the codices the commentary is given as anonymous, but in one it is attributed to Benjamin ben Judah, and in another to R. Saadyah Gaon. It does not require any arguments for proving that the latter rabbi cannot be the author of our commentary on Ezra and Nehemiah. Mr. Mathews shows, by comparing Benjamin ben Judah's commentaries on other Biblical books, that it is out of the question to ascribe the present commentary to this sober exegete. In the editions of the Rabbinical Bible is found a commentary on Daniel by R. Saadyah Gaon, which is generally admitted to be spurious. This is now incontestably proved, since the Bodleian Library has acquired large fragments in MS. of R. Saadyah Gaon's Arabic commentary on Daniel, which in no respect agree with the Hebrew commentary attributed to him. Mr. Mathews shows in his preface that this Hebrew commentary on Daniel, which is ascribed in nearly all the MSS. to R. Saadyah Gaon, and our present commentary on Ezra and Nehemiah are by one and the same author. Now, since in most of the MSS. this commentary follows that on Daniel, since also the Milan MS., which is the oldest of the MSS., attributes the commentary on Ezra and Nehemiah to R. Saadyah Gaon, and further passages of this commentary are quoted in the name of R. Saadyah Gaon, we accept Mr. Mathews's ingenious conjecture that the author of the commentaries on Daniel, Ezra, and Nehemiah is a R. Saadyah, for whom the well-known R. Saadyah Gaon was substituted by later Rabbinical authors and copyists. Let us add that the name of Saadyah is implied in the introductory lines of the MS. in the British Museum. At what epoch this Saadyah wrote and to what country he belonged Mr. Mathews rightly refrains from deciding. All that may be said with certainty is that an author who lived about 1250 A.D. quotes this Saadyah, and it may therefore be concluded that he wrote early or late in the twelfth century. From his phraseology and his method of interpretation, which is simply Midrashic, paying no attention to grammar, we should be inclined to take him to be a rabbi of Southern Italy—a fact which would explain the verbal agreement of many passages of our commentary with that of Isaiah of Trani on the same books, which passages are given by Mr. Mathews at the end of his learned preface.

BOOKS FOR THE YOUNG.

Bimbi: Stories for Children. By Ouidà. (Chatto & Windus.)

Summer Stories for Boys and Girls. By Mrs. Molesworth. (Macmillan & Co.)

Michaelmas Daisy: a Young Girl's Story. By Sarah Doudney. (Griffith & Farran.)

Christopher. By Helen Shipton. (Society for Promoting Christian Knowledge.)

My Boy and I; or, On the Road to Slumberland. By Mary D. Brine. (Cambridge, Harlan.)

Ouidà is not, perhaps, exactly the writer whom one would select as a teller of stories for the young. It is not that her incidents are sometimes hardly suited *virginibus puerisque*; it is not that she may lead the youthful mind astray by talking about "Barabbi" or by disagreeing with the grammarian as to the syntax or accidence of ancient and modern languages, or even, as in the present volume, by leading them to suppose that the silver groschen is, or was, an Austrian coin. But there is in all her writings a sort of pessimistic tone, a tendency to make evil triumphant and good unfortunate, and to insist on the baser and more cruel elements of human nature, which if carried into children's books would soon leave very little heaven to lie about them in their infancy. On the whole, therefore, we were somewhat agreeably surprised by this book. Out of the nine stories which it contains, two (those called 'Moufflou' and 'The Child of Urbino') are really pretty, though in the case of the former the author has been unable to refrain from ending with one of those anecdotes of cruelty to a dog which seem to possess a morbid fascination for her. Of the remainder, two or three are clumsy imitations of Andersen, and the rest seem intended to show that all grown-up people are stupid or brutal. But even the best have the fault that nearly all stories for children have nowadays: they are not really children's stories, but studies of children, such as their elders may appreciate, but themselves never.

Mrs. Molesworth's book is of the simplest kind, and all but the youngest children would certainly resent the method of the introduction as too conscious condescension to the youthful mind. But once launched on her stories, the author does well enough. The longest is about a "goose girl," obviously of German origin or suggestion, who turns into a princess. Others are of the swallows' return, a pretty fancy enough; of the toymakers of Bergstein and the privations they undergo occasionally when the trade in dolls is slack and provisions are dear; and of how a little boy, better off than the toymakers, got left behind in a train. We feel sure no harm can be done by Mrs. Molesworth, and possibly there may be some good in this sort of prattle, though 'Jack and the Beanstalk' would please youthful tastes much more.

'Michaelmas Daisy' is a very harmless book. It is even rather a pretty story, though the moral is time-worn and recalls our old friend Cinderella. The orphan Daisy is despised by her purse-proud cousins. She meekly bears

XUM

their affronts, and is rewarded in due time. The inevitable uncle from abroad comes home, pining for some one on whom to bestow his wealth, and Daisy becomes an heiress. The humours of the two girl-friends, Maud and Gertrude, are amusing. The tragic end of Gertrude is in keeping with the strictly moral, not to say goody-goody, tendency of the book. 'Michaelmas Daisy' is one of the series entitled "The Girls' Own Favourite Library." If it is an average specimen, some readers may doubt how far the series deserves the title. The girls whose favourite library consists of mild stories filled with moralities of the most commonplace type are not likely to have much time to spare for more robust literature.

Christopher is a modern giant, and, like his prototype, becomes a saint by means of childish influence. Miss Shipton seems to us to have worked out with a good deal of suggestiveness the allegory which we remember to have seen pictorially represented on the walls of an ancient country church. From an artistic point of view the mediæval St. Christopher was not a success, and the modern one is strangely depicted in one of the illustrations in this book, where the hero seems bent, judging from his action on the rein, on bringing a horse and hansom cab down upon himself and his friend. Of course his effort is, according to the story, successful in the opposite direction. Indeed he is throughout what children call a "good" giant, though like other Anakim he is somewhat slow-witted, and when Galatea rejects him as ungovernable as Polyphemus of old. On the whole it is a blameless story, not without its apt morality.

To pretty designs executed by Dora Wheeler, in the manner of "E. V. B.," Mrs. Brine has supplied pretty verses. Some of the little poems —a lullaby and a 'Mother's Song,' to wit—are so extremely simple and pathetic that they must have been inspired by nature and a happy mind. Mrs. Brine's ear is good, and she writes easily and yet carefully. Of the illustrations some are commonplace, others are excellent; the best is the frontispiece to 'The Waning Day,' an afternoon song. This book has been perversely bound, or rather its leaves have been tied together between flexible leather sides in the manner of a Persian manuscript—a peculiarly troublesome arrangement, intended probably to be in keeping with the baby inspiration of the author and artist. The very publication line is a puzzle.

HISTORICAL AND ANTIQUARIAN PUBLICATIONS.

THE twenty-fifth part of the new series of the *Archæologia Æliana; or, Miscellaneous Tracts relating to Antiquity published by the Society of Antiquaries of Newcastle-upon-Tyne* (Newcastle-upon-Tyne, Reid), is on our table. The Newcastle Society of Antiquaries is one of the oldest of our provincial learned societies; few bodies of the like nature at home or on the Continent have done more thorough and conscientious work. The north of England has long had and has still a band of students who need not fear comparison with the scholars of the capital. The elder Raine, Surtees, and Hodgson have passed away, but their places are worthily filled, and the *Archæologia Æliana*, in which much of their best work has appeared, continues to have a high repute wherever history is seriously studied. The present part contains several articles, and very noticeably the first, which are not up to the usual level; but it also possesses one, filling half the number, which for grasp of the subject and earnestness in mastering details leaves nothing to be desired. The Roman Wall is an object of unfailing interest to a Northumbrian. Its prominent features have been mapped and its details studied in a manner beyond all praise. It has occurred to Mr. Thomas Hodgkin that it was not enough to study this great fortification on the spot, but that it should be compared with the great barrier of imperial Rome between the Danube and the Rhine. As he carefully points out, the idea was not quite new. In the year 1822 the Rev. Hugh Salvin had published in the *Archæologia Æliana* a translation of a now forgotten German tract relating to this vast work. Mr. Hodgkin is, however, we believe, the first Englishman who has ever given the subject serious study. The title of his paper is 'An Essay towards a Description of the Barrier of the Roman Empire between the Danube and the Rhine.' In these days of boastful tour-writing we are impressed with the modesty which refrains from telling in the heading that the greater part of this work has been described from personal inspection, and that the writer has mastered the copious German literature which has gathered round the subject. This vast rampart is six times as long as the Northumbrian wall. It is a bank of earth, or of stones used as earth, running in a waving line from a point near Coblenz until it touches the Danube a little above Ratisbon. Its Roman origin is certain, but its exact date has not been fixed in a manner that can be held to be satisfactory. It is, indeed, highly improbable that it had any clearly defined date. The probable opinion seems to be that which maintains that it grew up bit by bit as the exigencies of the case called for it. A road, Roman or other, is of little service until complete, that is, until the most distant cities to which it reaches are connected; but a rampart such as the *Limes Imperii* might be of constant service in a disturbed district, when it was only called for on rare occasions in quieter regions. Our Roman wall was built of stone, and has in consequence suffered more devastation than its German equivalent; we gather, however, from Mr. Hodgkin's pages that, though much shorter, it must have been by far the nobler structure. The inscriptions found in the neighbourhood of our wall are more numerous than those of its German sister. We must not fail to remark that this valuable paper is well illustrated by maps and sketches. It would make no unsuitable companion for any English tourist who had conceived the idea that the remote history of foreign states might, by some strange chance, be not utterly without instruction for him. Mr. Hodgkin has certainly grasped this truth and much more. He says: "We see with ever-increasing clearness that wheresoever Roman civilization has once been established, the new Teutonic social system was, to use a geological phrase, always more or less of a 'conformable deposit' on the top of it. The fact that the larger part of German Austria, half of Bavaria, nearly the whole of Würtemberg and Baden, and all the Rhine lands were Romanized must have powerfully influenced character, manners, and forms of government in those countries through the Middle Ages down to the present day." The paper by Mr. John V. Gregory, on 'Place-Names of the County of Northumberland with reference to the Ancestry of the People,' is too short for the great subject of which it treats. The evidence he has produced makes it highly probable that sensational writers have represented the admixture of Scandinavian blood to have been much greater in Northumberland than it really was. The most permanent settlements were made in Southern Northumbria, Lincolnshire, and Nottinghamshire, and it is in those districts that we find the greatest number of place-names which point to a Norse rather than to a Low German paternity. The table of names which Mr. Gregory gives will be found useful by many persons who live far away from Tees and Tyne. It would be easy to cavil at some of his derivations, but as a whole they are sound and mark a direct advance in this obscure department of philological knowledge.

IT is seldom that so small a book contains so many new and important facts as Mr. Macray's *Notes from the Muniments of St. Mary Magdalen College, Oxford* (Parker & Co.). It is not easy to describe its contents. In the fourth and eighth Reports of the Royal Commission on Historical MSS. a useful account is given of the precious muniments of this college. Mr. Macray has, however, catalogued the whole collection. Every one of its nearly fourteen thousand documents has been studied by him, and the little book before us is but a series of notes made while engaged in the far more important work of the catalogue. It gives us in a handy form much information which we should conjecture the catalogue itself would not furnish. To any future editor of the 'Monasticon'—and such a man will assuredly appear some day—this little book will be most useful. The editors of the last edition could only recover the names of two of the priors of Sele in Sussex. Mr. Macray has identified eighteen of them as well as several of the seals of this monastery. It is not the 'Monasticon' alone that can be improved by consulting Mr. Macray's pages; the student of social progress will find a useful table of prices ranging from 1260 to 1520, which he would do well to compare with the far larger and more elaborate ones given by Mr. Rogers in his 'History of Agriculture.' Bondmen come in for their share of attention. In 1220 one was sold to Brackley Hospital for eighteen shillings, and in 1313 another was pledged as security for a loan. The last time they are met with is in 1562, when the college granted a manumission to one on condition of the yearly payment of sixpence. A few of the more interesting autographs that occur among the archives are reproduced. That of Lady Maud Willoughby, 1472, gives one the impression that she was not accustomed to use a pen for any other purposes than writing her name. Cecily, Duchess of York, the mother of Edward IV., on the other hand, writes as one accustomed to the practice of the art, but who had learnt it in a foreign school. There seems to be an almost complete catalogue of the seals belonging to the college. The collection must be one of the largest and most important in England. We should like to know more than Mr. Macray tells us of one of them of fourteenth century date which bears an Arabic inscription. It is unhappily broken, but surely the fragment is worth engraving. A table of measures of land and one of strange Christian and family names of men and women are given. We have also a list of remarkable quitrents. One tenant had to render for his holding a white rose on St. John Baptist's Day; a tenant at Westcote held by the service of paying one apple, and another by the payment of a root of ginger.

MR. E. PEACOCK has sent us the *Injunctions of John Longland, Bishop of Lincoln, to certain Monasteries in his Diocese* ('Proceedings of the Society of Antiquaries'). Mr. Peacock has unluckily done little more than print the transcript of this very interesting document made by the Rev. A. R. Maddison, F.S.A., and this is the more to be regretted as probably no one is more capable of annotating it than he is. Issued in 1531, these injunctions were part of the vehement efforts of an energetic and able man to prop up a falling edifice and to shame his subordinates out of the courses which served too well as an excuse for their ruin. There is no smoke without fire, and it may fairly be assured that the things the abbots and abbesses were so strongly urged not to do were the things they had been doing. They comprise a long catalogue of personal misconduct, lightness of behaviour, and so on, but none of the graver sins popularly attributed to the ecclesiastics of the period. Had any such sins existed in this diocese there is little doubt that so vigorous and plainspoken a prelate would have denounced them; but though he is careful to refer to things likely to cause scandal, he has no occasion to go further. At Ulnestowe neither the abbess nor her successors are to be led by the arm in processions. Dame Katherine Wingate is to get up earlier in the morning and be at matins, and is not to sup or breakfast in the buttery with

the steward or any other secular person. At Nun Cottam there is to be no lord of misrule in future. Chaplains are to have no keys of the church or cloister doors, and half-a-dozen priests who are mentioned by name are specially forbidden the place. There is to be no more wandering abroad of sisters under pretence of pilgrimages or visiting their friends, both of which practices have occasioned scandal. At Messenden the abbot is to provide "oon sobre sadde man" to be porter of the great gates, who is to be as careful to let no women in as the abbess of Nun Cottam is to keep them in. The bishop did not think it beneath him to refer frequently and at length to dress. At Ulnestowe the nuns are not to wear their head gear with "cornered crests" or show their foreheads like lay people, but are to wear their veils down to their eyelids. Nor are they to wear voided shoes, but are to close up their gowns and kirtles before, and not let them be so "deep voided" (low cut?) at the breast; and especially there are to be no more red stomachers. At Studley, too, the nuns are to wear their veils down to their "yye liddes." The monks also come in for censure, especially at Messenden, where they are told not to wear any "garded or welted hose or stuffed codpese or jerkyn, or any other shorte or courteley fashioned garment." There are not many complaints of gluttony, but the abbot of Messenden is told to spare some dish from his board till he has repaired his buildings; and in nearly every case the bad repair of the houses is commented on. Against nepotism most is said. The abbess of Nun Cottam is plainly told not to burden or charge her house with such a number of her kinsfolk as she had done in times past, and later on the bishop, returning to the charge, tells her sarcastically not to "give so liberally" the goods of her monastery to her brother and his children. The abbot of Messenden, too, is told not to suffer his kinsfolk to hang upon the monastery's charge. Unprofitable servants are strongly denounced. At Studley, Martin Whighull is specially mentioned as "not profitable," and the abbess is to avoid him out of her service. The abbess of Nun Cottam is roundly told that the excessive number of her servants is one of the great causes of her "miserable poverty," while at Messenden, John Compton, who is said to rule the abbot, is no more to meddle with the affairs of the abbey, and John Slithurse, one of the priests, is to be kept in prison. These injunctions must have been bitter reading for those to whom they were addressed, and to make them worse, in several cases it is distinctly ordered that they should be re-read aloud every month. They are models of plain speaking, but occasionally degenerate into incivility, as when the abbot of Messenden is told that the injunctions are sent to him in the vulgar English tongue because he is ignorant and has small understanding of Latin.

A Manual of Historical Literature. By Charles Kendall Adams. (Sampson Low & Co.)—This book, by an American professor, is a praiseworthy attempt to give a general account of historical literature, together with sketches of a course of historical reading for each country and period. The object is so meritorious and the difficulties in the way of accomplishing it are so many that it would be ungracious not to make great allowances. Yet, after making all the allowances we can, we are reluctantly forced to the conclusion that Prof. Adams's book is not likely to be of great service to any particular class, because it aims at supplying the needs of too many different kinds of readers. Prof. Adams has kept in view the student, the teacher, the schoolboy, and the general reader all at once, and consequently has failed to satisfy the needs of any one of them. In his method and in his criticisms he has paid undue attention to the general reader, and has mentioned a number of works which no one seriously searching for knowledge would ever dream of using. Thus, in Roman history, Beesly's 'Gracchi,' Beesly's 'Catiline, Clodius, and Tiberius,' and Curteis's 'Roman Empire' are mentioned, while Champagny's 'Les Césars,' De Broglie's 'L'Église et l'Empire Romaine,' and Friedländer's 'Sittengeschichte' are omitted. We do not object to the insertion of the first-mentioned books; but it is difficult to conceive any conception of the study of Roman history which omits the last three. Similar *lacunæ* occur in the case of every country and period. Valuable works are not mentioned; modern compilations receive full recognition. We should not gather from the criticisms much idea of the relative proportions of the works discussed. Some of the omissions are curious. There is no mention of Bohemian history. The great work of Palacky is entirely ignored, and we do not notice any mention of the Hussite wars. Again, while several of Ranke's books are mentioned, one of the most remarkable, 'Fürsten und Völker der Süd-Europa,' is passed by. Generally also there is a remarkable omission of books which are most valuable to students—books dealing with authorities. It is true that Potthast's 'Wegweiser' is briefly stated to be "of no interest to the general reader, but of great value to the special student of the Middle Ages in general"; but we do not find Wattenbach's or Lorenz's 'Deutschland's Geschichtsquellen,' or any of the 'Regesten,' which are the only guides of any real service to the complicated history of Germany. So far does Prof. Adams seem to carry his objection to authorities that he does not mention Gardiner and Mullinger's 'Introduction to the Study of English History,' nor either of the volumes of the valuable series of "Early Chroniclers of Europe" that have been published by the Society for Promoting Christian Knowledge. In fact Prof. Adams seems rather puzzled by a book which deals with authorities when he comes across it. He remarks naïvely enough of Gieseler's 'Kirchengeschichte,' that "the text is admirable for the ability and judicious fairness with which it is written, but it is perhaps in the notes that the extraordinary merits of the work are most conspicuous." No one would guess that he was describing a work which consists of references to, and extracts from, original authorities, arranged under headings and strung together by a brief summary at the head of each page. All this points to the main defect of Prof. Adams's book. Its compiler seems to have no clear view of the functions of history. He does not suppose that an historical reader is looking for anything in particular. His accounts of books do not tell us what they are about with any precision. His remarks are vague, bald, and approximate. We should not gather from him what books we wanted to read. His opinions represent the impression left on a puzzled mind after reading a few reviews of a book and combining their information. Prof. Adams has not sufficiently limited the scope of his book, nor has he sufficiently subdivided it. We doubt if it will be found useful by many readers.

The Regulations of the old Hospital of the Knights of St. John at Valetta. By the Rev. W. K. R. Bedford. (Blackwood & Sons.)—This is a republication of the rules of the Infirmary at Malta, from a Roman edition of 1725, accompanied by a translation into English. The sole motive for such a book is the existence in England of an "Order of St. John of Jerusalem," which gratifies an antiquarian spirit by carrying out the objects of modern philanthropy under an ancient name. Mr. Bedford, as chaplain to the order, has edited this book; but he has not done so in such a way as to make a contribution to any branch of human knowledge. His preface gives a very scanty account of the Order of St. John and of its hospital at Valetta. He adds a few notes to his translation, but they are not of a kind to throw much light on the medical and sanitary knowledge of former times. If he had given his readers some information on this subject they would have been thankful; as it is, he leaves them in the dark whether the hospital at Valetta was better managed than contemporary institutions or not. Its arrangements seem fairly good; but there is often a great difference between regulations on paper and their actual application. Nor is the translation always happy. Sometimes we find *frà* rendered by "frère"; and in the list of food provided for the sick *galline* is rendered "gallinas," while many Italian words are dropped about the English as though the translator were too lazy to be at the trouble of always rendering them. Mr. Bedford does not seem to have bestowed much pains upon his work, either as editor or translator.

M. Henri Welschinger publishes, through the house of Charavay of Paris, *La Censure sous le Premier Empire*, a volume containing documents of some little interest extracted from the Archives on the Censorship between 1800 and 1815, and a somewhat confused historical narrative founded upon them.

OUR LIBRARY TABLE.

When the first edition of *The Book Hunter* came out in 1862 there was some amused wonder among Dr. Hill Burton's friends that he should have written what was called "an elegant book." There was an undeniable charm about it, and a second edition was soon called for. The second edition was an improvement on the first, for Dr. Burton, with an amount of good sense which is not universal, had "taken advantage of some suggestions kindly contributed by the critics who reviewed the previous edition," had corrected some inaccuracies, and omitted, as we remember, some pages of well-known extracts from Sir Thomas Browne. But both editions have long been out of print, and a copy always fetched a fancy price, so that we are glad to welcome 'The Book Hunter' in another form, as sent to us by Messrs. Blackwood. This new edition of 'The Book Hunter' is a singularly handsome quarto volume, with several illustrations, and a short life of Dr. Burton. It is essentially an *édition de luxe*, and is meant mainly for the library shelf. Dr. Burton, we believe, proposed to introduce a number of fac-similes and ornamental initials, tail-pieces, &c.; but this intention he did not live to carry into effect. The memoir of the author, however, is the new feature in this edition which entitles it to a notice. Mrs. Hill Burton has shown a very wise discretion in not publishing a regular biography, and in condensing what she had to say into a hundred pages. It is only to be regretted that the wives of far less eminent writers have not shown equal judgment, and the contrast between this memoir and that (for instance) of Mr. Fields, the Boston publisher, is certainly remarkable. In another respect, too, has Mrs. Hill Burton shown herself a worthy, because an honest, biographer. She has given us a very fair photograph of the man as he really was, and not as she might have wished us to imagine him. She admits that he "can never have been handsome, and he so determinately neglected his person as to increase its natural defects. His greatest mental defect was an almost entire want of imagination. From this cause the characters of those nearest and dearest to him remained to his life's end a sealed book." But he was a kind-hearted and a charitable man, and a most laborious and painstaking student. We have no doubt that Mrs. Hill Burton has made the best use of her materials, but Dr. Burton's life seems to have been singularly uneventful, and there is really hardly anything to tell. He was born in 1809, and his early life was hard; but "constitutionally irritable, energetic, and utterly persistent," he worked steadily on. In 1854 he was appointed Secretary to the Prison Board, and for many years he divided his time between the duties this appointment involved and his literary tasks. He was a voluminous author, and his studies in Scotch history were properly rewarded

by his being made Historiographer-Royal. He was twice married, his second wife being a daughter of Cosmo Innes, the accomplished Scotch antiquary. There is a pretty description of Craighouse, where he lived for many years, "a venerable, half-castellated, ivy-grown manor-house, among avenues of ancient trees where the light had first to struggle through the foliage before it fell on the narrow windows, in walls that were many feet in thickness"; and here were stowed away his books in "a labyrinth of passages, to which you mounted or descended by a step or two; of odd nooks and sombre little corridors, and tiny apartments squeezed aside into corners, and lighted either from the corridor or by a lancet-window or a loophole." Craighouse was, however, bought for an asylum, and the family removed to Morton House. Age was now beginning to creep on, and Dr. Burton was becoming more and more retiring; he hardly saw any company, and dreaded the sight of a new face. He died on the 10th of August of last year, and was buried in the little churchyard of Dalmeny. Mrs. Burton says of her husband that he was "no great letter-writer," and we are bound to say that most of the letters here given are quite uninteresting and need never have been printed. Were there not letters of literary and historical interest which could have been selected? and might not more reminiscences of Dr. Burton's friends, in the form of letters to him, have found a place? However this may be, Mrs. Hill Burton's memoir is so modest in its dimensions, and so straightforward in its tone, that the reader will be disposed to find in it as few shortcomings as possible.

General Schomberg has concluded his praiseworthy task of translating the Odyssey. It is rather more than three years since we noticed the first volume, and the remarks we then made will apply to the second. It is, perhaps, a little difficult to see where the book is to find its public. Scholars and those who wish merely to read the story will prefer a good prose translation, such as that of Messrs. Butcher and Lang, while other people have Chapman and Pope. As we hoped before we will hope now—that General Schomberg's version will be popular among military men. It is good, straightforward blank verse, not very inspiriting, but pretty correct. The following is a fair specimen of it (Odyssey, T. 106):—

> Wary Ulysses answered in reply:
> "O lady, it is hard to recollect
> A thing so long ago; 'tis twenty years
> Since thence he sailed, and left my native shore:
> But as my memory sweeps o'er the past,
> I tell thee how it brings him to my mind.
> A purple mantle made of wool he wore,
> Of double folds; the brooch which fastened it
> Was worked in gold, fitted with double hasps;
> In front the brooch was wrought with rare device;
> With his fore-paws and fangs, a dog held fast
> A dappled, panting fawn: 'twas strange to see
> How truthfully the beasts were wrought in gold,—
> How the dog gazed, throttling the tender hart,
> Which struggled with his feet to free himself."

The Argus incident is not badly translated; but in the meeting of Ulysses and Laertes, General Schomberg has missed a point. The lines,

Ἀμφὶ δὲ παιδὶ φίλῳ βάλε πήχεε· τὸν δὲ ποτὶ οἷ
Εἶλεν ἀποψύχοντα πολύτλας δῖος Ὀδυσσεύς,

form such a climax that one commentator considered them to be the true end of the poem. In the version before us they are actually rendered by two lines *and a half*, and ended with a semicolon. This shows some want of appreciation. The publisher is Mr. Murray.

The Journal of Hellenic Studies. Vol. II. and Vol. III. Part I. (Macmillan & Co.)—All classical scholars and all educated people with classical interests will hail with satisfaction the progress of this journal, which removes a grave reproach long urged against English Hellenism. We were so taken up with writing Latin and Greek verses, and trying to suggest new emendations, and of late even with translating Greek authors into elegant English, that the historical and archæological side of Greek life was almost forgotten. Thus while *Hermathena* and the *Philological Journal* only represent the critical side, the *Journal* before us has its chief value in the predominance of archæology and the study of ancient art. The recent excavations of Dr. Schliemann at Orchomenos and the travels of Mr. Ramsay in Asia Minor are the principal contributions of new and original research, and both these have appeared first and in their freshest form in the transactions of the English Hellenic Society. The admirable plates and fac-similes given in the atlas make these records all the more valuable. Then there are the careful studies of delicate questions in Greek art, especially those of Dr. Chas. Waldstein, which open a field quite new to English students, and which will teach a fresh appreciation of the splendid remains of art which have hitherto been but vaguely wondered at in our museums. Many of the articles on this side are short and special, but all tend to this one large result. On inscriptions we have scholars like Mr. Newton and Mr. Hicks giving either new material or new renderings of known inscriptions. The variety of these contributions renders any survey of them in a short notice impossible. On the historical and literary side the work is not so various or interesting. The boldest and most distinct paper is Mr. Mahaffy's attack upon the Olympian register, at a time when any day a recovered inscription from Olympia may prove that he is wrong, while, on the other hand, a theory laid down in the face of this possible evidence will gain greater credit and importance if it turn out correct. Mr. Jebb's paper on Pindar, though learned and full of detail, does not leave any definite impression on the reader's mind. Besides, too much space is occupied with the controversy as to whether the Greeks did or did not believe Ilium to be the descendant of the heroic Troy. We regret to see that the society which produces this fine *Journal*, and which desires to give grants for research and for the production of monumental works, is only supported by 450 names. Surely the classical public in England is larger than this, and how is it that the best and readiest source of new information on Greek matters excites so little interest? The French are commonly reputed to be behind us in the study of Greek, and yet, in addition to their famous archæological school at Athens, how many excellent journals have they in which the progress of Greek studies can be pursued! We trust that in another year's time the English Hellenic Society may number not 450 but 1,000 members. Meanwhile it may be suggested that a short bulletin of the new discoveries, excavations, &c., should be appended to each number of the *Journal*.

Messrs. Kegan Paul & Co. have sent us the second volume of the very pretty edition of *Shakspere's Works* which forms part of the "Parchment Library."

We have on our table *The Belgium of the East*, edited by B. Jerrold (Allen & Co.),—*Winters Abroad*, by R. H. Otter (Murray),—*John Howard's Winter's Journey*, by W. A. Guy (De La Rue),—*Outlines of Ancient and Mediæval History*, by E. Power (Hamilton),—*Henry Wadsworth Longfellow, a Memory*, by Rev. P. Murphy (Routledge),—*Garfield's Place in History*, by H. C. Pedder (New York, Putnam),—*William Hedley, the Inventor of Railway Locomotion on the Present Principle*, by M. Archer (Newcastle-upon-Tyne, Carr),—*The Eddystone Lighthouses, New and Old*, by E. P. Edwards (Simpkin),—*Traces in Scotland of Ancient Water-Lines*, by D. M. Home (Edinburgh, Douglas),—*Land Nationalisation, its Necessity and its Aims*, by A. R. Wallace (Trübner),—*The Commercial Restraints of Ireland*, by J. H. Hutchinson (Dublin, Gill & Son),—*Metropolitan Police-Court Jottings*, by a Magistrate (Cox),—*Queenwood College Mutual Improvement Society, Miscellaneous Papers* (The College),—*Report of the Association for the Reform and Codification of the Law of Nations* (Clowes),—*Journal of the North-China Branch of the Royal Asiatic Society*, Vol. XVI. Part I. (Trübner),—*Report of the Metropolitan Board of Works*, 1881 (M.B.W.),—*Bristol Review*, No. 1 (Bristol, Fawn),—*New Views of Matter, Life, Motion, and Resistance*, by J. Hands (E. W. Allen),—*Beauty, and the Laws governing its Development*, by J. Hands (E. W. Allen),—*The Books of Chilan Balam*, by D. G. Brinton (Philadelphia, Stern),—*Indian Languages of the Pacific States and Territories*, by A. S. Gatschet (New York, Barnes),—*The Queen and the Royal Family*, by F. A. (Hogg),—*Political Epigrams*, 1874–81 (King),—and *Essays of Oliver Goldsmith, M.D.*, by C. D. Yonge (Macmillan).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Hallam's (R. A.) Moses, a Course of Lectures, cr. 8vo. 3/6 cl.
Student's (The) Concordance to the Revised Version, 1881, of the New Testament, sm. 4to. 7/6 cl.

Fine Art and Archæology.

Chevreul's (M. E.) Laws of Contrast of Colour, translated from the French by J. Spanton, cr. 8vo. 3/6 cl.
Cooke's (W. H.) Collections towards the History and Antiquities of the County of Hereford, Vol. 3, 4to. 52/6 cl.
Great Artists: Overbeck, by J. B. Atkinson, cr. 8vo. 3/6 cl.
Munro's (R.) Ancient Scottish Lake Dwellings, 8vo. 21/ cl.

Poetry and the Drama.

Lytton's (Lord) Dramatic Works, Vol. 2, Knebworth edition, cr. 8vo. 3/6 cl.
Shakespeare's Plays: Part 1, Julius Cæsar (Dumaresq edition), by Capt. F. S. D. de C. Bisson and R. Mongan, cr. 8vo. 2/
Songs of Many Days, by K. C., 12mo. 5/ cl.

History and Biography.

Pitt (W.), by L. Sergeant, cr. 8vo. 2/6 cl. (English Political Leaders.)

Geography and Travel.

Bourne's (C. E.) Heroes of African Discovery and Adventure, cr. 8vo. 3/6 cl.
Godwin's (Rev. G. N.) The Green Lanes of Hampshire, Surrey, and Sussex, 8vo. 6/ cl.
Philips' Elementary Atlas and Geography, edited by J. F. Williams, 4to. 3/6 cl.
Randall's (J.) The Severn Valley, cr. 8vo. 7/6 cl.
Smyth's (C. P.) Madeira Meteorologic, 4to. 6/ cl.

Philology.

Lysiæ Orationes XVI., with Analysis, Notes, &c., by E. S. Shuckburgh, 12mo. 6/ cl.

Science.

Fayrer (Sir J.) On the Climate and Fevers of India, 8vo. 12/
Galloway's (R. L.) A History of Coal Mining, cr. 8vo. 7/6 cl.

General Literature.

Blair Athol, by Blinkhoolie, 12mo. 2/ bds. (Railway Library.)
Clarke's (Mrs. S.) From the Deck of a Yacht, cr. 8vo. 3/6 cl.
Dudley's (R.) Monthly Maxims, 4to. 25/ cl.
Gibbon's (C.) A Heart's Problem, cr. 8vo. 3/6 cl.
Harte's (B.) Flip and other Stories, 12mo. 2/ bds.
Heatley's (G. S.) Horse Owners' Safeguard, cr. 8vo. 5/ cl.
Humphreys's Student's Guide to Systematic Coat Cutting, 4to. 4/ swd.
Jenkins's (E.) Jobson's Enemies, 3 vols. cr. 8vo. 31/6 cl.
Kompert's (L.) Scenes from the Ghetto, Studies of Jewish Life, cr. 8vo. 7/6 cl.
Lane's (L. M.) My Sister's Keeper, cr. 8vo. 3/6 cl.
Mallock's (W. H.) Social Equality, a Short Study in a Missing Science, cr. 8vo. 6/ cl.
Pirkis's (C. L.) Saint and Sibyl, a Story of Old Kew, 3 vols. cr. 8vo. 31/6 cl.
Reminiscences of an Old Bohemian, 2 vols. 8vo. 21/ cl.
Wee Babies, printed in Colours from Original Designs by Ida Waugh, Poetry by A. E. Blanchard, 4to. 5/ cl.

THE HALL OF PEMBROKE COLLEGE, CAMBRIDGE.

1, Scroope Terrace, Cambridge, Aug. 9, 1882.

The statement of Mr. Waterhouse in the *Athenæum* for last week that the hall which was destroyed under his directions "was neither in its floor, ceiling, windows, doors, fireplace, nor panelling, the hall of Gray," moves me to relate, as briefly as I can, the history of the

building. I am the better able to do this as I am now engaged in editing 'The Architectural History of the University and Colleges of Cambridge,' by the late Prof. Willis, which has been so long in preparation.

The charter of Pembroke College is dated December 24th, 1347; but the foundress, Marie de Valence, had purchased that portion of the site which stands at the corner of Trumpington Street and Pembroke Street a year previously. Her next purchase was a property called University Hostel, adjoining the former, which she acquired December 11th, 1351. She lived until March, 1377, but no further purchases were made for the site until several years after her death. Probably some difficulties arose of which the details have not been preserved. It is to this cause, in the opinion of Prof. Willis, that the narrowness of the old quadrangle, which measured only 52 ft. 6 in. from north to south by 95 ft. 6 in. from east to west, must be ascribed. After deploring the absence of bursars' accounts and building accounts in Pembroke College, he says: "The narrow width of the quadrangle makes it probable that the buildings were arranged, and the erection of the south side of the court begun, in her lifetime, occupying as they do the portion which she had acquired; for if more ground had been at liberty southwards, it seems unlikely that the area would have been made so small." He then proceeds to show that the chapel, which stood at the north-west corner of the site, was probably begun in 1366–67.

The hall, with the kitchen, butteries, and other offices at the north end, the muniment room and library above, and the combination room, audit room, and master's lodge at the south end, formed the east side of the quadrangle. It is known, on the authority of Dr. Matthew Wren, that the library was built by Dr. Laurence Booth in 1452; and, further, that he raised the picturesque staircase-tower which stood at the south-east corner of the quadrangle until Mr. Waterhouse destroyed it. It enabled the master to descend to the hall and combination room, or ascend to the library, without going out into the court. Of Dr. Booth's work Prof. Willis says: "The library is recorded as the work of Laurence Booth. Either, therefore, the hall was in building in his time, and the plan was changed at his suggestion, which is most probable; or else the hall had been finished long before, and was now unroofed and the additional story raised on the old walls. The building of the tower at this time, of course, refers only to the upper part, but the disposition of the building shows that the library story was an afterthought, for the buttresses of the hall, arranged to resist the thrust of the roof, rise only to the level of the sills of the library windows, and the latter are spaced at equal distances along the wall, as usual in libraries, but without regard to the spacing of the buttresses, so that some of the windows are placed partly over the latter." To this it may be added that there were original stone corbels on each side of the interior of the hall, at about nine feet from the ground, which showed that a high-pitched roof had been intended before Booth's library was planned.

It appears, therefore, that the hall could not have been begun later than 1452, and that it may very possibly be earlier. In 1634 the interior was ornamented with very appropriate woodwork, including a beautiful chimney-piece and screen, on which the above date was inscribed; the ceiling had once been panelled. Loggan's view, taken in 1688, shows a stone door-case at the west end of the screens (as the passage between hall and kitchen is usually called at Cambridge), which Prof. Willis assigns to the same date as the woodwork, and tracery in the windows. At some period which it is now impossible to fix with accuracy—probably in the course of the last century—this tracery had all fallen out, and the windows were divided by a single vertical mullion when I first knew them. The panel-work of the roof had also disappeared, and had been replaced by a plain ceiling. The screens, moreover, had been continued up to the roof by a lath-and-plaster partition, so as to contrive a room over the music gallery, which was used for kitchen stores. The Jacobean woodwork, however, all remained. It was the hall in this condition that was used by Gray.

Mr. Cory, the architect employed by the College in 1862, removed the partition above mentioned, and found under the modern ceiling traces of the ancient panel-work. From this he was enabled to design a very picturesque wooden roof, divided into compartments, and supported by vaulting-ribs resting on the original corbels, with appropriate tracery in the spandrils. He further added a pavement of encaustic tiles and lighted the interior with gas. Pointed windows of three lights were inserted in the old openings. These were, it must be admitted, an innovation, for he did not follow with sufficient closeness the indications of the original design furnished by Loggan, and he was guilty of wanton destruction of old work when he replaced the Renaissance doorway to the screens by one of Pointed character.

The hall, however, as it left his hands was essentially the old hall of Pembroke College, with its flat roof and Jacobean panel-work, and ancient arrangement of master's lodge in immediate contiguity with it and with the College; and it formed part of a quadrangle designed by the foundress.

Whether the walls had really been weakened by the excavation of cellars (which Mr. Cory had been instructed to provide) is a point which has often been discussed; but, on the assumption that they had been so weakened, there were other remedies for their condition short of destruction, which I believe to have been as unnecessary as it was certainly undesirable.

John Willis Clark.

CAXTON'S 'FOUR SONS OF AYMON.'

23, Abchurch Lane, Aug. 14, 1882.

It has often been remarked that of many of the works which issued from Caxton's press only small portions remain. Indeed, of the whole number known, one-third is represented by single copies or fragments. Of these fragments nearly the whole have been rescued from the covers of old books. An interesting instance of such rescue has just come to light in the shape of some leaves of 'The Four Sons of Aymon' from Caxton's press, before describing which some remarks upon the three earliest English editions of the work may be found acceptable.

One of the latest additions to the magnificent library at Althorp by its founder was an imperfect copy of Caxton's 'Four Sons.' Unfortunately, the beginning, containing a prologue from Caxton's own pen, was gone, and the end, containing the colophon, was also wanting, so that had it not been for a reprint eighty years later, we should have lacked some interesting details.

'The Four Sons of Aymon' was a favourite romance, and manuscript copies are found in every library of importance during the fourteenth and fifteenth centuries. Its popularity, of course, was a strong reason why so many early printers put it to press. It seems most probable that the very popularity of the romance caused its rapid destruction, just as in later ages the same fate overtook many first editions; for instance, those of Bunyan's 'Pilgrim,' 'Robinson Crusoe,' Cocker's 'Arithmetic,' and many others.

A Caxton edition of the 'Four Sons' was unknown to bibliographers until the copy now at Althorp fortunately came into Earl Spencer's collection. This unique possession was too late to be included in Dibdin's 'Typographical Antiquities' (1810) or in the 'Bibliotheca Spenceriana' (1814), so that its collation and description were not given publicly until 'The Life of William Caxton,' 2 vols., quarto, 1863, was published.

The four leaves lately discovered belong to Mr. Green, of Bishops Stortford, and are the only specimens at present known outside the library at Althorp. To Mr. Green's courtesy in lending them to me is the present article due. They are all portions of sig. E, and so, unfortunately, do not supply the defect in the Althorp copy. Tracing now the three earliest English editions, we have:—

1. Caxton's edition.—This, as the types plainly show, was printed in 1490–91.

2. A reprint in 1504 by Caxton's successor, Wynken de Worde.—Of this edition not a copy nor a single fragment has been yet discovered, and we only know that it really *was* printed by the colophon to edition 3.

3. Copland's reprint in 1554.—This is the first perfect copy known and it has both prologue and colophon intact. The copy in the Museum ends thus:—

"¶ Here finisheth the hystory of the noble & valiaunt knyght Renawde of Mountauban, & his three brethern. ¶ Imprinted at London by Wynken de Worde, the . viii. daye of Maye, and the yere of our lorde . M. cccc. iiii, at the request and commaundement of the noble and puissaunt Erle, the Erle of Oxenforde. And now emprinted in the yere of our lorde . M. cccc. liiii. the . vi. daye of Maye, By wylliam Copland, for Thomas Petit."

This colophon is very instructive, but the preface is much more so, as the composition and verbiage are so redolent from beginning to end of Caxton's style that no one familiar with his known prologues and epilogues can avoid attributing it to him. One or two sentences are here quoted as evidence:—

"As the philosopher in the fyrst booke of hys methafysique sayth that euery man naturally desireth to know & to connewe thynges. And therfore haue the Clerkes & peple of great vnderstandynge desyred and coueite to lerne sciences and to know vertues of thinges..... And bycause that aboue alle thinges the prynces and lordes of hie estate and entendement desyre to see thystories of ryght noble & hye vertues. .....Therefore late at ye request & commaundement of the ryght noble and vertus Erle John Erle of Oxeforde my good synguler and especial lorde I reduced & translated oute of frenche into our maternale & Englyshe tongue the lyf of one of his predecessoures named Robert Erle of Oxforde," &c.

Speaking of the same nobleman, the writer says:—

"He late sente to me a booke in ffrenshe conteyning thactes & fayttes of warre doone & made agaynst ye great Emperour and Kyng of Fraunce Charlemayne by ye . iiii. sonnes of Aymon, whyche booke I haue endeuorde me to accomplysshe and to reduce it into oure Englysshe to my grete coste & charges as in the translatyng as in enpryntyng of the same hopyng & not doubtyng but that hys good grace shal rewarde me in suche wyse that I shall haue cause to pray for hys good & prosperus welfare, and besechyng hys sayd noble good grace to pardon me of the rude and this symple werke. For accordyng to the coppy whyche he sēt to me I haue folowed as nygh as I can and wheras any defawte shall be founde I submyt me to the correccion of them that onderstande.....And I shall praye almighty god for them that so doo to rewarde them in suche wyse that after this shorte and transytory lyfe we alle may come to euerlastyng lyfe in heuen. Amen."

I have noted already that no fragment is known of Wynken de Worde's 'Four Sons,' and we learn from the above quotation that Caxton translated from the French and printed a life of the Earl of Oxford, of which also not even a fragment has descended to us. That so many books, once successfully launched upon the book-world, should have entirely vanished, leaving

not a wrack behind, is truly marvellous, and excites the fancy to conjure up many an unknown Caxtonian impression of rare fifteenth century MSS. Well, indeed, may we exclaim, "Quanta fuisti, si tanta sunt reliquia."

Reverting once more to the four leaves belonging to Mr. Green, we see plainly from the brown stains and holes that they were extracted from the leather covers of some old book—what book cannot now be traced, for the leaves have been many years in Mr Green's possession, and he obtained them from a London dealer. These facts all point to one conclusion—that great care should be taken by binders when old books are entrusted to them, and that all printed fragments used as linings should be preserved for examination; and, again, that books from old libraries should be entrusted only to known binders accustomed to that particular class of work. WILLIAM BLADES.

THE 'QUARTERLY REVIEW' ON SWIFT.

AN article on Jonathan Swift, attributed to a distinguished man of letters, was sure to excite much expectation and to secure for the number of the *Quarterly Review* in which it appeared an unusually large circle of readers.

Two former biographical essays of the writer have achieved a brilliant success—the first on Swift's illustrious kinsman Dryden, the other on Swift's intimate friend Bolingbroke; but I cannot think that this last contribution to the literary and political history of the first portion of the eighteenth century will be considered equally satisfactory.

The *Quarterly* reviewer seems to think that Swift has been misjudged, and that, while his character as a man has been loaded with undeserved obloquy, his merits as a writer and politician have not been sufficiently recognized. This unjust estimate he attributes to the influence on public opinion of four writers, Jeffrey, Macaulay, Lord Stanhope, and Thackeray. It is undeniable that Jeffrey exercised considerable ascendency in the days when the blue and yellow covers were a power in the literary world; but his influence was even then limited to a certain clique, and is now nearly extinct.

This cannot be said of Lord Macaulay. If his reputation for historical accuracy has been somewhat damaged, the number of his readers is still on the increase, and his works, in some form or another, are being constantly reprinted.

The reviewer complains that Macaulay speaks of Swift as "the apostate politician," "the ribald priest," "the perjured lover," "the heart burning with hatred against the whole human race." It is hardly fair to take these words, and, without giving the contexts of the passages where they occur, to quote them as Macaulay's character of Swift. But still, accepting them in their fullest signification, there is hardly one of these terms which is not justified by the essay now before us.

1. "The apostate politician."—We read (p. 403) of Swift's "unscrupulous versatility," and in several passages the reviewer himself speaks of his (Swift's) "apostasy."

2. "The ribald priest."—Referring to Swift's ordination, the reviewer writes (p. 395): "His [Swift's] correspondence makes it equally clear that expectation of preferment was, if not his only, at least his primary motive." As for the epithet "ribald," it cannot be said to be misapplied to the clergyman who wrote 'The Ladies' Dressing Room' and 'Directions to Servants.' The reviewer's excuse for these atrocious publications is that they were anonymous (p. 396). This plea need hardly be dealt with. If generally accepted, it would put an end to all prevailing ideas of literary morality and honesty. Such a defence comes strangely from a writer of the reviewer's high reputation.

3. "The perjured lover."—Swift's connexion with Stella and Vanessa is not fully discussed in the reviewer's present article, but he tells us that he intends on a future occasion to break a lance in defence of his (Swift's) conduct to these two ladies. All those who cherish the memory of Stella's *pure and blameless life* (the words in italics are the *Quarterly's* own), or who have lamented Vanessa's unhappy fate, and even those who are the warmest admirers of Swift, must look forward to the further portion of the reviewer's essay with anxiety. The story is spoken of by the reviewer himself as "one of the saddest and most mysterious." To whom, then, are we to impute the blame? Was it Stella's fault that her position as an honoured wife was never recognized, or, to adopt the writer's view,* that she never was a wife? Was it Vanessa who trifled with the Dean's feelings and then deserted him? I cannot help recalling the Abbé in Sardou's play 'Séraphine,' who, not content with defending the characters of the Borgias, tried to show that it was their enemies who were the poisoners. But before discussing the subject further, we must wait till the reviewer has had an opportunity of giving us his complete history of the affair.

4. "The heart burning with rage against the whole human race."—This is strong language, but not much harsher than some of the terms in the article now before us. Swift's temper is described (p. 392) as "moody and capricious"; "his mind and body were diseased"; "his soul was ulcerated with rage and grief"; his vision was "jaundiced." "The world was a pandemonium to him." Many other passages might be quoted to show that the reviewer's judgment does not materially differ from Lord Macaulay's. But if in Lord Macaulay's essay Swift's moral character is harshly treated, even the *Quarterly* must admit that full justice is done to his literary merits. His genius is described as one "equally suited to politics and letters—a genius destined to shake great kingdoms, to stir the laughter and the rage of millions, and to leave to posterity memorials which can only perish with the English language."

Two other writers, Lord Stanhope and Thackeray, are mentioned by the *Quarterly* as assailants of Swift's reputation. Of Lord Stanhope it is impossible to speak except with respect; but notwithstanding his unwearied diligence and research, his writings are intolerably dull, and, except as works of reference, are seldom or never read. But Lord Stanhope, it may be remarked, speaks in glowing terms of his admiration for Swift as an author.

Of Thackeray's brilliant sketch it seems to me that the admirers of Swift have not much to complain. If he dwells on Swift's cynicism, he speaks in enthusiastic terms of the brighter shades of his character. He writes ('English Humourists,' 8vo., 1858, p. 33): "For Swift was a reverent, was a pious spirit—for Swift could love and could pray. Through the storms and tempests of his furious mind the stars of religion and love break out in the blue, shining serenely, though hidden by the driving clouds and the maddened hurricane of his life."

I have endeavoured to show that Swift's reputation has not materially suffered from the writers referred to. It would be easy, moreover, to mention others, both English and foreign, with greater influence on modern thought, who have spoken of Swift in terms of the highest eulogy.

Little space is left me to consider the reviewer's own estimate of the famous Dean. The narrative of his career is clear and lively, and the sketch of the three years (1711–14) when Swift was in daily intercourse with Harley and St. John is in the highest degree interesting and instructive. No other living writer is probably so intimately acquainted with the party history of those times, but I think that he overrates the influence exercised by Swift. It was, no doubt, an age of pamphleteering, and in that class of literature Swift stood without a rival; but it is hardly the language of a sober-minded and accurate essayist to say that "he [Swift] dictated the political opinions of half the nation. He had turned the tide of popularity against the Whigs. He had done more than any single man then living to confound the designs of Austria and Holland, to crush Marlborough, to paralyze Marlborough's coadjutors. A war splendid beyond parallel he had rendered odious. At two perilous junctures he had saved the Ministry." The reviewer, like other writers on the subject, relies too much on Swift's own account of his life during these eventful times, as related in the 'Journal to Stella.' It is curious that in the description of Swift's rupture at this same period with Steele no mention is made of a pamphlet which Mr. Dilke, in my opinion, proves clearly to be the work of Swift. I refer to 'The Miscellaneous Works of Dr. William Wagstaffe,' one of the happiest contributions to the controversy. The reviewer considers that pamphlets such as the 'Drapier Letters' and the 'Conduct of the Allies' are "Demosthenian in style and method." The epithet is excellently chosen—none could more fitly describe the terseness, the close reasoning, the nervous vigour of these masterpieces of political controversy. In the description of the pamphlets written in ridicule of John Partridge the authorship is attributed to Swift alone. It is certain that both Steele and Prior had a share in them; and although Arbuthnot's name is not mentioned in connexion with the hoax, it is impossible to doubt that these exquisitely humorous productions owed something to the witty author of 'The History of John Bull.'

The reviewer falls occasionally into minor errors. We read (p. 337) that at three years old Swift could read any chapter of the Bible. Scott allows him to have attained his fifth year before attaining to that degree of proficiency. Swift's personal appearance at one part (p. 391) is called "uncouth," and a little further on (p. 411) we read of "the lofty forehead, the shapely, semi-aquiline nose, the clear blue eyes," &c.

In 1713 Pope was *not* busy (p. 421) with the second edition of the 'Lock,' and he probably had not set to work in earnest with the translation of the Iliad. The former poem was not published till 1714, although an imperfect sketch of it had appeared anonymously in a volume of miscellaneous poems in 1712. It is not just to state (p. 422) that Gay was too indolent to remedy the defect of want of a regular education. In the South Kensington Museum is a copy of Horace which is filled with notes and annotations in Gay's handwriting. But these are mere trivial errors. It is to the reviewer's theories that exception is to be taken—the explanation, for instance, of Swift's celibacy, which he attributes to Varina's coquetry. Miss Waryng's conduct was not distinguished from what may occasionally be observed among young ladies of all ages and countries. The lover was ardent, the young lady was coy, and was either uncertain of her own mind or waited to see if a more eligible suitor would not appear. When at length Varina consented to make her swain happy, she found that his love had cooled into indifference. Upon this the *Quarterly* remarks (p. 398): "Henceforth love lost all its glamour. Henceforth the passion which religion and romance have ennobled into the purest and holiest of human bonds awoke only nausea and contempt. He never afterwards sought to marry." No more extraordinary theory has ever been set forth; but there is little fear of it being generally accepted or acted upon. If every young man who is unsuccessful in his first love affair were to decide on remaining a bachelor for the remainder of his life and looking henceforth on love with nausea and contempt, the

* The reviewer considers that Mr. Monck Mason has conclusively proved that no marriage was solemnized. It is always difficult to prove a negative, but in a case like this it seems to me impossible.

marriage service would soon be obsolete and the world become an unpeopled solitude.

The reviewer considers that the cause of Swift's desertion of the Whigs was dissatisfaction with their conduct of affairs. This explanation is not satisfactory and is rather worn. The absence of mere mercenary feelings may be readily granted. It has always appeared to me that Swift was more influenced by neglect than by interested motives. It is probable, too, that a desire for power and the hope of occupying a position where his great abilities might find scope for action were the chief causes of his political apostasy.

I cannot agree with the reviewer that we have all the information required for a satisfactory biography of Swift—at all events, none has yet been produced; and I cannot think that the essay in the *Quarterly*, attractive as some portions of it are, will do much to supply the want. F. G.

MR. W. STANLEY JEVONS, F.R.S.

THE deplorable accident at Bexhill last Sunday has deprived England of a mind of great power. W. Stanley Jevons was born in 1835, and received the best part of his education at University College, London. While attending the lectures there he came greatly under the influence of De Morgan, to whom he owed that capacity for handling mathematical conceptions which distinguishes his best work. Receiving an appointment to the Sydney Mint, he went out to Australia in 1855. He subsequently returned to England, and in 1862 took the gold medal for philosophy in the M.A. Examination at London University. In 1866 he was appointed Professor of Logic, Political Economy, and Mental Philosophy at Owens College, Manchester. He "migrated" to London in 1875 on being appointed to the Chair of Political Economy at University College. When we add that he filled the post of Examiner in Philosophy at Cambridge (1874-5) and for many years at London, where he had the unique distinction of obtaining the Examinership in Political Economy after serving the customary period as Examiner in Logic and Mental Philosophy, the record of his outward life is in outline complete. It adds additional pathos to his unexpected death that last year he gave up his professorship at University College in order to devote himself entirely to his own work.

That work consists of contributions of considerable value to the science of logic and of political economy. If we remember rightly, his first appearance as an author was with a pamphlet, in 1861, on 'A Serious Fall in the Price of Gold,' a subject with which his professional position gave him unusual opportunities for practical acquaintance. In spite of an unfortunate attempt to introduce a mathematical novelty in the shape of a logarithmic average, the pamphlet still remains the best monograph on the subject in point of method. For a time his attention was more exclusively devoted to logic, and in two short essays, on 'Pure Logic' and 'The Substitution of Similars,' he laid the foundation for the popularization and modification of Boole's system which form his best claim to distinction in this branch of his investigations. The recent tendency of logical science in this country is undoubtedly to support the contention which Prof. Jevons was almost the first to raise, that symbolic logic is more scientific if less valuable for pedagogic purposes than the old Aristotelian system. Prof. Jevons was first in the field in bringing symbolic logic within the capacity of persons unacquainted with the mathematical methods which Boole had inextricably combined with his system. In his 'Elementary Treatise on Logic' Prof. Jevons produced the best introduction to all branches of the subject that yet exists in any language. His work on 'Logic' was crowned by his very thorough treatise on 'The Principles of Science,' which has gone through two editions. A remarkably accurate acquaintance with the most recent investigations of almost all branches of science, a firm grasp of the mathematical conceptions most analogous to logical processes, and wide knowledge of logical literature made the work a most admirable *résumé* of the logical methods of science, if it dealt but slightly with its actual principles. The work contained a description of his logical machine, which performs all the processes of symbolic reasoning mechanically, an analysis of the scientific methods of units and measurements, and—its chief novelty—the professor's theory of the inverse method. By this method Prof. Jevons hoped to reduce induction to a kind of integration of deduction, and an enormous amount of ingenuity was displayed by him in inventing processes which should correspond to the analogous methods of the integral calculus. Valuable as are the results of his investigations both theoretically and practically, there can be little doubt that the professor by no means solved the method of induction as conceived by Mill, his work connecting itself much more closely with that of Whewell. A primer on logic and a most admirable collection of examination questions on deductive logic conclude the record of his work on logic, by which he has done more than any predecessor to make logic an essential branch of English education, and has indissolubly connected his name with the history of the science in England.

Turning to his economic studies, the late professor's 'Theory of Political Economy' may be said to have been the most original contribution to the subject since Mill, and will, perhaps, bring him in future years more credit as an original thinker than any of his other productions. Quite independently of Cournot, his chief predecessor, he applied mathematical conceptions to economics, with the result of elucidating the problem of demand and supply, and helping greatly to connect economics and utilitarian ethics. The conception of "final utility," first distinctly formulated by Prof. Jevons, must always remain the root conception of quantitative economics. It is remarkable that so distinctly mathematical a method, fundamentally the same as that of the infinitesimal calculus, should have emanated from one whose grasp of the higher mathematical processes was but limited. His line of investigation has since been successfully pursued by Messrs. Marshall and Edgeworth. His work on 'The Coal Question' will be remembered as having led to the appointment of a Royal Commission. A series of papers in the *Contemporary Review* on practical economic questions, a work on 'Money and the Mechanism of Exchange,' an admirable *brochure* on Mr. Lowe's "match tax," a treatise on 'The State in Relation to Labour' (only recently reviewed in these columns), and a hand-list of works on economics, contributed to a recent number of the Library Association's *Monthly Notes*, conclude the list of his contributions to economics; and with a somewhat unsympathetic series of articles on Mill's philosophy finishes our enumeration of the works of a thinker of great ingenuity and considerable power. We trust that a series of essays on economic subjects promised by Messrs. Macmillan may be in sufficiently advanced a form to yet see the light; and under any circumstances a collection of the above-mentioned papers on economic subjects would do honour to his powers in the line of work in which, we believe, Prof. Jevons's greatest capacity lay.

Looking back at the long list of his contributions to English logical and economic thought, the principal aspect that strikes one is the admirable facility with which the fundamental ideas of mathematics were applied by the deceased professor to the two branches to which he devoted himself. This remains from first to last the chief note of his work and will always continue to be his strongest claim to originality.

In private life Mr. Jevons, though somewhat reserved, was always ready to place his varied knowledge at the disposal of his hearer. His habits were most regular, and there was every hope that the many years of leisure to which he might reasonably have looked forward would have resulted in productions of even a higher value than those he has left behind him. The professor took great interest in bibliography and was on the council of the Index Society. He earned his F.R.S. at an early age and was LL.D. of Edinburgh. By his loss a life has been cut off which, great as was its performance, had promise of even better work, and a feeling almost of vexation comes over one when reflecting on the avoidable nature of the accident to which he was a victim. The deaths of Prof. Balfour and Jevons occurring in such rapid succession should serve as a warning to intellectual workers that their muscular activity cannot be submitted to such severe strains as are allowable in the case of persons of less sedentary habits.

THE COMING PUBLISHING SEASON.

MESSRS. CHATTO & WINDUS's announcements of new publications in preparation for the coming season comprise a new work, already noticed, by Capt. Richard Burton and Commander Cameron, entitled 'To the Gold Coast for Gold; or, Vingt Ans Après: a Personal Narrative.' With 100 engravings on wood, 'The New South-West: Travelling Sketches from Kansas, New Mexico, Arizona, and Northern Mexico,' by the Chevalier Ernst von Hesse-Wartegg. In two volumes demy 8vo., with 100 drawings by the author in fac-simile of old engravings, 'Social Life in the Reign of Queen Anne,' by John Ashton, author of 'Chap-Books of the Eighteenth Century.' With seventy illustrations of picturesque localities, drawn on the spot by Thomas Macquoid, and engraved by Swain, 'About Yorkshire,' by Mrs. Katharine S. Macquoid, author of 'Through Brittany' and 'Through Normandy.' In small 4to., a new illustrated edition of Sir Walter Scott's 'Lady of the Lake.' A new popular edition of Mr. McCarthy's 'History of Our Own Times,' in four monthly volumes. An entirely new edition of Lane's 'Arabian Nights,' illustrated by Harvey, in three volumes. In one thick volume, uniform with Dr. Brewer's 'Reader's Handbook,' 'A Dictionary of the Drama: being a Comprehensive Guide to the Plays, Playwrights, Players, and Playhouses of the United Kingdom and America, from the Earliest Times,' by W. Davenport Adams. In small 4to., with over fifty illustrations, drawn by C. A. Vanderhoof and the author, 'About England with Dickens,' by Alfred Rimmer. In small 4to., with 400 illustrations, 'The Book of the Sword: being a History of the Sword and its Use from the Earliest Times,' by Capt. Richard Burton. In crown 4to., with illuminated cover and coloured pictures of flowers for every day in the year, drawn from nature by Viola Boughton, 'Birthday Flowers, their Language and Legends,' by W. J. Gordon. 'The Hebrid Isles: Wanderings in the Land of Lorne and the Outer Hebrides,' by Robert Buchanan. 'The Natural History of the Poets: Birds,' by Phil Robinson. A new and cheaper edition, in one volume, of 'Stories from the State Papers,' by A. C. Ewald. A new and cheaper edition, in one volume, of 'Hours with the Players,' by Dutton Cook. 'Science in Short Chapters,' by W. Mattieu Williams, author of 'The Fuel of the Sun.' 'The Folk-lore of Plants,' by Mr. T. F. Thiselton Dyer. Three new works by Mr. Proctor: 'Mysteries of Time and Space'; 'The Great Pyramid, its Plan and Purpose'; and a new and revised edition of 'Saturn and its System.' A new issue, in 8vo., of Maclise's 'Portraits of Literary Characters,' with descriptive text, anecdotal and biographical, by Mr. W. Bates, B.A. In two volumes, with portrait and illustrations, 'Twenty Years of a Publisher's Life,' by Alexander Strahan. In crown 8vo., with nearly 300 illustrations,

XUM

Dr. Andrew Wilson's new work, 'Chapters on Evolution: a Popular History of the Darwinian and Allied Theories of Development.'

Messrs. Chatto & Windus have also in preparation the following new works of fiction: 'All Sorts and Conditions of Men: an Impossible Story,' by Walter Besant and James Rice, illustrated by Fred Barnard,—'Val Strange: a Story of the Primrose Way,' by D. Christie Murray, author of 'Joseph's Coat,'—a new novel by the author of 'A French Heiress in her own Château,' entitled 'Valentina: a Sketch,'—'The Golden Shaft,' by Charles Gibbon,—a new novel by Ouidà,—'Kept in the Dark,' by Anthony Trollope,—'Foxglove Manor,' by Robert Buchanan,—'Dust: a Story,' by Julian Hawthorne,—a new novel by Wilkie Collins,—'Women are Strange, and other Stories,' by F. W. Robinson, author of 'Grandmother's Money,' &c.; together with many additions to their series of cheap popular novels.

Literary Gossip.

Prof. Max Müller is passing through the press a volume containing the lectures he delivered lately at Cambridge, likewise a new edition of his Hibbert Lectures, and of the 'Introduction to the Science of Religion.'

Messrs. Williams & Norgate have in the press a volume of 'Spinoza Essays,' by Profs. Land, Van Vloten, and Kuno Fischer, translated from the Dutch by Mr. Menzies, of Abernyte, and from the German by Miss F. Schmidt, and edited by Prof. Knight, of St. Andrews.

Three more of the "Sacred Books of the East," edited by Prof. Max Müller, will soon be published:—The second part of the Sacred Laws of the Aryas, containing 'Vasish*th*a' and 'Baudhâyana,' by G. Bühler; the second part of the Pahlavi Texts, containing the 'Dâ*d*istâni Dînîk' and the 'Epistles of Mânû*sk*ihar,' by E. W. West; and the second part of the Pâli Texts, containing the conclusion of the 'Mahâvagga' and a portion of the '*K*ullavagga,' by Rhys Davids and Oldenberg. Prof. Jacobi's translation of the '*G*aina Akârânga-Sûtra' and Prof. Beal's translation of the 'Fo-sho-hing-tsan-king' are likewise passing through the press.

The Clarendon Press will publish next month the 'Grammar of the Homeric Dialect' on which Mr. D. B. Monro has been for some time engaged. While Homeric accidence is by no means neglected, the larger portion of the book is taken up by syntax, and the author's object is to show that the difference between the Homeric and the Attic syntax is almost always a difference in the whole character of the usage, and not a mere irregularity or licence, such as might arise from mixture of earlier and later idioms. The structure of the hexameter verse and the rules regarding the quantity of syllables are treated at some length, and in this department, too, the appearance of irregularity is found to be chiefly due to the Attic medium through which the facts have generally been seen. Room has likewise been made for an abstract of the learning connected with the digamma. Many points will be new to English readers.

New and enlarged editions of Prof. Holland's 'Principles of Jurisprudence,' Sir William R. Anson's 'Principles of the English Law of Contract,' and Prof. Sachs's 'Text-Book of Botany,' edited, with appendix, by Mr. Sidney H. Vines, will be published almost immediately by the Clarendon Press.

Prebendary Sadler, the author of 'Church Doctrine, Bible Truth,' has in the press a commentary on the Gospel according to St. Matthew. The text is the Authorized Version, supplemented by marginal references and short critical notes, in which variations suggested by modern editors and the revisers of 1881 are noticed. The commentary itself will be a practical exposition adapted for Bible classes and private reading as well as for the use of the clergy. The work will be published by Messrs. Bell, and it is hoped that it will soon be followed by a similar volume on St. John.

The Rev. R. Hunter and Mr. Sidney J. Herrtage have completed another volume of the 'Encyclopædic Dictionary' (from *cable* to *conarium*), which will shortly be published by Messrs. Cassell, Petter, Galpin & Co. A further volume, carrying the work into the letter D, is in the press.

Mr. G. G. Walmsley, of Liverpool, has in preparation, to be published by subscription, 'Liverpool Municipal Archives and Records,' to be compiled by Sir James A. Picton, F.S.A., who at the request of the Finance Committee of the Council has made an examination of the municipal archives and records with a view to publication. The volume is expected to consist of about 450 pages quarto.

A copy of Thoresby's 'History of Leeds,' which had been in the writer's possession and contained his MS. notes and corrections, has just been sold at Leeds.

Two excellent works by Mr. Watkiss Lloyd, which have been published some years, have recently been placed on the list of books recommended to Cambridge undergraduates preparing for the Classical Tripos. But in the mean time the 'History of Sicily' (Murray) has, it is said, been consigned to the mash-tub, and the 'Age of Pericles' (Macmillan) has become a "remainder." The chance of such posthumous recognition—posthumous so far as the books are concerned—is not so stimulating as to disturb the satisfaction of both author and publishers at having left in manuscript the volumes which would continue the history of the politics and arts of Greece.

Mr. Julian Hawthorne announces the publication of a posthumous novel by his father, called 'Dr. Grimshaw's Secret.' The plot turns upon the assistance the hero gave to a young American in love with an English girl, and the effort to recover an estate belonging to the English branch of the family, which had been divided generations previously, during the war of the Roundheads and Cavaliers. The work, he says, is practically complete, but the difficult character of the writing prevented this being discovered sooner. On the other hand, Mrs. Lathrop, Hawthorne's daughter, has written to the American papers, according to a telegram in Thursday's *Standard*, to say that the story is incomplete, and was described in the *Atlantic Monthly* for October, 1872.

M. Max Rooses, the Keeper of the Musée Plantin, is going to publish an elaborate work, illustrated by a hundred photographs as well as numerous woodcuts, upon Plantin, under the title of 'Christopher Plantin, Imprimeur Anversois.' M. Rooses has already published a monograph on 'Plantijn en de Plantijnsche Drukkerij.'

A Correspondent suggests that the Bible mentioned in the *Athenæum* last week is probably that noticed in Mitford's 'Life.' Its genuineness seems dubious.

The *Allgemeine Zeitung* is going at last to take the step so long talked of, and moves from Augsburg to Munich on the 1st of October.

Philippopoli, the capital of Eastern Bulgaria, has been endowed with a library, for which a collection of books has been purchased, and a museum, which receives grants from the State.

The Indian Education Commission sitting at Simla is making a searching inquiry into the action of the Punjab Educational Department during recent years. In his examination, which lasted three days, Dr. Leitner, President of the Oriental College at Lahore, stated that the department had neglected the indigenous schools, which if developed would have met all the requirements of the people; that it had been aggressive in the matter of religious neutrality, so that schools in which any religion was taught were placed under a disadvantage; and that it had diverted to higher education the funds voted for primary education. After twenty-six years of the existence of the department, he said, fewer persons knew how to read and write than when it was established.

SCIENCE

The Acclimatisation of the Salmonidæ at the Antipodes: its History and Results. By Arthur Nicols, F.G.S. (Sampson Low & Co.)

In this little volume the author has republished with additions the substance of a series of articles contributed from time to time to various periodicals, and the succinct history of a remarkable achievement is now rendered accessible to the general reader. No other essays in acclimatisation have attracted so much interest as the successive attempts to introduce trout and salmon to our colonies in Australia, Tasmania, and New Zealand, and yet with regard to easily ascertained facts an astonishing amount of error has been disseminated by both the colonial and English press; the exceptions being, says the author, the *Field*, the *Melbourne Argus*, and the *Times*. The history of the persevering attempts to introduce these thoroughly "game" fish—important both as attractive to the angler, and, with their increase, as a new article of food—will interest alike the sportsman and the economist, and is admirably told in little more than a hundred pages, the rest of the volume consisting of an appendix.

In the same way as the warm zone of water within the tropics operates as a barrier to the passage of fish which inhabit cold water from the northern to the southern hemisphere, so did the heat of the equator offer the greatest obstacle to the conveyance of their ova. So delicate are these in the members of the salmon tribe, that even the

concussion caused by the fall of a soda-water bottle containing fertilized ova was sufficient to ruin every egg. Numerous have been the failures arising from the omission of some trifling detail, unforeseen or considered unimportant, and in no case was success easily won; but every unsuccessful experiment brought its lessons, and first the introduction of trout, and subsequently that of salmon, became accomplished facts. The credit of this result is mainly due to Mr. James A. Youl, now C.M.G., whose perseverance in spite of failure, and of the opinions formerly entertained by the most experienced pisciculturists, deserves ample recognition. Even Mr. R. Ramsbottom, with the most cordial wishes for the success of the experiment, wrote thus:—

"You might as well try to fetch Australia to England as to carry spawn to it in moss. Salmon spawn must be either hatching or dying from the moment it leaves the fish; you can retard it by about 140 days by a low temperature, but no longer. Neither one man nor another can carry living ova to Australia in any way; you can send young fish, that is all."

The main difficulty was the preservation of a sufficient stock of ice to last through the tropics, and the first successful shipment was made by the Norfolk, a fine ship belonging to Messrs. Money Wigram, who not only gave every facility for constructing an ice-house and special apparatus, but also refused to accept the one hundred guineas offered as freight. On April 15th, 1864, 4,000 salmon ova in splendid condition were landed at Melbourne, and the rest, with some trout ova, were sent on to the breeding-grounds at the headwaters of the Derwent in Tasmania. From that time onwards various shipments have been made, not always successful; and although, from some unknown causes, the increase of the salmon has not been so rapid as could be wished, there seems to be no reasonable doubt that the waters of the Derwent do contain true *Salmo salar*. Mr. Francis Francis, a very high authority upon the subject, is quite satisfied as to their identity, and several fine fish, one of them 7 lb. in weight, have since then been taken; still there are sceptics who assert that they are salmon trout. As regards the trout there is no mistake; in 1874 one of 16 lb. was taken by the rod in the Derwent, and they have been established in about a score of other streams in Tasmania and Australia, and in an equal number in New Zealand. Full details of the way in which this satisfactory result was attained will be found in this volume, which as a record of perseverance is very pleasant reading. Some features of our fallen nature which are not so gratifying are also placed on record; for when a good work has been done, claimants for the credit of it, and petty jealousies, are never wanting.

GEOGRAPHICAL NOTES.

'Norway in June' is the title of a book of travel by Olivia M. Stone which will be published this autumn by Messrs. Marcus Ward & Co. The illustrations—made from photographs taken during the tour by Mr. J. Harris Stone, M.A., F.L.S.—have been drawn by Mr. W. H. J. Boot, Mr. H. W. Petherick, Mr. R. Kent Thomas, and others.

Mr. John Bartholomew, of Edinburgh, has brought out a map of Lower Egypt, which will be a great help to readers of the daily papers. It is accompanied by plans of Alexandria and Cairo.

Part III. of the *Mittheilungen* of the German African Association presents features of unusual interest. It is gratifying above all things to learn that Dr. Pogge and Lieut. Wissmann are making satisfactory progress. Dr. Pogge, after sixty-two marching days, arrived at Mukenge's capital, in the Tusselange country, on October 30th, 1881, and met there with a most cordial reception on the part of the chief no less than on that of his subjects. Mukenge's territories lie between the rivers Kassai and Lulua, in about lat. 6° S. and long. 22° E. They consist for the most part of undulating grass-clad plains of red loam, and are rich in cereals, tobacco, and hemp. The rivers take their courses through wooded gorges, where reddish sandstone and granite are exposed. The fauna is poor and large beasts of prey are scarce, as are also birds, grey parrots excepted. Dr. Pogge speaks very confidently of the ultimate success of the expedition. Mukenge himself will accompany him and Lieut. Wissmann to Lake Mukamba, ten days' journey to the north-east, beyond which lie the countries of the Tukette and Mabondi. In the event of the travellers succeeding in reaching Nyangwe, on the Upper Congo, Lieut. Wissmann will go on to Zanzibar, whilst Dr. Pogge proposes to return to Mukenge's town, there to await further instructions from the Association.

Of equal interest are the reports from the Association's station in Ugunda. Queen Disha has not quite fulfilled the expectations of the explorers, who were promised grand things on condition of settling at the queen's *kwikuru* of Gonda. Neither the Arabs of Unyanyembe nor the queen's husband (the third of the number, his predecessors having been killed by the queen's own hands) look with friendly eyes upon the permanent establishment of Europeans in the country. Herren Böhm and Kaiser report on a journey to Karema on the Tanganyika. They travelled along Cameron's route as far as Liowa's in Ugalla, and then struck south in the direction of the residence of Simba, who is now a fugitive. The map accompanying this report presents features of great interest. Dr. Reichard descended the Wale or Kwale river to within a short distance of the Ugalla or Southern Ngombe river, where it loses itself in the sand. He effected this difficult piece of navigation in a boat of his own construction. Dr. Stecker expected to reach Kafa in June, and hopes "to turn up somewhere on the east coast" in February, 1883. In an appendix Dr. Förster, of the Berlin Observatory, discusses Dr. Bucher's astronomical observations made (1880-81) during his journey to Lunda.

The summary of recent French explorations in Senegambia in Petermann's *Mittheilungen* for August, accompanied as it is by two elaborate maps, must prove very acceptable to geographers whose time will not permit them to consult the original reports scattered throughout various periodicals. The expeditions more especially noticed are those of Olivier, Gaboriaud, and Bayol to Timbo, Col. Desbordes's military campaigns on the Niger, and Capt. Derrien's surveys. A separate paper deals with Dr. Gouldsbury's journey to Timbo. It is somewhat amusing to contrast the cool estimates of the latter with the glowing pictures of potential wealth presented by the French explorers.

An International Alpine Congress was held at Salzburg a few days ago.

Dr. Theophilus Hahn, the Keeper of the Grey Library at Capetown, has just published an original map of Great Namaqualand and Damaraland, from observations and surveys taken by him in 1879. The names of places are written phonetically, and with all the clicks, the dental, lateral, palatal, and cerebral (what can be the meaning of a cerebral click?). By means of these clicks it is easy to see at once how far the original seats of the Khoikhoi (Hottentots) extended. All roads are marked, all mission stations, and all the pans which hold water in the rainy season. We believe the map is published at the expense of the Government.

MEETINGS FOR THE ENSUING WEEK.

Tues. Horticultural, 11.—Fruit and Floral Committees.

Science Gossip.

The Iron and Steel Institute will this year hold its autumn meeting in Vienna, commencing on September 19th. On the 21st the Institute will be entertained by the city of Vienna. The American Association for the Promotion of Science meets at Montreal on the 26th inst.

M. Paul Henry discovered another small planet at the Paris Observatory last Saturday night, August 12th. This is the seventh planetary discovery of the present year, and raises the total number of known small planets to 227. M. Henry's first discovery of the kind was made ten years ago. It was named Velleda and numbered 126, so that one hundred have been discovered since, independently of the present announcement.

On the last two days of this month Venus will be very near the bright star Spica Virginis. She will reach her greatest elongation on the 26th of September.

Saturn rises now at about ten o'clock in the evening, Jupiter at half-past eleven. Saturn's ring is well opened out, the south side being visible.

Herren Schlag and Berend, of Berlin, have devised an ingenious method for ascertaining the water level of steam boilers in the dark. A float is formed by placing in a small cylindrical glass tube a mixture of Balmain's paint and phosphate of potash. This mixture becomes luminous at any temperature above 80° C. without exposure to light. The tube is kept in a vertical position by placing a few shot in the lower end.

M. Cacault has detailed some experiments made by him in photographing on hard faïence at Colombes. The photographs were taken upon the fine hard faïence of Creil. They were baked upon enamel at a single heat in a temperature about equivalent to that of boiling varnish. The results were very beautiful.

M. Billadot in the *Journal de Pharmacie* calls attention to "zorgite," an ore from La Plata which is exceedingly rich in selenium. This ore is a lead selenide containing 30 per cent. of selenium. With the demand for selenium the sources of supply are being increased, and the price of it has fallen in Paris from 1,000 francs to 40 francs the kilo.

M. P. Kienlen in the *Bulletin de la Société Chimique de Paris* shows that the deposit formed in the Wolff's bottles in which hydrochloric acid is condensed is very rich in selenium. A description of the process for separating this is too long for us to extract, but the selenium is obtained as a steel-grey precipitate in considerable quantity.

M. Melsens, at the Séance of the Académie des Sciences on July 17th, defended his system of lightning rods, which encloses the building, as it were, in a cage by a multiple of conductors. He showed that a live animal placed in a hollow sphere of metallic links could not be injured by the most powerful discharges from a Leyden battery. He therefore encloses the building in a series of rods. This, we think, is but another form of Sir W. Snow Harris's system of conductors for ships, which are so arranged that every point upon which lightning would strike is part of a closed circuit, and the electricity thus passes harmlessly away.

Prof. W. P. Trowbridge contributes to the *Journal* of the Franklin Institute for August an elaborate paper 'On a Theorem of Rankine relating to the Economy of Single-Acting Expansion Engines, first published in 1851.' Mr. J. C. Hoadley gives a paper 'On the Specific

Heat of Platinum and the Use of this Metal in the Pyrometer.' There are several other important papers in this *Journal*, especially one 'On the Prevention of Fires in Theatres,' by Mr. C. John Hexamer, which was read at the Stated Meeting of the Franklin Institute on June 21st.

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

The Funeral Tent of an Egyptian Queen. By Villiers Stuart of Dromana, M.P. (Murray.)

The vicissitudes of ancient Egypt are known from the most insignificant marks. A scratch of a chisel indicates a revolution, and the least change of name the rise of a new dynasty. The transfer of the royal mummies of the eighteenth and nineteenth dynasties to the pit in the Deir el Bahari is proof of a political convulsion of the most severe nature. Mr. Villiers Stuart, who visited the Museum of Boulaq last year, succeeded in seeing the royal mummies, with the exception of that of Thothmes III., whose fragile form has been unrolled and lost in the interests of science. Thothmes was not a man of commanding stature, but the great Sesostris is of the height of a grenadier, and the fate of Thothmes proving a warning, this monarch of the nineteenth dynasty has been left intact in his wraps. The other royal mummies, it appears, except the hideous Pinotem II., are still in their bandages.

The principal subject of Mr. Stuart's book is the tent or canopy of leather which is supposed to have covered the funeral barge of Isiemkheb, a queen of the twenty-first dynasty, who married her uncle and died in the flower of her age. This tent, it appears, is a marvel of leather work, embroidered in thousands of pieces, which still preserve their freshness and lustre. The ornaments are more Asiatic than Egyptian: rosettes, chequers, antefixal ornaments, gazelles, and united waterfowl, mingled with the Egyptian vulture of victory and lines of hieroglyphs. Tents of leather were used by the Libyans in their invasion of Egypt in the reign of Meneptah, and are represented on many of the Assyrian bas-reliefs. They were probably in the case of distinguished personages ornamented with lively colours, like the Babylonian tapestries and the Assyrian garments. On the Egyptian monuments, indeed, there are no representations of tents except the royal pavilion; but there can be no doubt that the Semitic tribes and nations used them in their campaigns, while the coverings of Egyptian arks, like the Hebrew tabernacle, appear to have been of leather. The present covering has been printed in its correct colours on a large folding plate. The hieroglyphs are, on the whole, well copied—as well, probably, as the difficult nature of the material and work would allow; they would admit, however, of sundry corrections and improvements, which would obviate some difficulties. The most interesting part of the inscription is the genealogy of the queen, who is declared to be the daughter of the high priest Masaharuta. The flowers with which the mummies were swathed have been discovered to be larkspurs, acacias, and lotuses, together with a peculiar moss chiefly found in Greece, and it is rather difficult to account for its appearance in Egyptian coffins of the time of Solomon. This find of the Deir el Bahari has, no doubt, great interest; but the pit, as already pointed out, has been rifled for the last ten years, and its contents still continue to find their way to Europe, especially the porcelain, which is of the most brilliant blue, far exceeding the Pompadour of Sèvres.

Mr. Stuart has republished the tomb of Rameses, the governor of Thebes, mentioned in his 'Nile Gleanings.' It is not quite certain that this tomb has not been previously discovered. The two kings Amenophis IV. and Khuenaten (the supposed later name of the same king) both appear on the façade, one with the conventional features of Amenophis III., the other with the well-known haggard visage of Khuenaten, but in the accompanying plate with the title of Amenophis IV. The question still remains a mystery. It is easy to change a name; it is not so easy to assume another face, although it is argued that the first of the two is the *beau idéal* assumed by the Pharaohs, and the other the *triste idéal* of the old usurping heretic. The one fact certain is that one king had two faces, and there may be, after all, two kings.

There is some account of the two pyramids newly opened at Sakkarah, but fuller details are expected so soon as the state of Egypt allows of their publication. Brugsch Bey and Prof. Lauth have given some information about what has hitherto occurred. The account of the scarabæus known as the *Copris Isidis* will be interesting to general inquirers as well as to entomologists. With the exception of the coloured plates the illustrations are ordinary.

Les Arts du Métal: Recueil descriptif et raisonné des Principaux Objets ayant figuré à l'Exposition de 1880 *de l'Union Centrale des Beaux-Arts.* Par J. B. Giraud. Illustrated. (Paris, Quantin.)

It was the intention of M. Giraud to write a history of all the applications of art to metal from the earliest days till the present time, and to use for the purpose of illustrating his subject the examples amassed in great numbers by the Union Centrale des Beaux-Arts two years ago. That collection is probably the richest of the kind ever formed in fine specimens of nearly all sorts. A complete treatise of this nature would have formed a modern and comprehensive history of art applied to metal, but it is not the sort of book to be lightly undertaken, and requires years for its execution. The materials supplied by the Union Centrale must needs have been supplemented from other sources, as many important branches of the subject, such as antique bronzes, arms, armour, and metal seals, are not so fully represented in the collection as for the purposes of a complete history they should be.

His larger purpose being defeated, our author has contented himself—for the present only, let us hope—with a general sketch of the subject. He rightly remarks that in order to arrive at a complete and judicious appreciation of the arts of antiquity it is needful to be well informed about their history and their modes of execution. Thanks to the technical knowledge of the artists and the studies of the archæologists, we have, he says, become acquainted with the processes (*procédés*) of the ancients; the result being that the moderns have little or nothing to fear from comparison between their works and those of their forefathers. We presume this comparison is to be limited to the processes only. Our chiselling, stamping, hammering, casting, and gilding are as fine as they can be; but with respect to art we fare best when we reproduce the choicest examples of antique, mediæval, and Renaissance modes. The evolution of a style at once modern and novel is quite another thing, and therefore—despite the unchallengeable loveliness of many of the treasures represented in this volume—we are unable to admit that modern and ancient works are equally fine. Beautiful as they are, the specimens of *argenterie* by MM. Christofle & Co. in the Greek mode and that of Louis XIII. (see plate xlviii.) are but reproductions, and illustrate the triumph of "processes" over design. M. Giraud may well say that even when placed side by side with masterpieces of old art, the modern versions are so true to their types as to be undistinguishable from them. After noticing modern engraving of medals, "La ciselure," he writes,

"sauf quelques rares exceptions, n'est pas à la hauteur où l'avait élevée le ciseau des artistes du XVIIIe siècle. La dorure galvanoplastique a généralement remplacé la dorure au mercure; nous copions des meubles de Boule, mais ce ne sont que des copies! Le fer a de vrais artistes qui le forgent, le martèlent, le cisèlent et le couvrent de délicates incrustations, de damasquinures d'or et d'argent, avec la même adresse que leurs ancêtres du moyen âge et de la Renaissance. L'émaillerie a si peu de secrets pour nous, qu'il est souvent difficile de reconnaître une contrefaçon moderne à côté d'une pièce ancienne: les émaux cloisonnés et champlevés viennent, comme au moyen âge, concourir à la décoration de notre orfèvrerie religieuse."

If we can only accept this with due qualifications, we agree unreservedly with the remark which follows, that these praises are, unfortunately, not due to all branches of what is fancifully called "applied art."

As if to prove the truth of both his opinions, M. Giraud, after a rapid survey of the art of antiquity, the Middle Ages, the Renaissance, and modern times, and the decorative art of the extreme East, proceeds with the real subject of his labours, the explanation of several hundreds of illustrations in heliogravure of beautiful and characteristic specimens, beginning with the well-known statuette which was found at Annecy, and is called the 'Bonus Eventus.' It belongs to M. Dutuit, and was recognized when in this country as a charming work of the Roman revival of the Antonine period, not of the pure, somewhat severe Greek type, as some had declared it to be. We have noticed it more than once. A purer if not more severe specimen is the draped Aphrodite, over which, when it was shown in the Exposition Rétrospective of 1865, M. Lenormant almost wept to think that it might pass into a foreign collection. Happily it remains

in the cabinet of M. Gréau. Its disproportions betray that it is of later origin than the fourth century, to which the distinguished archæologist assigned its quasi-archaic elements, formalized draperies and straight limbs. The gracious face is one of the finest types of Greek design. From these antiquities to the Limoges works of the twelfth century which follow on plate iii. the step is wide. Nevertheless it is most interesting to notice that, although not fewer than 1,600 years had passed between the making of the hieratic, but not archaic, Aphrodite of M. Gréau's collection, and the execution of the 'Mise au Tombeau' of copper, *repoussé*, engraved, enamelled, and gilded, which belongs to the Comtesse Dzialynska, the traces the latter bears of antique modes of feeling, execution, and even of composition, are very distinct. Romanesque in every feature, this gem of art is of high interest to students of design, and to the historian most precious, because it attests the survival of extremely noble antique Roman types in the Gaulish city at the very time when the plaque of Rheno-Byzantine origin now belonging to the same lady was enamelled *en cloisonné* with figures of the three youths in the fiery furnace. In this specimen the quaint and austere but passionately devout inspiration of Constantinopolitan design is apparent everywhere, and radically different in every element from the quasi-Roman—*i. e.*, Romanesque—production of the sculptor of Limoges. The baptism of Christ by a gaunt St. John, who empties on his Redeemer's head the contents of a vase with one handle, although undoubtedly by a sculptor of Limoges in the twelfth century, bears hardly a trace of antique influences of either kind. Naïve and austere as it is, there is a strong solemnity about the design, as well as about the primitive execution of this curious work, in which lines of white enamel represent the Jordan. There is something mediæval about this group, but its leading motive is an idiosyncrasy of the sculptor's. To the same series belongs a vesica-shaped Virgin in glory, enamelled and gilded and distinctly French, which figures on plate iv., of which our author writes with discrimination :—

"Ce travail, d'un beau caractère, est un des rares spécimens de ces émaux primitifs qui marquent la transition du procédé de cloisonnage des Byzantins au champlevé des ateliers de Limoges et des bords du Rhin. En effet les traits des figures et le dessin serré de tous les détails de la composition sont rendus par des traits de métal réservés de la même épaisseur, pouvant imiter et rendre l'effet du fil appliqué qui sertit l'émail dans le procédé byzantin."

To speak frankly, we do not care much for the probable significance of the "fil appliqué"; the "procédé" is, we think, of far less importance in determining the nature and origin of the example than the style of the work, the ornaments, and the peculiar pathos of the design. These accord with characteristics of art of a later date than that practised at Limoges in the twelfth century, to which period this specimen is relegated. The "liney" treatment of the draperies seems to be a mere peculiarity, which gives an archaic aspect to a work of the thirteenth, if not the fourteenth, century. It should be remembered that the very process of enamelling ensures some excess of severity and an apparent archaism which ought to be allowed for by those who would decide the age of any specimen of inchoate art.

On the same plate with the almond-shaped plaque, which was probably intended to be inserted in the side of a coffer (see the *châsse* on plate vi.), is an interesting reliquary in the form of a canopied tomb, rectangular in plan and comprising a base of two grades supported on four seated lions of Romanesque character and decorated with precious stones *en cabochon*, alternating escutcheons bearing rampant lions, which are obviously Gothic and not earlier than the middle of the thirteenth century. Four colonnettes sustain a rectangular coffer for the relic, which is surmounted by a high-pitched roof with gables garnished with crockets, the rudimentary character of which inclines us to date this portion earlier than the details of the columns, their capitals, bases with fleurons, and the bands on their shafts, would otherwise lead us to do. The faces of the coffer bear enamels of angels' busts holding labels severally inscribed "Sanctus." On the base, between the columns and under the coffer, is a French fourteenth century ivory group of the Virgin and Child, doubtless not an original element of the design. M. Giraud describes this very fine example as Rhenish of the thirteenth century, but it seems to us to be wholly French and datable *c.* 1280. The angels' busts may be older.

These choice examples of an important stage of art variously applied, according to historical influences and national tendencies, are but types of the contents of a work the illustrations of which represent treasures of many schools and all dates. Here is a coffer of *cuir bouilli* decorated with discs of copper exquisitely enriched with pierced work, a masterpiece of skill in decorative art and fine design. It was made in Limoges, that home of the arts in the thirteenth century, and attests the influence of the Crusaders or the Arabs of Spain; a *châsse*, from the same place and in date not remote from the coffer, is Romanesque with little that is Gothic in its motives. *Châsses*, statuettes, bowls, monstrances, crook-heads, and lovely patterns which owe much to the East, and French patens and chalices of the fifteenth century, which are all Gothic and already show signs of decadence from the fine taste and perfect grace of the previous age, are arranged in proper order. Florid Portuguese and liney German plateaux follow the purer examples, and are succeeded by quaintly designed *dinanderie* in tinned copper of monstrous forms, which betray the whimsical motives of popular art in the fourteenth and fifteenth centuries, and are as bizarre as the archaic terra-cotta toys of uncertain origin and great antiquity which the brothers Cesnola found in Cyprus. The former actually seem to repeat the latter. Among them are candlesticks, as grotesque as anything Chinese, but much more elegant, as well as chased and pierced censers. *Repoussé*, enamelled, and engraved utensils of bronze and copper abound in these exquisitely exact heliogravures. The "Reliquaire Pedicule," No. 2 on plate xv., which M. Giraud describes as Venetian of the end of the fifteenth century, bears a strong likeness to Nuremberg work of that date. Its companion, No. 1, bears that rarity, the maker's name and date: "Hoc opus fecit+dus+Antonius+Fozo, 1497," and is undoubtedly Italian.

We recommend these beautiful examples not only to antiquaries, artists, and amateurs of beauty, but to all who work in metal and desire to possess types of fine design, reproduced with perfect fidelity, and clear enough to be copied with exactness.

The Dictionary of Needlework. By S. F. A. Caulfield and B. C. Saward. Illustrated. (Gill.)—This volume, one of the handsomest of its kind, is illustrated, in the best sense of the term, with more than eight hundred woodcuts. It is useful and concise—in fact it is exactly what it professes to be, an encyclopædia of plain, fancy, and artistic needlework concerned with church embroidery, lace-making, and other higher developments of the art of Minerva. Arachne, Andromache, Penelope, Miss Linwood, Miss Pinkerton herself, to say nothing of the noble artist (assuredly not Queen Matilda) who superintended the execution of the Bayeux Tapestry, would make gracious courtesies to the compilers and their accomplished fellows who laboured in the production of this stupendous and complex *opus* of more than five hundred pages compactly printed in double columns. We wrote some twenty titles, most of which appeared to be recondite, and we found every one of them treated clearly and succinctly, in some cases exhaustively, and in all sufficiently. We thought "Mummy-cloth" rather an unfair test, and were glad to find it on p. 352, without, however, further historical information than reference to the "ancient Egyptian make of flaxen cloth" with which that name is associated. We found, but did not look for, "Needle-threader," the name of a little implement which ought to be dear to bachelors whose buttons disappear. We searched the entries entitled "Knitting," "Knots," and "Macramé," and found them worthy of their places, abundantly illustrated with diagrams and patterns of the clearest sort. The essay, for such it is, on "Knitting" is exhaustive; that on "Knots" is more than enough for any lady's use, and almost sufficient for the most ambitious and pedantic yachtsman. "Macramé" bewildered us, because we did not think it was so important a subject. After diligent search, not the less attentive because it was often baffled, we discovered a few omissions among the entries. "Cendal" or "Sendal," a fabric for which Palermo and other places in Sicily were famous, is not mentioned. We failed to find "Cobweb stuff," but its equivalent "Spider-work" was duly entered. Nothing is said about "Sindon," "Tangiers stuff," "Byssus," "Cheadle tape," and "Counterpane." "Embroidery" should have contained references to those illustrious antiquaries Drs. Bock and Rock, who covered themselves with glory in studying the most precious labours of the loom and needle. There are some essays in the *Archæologia*, *Archæological Journal*, and *Sacristy* to which it would have been well to refer inquiring readers. The account under "Chintz" is very far indeed from being sufficient. We question the information under "Dornock," to the effect that the fabric of that name owes its title to the Scotch village so called. The notice of "Dornick" (Tournay) is not quite correct, and very much too brief. On the other hand, we found, among terms of the newest mintage, "Holbein work" and "Zulu cloth." On the whole, this book has endured the severest tests at our command with rare success. It may be recommended to all who may be concerned in the matters of which it treats.

A Practical Treatise on the Joints made and used by Builders. By Wyvill J. Christy. Illustrated. (Crosby Lockwood & Co.)—It is a re-

markable instance of the difference between literary and technical English that the sense in which the word "joints" is used by the writer of this little volume is one not to be found in Johnson's Dictionary. A joint is there defined as: "1. Articulation of limbs, juncture of movable bones in animal bodies. 2. Hinge, junctures which admit motion of the parts. 3. Knot or commissure in a plant. 4. One of the limbs of an animal cut up by a butcher." The foreigner who should seek in the authoritative definitions thus given the meaning of the title "joints" would be sorely perplexed, for to not one of the above conditions does Mr. Christy apply his attention. Nor does he for a moment appear to think it necessary to define in what sense he uses the word, although his illustrations of it are numerous and apt. If we turn to Knight's 'Practical Dictionary of Mechanics' for guidance, we find, "Joint, a junction, or mode of joining parts in a structure." This is simple, and we think adequate. But Mr. Christy is not much helped by the reference, as he seems to refuse to the more perfect modes of junction the name of joint. Thus, speaking of the plasterer's "mitre joint," he says, "This can scarcely be called a joint at all, since the parts of a plastic substance enter into a somewhat similar union to that effected by fusion." But then, speaking of a weld, which if sound is the most perfect union of two distinct pieces of iron possible, he says, "In theory the welded joint is unsurpassed in strength and thoroughness." The "jumped weld," which is effected when two pieces of iron are forcibly brought in contact at a welding heat, is not mentioned by Mr. Christy. It would be difficult to give a short definition of the subject of his book which should be at once comprehensive and exclusive. The truth is that when we go beyond the simple meaning of a joining, or the act of joining, there are three genera of joints. First is the animal articulation, which is to some degree the pattern of the mechanical hinge. Of the latter, the most thoroughly artificial example we take to be the universal joint, which Mr. Christy fairly describes as "a contrivance for connecting two rods or pipes so that each may have freedom of motion in any direction, with certain restrictions as to extent." This kind of joint may be roughly cited as the hinge. Second is the joint of juxtaposition, which is usually kept in place by bolts, screws, nails, or mortice and tenons. One of the most familiar examples of this is the fish or fished joint, which Mr. Christy cites as one of the carpenter's joints, but with which people are most conversant as applied to the junction of railway metals. Third is the kind of joint that aims at a physical union of two portions of the same or of like substances, as the weld, the soldered joint, "the autogenous soldered joint" (p. 184), which is in fact a weld in lead, and the joint which is imperfectly formed by the bricklayer and the mason by the use of mortar and of cement. These three distinct ideas must be separately wrought out in a comprehensive treatment of the subject of joints. Mr. Christy's treatise is mainly confined to the illustration of the second and third of these kinds of joints. For the reasons above given we are inclined to demur to the title of "treatise" being given to a book which does not "treat" the subject of joints in any way as matter of principle or of explanation. But as a list or index of a great variety of joints, giving the ordinary meaning with which each name would be used by a workman, we think the book is very good. The knowledge of the technical terms used by each of the sixteen trades to whose work the book is limited appears to us to be sound, and we shall be glad if the work tends to "facilitate the director or designer of work in choosing good forms of joints and in securing their workmanlike execution," although it is not the director or designer, but the device and execution, which we apprehend Mr. Christy's manual is designed to facilitate.

NEW PRINTS.

The Fine-Art Society has sent us an artist's proof from a plate mezzotinted by Mr. T. O. Barlow after Mr. Millais's portrait of Mr. Tennyson which was exhibited in the Society's gallery, and is worthy to be ranked with the best of the painter's pictures of this class, and indeed of modern portraits. The Laureate wears the well-known cloak, and in his hand he carries that wideawake hat which is said to be immemorial, and will be immortal. No doubt mezzotinting, however desirable from commercial points of view, and tolerable on several other grounds, is by no means so well adapted for reproducing a Millais as a Reynolds. Still Mr. Barlow has deserved the high commendations bestowed on this work by his brother R.A., who is the best judge and the person most concerned. We should have preferred etching for the transcription of brilliant and pure-toned work like the painter's—in fact the etching made by Mr. Barlow for this plate was charming in its draughtsmanship, solidity, finish, and fidelity. The mezzotint is simply the best work producible by the process. It gains on the observer, and is remarkably rich, soft, finely drawn, and perfect in tone.

The same publisher has favoured us with an artist's proof of Mr. Herkomer's mezzotint after Mr. Millais's picture of a young lady seated on a rock, gazing on the sea, with a basket of fish at her side, called 'Caller Herrin',' a picture which was exhibited in the Society's rooms a few months ago. The plate, which retains a good deal of etched work, is extremely successful in reproducing the finer qualities of the picture, including the softness, beauty, delicacy, and energetic expression of the face, with the clear, sharp draughtsmanship of the flesh throughout. If any points are not quite happily rendered, they are the brightness of the fish and the hair of the girl, and, in relation to the tone of her petticoat, the comparative darkness of her jacket and shoes. In other respects it would be hard to speak too highly of it. The face is a complete success.

Mr. A. Elliot, Princes Street, Edinburgh, has supplied us with a re-mark proof of a plate etched by Mr. R. W. Macbeth after a picture by Mr. R. Anderson, representing the review of Scottish volunteers at Edinburgh on that wonderfully wet day, August 25th last, when the spectators protected themselves as well as they could with umbrellas and other coverings, and the volunteers were drenched to the skin. Mr. Anderson's large sketch has been sketchily etched with spirit and success by his colleague. We trust the artists have not persuaded themselves that work so slight as this is to be compared with examples such as the world outside of Scotland calls pictures. If such slight draughtsmanship satisfies the Scottish art world there must be a lack of wholesome competition in the art metropolis of the northern kingdom. Twenty-three neatly and dexterously drawn heads of eminent persons are in the margin of the plate.

Mr. Dunthorne has sent us "presentation proof" impressions from four etchings of Chartres Cathedral by Mr. A. H. Haig, draughtsman of similar works, such as 'The Vesper Bell,' 'The Morning of the Festival,' and 'The Quiet Hour,' which are well known to the artistic world. The impressions before us are not quite equal in merit of design or in fineness of execution to previous examples produced by the same able and poetical designer when dealing with the magnificent church he has very happily delineated. They are, however, inferior to his former productions only. 'The Great North Porch' gives a view in raking perspective, the front being in shadow, the light of the afternoon sun coming from our right. There are several cleverly grouped figures in front. 'The North Porch, from under the Central Arch,' represents a vista of part of the porch and houses of the city, closed by other houses. The noble statues on the brackets represent a prophet, Louis VIII., Isabelle of France, his daughter, and Zacharias, and on the façade proper are SS. John and Peter. We do not dispraise this effective and impressive work in saying that we like it least of Mr. Haig's etchings. The buildings in the distance intrude, and some portions of the porch are too heavily handled. On the other hand, the rich illumination is most powerfully given, a merit that, indeed, all the prints before us possess; the treatment of the architecture is instinct with the true spirit of the design, its noble, serene, and sedate architectonic character, sculpturesque dignity, and beauty. Each work looks solid as stone, a transcendent merit in views of ancient buildings. 'In the Aisles, Chartres,' is the title of the third etching, which gives an interior view, landscape-wise, including the entrance to the superb *chevet* of the cathedral, with, on the screen of the choir, the Flamboyant Gothic and Renaissance carvings of the greatest elaboration and boldness. Near the centre of the view is one of the stately and elegant pillars of the ambulatory, which, with its fellows, divides the curving path in two alleys. Sunlight fills the front, and is reflected into the vista with ever-diminishing brightness; but the distant piers which are opposed to the windows of the radiating chapels beyond lose none of their solidity. The stupendous solemnity of the architecture could not be more finely rendered than by this print. The fourth etching represents Chartres Cathedral from a distant point in the town, which is not now obtainable, and displays the towers and spires soaring in the air of late summer afternoon. Repose, gathering shadows, and the sinking splendours of afternoon form the main elements of this very poetical composition. The effect of sunlight suffusing the smoky air between us and the church is happily rendered. The series of prints is extremely beautiful and attractive, as remarkable for the suitability of the treatment to the subjects as for the poetry which pervades each example, and the richness of the effects Mr. Haig has happily chosen and rendered.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXVII.—KNOWSLEY HALL, PRESCOT.

In the Garden Library hangs No. 323, one of the most curious portraits in England, being an authentic bust of Richard III., which was bought at Eynsham in Oxfordshire, the site of the monastery at which place became the property of the Earls of Derby. It was No. 38 at the National Portrait Exhibition, 1866. The frame, which is ancient, is enriched with tarsia work of flowers. Mr. Scharf tells us that another specimen of this type of the portraits of the king is at Windsor; besides these are two at Arundel and in the National Portrait Gallery; an example of another type exists at Hatfield. The characteristics of the picture are its obvious fidelity—for instance, in Richard's worn and lean features, his little, "angry," and narrow eyes, like those of a boar, shrivelled lips and cheeks, his narrow chin—and the vivacity which illuminates a peevish, or rather irritable, but highly intelligent countenance. This irritability and the overwrought nervousness of the king's temperament are displayed by the peculiar actions of the hands. Richard is, with his left hand, quickly sliding a ring up and down the little finger of his right hand. This expressive action was undoubtedly true to the life.

The rape of the Sabines is the subject of G. G. del Sole's production, No. 198, a complete example of what eclecticism did for art. It is an elaborate composition of numerous nearly life-size figures, showing Romulus seated on our right, directing his followers by pointing with one hand. In the centre a stalwart Roman

warrior carries off his prey, whose fair and smooth features and their affected expression remind us of Guido, and, as Mr. Scharf has noticed, are due to the heads of Cleopatra and Magdalen which that artist gave to the world. There is the very "air" of the seventeenth century in the figures of a young soldier and a girl who are stepping forward; they seem as if about to take the opening steps of a dance. The local and general treatment and the quality of the picture are poor and weak; the colouring is pale, the handling flabby, the modelling skilful but flat. Laboured without solidity, correct without courage, careful without learning, this work is a perfect illustration of what may be expected from academies which pretend to be more than fields for the acquisition of technical accomplishments. It was bought of Hamlet Winstanley, about 1736, for 68*l.* The next subject of our notes hangs in the Garden Library, and shows radically different qualities from Del Sole's pseudo-classical heroics. It is not very safely attributed to Quentin Matsys, and was, in 1842, bought for 22*l.* 1*s.* by the twelfth Earl of Derby from Strawberry Hill (twentieth day, lot 29), to which collection it came from the gallery of Sir R. Walpole. It is an anonymous Flemish portrait, smaller than life, to the waist, of 'A young Man holding a Book with both Hands' (349), placed in three-quarters view to our left, and a work of very considerable merit, made extremely attractive by the serious and studious expression of the features, which are wholly Flemish, and solidly and learnedly painted and admirably drawn. The attitude is that of one looking up and listening to a speaker. The young man wears a small black cap, and a black dress lined and edged with fur. 'Portrait of Cardinal Mazarin' (346), by P. de Champaigne, is full of character, with not a little of the astuteness of the fox; it is dated 1653.

The following, which are in the Garden Library at Knowsley, came from Strawberry Hill in May, 1842, and are of exceptional interest. 'King Charles II.' (348), by Jervas, as Mr. Scharf has noticed, is—like the portrait of 'Dorothy (born Sidney), Countess of Sunderland,' No. 76, of which we have already spoken as representing "Sacharissa"—one of a series of twenty copies made by Jervas for himself after as many of Lely's best portraits (twenty-second day's sale, lots 103–22). The score of portraits were among the choicest ornaments of Walpole's "Beauty Room," and highly praised by the owner, who bought them of Mr. Lovibond, of Hampton, who obtained them at Lely's sale. Lord Derby gave seven guineas for King Charles's likeness, which is remarkable for the blackness of the hair, a characteristic which, as the Director of the National Portrait Gallery notices, distinguished the king from his brother James, who was very pale, and always wore light yellow hair—see Lady Burdett-Coutts's Petitot, which belonged to H. Walpole. Charles appears to be young, and has a pleasing face. Next to this portrait hung, in the "Beauty Room," its fellow of Queen Catherine; then came King William and Queen Mary. The line ended with 'The Duchess of Orleans' ("La belle Henriette"), which Walpole supposed to represent Mary, Princess of Orange, and recorded that it was given to him by the Prince of Monaco as a portrait of Henrietta Maria. The last-named picture was No. 1891 in the Exhibition of Miniatures, 1865, and cost Lord Derby twenty guineas. At the same sale was bought the capital 'Portrait of Sir P. Lely,' drawn in chalk by himself (350), and engraved in Walpole's 'Anecdotes,' edit. 1849, p. 441 (Nat. Port. Ex., 1866, No. 882). It seems to be the study for the portrait of the artist in the Florentine Academy, and is handsome, with a pompous, self-satisfied expression. From "Strawberry" (twenty-second day, lot 1) came Maubert's portrait of 'John Dryden' (351), a small, whole-length figure in blue, with a dog at his feet, and the eagle, Parnassus, and Helicon in the background. Maubert painted Wycherley, Congreve, Pope, and other writers of note. 'Sir G. Kneller' (352) is by himself; the excellent Hogarth (354) was at the National Portrait Exhibition in 1867, No. 345, and, after the manner of the conversation pieces which were in vogue a century and a half ago, represents 'Monamy the Painter exhibiting a Sea-Piece to Mr. Thomas Walker, his Patron.' Walker, a tall, thin, elderly man, in a long blue coat, is standing in profile on our right, and looking at the "sea-piece," which is placed on an easel before him. Between the picture and Walker stands Monamy, holding a palette on his left thumb, and pointing in a somewhat demonstrative manner to his work on the easel. Two pictures, a ship on fire and a moonlight sea-piece, hang on the wall. The painting on the easel bears the name "P. Monamy" within the frame. This painted frame is of the same kind in design and taste as that in which the Hogarth is enclosed; this proves that the latter is still in its original frame, although the design would, but for this curious circumstance, lead us to attribute it to a much later date than that of Hogarth's work. Walker was a collector of pictures. The Hogarth was probably painted about 1740; it belonged to Walker, and was given to Walpole by Mr. R. Bull. See Lord Orford's 'Works,' 1798, iii. 421. Lord Derby gave twenty guineas for it. It is not mentioned in J. B. Nichols's 'Anecdotes of Hogarth,' 1839, and deserves a much better place at Knowsley. Two, if not three, pictures by Monamy are at Hampton Court, including 'A Sea-Piece' (915) of very considerable merit. The Earl of Derby bought at Strawberry Hill the portrait by Janet (34), which we have already described; the "Brauwer" (102); a piece of the hair of Mary Tudor, cut from her head when her tomb at Bury St. Edmunds was opened in September, 1784; and a group of miniatures we have yet to mention.

Near the 'Richard III.' hangs Hamlet Winstanley's 'Portrait of Himself' (353), sitting at an easel before a canvas, which is engraved by J. Thompson in Walpole's 'Anecdotes,' 1849, p. 955, and by Bannerman in Lord Orford's 'Works,' iv. p. 95, in which the engraver added a portrait of Dorigny the engraver on Winstanley's canvas, as if he were painting it. Thompson took considerable liberties with the work. This picture was at the National Portrait Exhibition, 1867, No. 248. It is almost a monochrome of brown, with clear, rather light carnations. The figure is life size, nearly a full-length, turned to our left, looking at the spectator over the left shoulder, carrying an oval palette set with pigments, white being next the thumb on his left hand, while in his right hand is a port-crayon holding white chalk, with which the artist is sketching on the canvas. The expression of the closely shaven face is very lively, the likeness obvious, and the handling of the whole superior in freedom and spirit to most of Winstanley's productions. He wears a pale crimson cap lapping over the top, and a yellowish-brown dressing-gown; part of it is thrown over the left shoulder. When previously referring to this portrait, we erroneously stated that Hamlet Winstanley was a son of that builder of the Eddystone Lighthouse who perished with his own beacon. An obliging correspondent has called our attention to Mr. Scharf's letter in *Notes and Queries* (5th Series, viii. 404), which shows the artist was the second son of William Winstanley, of Warrington, where Hamlet was born in 1700, and buried May 20th, 1761. He formed the first part of this collection of pictures for the tenth Earl of Derby.

'The Head of St. Januarius' (366) is attributed to Domenichino and F. di Maria. The martyr's episcopal crook and mitre, and two ampullæ containing the blood that was often liquefied, are behind the head. The latter lies on a large silver charger, and the bleeding neck is turned towards us. This school picture is noteworthy for being painted in a masculine and solid, academical manner, and capitally drawn; the expression of scarcely subsided pain is simply human, not at all elevated by the spiritual feeling of the painter. This example was bought at Naples, where, and scarcely anywhere else, representations of the local saint are not uncommon.

Fine-Art Gossip.

The following are among the results of the investigations made by the learned Director of the National Portrait Gallery into the history of the very important group of likenesses of English and Spanish statesmen he lately bought at the Hamilton Palace sale, which was, from some unascertained time till lately, ascribed to Pantoja de la Cruz. Mr. Scharf thinks the picture may with probability be assigned to Marc Gheeraerdts, who arrived in England from Bruges in 1580, and was much employed at Court. A portrait of Elizabeth signed with his initials, a sprig of olive being in her hand and a sword at her feet, belongs to the Duke of Portland, and is now on loan in the South Kensington Museum. His 'Camden' in the Bodleian bears the painter's name in full. Other inscribed works of his are at Penshurst, Barrow Green, and Woburn Abbey. The subject of the picture in question is undoubtedly the ratification of the treaty for peace and commerce between England and Spain at an assembly of plenipotentiaries held at Somerset House, August 18th, 1604, English, Spanish, and Austrian representatives being present. Stow's 'Annals,' 1631, under the date 1604, p. 846, describes the conference, and quotes the articles of the treaty. The portraits include those of Thomas (Sackville), Earl of Dorset; Charles (Howard), Earl of Nottingham, who defeated the Spanish Armada; Charles (Courtney), Earl of Devonshire; Henry (Howard), Earl of Northampton; and Robert (Cecil), Viscount Cranborne. John de Velasco, Constable of Castille and Leon, appeared, with the following, for the foreign powers: John Baptista de Tassis, Count of Villa Mediana; Alexander Rovidius, professor and senator of Milan; Charles, Prince and Count of Aremberg; John Richardot, Knight; and Ludovic Verreiken, Knight. The scene is the interior of a chamber facing a window looking upon an inner court, and partly screened by a plant of the rose tribe. The tablets on the tapestries are dated 1560; the floor is strewn with rushes. The scarcity of writing materials on the table may imply that the meeting was for the purpose of signing the instrument already agreed upon. No hats are introduced. The date "1594" borne by the picture must be wrong; there was no historical conference in that year, and the English titles inscribed with this date and the name of De la Cruz were not conferred till some time after that period. Mr. Scharf thinks that possibly, in his endeavour to conciliate the Spanish king, James I. sent the picture to Spain as a present. The names of the diplomatists are written in Spanish, and the attribution of the picture to Pantoja is also probably Spanish.

We regret to hear of the death, at the age of seventy-four, of Mr. Warwick Brookes, the well-known Manchester artist. Mr. Brookes's health had for a long time been in a delicate state. He was the recipient of a pension of 100*l.* per annum from the Civil List Fund in recognition of his abilities as a painter.

A correspondent of the *Times* announces the death last week of Mr. James Wyatt, frame-maker and picture and print seller, of High Street, Oxford, a man of considerable intel-

ligence and well-deserved good repute, whose decease will be regretted by many members of the university and artists, to whom he was well known. He was one of the best judges of David Cox's works, and an early purchaser of Mr. Millais's drawings, and besides he commissioned that artist to paint his portrait. Like his father, the deceased was often consulted in an extra-official way about Oxford art-matters.

Mr. Blackestone, of Glasgow, writes to correct some dates, &c., for which we were indebted to one of the oldest friends and colleagues of the late Mr. C. Heath Wilson, whose death we recorded on the 15th ult. It appears that C. H. Wilson was born, not in Edinburgh, but in London, September, 1809. Andrew Wilson, his father, died in Edinburgh, not in Italy; and not he, but his son, C. H. Wilson, practised as an architect in the Scottish metropolis. The latter retired from office at Somerset House in 1848, not in 1845.

The new Exposition de l'Union Centrale, Paris, which is held in the Palais de l'Industrie, comprises the impression of Rembrandt's 'Hundred-Guilder Piece,' for which M. Dutuit gave 28,000 francs, and the renowned 'Evangéliaire d'Abbeville,' illuminated on purple vellum and said to have belonged to Charlemagne.

An inscription commemorating the birth of the painter Louis David on the Quai de la Mégisserie, Paris, has been placed on the southern façade of the Théâtre du Châtelet. It will be remembered that some abortive plans for removing the remains of this artist from Brussels to Paris were lately entertained.

The Union of German Architectural and Engineering Associations is to hold its general meeting at Hanover on Sunday next and the three following days.

By the partition of the objects found in the Troad by Dr. Schliemann, pursuant to arrangement, the Imperial Museum at Constantinople acquires a marble statue of Hercules, another, supposed to be of Dionysus, of the Roman epoch, and a Greek inscription, besides pottery and other objects, making altogether twenty-six cases. Dr. Schliemann is at present in Germany.

Mr. H. D. Grissell, writing from Athens, sends us copies of two inscriptions found last month at Eleusis. The first is in honour of Nicagoras the sophist, a "disciple of Plutarch and Sextus"; the second is interesting as containing a mention of Britain. It is unfortunately incomplete.

MUSIC

NEW PUBLICATIONS.

Phases of Musical England. By Frederick J. Crowest. (Remington & Co.)—The author of this volume is already well known for his readable, if not very scholarly, contributions to musical literature. The present book consists of a series of light and chatty articles on such *ad captandum* themes as "Encores," "Street Music," "Musical Criticism," &c. Mr. Crowest's hearty condemnation of the encore nuisance in every shape and form will be approved of by all who have a regard for the best interests of art. And many beside musicians will sympathize with his views on the subject of that unnecessary evil, street music, as practised in London, though we do not think that the remedy he suggests, namely, that it be made an indictable offence to encourage itinerant performers by gifts of money, &c., is likely to be quickly applied. Speaking generally, Mr. Crowest's opinions are sound and sensible, but he has disfigured his book by ill-advised references to particular artists, and still more by offensive puffery of an institution which has yet to earn the good opinion of musicians and the public. In stating that the institution in question is the only one in London where musical education may be obtained at a moderate cost by both sexes at any hour of the day or evening, Mr. Crowest asserts that which is not in accordance with fact. Occasionally the author trips in his grammar, the following being perhaps the worst instance:—"To one of these two sections English people may be said to belong and to extend its sympathies." Mr. Crowest promises to return to his subject. In his next effort he will do well to avoid the imperfections indicated.

Songs without Music. By Hamilton Aïdé. (Bogue.)—This is a collection of short poems, many of which are already familiar to the public in association with musical settings. If Mr. Hamilton Aïdé cannot be said to possess the genuine poetic faculty, his verses are, in many instances, graceful and pleasing; and while a protest must be entered against the too-common notion that the most vapid and watery effusions are good enough for musical illustration, it should be borne in mind that only composers of genius are worthy to treat literary productions of the highest class. The attention of would-be ballad writers may be drawn to this volume, and it would have been an advantage had an indication been given of those poems which have already been set to music. Beside the songs the book contains some effective recitations and miscellaneous poems, of which 'Lost and Found' and 'A Scandinavian Legend' may be named as favourable examples of the author's style.

The Child's Pianoforte Book. By H. Keatley Moore. (Sonnenschein & Co.)—As a matter of course, this book has been compiled to supply a special want—that of an elementary treatise in which the grammar of music and the elements of pianoforte playing are set forth in such guise that the pupil of tender years shall not only be amused as well as instructed, but shall attain a clear idea of the logical necessity of each rule advanced. In other words, it is an application of the Kindergarten system to music. The following paragraph, taken at random, will convey a fair idea of the style adopted throughout:—"Music is expressed by queer-shaped signs, some with tails, and some without; some white and some black; some loose and some tied together with a thick black rope like the poor slaves wicked men used to drive across Africa (and still do if they are not closely watched), and all these different signs running along lines which look like a great railway on paper." Mr. Keatley Moore says that he has found his system succeed admirably, and there can be no doubt that a lasting dislike of music may be implanted if elementary instruction be given in too severe and dry a manner. But it is questionable whether the author has not gone to the opposite extreme. This, however, must be a matter which personal experience can alone determine, and, at any rate, the present volume may be found rather amusing even to students of riper years.

In the same connexion may be named *Löhr's Primer*, a handy little catechism of the rudiments (Stanley Lucas); and a new and admirably printed folio edition of *Cramer's Studies*, with foot-notes as to the manner of playing (J. B. Cramer).

We have also received *Minster Bells*, a brief and simple cantata for female voices, by the late Franz Abt, words by Edward Oxenford (Novello, Ewer & Co.); *Pianoforte Album*, No. 9, containing fifteen marches (same publishers); a people's edition, small quarto, of *Moore's Irish Melodies*, with Stevenson and Bishop's accompaniments (Dublin, Gill & Son); *Twelve Canons*, for two female voices, by Carl Reinecke, Op. 163 (Novello); and *Nursery Rhymes*, composed by Gertrude Hine, illustrated by F. Barnard (Stanley Lucas).

Musical Gossip.

Among the earliest novelties in the forthcoming season of Crystal Palace concerts will be Brahms's new Pianoforte Concerto, to be played by Mr. Oscar Beringer. The pianist has just paid a visit to the composer, and has thus obtained the benefit of his personal directions respecting the performance of the work.

Miss Hope Glenn, one of the best of our younger contralto vocalists, has been engaged to accompany Madame Nilsson on her American tour.

An absurd story is being circulated to the effect that Baron Rothschild, of Vienna, unable to obtain any reasonable accommodation at Bayreuth, passed the night in his private saloon carriage, being determined to resist the extortion of the hotel-keepers. Those who were present at the opening performances of 'Parsifal,' when the Bavarian town was at its fullest, will know how much faith to place in this *canard*.

At the fifth performance of 'Parsifal' some further changes were made in the cast. Fräulein Malten sustained the part of Kundry, and, according to the *Musikalisches Wochenblatt*, was superior to either of her predecessors in the second act, though she had to yield the palm to Fräulein Brandt in the first act. Herr Jäger gave a highly intellectual and dramatic representation of Parsifal, and Herr Fuchs replaced Herr Hill as Klingsor.

Le Ménestrel states that the electric light, the use of which it was hoped would materially reduce the danger of fires in theatres, nearly caused a conflagration at the Paris Opéra last week during a performance. The current being too strong the wires became red hot, and their gutta-percha covering being quickly destroyed, the adjacent inflammable material began to smoulder and the services of the firemen had to be called into requisition. Happily the audience knew nothing of the danger, so that a panic was avoided.

It is stated that Herr Joachim has resigned his appointment of Principal of the Berlin High School of Music, and that his successor is Herr Friedrich Kiel.

The Viennese journals announce the celebration of the eightieth birthday of Herr Benedikt Randhartinger, who was for many years Hofcapellmeister in that city. The aged musician is one of the few who can date their experiences from the time when Vienna was the principal centre of musical art. He studied under Salieri, conversed frequently with Beethoven, and was intimately acquainted with Schubert. His voluminous compositions include eighteen masses, two requiems, and over four hundred songs.

A goodly list of novelties is promised for next season at the Leipzig Opera-house. It includes Berlioz's 'Benvenuto Cellini,' Reinthaler's 'Käthchen von Heilbronn,' Glinka's 'Russlan und Ludmilla,' Scholz's 'Vornehme Wirthe,' and Rubinstein's 'Maccabees.'

An extensive list of posthumous compositions by the late violinist Vieuxtemps is in course of publication by the Parisian firm Brandus et Cie. It includes two violin concertos in G and A minor, a concerto for violoncello, thirty-six studies and a number of miscellaneous pieces for violin, and two string quartets.

A new and severe law respecting unauthorized performances of copyright musical compositions is about to come into force in Italy. Offenders will be subjected to heavy fines, in addition to the fees payable to the holders of the performing rights of musical and operatic works.

Mr. Mapleson's opera season in New York will commence on October 16th.

To Correspondents.—P.—A. C. B.—H. S.—received.

LITERATURE

Social Equality: a Study in a Missing Science. By W. H. Mallock. (Bentley & Son.)

THIS work chiefly deserves notice on account of its author. Mr. Mallock is the only one of the youngest generation of authors whose thoughts, such as they are, are his own; indeed, of the men whose minds have been formed in the "seventies," he is almost the only one who has attracted attention. As yet he has not betrayed any considerable capacity for speculation, his chief gift appearing to be a remarkable power of imitating the prose styles of the different leaders of thought—a capacity quite different from the power of parodying verse, and far more rare. It is as a product of the "seventies" that Mr. Mallock is interesting; he stands out among the men who will in twenty years' time form what is termed the intellect of the country. But it is doubtful whether he is in any way representative of his generation, and the present work does not tend to remove the doubt.

Throughout Mr. Mallock's previous productions there has been plainly discernible a tendency to support the accomplished fact. He is always prepared to think well of the *status quo;* like Providence, he is on the side of the winning battalions. Anything which, like rationalism and science, tends to disturb this, rouses his ire and causes him to point out how it derives all its moral force from the older order of things which it tends to overthrow. The same tendency pervades the present work. Against the modern striving for social equality Mr. Mallock urges the claims of social inequality, and argues that the very objects which Democrats aim at are only brought into, and kept in, existence by the stimulus of social inequality.

Now of course there is always much to urge in favour of the *status quo.* It exists, and therefore complies with the conditions of existence. It does not, however, follow that because the system of "removable inequalities," to use Bagehot's phrase, has its advantages, it is therefore the best possible social system. Mr. Mallock's cardinal error consists in assuming that when it is shown that the present social conditions induce men to work beyond the mere necessity of earning a livelihood it is proved that no other conditions could effect the same end. With him, money is the motive power of all productive labour, with insignificant exceptions in the way of a few works of art and works of charity. But he has forgotten to inquire what money means to the majority of workers. It does not solely mean material enjoyment; it means power, social standing, respect from others, and so on. What the better minds of the Socialist school aim at is to produce such a state of public opinion that these advantages should accrue, not to the possession of money, but to the performance of high-class social functions. So that Mr. Mallock's main argument falls to the ground when he urges that without unequal distribution of money there would be no motive for productive labour. No Democrat of the present day argues that there should be no inequalities in the society of the future. Inequalities of capacity or social merit will be accompanied by inequalities of reward in the shape of social influence, say they. So that Mr. Mallock is only fighting with shadows in the present book, and that because he has not studied sufficiently the missing science—of human character.

The reader who knows anything of the later developments of modern economics will be astonished to learn that the "missing science" to which Mr. Mallock's present book is to be a contribution is that of human character. If Mr. Mallock had taken the trouble to refer to Mr. and Mrs. Marshall's 'Economics of Industry,' now fast becoming the standard elementary text-book on economics, he would have learnt that "the main purpose of economics is to seek for the moral and social laws by which men's conduct is determined in the every-day work of their lives"; in short, that modern economics is the very science that he misses. But the knowledge displayed by him of economics is very scanty and antiquated, while his whole line of argument is rendered feeble by the absence of any reference to a definite set of opponents. Mr. Bright and Mr. Herbert Spencer, Lassalle and Proudhon, are jumbled up in a most confusing way. It is, of course, very convenient to play off the weaknesses of one set of opponents against the weaknesses of another set; but while convenience may lead to plausibility it cannot conduce to conviction in minds acquainted with the present state of opinion on the subject.

Mr. Mallock's want of knowledge of the opinions he would attack comes out as strikingly as possible in the position he takes up about money. He is quite wrong, as has been already remarked, in supposing that it is money *per se* that Socialists object to. It is as much to inequality of culture as inequality of money that the best minds of the working classes object. They do not envy the higher classes their money; they do envy them their superior culture, and the envy is not ignoble. And surely Mr. Mallock will grant that quite sufficient inequality may be obtained without the accumulation of colossal fortunes. He protests strongly against the fact that three-quarters of the land of England are owned by so few persons that they could all be assembled together in one room being brought forward against large landholders. Surely it is a vivid way of putting an argument, even if it is not an argument in itself.

We have spoken somewhat severely of this book. It is not pleasant to see a young man of some ability aping Mandeville or Hobbes, and attributing all human endeavour to the love of money. The errors of youth should be on the side of idealism. Yet let us conclude with a word of praise. Unsatisfactory as the author's special pleading on the text *Beati possidentes* may be, it has the great merit of clearness and readableness. It opens with a graphic scene typical of social inequality, and the line of argument deduced from this picture is carried on with great show of relevance throughout the book, each step being made clear to the reader. In these days of jottings and disconnected essays a merit of this kind deserves recognition.

The Reign of William Rufus and the Accession of Henry I. By Edward A. Freeman. 2 vols. (Oxford, Clarendon Press.)

AFTER a considerable interval, devoted to work of various kinds, historical and political, Mr. Freeman has returned to the field which he has made peculiarly his own, the mediæval history of his own country. In the preface to the fifth volume of the 'Norman Conquest' Mr. Freeman informed his readers that the work was complete, according to its original design, but at the same time he expressed a hope that

"he might, in some shape or other, deal more fully with the important reign of William Rufus, a time than which none is richer alike in picturesque incident, in illustrations of personal character, and in a constitutional importance which is none the less weighty because it lies in a manner behind the scenes."

This hope it is pleasant to see fulfilled. The sketch of Rufus's reign which occupied one chapter of the earlier book has now been amplified into two bulky volumes, and the last thirteen years of the eleventh century are depicted with all the wealth of detail, all the vividness of narrative, all the fulness of local and personal knowledge, which distinguish Mr. Freeman's history of the Norman Conquest. But, it must be confessed, the later part of the story falls in interest considerably behind the earlier. The great event which gives unity to the earlier work, round which all other events group themselves as round a natural centre, is now too far in the background to make its presence felt. It is a paradox to say that the Norman Conquest was not completed till Henry I. expelled Robert of Bellême from the kingdom. It is rather true that his expulsion marks the establishment of a new system, as different from that which was essentially Norman as the latter was from that which was essentially Saxon. There was a reason why the story should stop with the death of William I.; there is none why it should stop with the death of his son.

The reign of Rufus is a time of transition, a period of confused aims and shifting policy, in which no single great event or series of events stands forth as the absorbing centre of interest. It falls between the establishment of the Norman rule in England under William the Conqueror and the establishment of the monarchy under Henry I. It differs from the periods before and after, but not sufficiently to bear a distinct character of its own. When we look back on the reign from the higher

level of the twelfth century, we fail to mark any notable step taken, any advance made by any of the elements of the nation. It cannot be said that monarchy or church, baronage or people, was any stronger or weaker at the end of Rufus's reign than when the Conqueror died. There was no legislation worthy of the name, no new institutions sprang into life, no great deeds were done. Some slight advance was made towards the conquest of Wales—how little the next two centuries serve to show. The incorporation of Cumberland was an important step, but otherwise no advance was made towards the conquest of Scotland. Ireland remained untouched. The partial and ill-established rule of Rufus in Normandy did nothing to prepare for the reconquest of the duchy, and Henry's first step was to renounce all claim to the lands over which his brother had held sway. The most important event of the reign, the quarrel between the king and Anselm, is only the first act of a drama which closes with the Reformation. The military history of the reign is not without its importance, but not one great battle, not one noteworthy feat of arms, breaks the monotonous tale of skirmishes and sieges, of marches and harryings, of expeditions planned only to be given up, which fills so large a space in Mr. Freeman's work. It does not follow from all this that nothing was done—that things were precisely the same at the end of the reign as at the beginning. But the changes and the growth of the time lie beneath the surface, and are only visible when some event like the siege of Bridgnorth brings them to light, and shows the silent process of national fusion which has been taking place.

It is clear, then, that the reader of history, whether he reads for amusement or for a scientific purpose, cannot expect to find the same interest in this period as in many others. It is a period, as Mr. Freeman says, rich in picturesque incident and in illustrations of personal character. But the incidents lead to little, and the characters, except those of Anselm and Helias de la Flèche, hardly repay scrutiny. Mr. Freeman remarks also on the constitutional importance of the reign, but unfortunately his notices of constitutional affairs are only incidental. We should have been glad to exchange some pages of personal and local detail for a summary of the state of the Constitution at a time when the Government approached a tyranny more nearly than at any other time before the sixteenth century, and for a sketch of social life and manners or the condition of the lower and middle classes, for which works like Eadmer's 'Life of Anselm' furnish much interesting material. But it is perhaps unjust to expect this in a work which is clearly intended to be, and is in the first place, an exhaustive chronicle of events. History in Mr. Freeman's hands is essentially a narrative. For the deductions and generalizations which may some day or other be wrought into a philosophy of history, the accurate and exhaustive statement of all that can be known for certain about the facts and events of the past is the primary and indispensable condition. This work has yet to be done for the greater part of English history. We have to thank Mr. Freeman that for the periods which he has dealt with it need not be done again. The story of the last forty years of the eleventh century has now been told for English readers in a way in which, it may safely be said, the history of no other country has been told. The personal knowledge of records and documents which Mr. Freeman displays, and, what is much more unusual, his acquaintance with the localities where the chief events took place, are very remarkable. Not only does he speak of the actors in his drama with the familiarity almost of one who had shaken them by the hand, but he is as intimate with the details of their lives and the maze of their family connexions as if he had been the Caleb Balderstone of their castles. He has visited every place of ancient fame, every fortress of note in Normandy and Maine, and his topographical knowledge of England enables him to describe events with the air of an eye-witness, or at least of one who knows *how* they must have happened, because he knows exactly *where* they happened. The only instance where Mr. Freeman seems not to have personally inspected the scenes of the events he narrates is Robert's invasion in the year 1100. He says, as if he had neglected a great duty, "I must confess I have not studied this Hampshire campaign on the spot, as I have studied those of Maine, Northumberland, Sussex, and Shropshire" (ii. 409). His architectural knowledge is the fruit of much first-hand study and adds largely to the picturesqueness of his pages. But his chief charm is derived from the intense interest he takes in his characters, from his warm sympathy with their efforts, his hatred of wrong and oppression, his approval of stout resistance to tyranny, whether with the crozier or the sword, his healthy if somewhat too insular patriotism. These good qualities are, indeed, not without some slight drawbacks. Obscurity is sometimes caused by Mr. Freeman's inclination to call people by a paraphrase instead of their proper names. People not gifted with his retentive memory take a little time to recognize Robert of Bellême in "the son of Mabel," or Ordericus Vitalis in "the monk of Evroul." Any circumstance that moves Mr. Freeman's feelings is apt to call forth a flood of allusion which, to say the least, is confusing to the ordinary reader. The momentary appearance of a son of King Harold in the year 1098 is such a circumstance. Instead of stating simply that he was born after his father's death, Mr. Freeman says (ii. 135):—

"Grandson of Godwine, grandson of Ælfgar, begotten, but not born, to the kingship of England, the child of the widow did not see the light in the City of the Legions till his father had found his cairn upon the rocks of Hastings, perhaps his tomb before the altar at Waltham."

Sometimes this power of association enables Mr. Freeman to group events round a certain centre in a very striking way. Speaking of the taking of St. Valery, he says (i. 228):—

"In the history of England as a power—and the history of England as a power had no small effect on the history of England as a people—the taking of St. Valery is the beginning of a chain of events which leads on, not only to the fight of Tinchebrai and the first loss of Rouen, but to the fight of Crecy and the fight of Chastillon, to the taking of Boulogne and the loss of Calais."

Again, speaking of the consecration of Salisbury Cathedral in 1092, he says (i. 308):—

"On the waterless hill which then was Salisbury, within the everlasting ditches of the earlier time, looking down on the field of battle which decreed that Britain should be English, and on the field of council which decreed that England should be one, Norman Osmund, the doctor of the ritual lore of England, had finished the work which Lotharingian Hermann had begun."

If the copiousness of Mr. Freeman's knowledge sometimes tends to superfluity, his warm sympathies occasionally make him rather too much of a partisan. His partisanship is not so evident in this work as in the history of the Norman Conquest, where the struggle of Englishman and Norman was the centre of interest, but it comes out wherever there is an opportunity. Probably no historian who has ever lived can altogether escape the charge, and many will be found to argue that without some manifestation of sympathy the historian cannot avoid being dull. Mr. Freeman's partisanship has this peculiarity, that however much it may warp his judgment, it never interferes with the trustworthiness of his narrative. He never suppresses facts that tell against his hero or his theory, but they strike him as less important than those that tell for it. We are told all that Godwine and Harold do, but nothing that they do is to be condemned; while all the great deeds of the Conqueror extract only a grudging admiration for the man whom Mr. Freeman, as a good Englishman, cordially detests. Similarly in these volumes it is clear that Mr. Freeman hates Rufus almost as much for being a Norman as for being a tyrant, and he rejoices in the accession of Henry I. long before he has had time to show his good qualities as a ruler, simply because he is an Ætheling, the son of a King of the English, born on English land. His chief grudge against William of St. Calais, his only grudge against the saintly Anselm, is that both appeal to Rome from the tribunals of the kingdom. Now and then Mr. Freeman's opinions about modern politics are brought to light by their association with questions of an earlier day. Talking of the first Crusade, he says (i. 545):—

"The cry of the oppressed churches and nations of the East came up then, as it has come up in our own ears; and it was answered in those days as one only among Christian nations has been found to answer it in ours."

This and several other passages of the same tenor show the strong feelings which a few years ago brought Mr. Freeman forward on the political stage, and can hardly be said to have strengthened the popular belief in his impartiality as an historian. It is interesting to observe, too, that his historical studies seem to have convinced him that between England and Ireland there exists a permanent incompatibility. "Much indeed," he says (ii. 304),

"had the eleventh century done towards welding the three elements of the isle of Britain into one political whole.....Towards the impossible work, forbidden by geography and history, of welding another great island into the same whole, whatever either William may have dreamed, neither had done anything."

But with Mr. Freeman's opinions about modern politics we are not here concerned. It is more important to know what he has to tell about those of Rufus's day. The character of Rufus himself is, of course, no small element in the matter; the chief

characteristics of a reign are in great measure determined by the character of the ruler when that ruler is as absolute as was William Rufus. No despot can altogether ignore the wishes of his subjects, but, except in the single case of his quarrel with Anselm, and there only partially, Rufus seems never to have been thwarted by any internal opposition to his will. Defiant alike of God and man, he ruled as he pleased, raised taxes as he pleased, made war and peace as he pleased, and confiscated the revenues of vacant bishopries and abbeys as long as he chose to keep them in his hand. The elaborate analysis of Rufus's character (i. 146, *seq.*) is a good example of Mr. Freeman's style. Not brilliant nor epigrammatic, it is searching and complete, and his remarks are supported by copious illustrations from the facts of Rufus's life. Mr. Freeman has not altered his opinion of Rufus since he wrote the sketch of him in the last volume of the 'Norman Conquest.' He impresses upon his readers the self-confidence and caprice, the violent and ungovernable temper, the lustfulness and lavishness, the mocking impiety of the Norman despot. One only redeeming point Mr. Freeman finds in the character before him, that he was obedient to the law of personal honour. The fundamental idea of chivalry—on its good side, that of knightly obligation, as well as on its bad side, that of brutal and contemptuous disregard of all other obligations—first finds expression in William Rufus. For the hollowness and falsehood of the law of chivalry, as displayed by the French knights at Crecy or the Black Prince at Limoges, Mr. Freeman has no words of condemnation strong enough, and William Rufus, as he says, is one of the heroes of chivalry. This peculiarity in Rufus's character shows itself over and over again. Even to the rebels at Rochester "the king plighted his faith, and his faith, when once plighted, was never broken" (i. 85). It is the same whether the royal word is pledged to Odo, or to Helias, or to Anselm, and no other bond than this purely personal one is recognized.

But instructive as is the dispute with Anselm from the illustrations it supplies of Rufus's character and the light thus indirectly thrown on the whole reign, this is of course the less important side of that memorable quarrel. To Rufus and his contemporaries it seems to have appeared comparatively unimportant. To the former the exile of the archbishop was an easy triumph and a lucrative source of gain; to the latter it was only one illustration among many, though perhaps the most odious, of the general "unlaw" which existed under Rufus. It caused the king no scruples; it did not put the kingdom under an interdict or excite a rebellion. But to us, regarding it in connexion with after events, it stands out as far the most memorable event of the reign. Mr. Freeman has done well to devote to the quarrel, in its origin and course, a large share of attention. He sets clearly before his readers the grievances under which the Church laboured at this time, when at the mercy of an unscrupulous king. He shows how the crying evil of the day, the sale of ecclesiastical dignities, easily led on to the peculiar grievance of Rufus's reign, the confiscation of ecclesiastical revenues during vacancies shamelessly prolonged. In Rufus's time the State had but few encroachments to complain of on the other side, and, at any rate at the outset of the quarrel, Anselm was entirely in the right. Randolf Flambard, of whose character and policy chapter iv. gives an admirable account, in his application of the feudal system alike to Church and State, endangered the very existence of the former. The words of the Chronicle, "The king would be ilk man's heir, ordered and lewd," put the whole system, from the point of view of land tenure, into a nutshell. This principle, when applied to the Church, carried with it the king's right to withhold the lands which were the support of the Church as long as he pleased, or to bestow them on any one, even a layman, whom he chose. Against this evil Anselm strenuously set his face, and though it was not the immediate cause of the quarrel between him and the king, his opposition to the system prevented any reconciliation from taking place. Into the intricate history of the whole episode it is, of course, not our business to enter here. It is told by Mr. Freeman clearly and exhaustively. We may refer especially to his account of the compulsory appointment of Anselm, where the whole scene, with its tragic and comic sides, is most vividly and faithfully reproduced. As Mr. Freeman says, "it was a piece of sheer violence"; and Gundulf's letter, saying that the appointment was "by advice and request of the great men, and by petition and election of clergy and people," may serve to illustrate how little trust is to be put in such statements, which taken literally might appear to argue a very advanced state of the Constitution. It is remarkable that, when the history of the quarrel is told in all its detail, we find almost every point of dispute in the relations of Church and State either directly or indirectly touched, and this it is which gives the affair its great importance. The whole long contest of nearly five hundred years is foreshadowed at the Gemot of Rockingham. Mr. Freeman, feeling the vastness of the issues raised, is divided between his admiration for Anselm's personal bearing and character, and his hatred of that Roman supremacy which Anselm's conduct did so much to establish. He is particularly anxious to show that "it was not Anselm, however, but Anselm's enemy, who was the first to appeal from an English court to the see of Rome." He claims credit, and with justice, for being the first historian to bring out in its full importance the history of William of St. Calais, Bishop of Durham, his treason, and his appeal from the king's court of justice to the court of the Bishop of Rome. William's appeal was undoubtedly made in a bad cause, and Anselm's in a good; but we cannot go so far as Mr. Freeman apparently wishes us to go in shifting the blame, such as it is, from Anselm's back to that of William. If the Bishop of Durham is to blame for setting a bad precedent, the Archbishop of Canterbury is equally to blame for establishing it with all the weight of his primatial authority. Before leaving this part of the subject we may remark the graceful way in which Mr. Freeman acknowledges the previous labours of Dean Church in this field, and compliments him upon the excellence of his biography of Anselm—a model of what such biographies should be.

We have spent some time over the episode of Anselm because it is at once the most attractive and the most important of the period. The rest of Mr. Freeman's work is mainly concerned with military history, from the suppression of Odo's rebellion at the beginning of the reign to the last expedition to Normandy just before Rufus's death. Ecclesiastical and military affairs, with an occasional earthquake or other portent, attract almost exclusively the attention of the contemporary chronicler, because all the notable events of the reign may be classed under those heads. The intervals of peace, when Rufus was engaged neither with recalcitrant priests nor rebellious vassals, are unfortunately little more than blanks to the later historian. This loss, however, does not seem to trouble Mr. Freeman much. He relates the campaigns of Rufus and his captains, resultless as they generally were, with as much interest as if they were the battles of a Cæsar or a Napoleon changing the face of the world. Unfortunately, the story, even when told with all the vivacity resulting from intimate knowledge of documents and localities, cannot be made very attractive, and its details, except for the light they incidentally throw on the manners and customs of the day, might safely be forgotten. Such as it is, however, Mr. Freeman has undoubtedly made the best of it. His skill as a narrator has never been shown more clearly than in his account of the siege of St. Michael's Mount, and in his manner of telling how Rufus took into his service the knight who unhorsed him, and mocked at Robert's ill-timed generosity in allowing water to his besieged brother. The siege of Rouen and the death of Conan, thrown from the tower by Henry's own hands, are equally vivid pieces of narrative. In the second volume we have an interesting sketch of the condition of Wales at this time, and an instructive contrast drawn between Wales and England, pointed by those geographical differences between the two countries which have so important a bearing upon history, and which Mr. Freeman's topographical knowledge enables him clearly to note. The whole history of the wars in Wales illustrates at once Rufus's capricious and unstable character, and the inevitable tendency towards the establishment of English supremacy in spite of momentary failures. The wars in Normandy and Maine, especially the latter, appear to have for Mr. Freeman a peculiar attraction, and this is very much due to the fact that the border lands of Maine and the Vexin are as well known to him as his own county. Yet the wars against King Philip and Helias de la Flèche were strangely fruitless. Mr. Freeman says:—

"We may sum up the result by saying that Maine was subdued and France was not. Maine was at least held to be subdued.....But against France no real advantage was gained."

And so incomplete was the reduction of Maine that immediately on Rufus's death Helias recovered his position, and held it peaceably till his own death some years after. The cause of liberty usually finds a sympathizer in Mr. Freeman, and the struggles of Helias have his warm approval; but it is hard to see how France or England or Maine itself profited by the autonomy for which Helias fought, and which, if not

in this particular case, was elsewhere at any rate the root of all the evils of feudalism.

The hasty expedition of William to Maine in 1099 is the last affair of note before his death. On that mysterious event Mr. Freeman naturally dwells at considerable length, but without coming to any definite conclusion. He gives the various versions of the story, but sums up in the words of the Chronicle :—

"Of these events we may say thus much with certainty, 'Thereafter on the morrow after Lammas Day was the King William in hunting from his own men with an arrow offshot, and then to Winchester brought and in the bishopric buried.'"

And in his preface he says :—

"I feel pretty certain that no amount of local research can throw any real light on the death of William Rufus, unless indeed in the way of showing how local legends grew up."

So we must leave the event—one, as Mr. Freeman says, of the best known in all English history—in the obscurity which eight centuries have failed to remove, and with a stronger conviction than ever that nothing more certain will ever be known about it.

Mr. Freeman's book does not conclude with the death of Rufus, nor even with the accession of Henry I., but with the defeat and banishment of Robert of Bellême, which dealt a death-blow at Norman feudalism. "My immediate subject ends," he says,

"when King Henry is made fast on his throne by the overthrow of the rebel Earl of Shrewsbury.....The surrender of Chester to the elder William marked that the first struggle was over, and that the Norman was to rule in England. The surrender of Shrewsbury to his youngest son marked that the second struggle was over, the struggle that ruled that, though the Norman was to reign in England, he was to reign only by putting on the character of an English king, called to his throne by the voice of Englishmen, and guarded there by their loyalty against the plots and assaults of Norman rebels."

Mr. Freeman holds out some hope that he may be able to carry on the story yet further, to the day "when, as men fondly deemed, England, after forty years, paid back the day of Senlac on the day of Tinchebrai." We trust this hope may be fulfilled, or rather that Mr. Freeman may be able to tell the whole story of the Norman times to the point where the other of our two greatest living historians might naturally take it up. If Canon Stubbs would thus continue Mr. Freeman's work we should have a foundation of English history laid for all time, for the work they do has this unsurpassable merit—that it need not be done again.

Six Months in Persia. By E. Stack. 2 vols. (Sampson Low & Co.)

In a book of travels we generally expect either instruction or amusement; in some rare instances we get both; in Mr. Stack's volumes we get neither. We gather that he is an Irishman; but there is not a touch of wit in his six hundred pages to vouch for his nationality. And if he cannot make his book amusing, neither does he make it very instructive. It takes some science to write a good description of a country. The traveller must be something of a naturalist, and must know a little of geology, physical geography, and botany; above all, he must possess the observant eye, without which the notes of the most novel and varied journey are valueless. Mr. Stack may be both scientific and observant, but his pages do not testify to either quality. If he sees things, he has not the gift of making others see them; and if he knows things, he keeps the knowledge to himself. He has made a long journey through a country little known and in parts still unexplored. For six months he travelled Persia up and down, visited most of its great cities, climbed its mountains, threaded its gorges, and traversed its plains and deserts; and his account of it all leaves no picture on the mind beyond the ordinary impression of the shifts and petty incidents of travel. Persia as described by Mr. Stack might almost as well be Norway or the Pyrenees. As the reader closes these monotonous volumes he retains no characteristic impression, no general idea of scenery or people, not even the feeling of acquaintance with the author and his companions which almost every traveller manages to create. As we think over his experiences, we remember that the distance from one halting-place to the next was so many farsakhs, and the march lasted from 7 A.M. to 5 P.M.; that a horse's back was sore, and the dust was unpleasant; that an old woman sold him a diseased chicken, or the telegraph officials gave him a good dinner. Except the farsakhs, this would apply to any country. Then the children were often rosy-cheeked, his host's wife pretty, the young men fond of discharging their rusty muskets in token of smartness, the old men genial and sociable over a pipe. Such characters have been studied elsewhere, and four or five hundred pages devoted to similar observations constitute a waste of time and type. Here is an example, taken at random :

"*26th March, Kahna, 8 farsakhs;* 7 A.M. *to* 5 P.M.—I awoke at four in the morning, roused the servants, and returned to snatch an hour's sleep while the mules were packing. The servants immediately went to sleep again, as is the habit of Persian servants when the master's eye is withdrawn for a moment. We did not start till seven. The Lar plain runs nearly east and west, between low mountains, black and impregnated with salt; it is four miles wide, stony and barren. In the neighbourhood of Lar are a few villages. At twelve miles we passed the ruins of Tanguni, with a small but well-built caravansarai, now untenanted; the qanat which gave life to the place has been choked some years. Here the plain proper ends in a tangle of dry watercourses and ravines, which extend ten miles, and then smooth themselves out into the plain of Aliabad, a circular area surrounded by black rocky hills, with Aliabad village in a tamarisk grove in the middle. Here the Forg and Hormuz roads diverge; we left Aliabad three miles on the right, and turned northward, after breakfasting beside an abambar, whence we could see the great dark mass of Hormuz mountain far to the east, and the nearer cliffs of Karmasta, streaked with salt. We entered the basin of a salt river, and presently caught sight of Kahna from afar, a black date grove against a low range of limestone hills. The village fort contains about fifteen families. It belongs to Fath Ali, who bought it ten years ago, and has spent money in repairing the qanat. The wall of the fort is in good repair. We found the interior crowded with tufangchis, bringing revenue from Forg. They were loud on the subject of robbers, the insecurity of the road, and the extraordinary daring and desperate character of the population hereabouts; altogether an evil and unsavoury lot of rascals. My quarters were in a dilapidated straw shed. Sayyid Ali was partly in a state of collapse, believing that the atmosphere of the salt country aggravated his ailment."

This is the entire record of one day's march in a region marked "unexplored" in the map of the Surveyor-General of India, and it is, perhaps, more eloquent than usual. As a rule, the elevation of the hills, the appearance of the crops, and the nature of the accommodation occupy the space which is here filled by a slight notice of scenery. It is the same with Mr. Stack's descriptions of the towns. He visited Shiraz, Karman, Yezd, Isfahan, and Teheran, to mention no smaller cities; but beyond an account of their governors he has very little to tell about any of them; and when he visits Persepolis, though he quotes Keats and confesses to "genuine pity and reverence," he is more at home in giving a variety of unmeaning measurements which have been measured before. His whole book is, in fact, a dry itinerary; and it lacks an important adjunct to an itinerary in possessing no index. An index would have made the matter-of-fact descriptions of many unknown places useful to the geographer and occasionally to the student of Persian history.

Though 'Six Months in Persia' is certainly not a successful description of a country, nor a treasury of scientific information such as a Darwin would have compiled, it has its value. In the confused impressions of page after page of monotonous diary the reader is unable to grasp the results of six months' observation of Persia and the Persians by one who, if he has not the gift of brilliant description and the power of giving his own eye to the reader, has nevertheless boundless patience in making notes of whatever he saw. It is the crowd of ill-arranged details that makes Mr. Stack's book uninteresting and ineffective; but the details themselves are valuable, and if properly put together would form a fair account of the country, so far as an ordinary eye can view it from the outside, if we may use the expression. Happily Mr. Stack has appreciated this necessity of generalization, and the main attraction of his book to all but professional geographers and travellers who mean to follow his route must lie in the three concluding chapters, entitled "Geographical," "Land Revenue Systems," and "The Present Condition of Persia." Here we have the results of his observations and experience set down with something of the clearness and perspective for which his readers will search vainly throughout his diary of travel. The geographical chapter gives a large number of corrections of the present maps of Persia, almost entirely in the south, with distances and compass bearings; and the succeeding chapter presents in a collected form Mr. Stack's observations on Persian land tenure and taxation, of which little was known before. It seems that there is no universal system of tenure or of rent and taxation; each province or even village has its own traditional method; and no records or revisions of assessment are thought of. The chief thing considered in Persian agriculture is water. In so dry a country it is useless to estimate or assess land which has no certain prospect of water, and hence the main question in deciding the value of any

land is what wells or springs it can count upon; and it is upon the water supply, wholly irrespective of the quality of the land, that the State assessment is based. The same important question of water dictates the division of land into wet land and dry, the former being within reach of springs, the latter dependent upon the precarious rainfall. Dry land may belong to anybody who will break up the soil, scatter the seed, and run the chance of rain. If there is none, he gets no crops and pays no rent; if there is rain, he pays a proportion of his crop as a species of rent in kind, varying from one-fifth to one-hundredth, according to the quality of the land. Although Mr. Stack can find no traces of the village community, many primitive customs, such as the annual distribution of land among the ploughs of the village by the elders, survive in the outlying districts of Persia; and the arrangement of land in various classes according to its quality, and the apportionment of a share in each class to every plough, remind one of Indian customs. In wet lands two-thirds of the produce go to the owner, who may be either the State or a private proprietor; in the latter case the proprietor pays an assessment to the Government. The proportions of the payments in kind and of the State assessments differ in many districts, and the relations of landlord and tenant in the matter of furnishing cattle and implements are also various. There seems, however, to be no idea of a ryot possessing any proprietary rights; he holds his land at the pleasure of his landlord, who on his part does not turn him out so long as he gets his share of the produce as rent. The apportionment of the land among the village ploughs is not a new feature; but few, probably, have heard of a much more important affair, the proper apportionment of water, which Mr. Stack describes:—

"The general rule is that the water must be carefully divided, and the commonest way of doing this is by the *taq* and the *tashk*. The water of a village has so many taqs, each taq being twelve hours, measured approximately from sunrise to sunset. If there are eighteen taqs the meaning is that the water supply is sufficient to water the whole village in nine days. Each taq contains a certain number of tashks,—suppose a hundred and thirty, which is a favourite number in the Yezd plain—sixty-five by day and sixty-five by night—sixty-five tashks in twelve hours. Each tashk is therefore equivalent to the use of the water supply for a little more than eleven minutes, and this space of time is measured by floating a copper bowl with a needle-hole in its bottom in a large vessel of water; the duration of the tashk comes to an end as the bowl sinks.....The bowl like everything else is divided into six dungas, by marks inside; so that in the case supposed above, a man's right to the use of the water could be measured to within two minutes. Given then a village of resident arbabs [private proprietors], each of whom holds his own separately demarcated lands, the distribution of the water is regulated by each man's right to so many tashks. If he has a right to twenty tashks, then.....he will receive water for 3¾ hours of the day, or the night, as the case may be, every tenth day or three times a month. If there be twenty-four taqs, or as it is otherwise expressed, if the *daur i âb*, or cycle of watering, be twelve days, he will get his 3¾ hours of water every thirteenth day only. If he has a right to half a taq, he will get six hours of water; if to a whole taq, twelve hours. If he owns a whole *shabauruz*, or day and night, he is entitled to twenty-four hours' use of the water every ninth day, or whatever the interval may be that is determined by the *daur i âb*. And this again depends upon the copiousness of the water supply."

As Mr. Stack shows in his final chapter, the question whether Persia is to have a prosperous or a declining future depends on the water supply. The soil is good enough; the peasants are energetic enough, as their perseverance in turning the slenderest supply to account in long subterranean aqueducts plainly proves; the climate is far healthier than India; and, adds Mr. Stack, the people far pleasanter to deal with, with much less prejudice and more manly heartiness. Though the Persian peasant is more heavily taxed than the Indian ryot, he is comparatively well-to-do. His villages are better built; his family is better dressed, and without the half-starved look one notices in many Indian districts; and the peasant himself is large and well nourished. What Persia needs, according to Mr. Stack, is money to build reservoirs to store the winter torrents in, a more regular and equable land valuation, and the working of its salt and mineral mines. The Shah's government he blames for its niggardly spirit, and especially for the suicidal custom of selling high appointments, as they are sold in Turkey; but on the whole, with rare freedom from Anglo-Indian prejudice, he believes that the country is better off when governors and governed are of the same race and language than when the natives are under a model European control. Egypt, he writes, is warning sufficient; and Persia may be congratulated on being beyond the reach of European intervention and European stocks. Nevertheless it was annoying to hear nothing expressed but fear and admiration of Russia, and to be asked, "Are you a European or a Russian?" by each chance questioner. England holds but a poor place in Persian esteem, and Mr. Stack wisely remarks that a little friendly intercourse and help now might save the imitation of an Afghan war hereafter.

Country Sketches in Black and White. By J. E. Panton. (Bogue.)

We cannot pay Mrs. Panton a higher compliment than to say that for some time we were half inclined to set down her essays, as they appeared in the *Pall Mall Gazette* or elsewhere, to the author of 'The Gamekeeper at Home.' Throughout she has caught Mr. Jefferies's distinctive tone: there is the same minute observation of nature, the same close knowledge of animal habits, the same command of picturesque and varied English. Yet Mrs. Panton has idiosyncrasies of her own withal; she is not merely one of the *imitatores servum pecus;* her pencil makes a mark peculiar to itself at times, which caused us some doubt and hesitation when the essays first began to show themselves in the daily papers. They were so like those of Mr. Jefferies, and still there was a different note here and there—a new note that pleased one in a new fashion. The essays are all bits of pure word-painting — little vignettes sketched with care from the life, and often couched in those charming local words which describe minute differences of natural scenery infinitely better than colourless commonplace English. It is a point of resemblance, indeed, in all the most successful word-painters of our age—Black and Blackmore, Heath and Green, Jefferies and Symonds—that they use these local descriptive terms freely; and they are undoubtedly right in what they do. Nothing can picture a chine to the mind's eye like the word chine; nothing can bring up the image of chalk country like the words combe, dean, and beacon. Every one who has once seen Dartmoor knows exactly what is meant by a tor and a cleave; every one who has once been in the Highlands feels that there is no possible southern equivalent for a burn or a corrie. Mrs. Panton's own sketches are drawn from the hilly borderland of Hants and Dorset, and they are rich in characteristic touches of the hazy heath scenery and the changeful Purbeck range. That bit of English south coast stands almost unrivalled in the variety of its contrasts, from the pine woods of Bournemouth and the misty uplands of the interior to the cliffs of Swanage, the shingle of the Chesil Bank, and the low islets that rise into gentle mounds above the tidal mud-flats of Poole Harbour. All are here photographed with consummate skill, and all have evidently been studied alike with loving care and artistic insight.

The whole gallery of pictures just fills up the measure of a year. The series begins with the great snowstorm of January, 1881, which cut off Swanage from outer civilization for nearly a week; and it goes on through 'February Fill-dyke,' 'Lent Lilies,' the 'Heath in Spring,' 'Summer at the Swannery,' and 'Autumn Weather,' till it ends with 'Bournemouth in November' and 'Winter by the Sea.' The selection has been well made. We had noticed almost every one of these papers as they appeared, and we are glad to have them now in a collected form. Perhaps the most interesting of all are those which deal with the wild fowl of the flats, the heronry on the heath, the coots and sheldrakes of Littlesea, the teal of the decoy pond, and the swans on the Fleet behind the Chesil Beach. It is a fact in Mrs. Panton's favour, too, that she is not afraid to localize her sketches; she gives us the very spot from which her view is taken, and throws in the surrounding landmarks with scrupulous fidelity. This mode of treatment allows her to get the full benefit of our local nomenclature. It is one thing to be given a vague general description, which may or may not have an actual counterpart in nature—some Claudesque ideal landscape of the romantic type; it is quite another thing to be told that yonder gate in the chalk is Corfe Castle, that yonder snow-covered ridge is Ballard Down, and that yonder projecting cliff is St. Alban's (why not St. Aldhelm's?) Head. Throughout, indeed, these sketches are thoroughly English, and not English only, but southern English as well. The only thing we cannot praise about the book is the sonnets—they are sonnets merely in form, not in spirit; almost every one of them disappointing expectation with a distinctly feeble and inconclusive close. But we will not quarrel with Mrs. Panton because she is not an artist in two separate modes. The prose pictures are perfect of their kind, and it is a great thing to have attained so high a level in any one artistic pursuit.

XUM

History of Shorthand; with a Review of its Present Condition and Prospects in Europe and America. By Thomas Anderson. (Allen & Co.)

Learning a system of shorthand has been aptly compared to learning a language, and to write a satisfactory history of shorthand is almost as formidable a task as to write a history of language. Probably no man living possesses the requisite knowledge, and the interest existing on the subject, whether among the learned or the general public, is scarcely sufficient to yield an adequate return for the toil which the needful investigation would involve. To present a mere collection of alphabets is not difficult with the resources of existing libraries, but much more than this is required to satisfy the rational inquirer. The chief peculiarities of a system often lie in modes of abbreviation, at which the alphabet gives no hint. Any one who would devote six months apiece to the learning and practising of some of the leading systems — English, German, French, and American—would be worth listening to when he came forward to tell us the results of his experience, though possibly his judgment of relative merits might be greatly altered if, instead of six months, he devoted two years to each of the systems compared.

Mr. Anderson has surpassed his predecessors by including foreign as well as English and American systems in his review. He gives not only the alphabets of numerous French and German systems, but specimens of writing in the most notable of them. His own leanings are towards what may be called the German as distinguished from the English school. He thinks that shorthand writing, like longhand writing, should slope all one way; and to attain this end he would be willing to sacrifice the greater brevity of outline which is attainable by the use of characters some of which are horizontal, some vertical, some sloping to the right and others to the left. He is also opposed to placing any words above or below the line, and to making a distinction between light and heavy strokes. To show how opinions differ, we may mention that, in the discussion which took place at the Shorthand Society on Mr. Anderson's views, a leading member advocated the use not only of three positions for words, but of nine. This idea has been carried still further in a recent publication called 'Locomotive Shorthand,' in which position is everything, the different letters having no distinctive characters, but only distinctive positions in a square divided up by ruled lines into smaller squares. A word of one letter is a dot in the proper place; a word of two letters is a straight line drawn from the position of the first letter to the position of the second. Without going these lengths, we think that everything which helps to distinguish one word from another should be regarded as a legitimate aid. If our characters slope all one way, they must either be too much alike or too complicated; and though it ought to be possible upon occasion to write all words at the same level, we see no sufficient reason for refusing to the shorthand writer the liberty which every longhand writer takes when he writes *n* with an *o* above the line as an abbreviation for *number*.

The philosophic investigator of shorthand ought to give his chief attention to examining what each system can do when limited to the use of simple means, such as an ordinary memory could retain after a few lessons, and to styles of spelling not too brief to be easily read. Under this test there is, perhaps, no system that would come off better than the French one of Duployé, the alphabet of which, as given in the author's advertisements side by side with a sentence of strictly alphabetic writing, exhibits a striking combination of simplicity and power. Mr. Anderson devotes several sentences to the expression of his contempt for this system, but does not do it the justice of exhibiting its alphabet. A similar animus is exhibited in his comments on Pitman's phonography, and he quotes with gusto the most absurd things that have been said against it; for example, the allegation that it reports by sound and not by sense—as if there were any way of reporting the sense directly. He strongly objects to phonetic spelling in shorthand, but the best instances that he gives of the weaknesses of Pitman's system are instances in which it is not sufficiently phonetic; *proof*, for example, being confounded with *oppression*, *sent* with *is not*, *modes* with *impossible*.

Antiquaries will be interested in the very elaborate and well-printed specimens which Mr. Anderson gives of the *notæ Tyronianæ* and the Greek *tachygraphy*; and, on the other hand, there is no lack of information of the most recent kind. A list is given of the London newspaper reporters, with the systems which they respectively employ, from which it appears that out of nine "chiefs," five use Taylor's system, while Pitman, Gurney, Mavor, and Byrom can only claim one each. Pitman's is, however, more in favour among the general body, his followers being between a fourth and a third of the total number.

There has been an unusual amount of activity in the shorthand world of late, and perhaps the best proof of it is the establishment in London last year of the Shorthand Society, numbering in its ranks some of the leading writers of various systems, for the discussion of the principles which should govern the construction of a system adapted, if possible, for general use. The book before us is an important contribution to the literature of the subject.

Kaffir Folk-lore; or, a Selection from the Traditional Tales current among the People living on the Eastern Border of the Cape Colony. By George McCall Theal. (Sonnenschein & Co.)

The stories which Mr. Theal has collected, during a residence of twenty years among the Kaffirs, are very curious and interesting; and the information he gives, in his introduction and notes, about these wild people —among whom he has exercised many functions, including those of a mission teacher and a border magistrate—is most valuable. The word "Kaffir," he remarks, is often used to signify "any black native who is not the descendant of an imported slave"; but it is applied on the eastern frontier of the Cape Colony only to a member of the Amaxosa tribe. From these Amaxosa the tales in Mr. Theal's volume were obtained.

The Kaffir of the coast region is described as "a model of a well-formed man," possessing reasoning powers "quite equal to those of a white man." It appears that "for anything approaching frivolity he has a supreme contempt"; and therefore it is to be feared that any distinguished representative of his race who may visit London will carry away an unfavourable impression as regards fashionable society. The language of the Amaxosa is "rich in words and is musical in expression"; and it contains three clicks, "which are now represented in writing by the superfluous letters *c*, *q*, and *x*." It is at first encouraging to be told that they are easily sounded separately by Europeans, "the *c* by withdrawing the tongue sharply from the front teeth, the *q* by doing the same from the roof of the mouth, and the *x* by drawing the breath in a peculiar way between the tongue and the side teeth." But Mr. Theal afterwards saddens his readers by the information that these clicks "generally prove an insurmountable difficulty to an adult who wishes to learn to speak the language." The language of the women varies a good deal from that of the men, on account of "the custom called *ukuhlonipa*, which prohibits females from pronouncing the names of any of their husband's male relatives in the ascending line, or any words whatever in which the principal syllables of such names occur." Of many other curious customs Mr. Theal supplies an interesting account, especially as regards marriage, death, and witchcraft. He gives a couple of curious instances of their superstitions which came under his own notice. In 1875 a Kaffir girl was drowned while bathing. Her companions ran away home and declared that she had been lured away into a dark hole by a spirit, and that she cried out, just before sinking for the last time, "Go and tell my father and mother that it took me." Her father immediately collected his cattle, drove them into the water, and implored the spirit "to take the choicest of them and restore his daughter." He spoke in vain; but "the failure to get the exchange effected is still attributed by the relatives of the drowned girl to the absence of one skilful to work with medicines." In July, 1881, a Kaffir woman sorrowfully sought Mr. Theal's assistance. The "witch-finder" of the village had pointed her out as the person who had caused the death of a neighbour's child. The result of her being thus "smelt out" was that no one would so much as speak to her, and even her own children avoided her. Such treatment was unendurable, and Mr. Theal interfered on her behalf. The witch-finder was sent for, and a large number of Kaffirs appeared to judge the case. It is pleasant to know that the witch-finder failed to satisfy the judges when the ordinary tests were put to him; and when he was compelled to admit that he had never held converse with "the people under the water," he was convicted of imposition, and his victim was acquitted of the terrible charge he had brought against her. One of the most unreasonable of the ideas indulged in by Kaffirs is that in consequence of which "they use no kinds of fish as an article of diet, and call

them all snakes without distinction." But they do not intend by so doing to insult the fishy race, for

"the snake is treated with great respect by the Kaffirs. If one is found in a hut the people will move out and wait patiently until it leaves. The owner will say that it is perhaps the spirit of one of his ancestors who has come to visit him in this form."

The Kaffir stories are for the most part wild and all but unintelligible. A few of them appear to show traces of foreign influence, and may possibly have adapted to South African uses certain incidents properly belonging to Asiatic tales. This may account for the resemblance between part of 'The Story of the Girl and the Mbulu' and the numberless Asiatic and European variants of the tale which it has been proposed to call 'The Substituted Bride.' In the Kaffir story the girl is induced to bathe, and the mbulu—a fabulous being which "can assume the human form, but cannot part with its tail"—puts on her clothes and assumes her place, passing itself off as a chief's daughter, and making the girl act as its servant. The girl lightens her cares by song, and sings the tale of her woes. The neighbours who hear her test the truth of her metrical assertions, satisfy themselves that the "substituted bride"—for a wedding has taken place — has a mbulu's tail, and put the interloper to death. The deceived bridegroom then marries the girl whose place the mbulu had usurped. The story ends after a fashion which may be said to be original:—

"She had a child, and one day, when it was playing, a square pumpkin came out of the ground where the mbulu was buried, and tried to kill the infant. But the people chopped the pumpkin into pieces, and burned it. They afterwards threw the ashes into a river, so that nothing more could come of that mbulu."

'The Story of Five Heads' also is one which résembles to a suspicious extent the numerous popular tales which tell how a foolish or haughty maiden turns a deaf ear to the good advice which is given to her while she is on her way to the dwelling of a demon or witch, and suffers in consequence, and how her wise or humble sister listens to similar counsel and is rewarded. The demoniacal being in the Kaffir tale is "a big snake with five heads and large eyes," a creature of a foreign aspect, closely akin to the seven-headed snakes which are part of the stock-in-trade of Russian and other story-tellers. One of the beings about whom a piece of advice is given to the Kaffir damsel differs from those we are accustomed to hear of in European tales. She is told that she will meet a man "whose head is under his arm," and she is advised not to take water from him. She meets "a man carrying his head under his arm," and takes water to drink from him. In consequence the snake eventually kills her with his tail, being discontented with the bread she has made for him. The opening of 'The Story of the Girl who disregarded the Custom of Ntonjane,' in which a snake comes out of a pool wherein a number of girls are bathing, and takes possession of the clothes they have left on the bank, is very like that of the Russian story of 'The Water-Snake,' which, again, is closely akin to a Burmese tale of a water-spirit who marries a mortal maiden; but the incidents which follow are entirely different. There are several Kaffir stories also which describe the apparent destruction of men and beasts by some monster, and their ultimate rescue uninjured from its inside, just as in the Norse tale of 'The Devouring Cat' or the Indian story of 'The Voracious Frog.' In one of the Kaffir variants of what seems to be a nature-myth which has dwindled into a grotesque story for children, a monster called an "inabulele" swallows a young hero, who finds inside it "his father and his mother and many people and cattle." He pierces his living prison with his assagai, and the captives escape. In another tale two boys kill a glutton, and their mother opens it, whereupon "people came out and cattle and dogs." In a third the devouring creature is "a monstrous cannibal." "The men went and skinned the cannibal, when a great number of people came from him." One of the most thorough-going parallels with alien folk-tales is afforded by 'The Story of Sikulume.' That hero wins the heart of the daughter of a demoniacal being named Mangangezulu, and flies with her from her father's house. The bereaved parent pursues, but the girl throws down successively "an egg, a milk-sack, a pot, and a smooth stone." The demon is for a time baffled by the mist into which the egg turns, the sheet of water which comes out of the milk-sack, and the thick darkness due to the flinging down of the pot; but he is not completely foiled until the smooth stone is thrown. "It became a rock, a big rock, with one side steep as a wall. He could not climb up that rock, and so he returned to his own village." In European folk-tales a brush and a comb are the objects most often relied upon by similar fugitives. Very quaint, though not absolutely novel, is the story of the "big ugly cannibal with only one leg," who took home a bag into which he had inserted a very nice girl, "and called all the other cannibals to come to a feast, and they came expecting to get something nice." But when the bag was opened it was found to contain "only snakes and toads," for the girl's father had effected an unwelcome substitution. "The other cannibals were so angry when they saw this, that they killed him and made their feast off him." Quaint also is the "person with only one arm, one side, and one leg," who kindly cries to Magoda's runaway children, "See, the cannibal has eaten the rest of me; take care of yourselves." The opening of the story of the cannibal who calls to Demazana, pretending to be her brother Demana, is singularly like that of the German story of 'The Wolf and the Seven Kids.' The Kaffir girl replies, "Go away, you cannibal; your voice is hoarse, you are not my brother." He consults with another cannibal, who advises him to burn his throat with a hot iron. "He did so, and then no longer spoke hoarse." The girl admits him into the cave in which she lives, and he carries her off. In the German story (Grimm, No. 5) the wolf, detected by the gruffness of its voice, "went to a shop and bought a great piece of chalk, which it ate, and by that means rendered its voice more gentle." By way of conclusion we may mention as an original story, and one which is in accordance with the already mentioned Kaffir idea about drowning, 'The Story of Tangalimlibo.' That lady, who made it a rule never to go out in the daytime, and was therefore known as "the walker by moonlight," was drawn under water one day, when she had broken her rule in deference to her father-in-law's repeated requests for water. In vain did her father-in-law offer the river-spirit an ox in exchange for her. She remained unseen all day. When the night came her child cried so bitterly that its nurse carried it down to the river. "Then the mother of the child came out of the river," and sang a sad song, and afterwards "took her child and put it to her breast to suck." The story ends more happily than the Russian tale of the dead mother who used to suckle her wasting child by night; for a fat ox having been offered to the river-spirit by "a woman skilful in the use of medicines," the demon was appeased. "There was a great shaking and a rising up of the river, and Tangalimlibo came out. There was great joy among those people when they took her home to her husband." We trust that we have quoted enough from Mr. Theal's book to prove that it is one which may be cordially recommended.

Memoir of the Honourable George Keith Elphinstone, K.B., Viscount Keith, Admiral of the Red. By Alexander Allardyce. (Blackwood & Sons.)

Fifty-nine years have elapsed since the death of Admiral Lord Keith, and yet until now no biographer had come forward to do justice to the long and faithful services rendered to his country by the illustrious naval veteran. Mr. Allardyce has founded his memoir upon a manuscript prepared by Mr. James Napier for Lord Keith's family; and he has also had access to the numerous private journals and official despatches still preserved at the family seat, Tulliallan Castle, Perthshire.

The main outlines of Lord Keith's career are not known so well as they should be by the present generation, so we may briefly recapitulate the leading events in which he took his share.

As captain of H.M.S. Perseus, George Keith Elphinstone greatly distinguished himself during the American war, under Admiral Arbuthnot; and his personal exertions contributed not a little to the capture of Charlestown. At the close of the war he became member for Dumbartonshire (the possession of a seat in the House being in those days one of the recognized modes of gaining promotion, whether in the army or the navy), and was appointed to the household of the Duke of Clarence, who as midshipman had served under him in the Warwick. In 1794 Elphinstone's ship the Robust formed part of Lord Hood's expedition to Toulon; here the French (amongst whom was Major Buonaparte) under Dugommier were held at bay until the evacuation was effected:—

"To Elphinstone in his way, as well as to Napoleon, Toulon was destined to be a turning-point in career; and the two were fated to meet afterwards, under circumstances that connect their names inseparably in history."

After promotion Rear-Admiral Sir George Keith Elphinstone was appointed Com-

mander-in-Chief in all the Indian seas, with a view to his carrying out active operations against the Dutch settlements in those parts. An interesting account is given of the expedition, which ended in the reduction of the Cape Colony by the small British force, and also of the surrender to Elphinstone of the Dutch fleet in Saldanha Bay without a shot being fired. For these feats the admiral obtained the title of Baron Keith in the Irish peerage.

In 1797 the series of mutinies which, commencing on board Lord Bridport's ship at Spithead, spread in succession to the fleets at the Nore and at Plymouth, was quelled by the energetic action of Lord Keith. His personal influence over the seamen was great, for they well knew that he would deal with them as justly as severely.

"Lord Keith went on board the Saturn and gave the crew his opinion of their conduct, telling them that if they surrendered fourteen of their ringleaders he should be satisfied; but if they did not, he had a list of fifty. After an appearance of crowding on him, and a threat from him to run the first man through who stirred, fourteen men were delivered up to him and immediately put in irons."

In 1799 Lord Keith succeeded Earl St. Vincent in the Mediterranean command, an unenviable position at the time, owing to the want of harmony amongst his officers. Admiral Bruix with the French fleet escaped into Brest before Lord Keith could intercept him, and shortly afterwards the Queen Charlotte, then Keith's flag-ship, was burnt off Leghorn. Next followed the two months' blockade of Genoa by Lord Keith's squadron, co-operating with Melas and Ott against Massena. Genoa capitulated, only to be re-occupied by the French within a few weeks after Marengo; in fact,

"Suchet entered the town with such celerity that it was with difficulty Keith's flag-ship could be worked outside the mole before the French had manned the batteries."

Mean time Sir Sidney Smith had signed without due authority the convention of El Arish, an event which created keen controversy; but on Kléber's assassination his successor Menou carried on hostilities, and Keith's vessels were employed in transporting the army of Sir Ralph Abercromby to Egypt. This portion of Lord Keith's life is more particularly interesting at the present time, when our troops are occupying the positions which General Friaut and the French army occupied within and outside the lines of Alexandria, eighty-one years ago. Co-operation with the Sublime Porte then meant much the same as it means now —half-heartedness, procrastination, words instead of deeds, and fallacious promises. "Their Government," writes Lord Keith, "seems well inclined, but they are so slow in everything that it is distressing to a degree."

"When the month of January [1801] had passed, and there was no appearance of the Capitan Pasha and the Turkish gunboats, or any news of their having quitted Constantinople, where the feast of Bairam was then going on, the patience of the leaders began to be exhausted. General Moore came back on the 16th of February, and gave a gloomy account of the condition of the Grand Vizier's army, which was insignificant in numbers, insubordinate in discipline, and ineffective from disease."

The old story of the landing at Aboukir and of the death of Abercromby before Alexandria is retold by Mr. Allardyce, and it is worth reading whilst the attention of Europe is still directed to the sandhills of Aboukir and Kafr Dowar:—

"Acting upon a hint in the papers of General Roize, found on his body on the field of Canopus, the British cut the canal of Alexandria and let the waters of the Mediterranean into Lake Mareotis. The low hills that shut out the sea were cut through, and the waters were admitted into the plain of the old lake. The inundation swept inwards with a terrible force, and a hundred and fifty hamlets are believed to have been overwhelmed in the floods."

Whilst General Hutchinson was pushing up the Nile, Lord Keith, with the fleet, performed arduous duties along the coast, covering the disembarcation of stores, and awaiting an attack from Gantcaume's fleet, which was daily expected. Keith's position was rendered more uncomfortable by the jealousies and ill-will which pervaded the ships under him; many of the captains combined to foster old grievances and caused their admiral great annoyance—indeed, from the first there seems to have been an unworthy prejudice excited against Lord Keith, presumably from the fact of the Admiralty having given the command of the Mediterranean fleet to him instead of to Nelson. The biographer, however, does not even suggest this reason, and in all matters touching on the strained relations between Lords Keith and Nelson he is particularly reticent, as becomes the historian of one who, by position and character, was above the reach of professional jealousy.

Lord Keith predicted that the stipulations regarding the evacuation of the Mediterranean would not be carried out, and when the peace of Amiens was broken, on his shoulders fell the burden of protecting the whole of our eastern coasts and the river Thames from the threatened invasion. For this purpose he devised a general system of defence by means of blockships provided with fire-booms and thorough communication along the coast by telegraph. Keith's command was extended as far as Selsea Bill, and besides his vessels had to watch the French coast as far as Cape Harfleur. It was at this period that he experimented with Fulton's "catamarans"—the prototypes of the modern fish torpedoes — against the Boulogne flotilla. The victory of Trafalgar restored safety to the British shores, and Lord Keith for a few years enjoyed comparative freedom from active service.

In 1812 he was Commander-in-Chief of the Channel Fleet, and in this position he was able to give some support to Wellington in the Peninsula. When Napoleon left Elba Keith's flag was hoisted on the Tonnant, and even before Waterloo the British admiral had effected all his preparations necessary to prevent the possibility of Buonaparte's escape by sea. Then followed in due time the abdication and flight of the emperor, and the surrender on board the Bellerophon. Lord Keith had the satisfaction of safely effecting the transfer of his prisoner from the Bellerophon to the Northumberland, and after much anxiety he saw the latter with her convoy sail for St. Helena. Portions of Lord Keith's private journal kept during his trying mission are now first published by Mr. Allardyce, and some of the details, especially those relative to the attempted serving of a writ on Lord Keith, are entertaining.

Napoleon, it will be remembered, dictated a protest against his treatment when on board the Bellerophon, and means were found to corrupt a sailor, who swam ashore and despatched the document to London to "un célèbre jurisconsulte," as Montholon says—doubtless Sir Samuel Romilly. Early on August 4th Lord Keith received a letter from Lord Melville to the effect that an attempt might be made to bring Buonaparte out of the ship by a writ of *habeas corpus*:—

"Lord Keith immediately went on board his flag-ship, and it was fortunate for him that he had been so prompt in his movements. Scarcely had the Admiral left his quarters, when a person named Mackenrot, from the Court of King's Bench, arrived, and inquired anxiously for him. Lord Keith had left his house by the kitchen door to be rowed to the Tonnant as the King's Bench messenger entered by the front. Even Lady Keith did not know where he was gone. The man's object was to serve a writ on Lord Keith to produce Buonaparte as a witness in a libel case, in which Sir Alexander Cochrane was plaintiff and Mackenrot himself defendant. Had the man arrived a few minutes earlier, the consequences might have led to a serious complication; but fortunately Mr. Meek, the Admiral's trusted secretary, was a gentleman of judgment and resource, and managed to detain the messenger until he had got a warning conveyed on board the Tonnant to the Admiral. Lord Keith at once removed from the Tonnant to the Eurotas, with the messenger hard on his heels. When Makenrot reached the Eurotas, he found that the Admiral had gone ashore at Cawsand Bay. The exciting chase continued, the scent getting colder on shore, where all trace of the Admiral was lost, and the messenger had to abandon his hunt. The Admiral got signals made to the Prometheus as she stood in from the westward, and for better security cruised about in her until dusk, when he felt safe to return to his flag-ship."

Next day a letter from the messenger, enclosing the copy of the writ, was sent on board the Actæon for conveyance to the Tonnant:—

"Lord Keith received the letter and copy of the writ on the afternoon of the 5th, when he and his prisoner had already sailed, and thus ended this farcial interlude in a drama of the highest historical dignity, which but for the decision of Lord Keith and the promptitude of Mr. Meek might have exercised a serious influence upon the intentions of Government."

It is in his character as custodian of Napoleon I. that Lord Keith has been, and will always be, best known in history.

"This was the last important service that Lord Keith was to perform for his country; and he doubtless felt proud that his public career should be wound up by so memorable an incident. The arrangements connected with the disposal of Buonaparte had exposed his judgment and prudence to an ordeal which not every officer would have come through so satisfactorily; and the Government readily acknowledged the obligations under which it lay to his management of so embarrassing and delicate a duty."

Lord Keith retired, after fifty years' hard active service, at the age of seventy, yet hale and hearty. He was able to enjoy his well-earned leisure and an ample fortune, for common belief had not been wrong in crediting him with being lucky as a prize-taking admiral. He was twelve

years the senior of Nelson in age, and was a post-captain when the latter passed for his lieutenancy. It would be interesting, perhaps, to draw a parallel between the lives and characters of the two great admirals, so deep would be the contrasts depicted; but here, at all events, such an attempt would be out of place.

It appears that Robert Southey's 'Life of Nelson' is used as a manual by the cadets on board the Britannia at Dartmouth. The Lords of the Admiralty would not do wrong in recommending this biography of Lord Keith by Mr. Allardyce as a companion text-book to that of the late Poet Laureate.

NOVELS OF THE WEEK.

Saint and Sibyl. By C. L. Pirkis. 3 vols. (Hurst & Blackett.)

Flip, and other Stories. By Bret Harte. (Chatto & Windus.)

'Saint and Sibyl' shows a good deal of ability and yet has most of the faults which may be committed in a tolerable novel. It begins well; in a few pages the author gives a vivid picture of the principal characters and their surroundings, and plunges the reader at once into a situation which promises well for a domestic drama. Unfortunately, after this the action is terribly slow, and through several hundred pages the main story does not advance at all. When it eventually developes it turns out to be very trivial, certainly not strong enough to bear telling at the length of three volumes, and hardly interesting enough to be readable. The author has vacillated between pathos and absurdity, and the result is that the pathetic part of the story is rather absurd, and the absurd part not funny. It is a safe rule, which all but the greatest novelists would do well to observe, that the reader should be made to admire the heroine or the hero, or both; and this is not a very difficult task to accomplish if the author will try to express genuine admiration. The author of 'Saint and Sibyl' possibly meant to make the heroine the figure of central interest and to represent her as admirable. But the process of criticism seems to have gone on together with that of creation, and she appears on the whole as a creature of ignoble impulses. There is one other defect with regard to her: she is left a mystery. Introduced as the daughter of a strolling clown, she is at once seen to be nothing of the sort, but the revelation of her parentage is never made. This is an offence against a law of fiction which every reader justly demands should be obeyed. Turning to the hero, he is found to be a rather vulgar young man and a prig of the most pronounced type. Mrs. Pirkis fails equally in all her male characters. The conflict in the mind of the hero's cousin between love and religion is the best bit of character drawing in the book. It would have been more interesting if her personality had been presented more graphically.

There is little or nothing new in Mr. Harte's new volume. It is true that such stories as it contains are told more or less cleverly, and more or less for the first time. But they are told in the old way, with the old tricks and points and mannerisms; they take us over the old ground; they show us the old sort of characters; they exemplify the old faults and the old merits; and as we read we seem to have read them all before, and to have read them many times. The names are changed and the incidents have been shuffled and dealt anew. But the game is the same; and the pack and the players and the stakes are the same; and as we know exactly what is to happen and who is to win, our interest in the proceedings has evaporated. Of the three new stories the best, perhaps, is 'Flip'; the worst, perhaps, is 'Found at Blazing Star.' There is, however, so little to choose between them that it is not easy, as it is probably not necessary, to say which is the freshest and which is not. Mr. Harte has written better and he has written worse—that is all that need be said about them.

RECENT VERSE.

Translations and Original Pieces. By Charles Gipps Prowett. (Deighton, Bell & Co.)

Songs and Rhymes. By Walter H. Pollock. (Remington & Co.)

Mr. Prowett appears to have been one of those "qui nati morientesque fefellerunt"; no unhappy lot, as Horace rightly thought. Four pages of introduction, signed with initials which will be familiar to Cambridge men of ten years ago and upwards, tell the story of his life. A good classical scholar of the last generation, a nominal barrister, and a regular contributor to periodical literature, he lived dear to his friends, and died, as things now go, prematurely, at the age of fifty-eight, through an accident. Half of this little volume is taken up with a translation of the 'Georgics,' of which it may be said that if the writer had published it himself he would probably have polished it more. A short extract from a well-known passage will show the quality:—

> O happy happy he who hath attained
> Such skill in nature's laws as may have might
> To plant his foot upon all dread of doom
> Inexorable, and maw of roaring hell!
> Nor yet unblest his lot to whom are known
> The guardian powers of the country, Pan
> And old Silvanus, and the sister nymphs;
> He holds his quiet way, all undisturbed
> For rods and axes of the Commonwealth,
> Or purple pride of kings, or factious zeal
> That sets mistrustful feud 'twixt brethren born,
> Or Danube in revolt mustering to war
> His Dacians, or the Roman state, and realms
> That totter to their fall.

It will be observed that the eighth and ninth of these lines are expanded from five words in the original, and the whole gives, as we have said, the impression of haste. But the lines run smoothly. The translation of the 'Eumenides,' which follows, is a bold attempt at a task which possibly Mr. Swinburne, but certainly no one else, could perform successfully. The 'Pervigilium Veneris,' published when the translator was twenty-seven, is the best thing in the book. The original poems call for little remark. 'Hydro-Bacchus' is curious as an onslaught on teetotalism nearly forty years ago, which might be read with profit by some fanatics now:—

> Great was high Duty's power of old
> The empire o'er man's heart to hold;
> To urge the soul, or check its course,
> Obedient to her guiding force.
> These own not her control, but draw
> New sanction for the moral law,
> And by a stringent compact bind
> The independence of the mind;
> As morals had gregarious grown,
> And Virtue could not stand alone.
> What need they rules against abusing?
> They find th' offence all in the using;
> Denounce the gifts which bounteous Heaven
> To cheer the heart of man has given;
> And think their foolish pledge a band
> More potent far than God's command.

But it was not fair to sneer at "Barry Cornwall and Leigh Hunt." We could almost hope that the present editor might some day collect the best of Mr. Prowett's prose contributions to the magazines. The work done by the men of that generation, who did not write, as a rule, unless they knew something about their subject, deserves to be kept before the eyes of the fluent penmen of the present day.

Mr. Pollock's volume is graceful both in outward appearance and in its contents. It is chiefly the muse of Heine whom Mr. Pollock woos, and not always unsuccessfully. He has the Heinesque appreciation of what is beautiful in the world, mingled with a consciousness of the irony which is in the nature of things. Of course, with the young versifier of the present day it is not always easy to see how much is inspiration and how much composition, or rather what is called at Cambridge "comp"; but at all events Mr. Pollock writes as if he was moved to write. 'Memory' is very pretty, but too long to quote. Perhaps the following, headed 'A Conquest,' gives as good a notion of Mr. Pollock's style as any:—

> I found him openly wearing her token;
> I knew that her troth could never be broken;
> I laid my hand on the hilt of my sword,
> He did the same and spoke not a word;
> I bad him confess his villainy,
> He smiled and said, "She gave it me."
> We searched for seconds, they soon were found,
> They measured our swords, and measured the ground;
> To save us they would not have uttered a breath,
> They were ready enough to help us to death.
> We fought in the midst of a wintry wood,
> Till the fair white snow was red with his blood;
> But his was the victory, for, as he died,
> He swore by the rood that he had not lied.

The volume ends with three or four little songs in French, which show that Mr. Pollock can write correctly in that language, but are not in themselves above the level of the ordinary "words" to music. As such they would pass muster very well. After a fashion which seems to be not uncommon just now, Mr. Lang introduces, so to speak, Mr. Pollock's "rhymes" with a charming little poem of his own.

GUIDE-BOOKS.

Handbook of the Bengal Presidency, with an Account of Calcutta City. (Murray.)—Readers of Murray's Handbooks of Madras and Bombay need only to be told that the Handbook of Bengal is from the pen of the same author—Mr. E. B. Eastwick—to be assured that it is compiled with care and ability. It comprises not only the chief places of interest in Bengal proper, but also those in Oudh, the North-West Provinces, and British Burma. The book supplies a want which has been much felt of late. No country in Europe possesses a climate superior to that to be found in Bengal from the end of November to the end of February. The number of English travellers who visit it during those months increases yearly; but, though guide-books to some of the chief cities have been published, no handbook of the Bengal Presidency has hitherto appeared. The book is divided into two sections. The first, besides various useful chronological tables and the necessary vocabulary and dialogues of Hindí and Bengálí, contains some hints as to outfit, voyage out, diet, &c. The latter, however, are very meagre, and the traveller who wishes for information on these important subjects will have to refer to the Handbook for Madras, where it is given at considerable length. The second section opens with an exhaustive account of Calcutta and its immediate surroundings, and then, dividing the territory treated into forty-four different routes, describes all the places likely to be of interest. The author's strong point is archæology; his descriptions of the various temples, monuments, &c., leave nothing to be desired. Condensation is of such importance in a guide-book that it is with reluctance that we refer to omissions. Considering, however, that many of the persons for whom this work is intended proceed to India rather with the object of learning something of the people of our great dependency than with a view to sightseeing pure and simple, more prominence might have been assigned to descriptions of the condition of the natives, their modes of life, &c. We observe that some of the minor faults to which we adverted in reviewing

XUM

the other handbooks by the same author reappear in the present volume. Too much space, for instance, is assigned to epitaphs of wholly insignificant persons and to uninteresting monuments which require no explanation. Again, the introduction into a guide-book of such variable matters as the times of trains, &c., is a waste of space and may tend to mislead. The book is supplied with three good maps of Bengal and Assam, British Burma and the North-West Provinces, and Oudh; though for facility of reference it would have been an improvement if the great lines of railways had been more clearly indicated. The text, moreover, is almost devoid of reference to the positions on the maps of the places described. The omission is often inconvenient, as the knowledge of Indian geography possessed by even educated English people is scarcely sufficient to enable them to dispense with such assistance. These faults, however, are small, taking into account the difficulty of the subject and the successful manner in which it has been treated.

Tourists' Guide to the County of Cambridge. By A. G. Hill. With a Map and Plan. (Stanford.)—Mr. Hill's English is sometimes clumsy, but his book is distinguished by much carefully selected archæology and true feeling for antiquity. He may have meant well when he called the fens and their islands "oases," but his terms are not excellently chosen in such passages as the following:—"These oases appear to have been luxuriant climes in the midst of chaos, if we may believe the accounts of William of Malmesbury and early historians, and, no doubt, their descriptions are, in substance, correct." A Scholar of Jesus, B.A. and F.S.A., ought to write better than this, which is by no means the worst passage in the book. There are a few slips in criticism which in a second edition may be corrected, *e. g.*, the treatment of the costume of Newton's statue in Trinity College is not in "the eccentric style of the time," but Roubiliac's own eccentricity. How can a building "be vaulted throughout with a species of ceiling known as a 'fan-tracery' roof"? The literary enormity of this statement involves an unkindness to King's College. Mr. Hill has written things about Jesus College which show that his *alma mater* spared the rod too long. As to the windows of Jesus Chapel he says:—"All the nave and transept windows (Alcock's) have been filled with stained glass from the hand of Mr. Burne Jones—fine works of art, but the drawing is rather too heathenish in its Renaissance to be ecclesiastical, and is thus unlike real English Renaissance glass." "Canoes are very favourite crafts in these waters" is truly if ungrammatically said of Freshman's River, that wonderful stream which, Mr. Hill tells us, "flows up by Grantchester."

A NUMBER of guide-books relating to the Grafschaft of Glatz have been sent to us by the Gebirgs Verein of that locality. Under the title *Die Grafschaft Glatz und deren Anschlüsse*, Herr Peter has compiled an exhaustive handbook which will be welcome to English tourists who know German and find their way to Silesia.

The Green Lanes of Hampshire, Surrey, and Sussex, by the Rev. G. N. Godwin (Griffith & Farran), deals with a lovely tract of country, but it is too discursive to serve as a guide-book.—Ward & Lock's *Pictorial Guide to Aberdeen, Elgin, and the Moray Firth*, and *Pictorial Guide to Perth, Dundee, and Aberdeen*, are good popular books which would be all the better for the omission of the illustrations.—Mr. Unwin's *Sydenham, Dulwich, and Norwood* is a good specimen of a half-holiday handbook.—Messrs. Bradshaw have sent us a new edition of their *Illustrated Tourists' Handbook to Great Britain.*

THE ARCHÆOLOGICAL SOCIETIES.

The Transactions of the Cumberland and Westmoreland Antiquarian and Archæological Society, Vol. VI., Part I., 1882, is fully up to the standard of previous volumes. Much attention is devoted to the old halls and castles of the two counties, as evidenced by the papers on Brougham and Brough Castles from the skilled pen of Mr. G. T. Clark, and papers by other writers on Egremont Castle, Burnside Hall, and Lamplugh Hall. Mr. Ferguson gives an interesting account of the armorial bearings of the city of Carlisle, and also describes some curious knitting sheaths or knitting sticks, of which a plate of specimens is given. A remarkable cup-marked stone found near Penrith is very fully described by Dr. M. W. Taylor, and an illustration of it is given. It was found covering a grave in which a quantity of bones and charcoal was discovered. The account of the parish church of Egremont is from the pen of the architect who was employed to pull it down, and it is, therefore, gratifying to know that the parishioners "will see in the new building all that was of architectural worth in the old." Other papers, on the Friar Preachers of Carlisle, on certain stone circles, and on excavations at Walls Castle, help to make up a very attractive volume.

Sussex Archæological Collections. Vol. XXXII. (Lewes, Wolff.)—The principal articles in this unusually interesting volume are the Rev. F. H. Arnold's account of Thorney, Chichester Harbour; Mr. Parsons's valuable paper on Sussex iron works; an account of leaden fonts in Sussex, by Mr. J. L. André; Mr. Sawyer's notes on Capt. N. Tettersell and the escape of Charles II.; and papers on early wills, Icklesham Church, and excavations at Seaford, by Messrs. Churton, Attree, and Price respectively. It is impossible to do justice to all these essays, but a note or two may be borrowed from some of them. Until lately the islanders of Thorney were exempt from serving on juries, and from tolls and market dues in Chichester, on account of services rendered by their ancestors to the people of the city during the Great Plague of 1665. Thorney Church tower was a depôt for smuggled goods. The Norman (or older) font in this church is a simple cylinder, without mouldings, and incised with chevrons and twelve niche-like compartments. Of the twenty-nine leaden fonts in England three are in Sussex, at Edburton, Parham, and Piecombe. Of the whole class at least eighteen are of Norman origin. The Norman fonts at Llancourt and Tidenham, in Gloucestershire, were cast in the same mould. These fonts were cast flat and bent, the edges being soldered together; the examples at Piecombe and Edburton show coarse junctures. These examples are figured here, and are very curious specimens of Norman art. That at Parham is the only noteworthy relic in the church, and of Decorated origin. When the bishop lately visited a certain Sussex church the local authorities had the font resplendently blackleaded. Icklesham Church, having been restored till it looks as good as new, nobody cares to see. Before the advent of Mr. S. S. Teulon it wanted nothing but repairs and cleaning. The churchwardens' accounts are not older than 1712, but they are in good order and of unusual interest; they chronicle the consumption of much ale at the parish cost. The parish officials were not ashamed to use popular English, *e.g.*, "1720, Octr ye 21, p^{d} To Gooddy Goland for Washing up Goody Martin's Things, 00, 04, 02." The old ladies who received parochial doles were styled "goodies," *vide* "1735, Januery ye 13, p^{d} for a Pint of Wine & for eight pound of Mutton for Good Row & Good Winch & Goody Sutors for their being with Goody in her Fitts, 3. 0." The same "Goody Sutors and Goodman Burt" made a good thing of it when they "stood" for the "Child (of) David Sharvill a Vagrant," and pocketed three shillings, and drank two "Muggs of beer." It was reasonable that 4*l.* 10*s.* 8½*d.* should be paid for the "Stokes," which until within living memory were in Icklesham churchyard (we can testify to the need of these implements in the neighbourhood), but why 1*l.* 10*s.* should have been paid "for fatting Widdow Cloke's Hogg" in 1732 no living man can tell. Tom Seuter's "Eye" was cured in 1739 for three shillings, and in 1741 the churchwardens lent five shillings to "a Soiourner." In 1744 "Gudy Tayler" was paid one shilling and sixpence "for going to Winchelse for to give her Arthor Davy." As to J. Harold of 1756, the churchwardens paid "13*d.* for Beere at his Burying," four shillings "for his grave & nell & afterdavit," and two shillings and ninepence for a pound and a half of wool for his shroud. Although three shillings and sixpence was paid in 1766 "for a pair of Second Hand Buckskinn briches for Wm. Dungan [Duncan, a Scotchman?]," poor Dame Burt had but a pound for a quarter's schooling for ten children. Five shillings were paid "for a Gallon of Brandy for Susana Seldens Leg"(!), and Dame Winset was consoled with three shillings "when her boy run away." One of the most interesting accounts of excavations within our knowledge is that by Mr. J. E. Price, which describes operations conducted with rare acumen at Seaford.

THE *Archæological Journal*, No. 154, is an unusually interesting instalment of that valuable serial. Besides a picturesque and emotional essay on Sens and Auxerre—subjects of great interest and worthy of exhaustive treatment—by Mr. E. A. Freeman, this issue contains a very comprehensive series of notes on that great inheritance, which has yet to fall in, of Christian archæologists, the 'Antiquities of Constantinople.' Of these Mr. Bunnell Lewis gives an extremely attractive account and the latest intelligence of the wonderful antique, Byzantine, and mediæval walls of the city, and the inscriptions and sculptures those gigantic structures retain in no unimportant numbers. The ancient Greek churches of Constantinople are many; recent investigations have increased the number known to us. Mr. Lewis comments on that of Chora, rich in mosaics and frescoes differing from formalized Byzantine examples, and famous on account of the marvellous picture of the Virgin and a sacred healing spring. He notices the better-known church of SS. Sergius and Bacchus, *i. e.*, Little St. Sophia, which he, opposing Mr. Fergusson therein, and agreeing with Mr. Freshfield, declares to be Byzantine and not Romanesque. The museum at Constantinople is the last subject of Mr. Lewis's notes. Mr. G. T. Clark concludes his admirable memoranda on 'The Castles of England and Wales at the Latter Part of the Twelfth Century' by enumerating and scientifically grouping the very numerous fortresses west of the Severn and the Dee. The author sums up the whole subject by stating that at the close of the reign of Henry II. there were in England and on the Marches of Wales about 657 castles, of 506 of which little is known.

OUR LIBRARY TABLE.

THE *Eighty-ninth Report of the Royal Asiatic Society* has appeared on our table, true to its date, full, interesting, and accurate, and recording in an agreeable way the marvellous progress that is being made in Asiatic and African studies. Mr. W. Vaux, the secretary, has, by careful collation all the year round, brought together in a condensed form the labours of scores of men of all nationalities working together in the noble field of inquiry. The obituary notices of distinguished scholars, such as Muir, Benfey, and Krapf, are followed by an abstract of the contents of the *Journal* of the Society during the past year. Each paper is interesting, but so varied are the subjects that few could appreciate or even understand them all. We rejoice to read of numerous elections of new Fellows, a full treasury, and a library of books and manuscripts available as loans to scholars under liberal rules; and it s remarked (as if in covert sarcasm of

other libraries, in which the object of their existence is forgotten) that the Society retains its priceless Oriental manuscripts and rare books in its possession that they may be lent to scholars. The proceedings of other European Oriental societies are then noticed, and the proceedings of its own branches in Asia and the parent society in Calcutta; the contents of Oriental serials are then detailed; and finally a *résumé* is given of the general progress of Oriental learning in its two great branches, archæological and literary. With a steady, practised hand Mr. Vaux passes over the different fields into which this vast subject is divided. Names and books are mentioned which make the heart of the reader long for a little more leisure in this over-wrought nineteenth century. We can say with justice that the Royal Asiatic Society, as judged by its own *Journal* and Reports, lives on in great force, representing the practical tendency of English erudition—"Primus in Indis."

Messrs. Reeves & Turner have sent us an edition of the *Poetical Works of Shelley* in two volumes. This is a reissue by Mr. Forman of the text of his library edition, without the elaborate notes which accompanied that work. The principles on which Mr. Forman has proceeded as an editor are well known, and there is no need to discuss them over again. The reader, however, will be prepared to hear that these handsome and convenient volumes contain every scrap of Shelley's verse that the enthusiastic industry of the editor has been able to discover; in fact, they can boast of two brief fragments not included in the library edition. Mr. Forman's industry and accuracy are as untiring as ever. A long preface is devoted to a defence of Shelley's reputation as a corrector of proofs and of Mr. Forman's retention of the poet's punctuation.

The publication of the *Catalogue of Additions to the Manuscripts in the British Museum in the Years* 1876–1881, the result of the united efforts of the staff of the Manuscript Department of the British Museum, brings up the description of the contents of the department to the present date, and the arrears, which at one time were considerable, have under the management of Mr. Thompson been effaced. This volume of upwards of 600 pages—of which, by the way, nearly half is index—contains six years' purchases and presentations, comprising upwards of 2,000 manuscripts, 2,300 charters and rolls, the same number of seals, and five papyri, counting many fragments under a single number. The index has been made very full, and its length is accounted for by the fact that besides references to the details of the printed descriptions, the names of writers of the numerous letters are given from the collections of correspondence only generally noticed in the catalogue. Many of the specially interesting additions have been pointed out in the *Athenæum* from time to time as they were acquired, but we may refer to the most interesting features of the new additions again without fear of being tedious. Of the papyri two deserve special notice — the Orationes of Hyperides, of the first century B.C., and the Bankes Homer, of the second century A.D. Early Latin palæography is represented by the Homilies of St. Augustine in Merovingian writing of the seventh century; Gregory's 'Moralia' in the same style of handwriting of the eighth century; and a series of Visigothic works, chiefly liturgical, ranging from the ninth century to the eleventh. Illumination, a favourite branch of the study of MSS., albeit now, perhaps, deposed from the high pedestal it formerly occupied among the treasures of the Museum in favour of antiquity, is represented by the Exultet roll of the twelfth century, and the 'Rationale' of Durandus, from the Didot collection, adorned with initials of well-finished design and execution, of Italian art of the beginning of the fourteenth century. Mr. W. Burges has bequeathed some good specimens of the French and Flemish school. Under the important headings of "State Papers" and "Correspondence" are ranged 242 volumes of transcripts of State papers relating to the history of France and other countries of Europe, formed by Antoine de Loménie, Seigneur de La Ville-aux-Clercs, Secretary of State under Henri IV. and Louis XIII.; the Asheby Correspondence; six volumes of the correspondence of Jas. Hay, Viscount Doncaster and Earl of Carlisle, chiefly in connexion with his embassies, 1619–1624; the Nicholas Correspondence, 1560–1722, of which a considerable portion relates to the movements and intrigues of the Royalists during the period of the Commonwealth; the correspondence of Cardinals Caprara and Gualterio, protectors of the English Catholics at Rome, including papers relating to Lord Lovat's plot for the invasion of Scotland, 1688–1727; the Diary of Cardinal York, 1758–1805; the Wentworth Papers, 1685–1739; Wilkes Papers, many of them highly seasoned, 1739–1797; the Haddock Correspondence, chiefly naval, 1639–1742; papers of the Jervis family from the seventeenth century to the nineteenth, including the official correspondence, registers, and journals of Admiral Sir John Jervis, afterwards Earl of St. Vincent, 1755–1823; the journals, correspondence, and papers of General Sir Robert Thomas Wilson, many unpublished, 1798–1848; and the correspondence and papers of the Right Hon. Nicholas Vansittart, Chancellor of the Exchequer, afterwards Baron Bexley, 1796–1844. Of Mr. Julian Marshall's collection of music MSS. we hope to give a separate notice at another time; it is sufficient here to draw attention to the important collection of 440 numbers, among which are a sketch-book of Beethoven and two volumes of original compositions of Handel. Among volumes and pieces of individual rarity or interest may be mentioned the 'Satires' of Juvenal, eleventh century; a Dante written at Ferrara in 1379; a year-book of law cases during the reign of Edward I.; the original MS. of Cavendish's 'Life of Wolsey'; a Mexican chronicle down to the year 1576, partly in native picture-writing; White of Selborne's 'Naturalist's Journal'; Carter's original sketches of ancient monuments and buildings; a Servian charter of King Stephen Dabisha, 1395; and a series of charters of the priory or nunnery of Stixwould, co. Lincoln. The acquisition of the Laing collection of Scottish seals is also a noteworthy feature in the history of the progress of the department during the period covered by the catalogue.

Quaint Industries and Interesting Places in Sussex. (Lewes, 'Sussex Advertiser' Office.)—Some time ago a number of amusing and curious essays on Sussex industries and customs were published in the journal at the office of which they have been reprinted in this little volume. Students of peculiar manners and out-of-the-way crafts will be glad to obtain the capital paper on Sussex higgling and to learn the ways of those who scour the country and buy up lean chickens for the fatter's coop, as well as those who vend again the well-stuffed toothsome product of the "industry." The author showed lack of poetic sympathy when he wrote that the "Persian bird" was offered to Æsculapius because he is digestible by patients. Painful experience has convinced us that not all fowls, though born in Sussex and fed by farmers, are digestible. The author would be out of sympathy with his subject if he had not a habit of jumbling together all sorts of things. A Sussex trug, the subject of another of these essays, is a flat basket, not of wicker, but of flakes of sallow, braced with ash and furnished with a handle of the latter wood bent over from side to side. A trug is cheaper and more durable than a basket; small varieties are bought by children and much used at the seaside by Cockneys, who remain ignorant that making them is, so far as Sussex is concerned, an industry confined to Hurstmonceaux and its neighbourhood. Big ones will hold four bushels. Our author says that trugs are exported to all parts of Europe, to Australia, and elsewhere, and assumes that they are made nowhere else. We have met with so many trugs in France that it is hard to believe objects so easily and cheaply constructed are really not indigenous products. Patriotism has doubtless led the writer to exaggerate the "peculiarity" of trug-making as a Sussex craft, just as the same sentiment led him to ignore the practice of higgling in Devonshire, Cornwall, and Wales, to say nothing of Normandy and Brittany. The other subjects of these essays are Rye pottery, Selsey mousetraps, the huge Carthusian monastery at Cowfold, and the little town at Seaford.

Canon Bourke has brought out, through Messrs. Gill, of Dublin, a memoir of a remarkable man, "John of Tuam." The canon's style is a trifle too ornate, but perhaps in a shilling volume intended for popular reading that does not greatly matter.

We are particularly indebted to Mr. Sampson Low for the third volume of the *English Catalogue*. Little is done in England for bibliography, and every effort in that direction deserves encouragement. The usefulness of a book like this can hardly be overrated. Mr. Low's labours have been increased by the constant growth in the number of books issued annually, and therefore all the more praise is due to him for the trouble he has taken. The present volume goes down to the end of 1880.

Messrs. Bradbury, Agnew & Co. have brought out a cheap edition of *Happy Thoughts* with illustrations, many of which are decidedly clever. It will no doubt be highly popular.

We have on our table *The Burman*, 2 vols., by S. Yoe (Macmillan),—*A Prairie Idyl, and other Poems* (Chicago, U.S., Jansen),—*Konrad Wallenrod*, by A. Mickiewicz (Trübner),—*The Earl's Revenge* (Diprose & Bateman),—*Songs from the Sunny South*, by J. C. Grant (Longmans),—*Curiosities of Judaism*, by P. Abraham (The Author),—*Rest by the Way*, by C. M. Hallett (Smith),—*Farm Sermons*, by C. H. Spurgeon (Passmore),—*The Second Epistle to the Corinthians*, by the Rev. H. Linton (Philip),—*Infant Baptism*, by J. Malcolm (Houlston),—*Practical Sermons*, by the Rev. P. T. Ouvry (Rivington),—*The Friendship of God*, by the late Rev. H. Wright (Low),—*Tarjuma-i-Alif Laila Ba-Zuba'n-i-Urdu*, edited by T. W. H. Tolbort and F. Pincott (Allen & Co.),—*La Spugna d'Apelle*, by E. Onufrio (Milan, Quadrio),—*Jehovah*, by C. Sylva (Leipzig, Friedrich),—*Thomas Platters Leben*, by H. Düntzer (Trübner),—*Die Alhambra*, by W. Irving (Trübner),—*Englisches Naturwissenschaftlich-Technisches Lesebuch*, Part II., by Dr. F. L. Wershoven (Leipzig, Brockhaus),—and *Der Treppenwitz der Weltgeschichte*, by W. L. Hertslet (Berlin, Haude & Spener). Among New Editions we have *Brandram's Selected Shakespeare Plays for the Young* (Smith & Elder),—*How to See Bristol*, by F. J. Nicholls (Bristol, Arrowsmith),—*Ivanoff's Russian Grammar*, edited by W. E. Gowan (Kegan Paul),—*The New Man and the Eternal Life*, by A. Jukes (Longmans),—*Handbook of Heraldry*, by J. E. Cussans (Chatto & Windus),—*The Principles of Colliery Ventilation*, by A. Bagot (Kegan Paul),—and *On Failure of Brain-Power*, by Dr. J. Althaus (Longmans). Also the following Pamphlets: *The Relation of Brain to Mind*, by J. Cleland (Glasgow, MacLehose),—*Morality in Public Schools and its Relation to Religion*, by the Rev. J. M. Wilson (Macmillan),—*Some Remarks on Turner's Picture 'The Old Téméraire,' discovered in* 1882, by J. C. Laud (J. Heywood),—*The Shaksperian Characters of Richard III. and Hamlet*, by J. Davies (Warrington, 'Guardian' Office),—*The Story of our Bell*, by the Rev. J. S. Joly (Dublin, Herbert),—*A Glimpse through the Corridors of Time*, by Prof. R. S. Ball (Macmillan),—and *Bankruptcy and Insolvency Law*, by A. de Lissa (Robertson).

XUM

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Wishaw's (Rev. A., the late) Sermons preached in the Church for the Blind, Liverpool, cr. 8vo. 9/ cl.

Fine Art and Archæology.

Great Artists: Correggio, by M. C. Heaton, cr. 8vo. 2/6 cl.
